

# Sanitary Sewers

## PROGRAM DESCRIPTION

Fairfax County provides sewer service to its citizens through a system of nearly 3,330 miles of sewer lines, 65 pumping stations, 54 metering stations and one treatment plant owned and operated by the County. Additional treatment capacity is provided by contractual agreements with the District of Columbia Water and Sewer Authority, Alexandria Sanitation Authority (ASA), Arlington County and the Upper Occoquan Sewerage Authority (UOSA).

### LINK TO THE COMPREHENSIVE PLAN

The Policy Plan for Fairfax County's Comprehensive Plan has established a number of objectives and policies in order to:

- ✓ Emphasize the need to maintain a system of conveyance and treatment facilities that is responsive and compatible with the land use and environmental goals of the County.
- ✓ Provide for public sewer in accord with the Board of Supervisors' approved sewer service area and the expansion of lines and plants consistent with other facility availability and land use development goals.

Source: 2007 Edition of the Comprehensive Plan, as amended

## CURRENT PROGRAM INITIATIVES

The current capital program can generally be categorized in regards to supporting the following County initiatives:

- Providing sufficient treatment plant capacity to ensure that projected residential and nonresidential growth can be accommodated over the planning period.
- Improving the effluent quality of County-owned and treatment by contract wastewater treatment facilities to comply with increasingly stringent discharge limitation, such as those mandated by the Chesapeake Bay Program.
- Ensuring a sufficient capital re-investment rate for the rehabilitation and replacement of existing County assets to ensure cost effective long-term operations and provision of adequate service levels.

Financing of the capital program for the sanitary sewerage system has historically been derived from three sources: current system revenues, the sale of revenue bonds and grant funding. The County has generally used current system revenues on a "pay as you go" basis to fund the majority of capital improvements. This has particularly been true for "recurring" capital projects, such as capital replacement and rehabilitation projects, extension and improvement (E&I) projects and general system improvement projects. For major capital initiatives such as system expansion and regulatory compliance projects, the County has funded the projects through the use of sewer revenue bonds, payable solely from the revenues of the Integrated Sewer System and hence not general obligations of Fairfax County. The

County actively manages its outstanding debt, refinancing to take advantage of lower interest rates or retiring debt to manage its debt coverage. While federal and state grants were extensively utilized to fund the construction programs of the 1970's and 1980's, the financial burden of future programs will fall heavily on the County due to scarcity of federal grant funds. While the County is pursuing grant funding options, the County has conservatively assumed that no state or federal grant funding will be available to help offset the cost of compliance with the Chesapeake Bay Program.

Approximately 90 percent of the System's revenues are derived from charges to new and existing customers through availability fees and sewer service charges, respectively. New customers to the System are charged a one time availability fee per new connection for access to the System. Existing customer charges are based upon the annualized equivalent of water consumption. Availability fees and sewer service charges are established by the Fairfax County Board of Supervisors. Since 1979, the Board has used the five-year financial projection of system expenses, revenues and available cash balances to determine the appropriate level of availability fees and sewer service charges. The available cash balance reflects the projected sources and uses of funds by new and existing customers. The system allocates operating revenues and expenses, debt service and capital outlay between existing users and new users of the System. The remaining 10 percent of system revenues are derived primarily from sale of service to wholesale users such as Arlington County, the Loudoun County Sanitation Authority (LCSA), the Cities of Fairfax and Falls Church, the Towns of Herndon and Vienna and Ft. Belvoir.

As previously discussed, the County has issued sewer revenue bonds to provide funds for expanding treatment facility capacity at both County-owned and County-contracted facilities. Specifically, the County issued revenue bond debt for the following treatment plant expansions:

- Noman M. Cole, Jr. Pollution Control Plant (NCP) – \$104 million in revenue bond debt to support the expansion from 54 million gallons per day (MGD) to 67 MGD.
- Alexandria Sanitation Authority – \$90 million in State Revolving Fund/Virginia Resources Authority debt to support the County's share of plant upgrades.

In addition to this County-issued debt, as of June 30, 2007, the County is responsible for \$209.9 million in debt to support the expansion and upgrade of the UOSA treatment plant.

Looking to the future, a balance must be struck between the following three major issues facing the integrated sewerage system: (1) the necessity of maintaining high levels of water quality (including meeting more stringent nutrient limits); (2) keeping pace with County growth, and (3) achieving these two goals in terms of both financial and other resources. To a similar end, consideration must be given to inspecting, repairing and maintaining the system at acceptable service levels. In most instances, annual expenditures for system upkeep will enable the County to avoid costly, major rehabilitation in the future.

## **SUMMARY OF TREATMENT CAPACITY STATUS AND SUFFICIENCY**

Fairfax County has completed the program of plant expansion and upgrading that was begun in the early 1970s. This program was directed at pollution problems in the Potomac River and the Occoquan Reservoir and was comprised of four major elements:

- Creation of a single treatment complex at the Noman M. Cole, Jr. plant to treat flows from the Accotink, Pohick, Dogue and Little Hunting Creek Watersheds and Fort Belvoir;
- Installation of pumping facilities at the old Westgate treatment plant to divert flows from its service area to the Alexandria treatment plant;
- Expansion and upgrading of the District of Columbia Water and Sewer Authority's treatment plant at Blue Plains to 370 MGD; and
- Construction of the UOSA plant and eliminating the discharge from the five small County facilities.

