## INTRODUCTION

This year's Annual Report on the Environment has been prepared by the Environmental Quality Advisory Council. Staff support for the coordination and printing of the report has been provided by the Planning Division of the Department of Planning and Zoning.

The Annual Report on the Environment, which is an update on the state of the county's environment, serves a threefold purpose. Initially, it is intended to assist the Board of Supervisors in evaluating ongoing environmental programs and to provide the basis for proposing new programs. The document also aids public agencies in coordinating programs to jointly address environmental issues. In addition, the report is directed to residents and others who are concerned with environmental issues.

Similar to last year's Annual Report, EQAC is presenting this year's report in two formats: (1) A detailed report similar to the reports that have been produced each year; and (2) A summary report providing highlights of recent activities, key issues, and comments and recommendations associated with each of the major topical areas covered in the larger report. In addition, most of the chapters of each report format include discussions of stewardship opportunities. Both report formats are provided electronically, but only the summary document is being made available in hard copy. It is EQAC's hope that this approach to report formatting will provide interested readers with the level of detail or generality that they desire while saving resources associated with hard copy production.

The report continues to include chapters on major environmental topics including: global climate change as it relates to Fairfax County; land use and transportation; air quality; water resources; solid waste; hazardous materials; ecological resources; wildlife management; and noise, light, and visual pollution. An appendix addressing state legislation relating to the environment is also provided within the detailed report format, as is an appendix providing EQAC's resolutions and positions taken over the past year. Within each chapter of the detailed report format are: a discussion of environmental issues; a summary of relevant data; and a discussion of applicable government programs. Most of the chapters include information regarding stewardship opportunities and conclude with recommendations that identify additional actions that EQAC feels are necessary to address environmental issues. References are presented only in the detailed report format. As was the case in last year's report, recommendations are presented in two formats: items addressing ongoing considerations and continued support for existing programs are noted as "comments." Items addressing new considerations, significant refinements of previous recommendations, or issues that EQAC otherwise wishes to stress are presented as "recommendations."

This report covers activities affecting the environment in 2009; however, in some cases, key activities from 2010 are also included.

While the Environmental Quality Advisory Council has prepared and is responsible for this report, contributions were made by numerous organizations and individuals. Many of the summaries provided within this report were taken verbatim from materials provided by these sources. EQAC therefore extends its appreciation to the following:

Alice Ferguson Foundation  
Audubon Naturalist Society  
Clean Fairfax  
Coalition for Smarter Growth  
Fairfax County Deer Management Committee

Fairfax County Department of Information Technology<sup>1</sup>  
 Fairfax County Department of Systems Management for Human Services  
 Fairfax County Department of Planning and Zoning  
 Fairfax County Department of Public Works and Environmental Services  
 Fairfax County Department of Transportation  
 Fairfax County Department of Vehicle Services  
 Fairfax County Executive's Office  
 Fairfax County Environmental Coordinator  
 Fairfax County Facilities Management Department  
 Fairfax County Fire and Rescue Department  
 Fairfax County Health Department  
 Fairfax County Office of Community Revitalization and Reinvestment  
 Fairfax County Park Authority  
 Fairfax County Police Department, Division of Animal Services  
 Fairfax County Restoration Project  
 Fairfax County Wildlife Biologist  
 Fairfax Joint Local Emergency Planning Committee  
 Fairfax ReLeaf  
 Fairfax Water  
 Illuminating Engineering Society of North America  
 International Dark-Sky Association  
 Interstate Commission on the Potomac River Basin  
 McLean Land Conservancy  
 Metropolitan Washington Airports Authority  
 Metropolitan Washington Council of Governments  
 Northern Virginia Conservation Trust  
 Northern Virginia Regional Commission  
 Northern Virginia Regional Park Authority  
 Northern Virginia Soil and Water Conservation District  
 Occoquan Watershed Monitoring Laboratory  
 Reston Association  
 United States Environmental Protection Agency  
 United States Fish and Wildlife Service  
 United States Geological Survey  
 United States National Museum of Natural History  
 Upper Occoquan Sewage Authority  
 Virginia Department of Conservation and Recreation  
 Virginia Department of Environmental Quality  
 Virginia Department of Forestry  
 Virginia Department of Game and Inland Fisheries  
 Virginia Department of Transportation  
 Virginia Outdoor Lighting Taskforce  
 Virginia Outdoors Foundation

