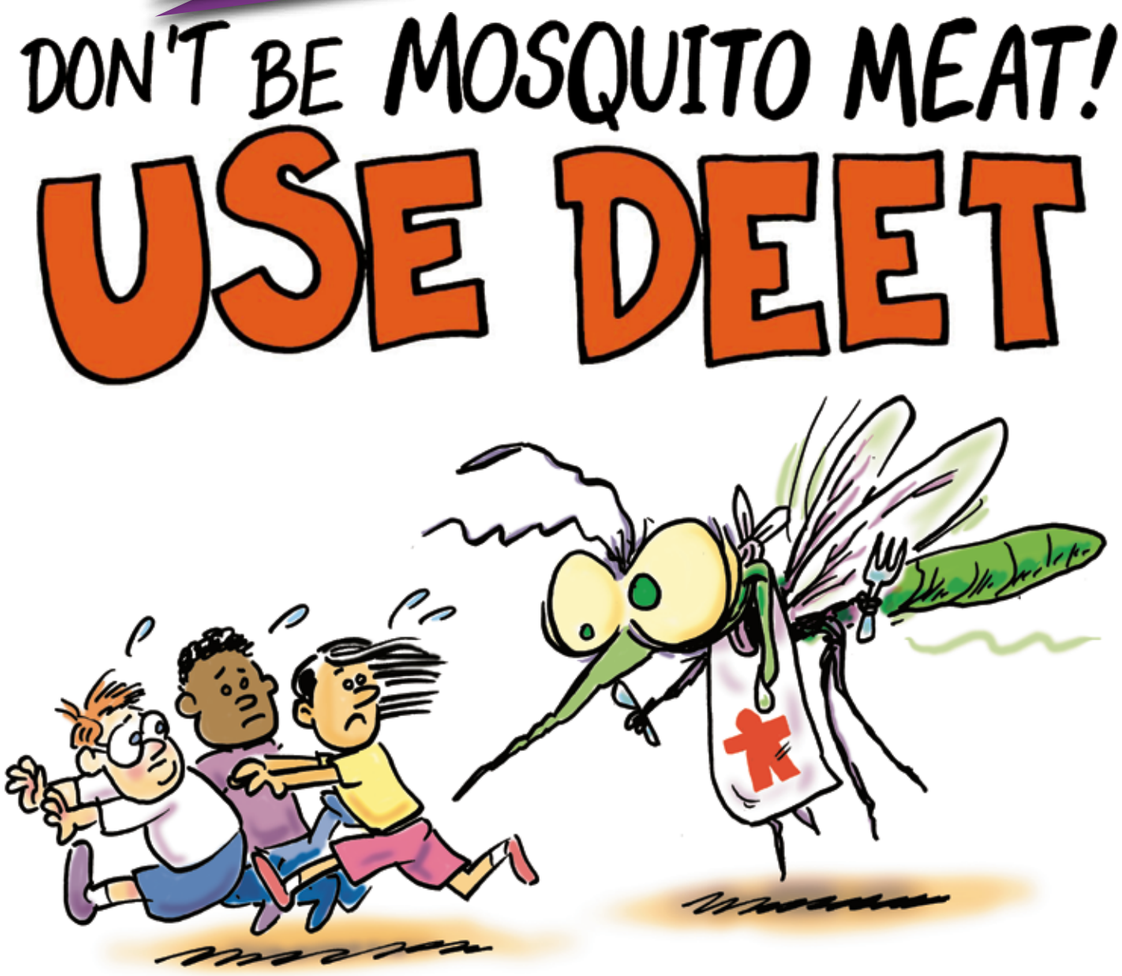
December *2007*



Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
All the insect repellents registered by the Environmental Protection Agency (EPA) have some repellent activity, but most authorities recommend those containing DEET as the most reliable and long-lasting. DEET repels mosquitoes, ticks, and other arthropods when applied to the skin or clothing. In general, the more DEET a repellent contains, the longer time it can protect against mosquito bites (see table). However, there appears to be no added benefit of concentrations greater than 50 percent. Length of protection also varies with ambient temperature, amount of perspiration, any water exposure, abrasive removal, and other factors.						**1** Always read and follow label instructions when using insect repellents.
2	**3**	**4**	**5**	**6**	**7**	**8** DEET also repels ticks, gnats and chiggers.
9	**10**	**11**	**12**	**13**	**14**	**15** Insect repellents work by making you invisible and unattractive to mosquitoes.
16	**17**	**18**	**19**	**20**	**21**	**22** DEET has been keeping mosquitoes away from people for over 40 years.
23 / **30**	**24** / **31** New Year's Eve	**25** Christmas Day	**26**	**27**	**28**	**29** Make a resolution to 'Fight the Bite'!

DEET Concentration	Hours of Protection
23.8%	5
20%	4
6.65%	2