Fairfax County's current treatment capacity is projected to be sufficient through 2030 with the addition of 1.0 MGD of capacity from the Loudoun County Sanitation Authority (LCSA). The following summarizes the status of the County's treatment capacity.

### **Noman M. Cole, Jr. Pollution Control Plant**

The Noman M. Cole, Jr., Pollution Control Plant (NCPCP) serves the Accotink, Pohick, Long Branch, Little Hunting and Dogue Creek drainage basins. In addition to flows originating within the County, the plant also treats sewage from the City of Fairfax, Fort Belvoir and part of the Town of Vienna. The Noman M. Cole, Jr. Plant was put on line in 1970 with an initial design capacity of 18 million gallons daily (MGD), which was subsequently increased to a rating of 36 MGD of advanced treatment in 1978, 54 MGD in 1995 and again increased to a rating of 67 MGD in 2005.

In order to meet the anticipated needs for sanitary sewage service in sheds that contribute to the NCPCP, as well as meet new water quality standards for nitrogen control, the program to expand the plant to 67 MGD was initiated in 1992. Construction began in 1997 and was completed in 2005. However, additional facilities will be needed to enhance the removal of nitrogen to current limits of technology. The Noman M. Cole, Jr. Pollution Control Plant is capable of handling anticipated flows from its contributory sheds through 2030.

*Photo of the Noman M. Cole Jr. Pollution Control Plant*

### **Alexandria Sanitation Authority**

The Cameron Run and Belle Haven watersheds and the City of Falls Church are served by the Alexandria treatment plant. The Alexandria plant is owned and operated by the Alexandria Sanitation Authority (ASA). Sixty percent of its capacity is contractually allocated to Fairfax County. The ASA plant has been expanded and upgraded to provide 54 MGD of advanced secondary treatment capacity. Fairfax County is allotted 32.4 MGD of capacity. By reactivating the Braddock Road and Keene Mill Road pumping stations, the County has the capability to divert flow from the Accotink watershed to ASA. These diversions will increase the County's wastewater management alternatives in the entire eastern portion of the County by off loading the NCPCP and Blue Plains Treatment Plant to the ASA plant. The ASA plant completed a major rehabilitation project in 2005 to meet water quality standards for nitrogen removal. As with other treatment plants in the area, additional facilities will be needed to enhance the removal of nitrogen to current limits of technology. The County's existing capacity at the ASA plant is capable of handling anticipated flows from its contributory sheds through 2030.

### **Blue Plains**

With a current capacity of 370 MGD, the District of Columbia Water and Sewer Authority (DCWASA) treatment plant at Blue Plains is the largest plant in the area. In addition to the District of Columbia, it treats flows from Maryland, Virginia and several federal installations. Wastewater flows originating in the Sugarland Run, Horsepen Creek, Difficult Run, Scotts Run, Dead Run, Turkey Run and Pimmit Run watersheds are all treated at Blue Plains. Fairfax County is presently allocated 31 MGD at the plant. Blue Plains will be undergoing a major renovation of the chemical additions and sludge disposal systems over the next several years. The County's existing capacity at the Blue Plains plant is now capable of handling anticipated flows from its contributory sheds through 2030.

*Aerial photo of Blue Plains Waste Treatment Plant*

### **Arlington County Pollution Control Plant**

The Arlington County pollution control plant serves that portion of Fairfax County within the Four Mile Run watershed. The plant has been expanded and upgraded to 30 MGD of advanced secondary capacity. Over the next five years, the Plant will be upgraded again to comply with the water quality standards for nitrogen removal, and expanded to 40 MGD, which should be completed by the end of 2010. The Arlington plant currently receives approximately 2.1 MGD of flow from Fairfax County. The County's contractual capacity is 3.0 MGD. The County's existing capacity at the Arlington plant is capable of handling anticipated flows from its contributory sheds through 2030.

### **Upper Occoquan Sewage Treatment Authority**

The southwestern part of Fairfax County is served by a regional plant owned and operated by the Upper Occoquan Sewage Authority (UOSA). This plant became operational in 1978 and replaced five small treatment plants in Fairfax County (Greenbriar, Big Rocky Run, Flatlick Run, Upper Cub Run and Middle Cub Run), as well as six in Prince William County. This plant was originally certified to operate at 15 MGD. Fairfax County's initial 30.83 percent share of the plant was increased to 36.33 percent in 1978 with the purchase of additional capacity from Manassas Park. When the plant expanded to 54 MGD, the County's share increased to 51.1 percent. The following summarizes the County's capacity in the plant:

- Original plant capacity of 15 MGD- County capacity of 5.45 MGD.
- Plant capacity expansions to 27 MGD- County capacity of 9.915 MGD.
- Additional plant capacity expansions to 54 MGD- County capacity of 27.6 MGD.
- The County sold 3.0 MGD of capacity to other UOSA users in January 2008, which reduced County capacity to 24.6 MGD.