Finally, EQAC wishes to acknowledge the efforts of the county's interagency Environmental Coordinating Committee, which coordinated the staff responses to the recommendations within EQAC's 2009 *Annual Report on the Environment*, as well as the ongoing efforts of the interagency Energy Efficiency and Conservation Coordinating Committee.

<sup>1</sup> In the published version of this report, the Fairfax County Department of Information Technology was inadvertently omitted from this list. EQAC regrets this error.

# County of Fairfax, Virginia

---

To protect and enrich the quality of life for the people, neighborhoods and diverse communities of Fairfax County

Board of Supervisors  
County of Fairfax  
12000 Government Center Parkway  
Fairfax, VA 22035

November 16, 2010

Chairman Bulova and Members of the Board:

The Environmental Quality Advisory Council is pleased to present the 2010 Annual Report on the Environment. In this report, we discuss various environmental issues in Fairfax County and make recommendations as to what actions the county should take to resolve identified problems. This report covers 2009, but also includes significant actions from 2010 that could impact EQAC's comments and recommendations. We recognize that the report does not capture all ongoing actions; if we tried to accomplish this, the report would never be finished and would be even longer. The report consists of nine chapters – each chapter addressing a different aspect of the environment. The chapters are arranged to reflect the order of topics listed in the Board of Supervisors' Environmental Agenda. We have again have created two versions of the report; one a printed summary version, and secondly, an on-line complete version with all data included. We have again highlighted environmental stewardship opportunities within the report chapters.

EQAC thanks the board for its continued strong support of environmental programs. We understand that, although budget constraints lessened this year, they continue to impact all programs within the county and have resulted in some very challenging choices, including those affecting environmental services.

EQAC asks that you continue to support the environment programs you have established. The programs are important if we are to maintain the high quality of life we have in Fairfax County and the high standards we have set for ourselves. We note that, for Fairfax County residents, quality of life is not just about good schools and jobs but also about having a clean and healthy environment in which to live and recreate. This support for environmental programs includes funding for the Environmental Improvement Program for the upcoming fiscal year. The EIP is a reflection of those non-stormwater programs, including implementation of the Cool Counties initiative. Funding the EIP is necessary to implement the Environmental Agenda adopted by the board for this county.

Board of Supervisors  
Continued

We therefore have three key requests this year among the many recommendations we have made in our report. The key recommendations are:

1. EQAC commends the Fairfax County Board of Supervisors for its leadership to increase energy efficiency and reduce greenhouse gas emissions throughout the county. We also commend the continued efforts of the county's Energy Efficiency and Conservation Coordinating Committee, being led by Deputy County Executive David Molchany. We thank you for the funding of the countywide greenhouse gas emissions inventory to be finished this fall. We fully support the residential energy education and outreach effort that will be getting under way soon that will address ways to increase energy efficiency in individual households. **EQAC encourages the county to expand these efforts to include energy use benchmarking and monitoring in non-residential buildings.**
2. EQAC commends Fairfax County for its support of its ongoing stormwater program, which includes dam maintenance, infrastructure replacement, water resource monitoring and management, watershed restoration and educational stewardship programs. EQAC realizes under the present budget there will be no monies available from the General Fund and that the funding for the stormwater program will come from funds generated through the Stormwater Service District rates. However, one only has to look at the variability over the last five years of water quality in our streams to understand the depth of need of increased funding for these programs.

**EQAC recommends that the rate be increased by another ½ penny for funding the stormwater program through the Service District.** This would result in some additional funding for modest watershed improvement programs and some funds for infrastructure replacement. In terms of infrastructure replacement, the present level of funding is simply not acceptable. We also realize that there will likely be a need for additional increases for water quality projects to meet future permit conditions, and for infrastructure reinvestment, as the system is continually growing and aging.

3. EQAC commends the county for its high density mixed use development planned near Metro stops and for the finalization of the Tysons Plan this year. All of these efforts recognize the need for increased transit use in the county to reduce traffic congestion, improve air quality and reduce greenhouse gas emissions. **EQAC recommends that the county improve transit utilization through a systematic plan that includes multiple options within a community.** For example, specific projects for the Wolfrap Road bicycle and pedestrian bridge, Pohick Stream Valley “VRE 2 VRE” and the “Bobann Bikeway” provide trail connections to transit opportunities. In addition, we need to ensure that the public is aware of all of these opportunities as they become available. These are the kinds of improvements to our overall transportation system that we want the county to continue with and to expand on.

Board of Supervisors  
Continued

As we do each year, EQAC would like to commend the outstanding efforts of the following groups whose actions improve and safeguard the environment in Fairfax County. The Northern Virginia Soil and Water Conservation District continues its work to provide excellent education programs, to consult with the county on innovative stream restoration work, to have a large and successful stream monitoring program and to be available to residents and developers alike for site work consultation. The Northern Virginia Conservation Trust continues to obtain easements on privately owned environmentally sensitive land. Fairfax ReLeaf continues to promote tree preservation and tree replacement programs. The Park Authority Natural Resources staff continues to provide exemplary service due to a small group of dedicated individuals, working with a very small budget, who are slowly enhancing environmental efforts in the county's parks. The members of EQAC thank all these groups, and all others who work to preserve and enhance the environment of the county.

As we do each year, EQAC would like to thank and commend the county staff for its continued outstanding work. We thank staff especially for providing the data for this report and for a continued willingness to meet with EQAC to discuss various issues. We commend the county's Environmental Coordinating Committee, which is chaired by Deputy County Executive David Molchany, for its continued efforts at managing environmental action within the county. We appreciate the ECC's willingness to meet with EQAC twice a year and to discuss issues of environmental significance. As always, it gives me great pleasure as the representative of EQAC to thank and acknowledge the work of two individuals.

Every year we do this and every year the members of council continue to be impressed with the work and input of these two people. First, we need to mention Noel Kaplan of the Environment and Development Review Branch, Department of Planning and Zoning. Noel provides county staff support to EQAC. Noel sets up and tapes every EQAC meeting, follows up on actions generated from the meetings, and coordinates the inputs and publication of the Annual Report. Although the members of EQAC write the Annual Report, it is Noel who makes publication of the document possible. EQAC cannot thank him enough for his hard work and long hours in our support.

Second, we thank Kambiz Agazi, Environmental Coordinator, Office of the County Executive, who also attends all of our meetings and provides helpful advice and suggestions. His insight and his overview of county environmental activities are invaluable to our work. EQAC thanks him for his assistance and valuable contributions.

Third, as I did last year, I would like to personally recognize my fellow EQAC members. They represent a diversity of views that allows for knowledgeable discussions and results in thoughtful recommendations. They spend extensive time investigating issues, write excellent resolutions and produce comprehensive chapters

Board of Supervisors  
Continued

on subjects they have carefully researched. They are to be commended for their efforts.

In conclusion, EQAC encourages the Board of Supervisors to both support and fund all of the valuable programs designed to protect the county's environment and enhance the quality of life for its residents. We continue to urge you to take a look at how to integrate these excellent programs to maximize your efforts and returns.

The members of EQAC thank the Board of Supervisors for its leadership and look forward to continue working with you to achieve the goals of the Environmental Agenda in the coming years.

Respectfully submitted,

A handwritten signature in cursive script that reads "Stella M. Koch". The signature is written in black ink and is positioned above the printed name.