Even with the sale of County capacity, the UOSA Plant is capable of handling anticipated flows from its contributory sheds through 2030.

### **Loudoun County Sanitation Authority**

The western part of Fairfax County is currently served by the Blue Plains and Noman Cole Pollution Control Plants. To provide sufficient capacity for the western service area of Fairfax County in the future, the County plans to purchase of 1.0 MGD of capacity from the Loudoun County Sanitation Authority (LCSA). The flows in Blue Plains will be continually monitored to see if any additional capacity will be required from the LCSA in the future.

## **CURRENT PROJECT DESCRIPTIONS**

1. **Noman M. Cole, Jr. Pollution Control Plant Construction** (Mt. Vernon District): This is an on-going project to upgrade the plant capacity and to continue the rehabilitation and replacement of the plant's assets (10-year capital cost of \$136,658,000 for FY 2009 through FY 2018). This capacity will meet the future demands until 2030 for the Accotink, Pohick and Long Branch drainage basins and the City of Fairfax, the Town of Vienna and Fort Belvoir. Projects proposed to improve the plant's assets include the following: prepare Master Plan; repair and replace pumps, motors, mixers, chemical feed systems, valves and other plant equipment; renovate and upgrade roads, floors, walls, tank sidewalls & bottoms and other grounds, building and structure-related facilities; replace or rehabilitate tertiary clarifiers used to remove phosphorous; replace or install additional back-up electrical generators; construct additional odor control facilities; construct site improvements to direct stormwater runoff to wastewater treatment facilities; install bio-filter devices to supplement odor control systems; rehabilitate incinerator hearths; complete replacement of plate and frame dewatering units with centrifuges; pave pond no. 1; and replace elevator in Solids Processing building.
2. **Noman M. Cole, Jr. Pollution Control Plant LOT Upgrade** (Mt. Vernon District): \$102,093,000 upgrade the plant to meet the limit of technology (LOT) requirements for nitrogen removal associated with the Chesapeake Bay Program. Proposed project will include construction of new chemical storage and feed facilities to add methanol for improved nitrogen removal, denitrification filters or equivalent technology such as moving bed biofilm reactors; construction of additional equalization tanks; replacement of the existing bar screens; conversion of the gravity thickeners to fermentors; modifications to the activated sludge tanks; and rehabilitation of the monomedia filters.

3. **Alexandria Wastewater Treatment Plant Improvements** (Countywide): \$264,444,000 for the County's share of improvements at the Alexandria wastewater treatment plant. Included is renovation of the carbon absorption system, scum collection system, the dechlorination system and the nitrogen removal system to meet the enhanced total nitrogen standard three parts per million (includes the purchase of land for equalization tanks).
4. **Blue Plains Wastewater Treatment Plant, DCWASA** (Countywide): This is an on-going project to fund the County's share of upgrading the Blue Plains treatment plant (10-year capital cost of \$105,000,000 for FY 2009 through FY 2018). This upgrade includes major plant renovations, specifically including the chemical addition and sludge disposal systems
5. **Arlington Wastewater Treatment Plant Upgrade and Expansion to 40 MGD** (Countywide): \$66,237,000 for the County's share of the plant upgrade costs. This project is the result of an Interjurisdictional Sewer Service Agreement which requires funding from participating jurisdictions, on the basis of their share of sewerage capacity and to meet the one part per million ammonia-nitrogen discharge standard.
6. **Loudoun County Wastewater Treatment Plant** (Countywide): \$21,500,000 for the purchase of 1.0 MGD at Loudoun County's new wastewater treatment plant.
7. **Sanitary Sewer Replacement, Rehabilitation and Upgrade Program.** (Countywide) This is an on-going project to fund the continual replacement, rehabilitation and upgrade of sewer lines (10-year capital cost \$89,000,000 for FY 2009 through FY 2018).
8. **Sewer Metering Projects.** (Countywide) This is an on-going project to install and rehabilitate sewer meters (10-year capital cost is \$500,000 for FY 2009 through FY 2018). These meters support billing for actual flows, help identify excessive Inflow and Infiltration (I/I) and provide data required by the State Water Control Board and the EPA.
9. **Pumping Station Improvements.** (Countywide) This is an on-going project to fund the continual replacement, rehabilitation and upgrade of the System's 65 pumping stations (10-year capital cost is \$55,700,000 for FY 2009 through FY 2018). These improvements do not increase capacity of the stations and are related to addressing system upkeep or improving the stations to address service issues, such as odor control.
10. **Sewer Extension Projects.** (Countywide) This is an on-going project for the extension of sewer service lines to new customers within the County's service area who are experiencing chronic septic system failures (10-year capital cost is \$33,700,000 for FY 2009 through FY 2018).