Stella M. Koch, Chairman

**SCORECARD**  
**Progress Report on 2009 Recommendations**

**I. CLIMATE CHANGE**

<b>Climate Change Recommendation</b>	<b>Action taken by Agency or Department</b>	<b>EQAC Comments</b>	<b>Completed</b>
<p>1. Explore whether commitments should be sought from developers to: (1) encourage reporting of greenhouse gas emissions estimates; and (2) reduce greenhouse gas emissions by reducing energy consumption or by obtaining energy from sources that do not emit greenhouse gases. The use of electronic reporting standards employed by the Climate Registry or other sources should reduce the need for human intervention in the handling of data. The pursuit of commitments to LEED certification at the Silver level or higher should be considered as well.</p>	<p>1) Staff is interested in getting further guidance from EQAC regarding the anticipated needs and uses for energy consumption data and greenhouse gas emissions estimates from buildings that will be constructed in Fairfax County. Staff feels that reporting should be encouraged but that it should not be tied to the development process as the issue is as important for existing buildings as it would be for new buildings, and as there would be difficulties in developing approaches that would be acceptable to applicants and enforceable.                  2) While staff supports the use of energy from sources that do not emit greenhouse gases, staff believes that it is unlikely that developers will be amenable at this time to commitments to renewable energy approaches due to cost efficiency concerns.</p>	<p>1) The report has clarified that energy use information provides the most reliable indicator of efficiency. While LEED certification should reduce greenhouse gases, the proof will be in the actual energy savings. Other jurisdictions have set the standards so that developers may want to increase density beyond the stated requirement and the proffering of agreements for environmentally sensitive actions, including LEED certification can be used for modest increases in density that increase developer profit. The EQAC has suggested that information on greenhouse gases be collected by a regional agency such as the Council of Governments using uniform reporting formats. 2) While economics will play a role in decisions to undertake actions to reduce greenhouse gases, we believe that the positive reactions of citizens will likely also play a role in influencing company behavior.</p>	<p>Progress made, but not yet completed.</p>

## II. LAND USE AND TRANSPORTATION

Land Use & Transportation Recommendations	Action taken by Agency or Department	EQAC Comments	Completed
<p>1. EQAC recommends that the county produce an updated version of the “State of the Plan, An Evaluation of Comprehensive Plan Activities.” EQAC also recommends that the county consider the process for a complete review of the Comprehensive Plan.</p>	<p>Staff recommends that, upon completion of the current Area Plans Review cycle and the Area Plans studies, there be an evaluation of the collective implications of all Plan changes that will have been made of the past several years. Upon completion of this evaluation, there could, based on the results, be an assessment as to whether additional Plan changes should be considered. Staff feels that a full scale rewrite of the Comprehensive Plan would only be productive if this evaluation was to suggest a need for fundamental changes to the Plan.</p> <p>Until the aforementioned Plan evaluation is performed, staff feels that the best approach to Plan monitoring is the current approach described above; this approach serves as a tool for both in-house DPZ purposes and the larger goal of shared use in the county system. Furthermore, the new GIS-based approach monitors Plan changes at a more detailed level than analyzed in the <i>State of the Plan</i> document. The current monitoring tracking system allows up to parcel-level analysis, while the <i>State of the Plan</i> analysis provides only summary information for large areas, such as planning districts.</p>	<p>EQAC continues to recommend that the county evaluate the Plan and publish an updated version of the “State of the Plan, An Evaluation of Comprehensive Plan Activities between 1990-1995 with an Assessment of Impacts through 2010” to cover plan activities between 1995-2008 and assess impacts through 2025.</p> <p>EQAC understands the constraints on the staff to complete APR and the Area Plan Studies and looks forward to a more comprehensive review once those tasks are complete.</p>	<p>No.</p>

<b>Land Use &amp; Transportation Recommendations</b>	<b>Action taken by Agency or Department</b>	<b>EQAC Comments</b>	<b>Completed</b>
<p>2a. EQAC is an advocate of the county GIS system and the Integrated Parcel Lifecycle System.</p> <ul style="list-style-type: none"> <li>• New nonresidential pipeline data needs to be incorporated into IPLS.</li> <li>• IPLS should incorporate data regarding planned nonresidential land use intensities.</li> </ul>	<p>County staff agrees with this recommendation and put resources into place to begin work integrating the nonresidential development pipeline into IPLS. Department of Planning and Zoning (DPZ) staff will take the lead on the nonresidential development pipeline work in coordination with the Department of Information Technology (DIT) and the Department of Systems Management for Human Services (DSM). DPZ staff will research the availability of nonresidential development pipeline data and determine the business rules for creating and analyzing new IPLS tables containing these data. DIT staff will work with DPZ staff to create the tools that will use the business rules to pull the desired data into the IPLS tables and to create the analysis tools specified by DPZ staff. DSM staff will work with DPZ and DIT staff to facilitate the work. Staff anticipates beginning the work on designing a nonresidential development pipeline interface for IPLS in March 2010.</p>	<p>EQAC anticipates the completion of the integration of non-residential pipeline data and nonresidential land use intensities into IPLS.</p>	<p>In progress.</p>
<p>2b. EQAC recommends that the county continue to expand the ability of the general public to access GIS and IPLS tools, as appropriate and feasible. This includes the next iteration of My Neighborhood</p>	<p>Planning for the next version of My Neighborhood is underway. The GIS Branch will work with the Department of Systems Management for Human Services during that planning to identify approaches to include IPLS data and the annual American Community Survey data in the reporting of My Neighborhood.</p>	<p>EQAC appreciates regular updates to My Neighborhood that include new sources of information.</p>	<p>In progress.</p>

<b>Land Use &amp; Transportation Recommendations</b>	<b>Action taken by Agency or Department</b>	<b>EQAC Comments</b>	<b>Completed</b>
<p>2c. EQAC is impressed with the ways that the county has incorporated three-dimensional models across the various agencies. These have had a transformative effect on business operations. We recommend that the county continue to enhance its investment in GIS technology and updates to the source data.</p>	<p>The GIS Branch obtained 3-D models of two key areas of the County: Tyson’s Corner and the Reston/Herndon toll road corridor (5 sq miles of Reston/Herndon and 3 sp miles of Tyson’s Corner area). In all, 3-D models exist for over 2,000 buildings in those two areas. Those models and orthoimagery are viewable through Virtual Fairfax which will be released in FY 2010. In addition, several copies of software that enable 3-D model creation have been obtained.</p>	<p>The Virtual Fairfax application has been released and is a wonderful addition to the tools available to planning boards and commissions as they proceed to plan for future changes to the County. EQAC will continue to recommend that additional data be incorporated into these tools.</p>	<p>Complete.</p>

<b>Land Use &amp; Transportation Recommendations</b>	<b>Action taken by Agency or Department</b>	<b>EQAC Comments</b>	<b>Completed</b>
<p>d. EQAC further recommends that the county develop a Digital Comprehensive Plan. The Digital Comprehensive Plan would combine:</p> <ol style="list-style-type: none"> <li>1. The Integrated Parcel Lifecycle System as a base data capability.</li> <li>2. Three dimensional representations of the county.</li> <li>3. Future projections for planned changes and growth, as well as various alternatives.</li> <li>4. Environmental and Transportation models with both local and macro impacts.</li> </ol>	<p>The recommendation for a digital Comprehensive Plan is being addressed in part. The Comprehensive Plan in digital format is available on the Department of Planning and Zoning's website. The website has been redesigned in order to make the Plan and its contents more accessible to the general public. The website outlines and provides links to the Policy Plan, individual Area Plans, and their respective community planning sectors and/or special areas. If a user has knowledge of a specific property's location within the Plan, the user can directly and quickly link to the corresponding Plan recommendation. At the same time, a new feature provides a link to a webpage that helps a novice user determine the location of the Plan in which a property is located. The linked website allows a user to click on a location within a map of the county and directly connects the user to the corresponding Comprehensive Plan text. The reference map provides several options by which to search a property location. The options include Planning District, major roads, and local streets. Three-dimensional modeling, growth projections, and environmental and transportation modeling are currently being used by the county to anticipate and assess growth and land use changes. The results of these modeling tools are available to the general public in paper or other non-digital forms.</p>	<p>EQAC envisions this as a longer term project to transform the Comprehensive Plan from a text form into a GIS form with many layers of information, 3-d models such as those provided by Virtual Fairfax, projections of plan capacity based on zoned density, and models to consider changes. The current online Comprehensive Plan while being digital, does not embrace new technology to enhance planning and the integration of Land use and transportation.</p>	<p>No.</p>

<b>Land Use &amp; Transportation Recommendations</b>	<b>Action taken by Agency or Department</b>	<b>EQAC Comments</b>	<b>Completed</b>
<p>3. The current recession presents a unique opportunity to view foreclosed homes, vacant commercial space and the expected employment rebound as targets of opportunity in achieving transportation and land use goals. EQAC recommends that the county prepare a strategy for the recovery that includes ideas such as:</p> <ul style="list-style-type: none"> <li>• Continue to expand options for affordable housing by investing and partnering appropriately in areas that will need increased affordable options as the economy rebounds.</li> <li>• Identify vacant offices and homes in locales with good transit options and coordinate with the real estate industry to aid in marketing those properties.</li> <li>• Coordinate with agencies and businesses to inform prospective/new workers of opportunities for desirable commutes and local housing amenities.</li> </ul>	<p>The BOS has adopted policies and programs that address these recommendations. The Affordable Dwelling Unit Program, requires the provision of affordable housing in new construction that is four-stories or lower (at least 12% of all housing be affordable, ADU and/or Workforce Housing). In redeveloping areas not subject to the ADU Program, the Workforce Housing Program requires that 12% of the total number of units be either ADUs or workforce units. Significant partnering efforts have preserved affordable units accessible to public transportation and jobs, reducing displacement of the lower wage workforce and impacts on transportation and land use. Fed. funds are being used to support non-profit orgs.' purchase of foreclosed homes to assist those in need. DHCD assists first-time homebuyers in buying foreclosed homes. Engagement with the real estate community makes this possible. Comp. Plan Amendments for Lake Anne, Springfield, Annandale, Baileys Crossroads and Tysons were adopted within the past year. Enhanced amenities that include affordable housing close to employment and transportation opportunities have been incorporated within each amendment. County public/private partnerships include the establishment of the county's first Community Development Authority.</p> <p>The Economic Development Authority gathers and maintains information on office/flex buildings and provides options. EDA does not give preference to any particular type of space or promote one particular property over another. Information provided to customers is based solely on the criteria that the customer conveys to the EDA.</p> <p>Housing preservation activities have been redirected by the BOS through adoption of the Housing Blueprint to primarily serve lower income and at risk individuals. The 2010 budget for preservation activity was cut in half and these funds are obligated. Budget constraints reduce the ability to respond to EQAC recommendations to support lower income individuals in these and other programs.</p>	<p>EQAC commends the board and county agencies for the extensive work and programs in place to address land use and transportation issues through the real estate market.</p> <p>EQAC encourages the county to continue to coordinate these efforts across agencies and in concert with potential real estate opportunities arising from depressed property values and increased vacancy rates.</p> <p>EQAC recognizes that the overall budget constraints in the county impair the ability to implement these programs fully.</p>	<p>In progress.</p>

### III. AIR QUALITY

Air Quality Recommendation	Action taken by Agency or Department	EQAC Comments	Completed
<p>1. EQAC acknowledges the budget limitations that can be expected to continue for a few years, yet also recognizes that without a continued commitment to traditional air pollution problems, the area will not attain national air quality standards. EQAC commends the Board of Supervisors for retaining, in the FY 2010 budget, the county's air quality management position and recommends that this position be retained in future budgets as well.</p>	<p>The air quality management position is being retained.</p>	<p>EQAC thanks the Board of Supervisors for retaining this position.</p>	<p>Yes.</p>

#### IV. WATER RESOURCES

Water Resources Recommendation	Action taken by Agency or Department	EQAC Comments	Completed
<p>1. EQAC recommends that Fairfax County adequately fund and implement its ongoing Stormwater Program. EQAC recommends that the Stormwater Program continue to be funded by the Service District, and that the rate be increased to a penny and a half. We realize that there will likely be a need for additional increases for water quality projects to meet future permit conditions, and for infrastructure reinvestment, as the system is continually growing and aging.</p>	<p>The County Executive recommended that the Stormwater Program be funded by an increased rate of a penny and a half in the FY2011 budget.</p>	<p>The Board of Supervisors did adopt this penny and a half in the FY2011 budget. EQAC thanks the County Executive for proposing the penny and a half for the FY2011 budget and the Board of Supervisors for adopting this recommendation in the FY2011 budget.</p>	<p>Yes</p>

## V. SOLID WASTE

There were no recommendations in the 2009 Annual Report

## VI. HAZARDOUS MATERIALS

<b>Hazardous Materials Recommendation</b>	<b>Action taken by Agency or Department</b>	<b>EQAC Comments</b>	<b>Completed</b>
1. EQAC recommends that the county continue to find ways to help people more easily recycle household hazardous waste. As examples of the need for such efforts, with the increased use of rechargeable batteries and compact fluorescent light bulbs, more households in the county will have these hazardous waste items to dispose of on regular basis. Consideration should be given to continuing remote household hazardous waste collection events.	Staff does not concur with this recommendation at this time. Fairfax County has two permanent sites that accept household hazardous waste. Remote collection events serve less people than the two permanent sites and cost more (\$32 per customer at the permanent sites versus \$58 per customer at the remotes. Staff could reconsider the remote sites when more funding becomes available.	EQAC continues to believe that remote hazardous waste collection events would better serve the citizens of Fairfax County. More household hazardous waste could be correctly handled with these remote sites.	No.

## VII. ECOLOGICAL RESOURCES

Ecological Resources Recommendations	Action taken by Agency or Department	EQAC Comments	Completed
<p>1. The Fairfax County Park Authority approved a Natural Resource Management Plan in 2004. This partially fulfills a long-standing EQAC recommendation to develop and implement a countywide Natural Resource Management Plan. However, most of this plan cannot be implemented without additional staff and funding for the FCPA. The FCPA staff estimates that implementation will require \$3 million plus per year. A more phased approach will allow FCPA to begin to manage 10 percent of parklands and set up the program to be phased in over time. Phase 1 with this approach would require \$650,000 and six positions. EQAC strongly feels that the plan needs to be implemented. Therefore, EQAC recommends that the Board of Supervisors provide sufficient funding to implement Phase 1. EQAC recommends that some of the six staff positions should be found from internal FCPA staff assets.</p>	<p>The Park Authority concurs with the recommendation to fund and implement the Natural Resources Management Plan, but at this time cannot realign staff from other important existing programs and services to the natural resources management program. We are unable to reallocate staff to the natural resources management program without sacrificing other important existing programs and services to the public. However, the Park Authority will continue to work with the Department of Management and Budget to seek funding in future years. If funding is provided, we will look at our positions again to see if any can be realigned to the natural resources program.</p>	<p>The Park Authority has two equally important missions – to provide active recreation to Fairfax County citizens and to protect the natural resources of Fairfax County. However, for many years, the priority has been given to active recreation. The Staff response continues this allocation of resources. EQAC strongly believes that the two different missions of the Park Authority need to be brought into balance. EQAC reiterates its recommendation.</p>	<p>No</p>

**VIII-1. IMPACTS OF DEER IN FAIRFAX COUNTY**

<b>Deer Management Recommendations</b>	<b>Action taken by Agency or Department</b>	<b>EQAC Comments</b>	<b>Completed</b>
<p>1. Insofar as staff resources permit, managed hunts should be continued as they have become both cost-effective and efficient in reducing excesses in the deer herd.</p>	<p>The Fairfax County Wildlife Biologist developed a new Archery Program as a management tool to more effectively implement the Deer Management Program. Managed hunts and sharpshooting operations remain integral strategies as a core component of the Deer Management Program.</p>	<p>EQAC is glad to see that managed hunts and sharpshooting operations continue. However, deer continue to be a problem in many of Fairfax County parks and these operations should increase.</p>	<p>Yes.</p>
<p>2. The sharpshooter events should be continued since the Police Department Tactical Teams must engage in required practice in order to maintain proficiency, and using deer as targets is both cost effective and more closely replicates operational situations than does practice on the target range.</p>	<p>Sharpshooting remains an integral strategy. The Wildlife Biologist, however, recommends that the assertion of sharpshooting events as target practice be discontinued. Rather, they should be noted as a cost effective and efficient (humane) strategy for reducing excesses in the deer herds.</p>	<p>EQAC is glad to see that sharpshooting events continue.</p>	<p>Yes.</p>

**VIII-2. IMPACTS OF GEESE IN FAIRFAX COUNTY**

<b>Geese Management Recommendations</b>	<b>Action taken by Agency or Department</b>	<b>EQAC Comments</b>	<b>Completed</b>
1 EQAC strongly recommends that, insofar as staff time is available, the goose management program be continued, particularly the public outreach and training activities so that a cadre of volunteers can be created to provide the labor to do the actual egg-oiling that is the principal control measure.	The Fairfax County Wildlife Biologist will begin the process of public education and community outreach to educate the public regarding addling (egg oiling) and the training of interested parties in March 2010.	EQAC commends the Wildlife Biologist for the public education and community outreach program.	Yes.

ixxxx  
::

**VIII-3. COYOTES IN FAIRFAX COUNTY**

There were no recommendations in the 2009 Annual Report

**VIII-4. WILDLIFE BORNE DISEASES OF CONCERN IN FAIRFAX COUNTY**

There were no recommendations in the 2009 Annual Report

**IX-1. NOISE**

There were no recommendations in the 2009 Annual Report

## IX-2. LIGHT POLLUTION

Light Pollution Recommendations	Action taken by Agency or Department	EQAC Comments	Completed
<p>1. The Zoning Administration Division of the Department of Planning and Zoning should attempt to have a draft of the proposed revisions to the Outdoor Lighting Ordinance by summer 2010. EQAC will collaborate with them to this end.</p>	<p>Each year the Board of Supervisors adopts a Zoning Ordinance Amendment Work Program (ZOAWP) which contains a Priority 1 list of amendments that staff will be working on during the year and a Priority 2 list of items that will be maintained for future prioritization. The 2009 Priority 1 ZOAWP adopted by the Board on March 30, 2009 contained an item to consider revisions to the outdoor lighting standards. Staff began working on this amendment and in early 2010 a workgroup consisting of county staff and private sector individuals will be reconvened to review aspects of the outdoor lighting standards that may require revision. It is anticipated an amendment should be ready to present to the Board for authorization to advertise public hearings in fall 2010.</p>	<p>EQAC is pleased that staff is moving forward on this recommendation.</p>	<p>In progress; nearing completion.</p>
<p>2. The Fairfax County Park Authority should attempt to have a finished draft of the “white paper”, which discusses the scientific basis for the glare problem and the limitation for a solution to it, and improved technical design specifications for athletic field lighting design ready for publication by late spring 2010.</p>	<p>The recommendation for the completion of the White Paper is in the process of being addressed through a series of collaborative meetings with key members of EQAC and DPZ. The final “white paper” will include a more comprehensive discussion on glare, control limitations and possible solutions for control and should be available for public review by mid-summer.</p>	<p>EQAC thanks the Park Authority Director of Planning and Development for the opportunity to collaborate on this paper. The final document reveals that much of the glare problem is dependent upon source-to-background contrast ratio and as such is a fundamental law of nature and not under the control of man.</p>	<p>Yes.</p>

## IX-3. VISUAL POLLUTION AND URBAN BLIGHT

There were no recommendations in the 2009 Annual Report

---

ANNUAL REPORT ON THE ENVIRONMENT

CHAPTER I

**FAIRFAX COUNTY  
AND GLOBAL  
CLIMATE CHANGE**

---

# I. FAIRFAX COUNTY AND GLOBAL CLIMATE CHANGE

## A. OVERVIEW

The impact of environmental contamination on climate change/global warming is the result of world-wide emissions of greenhouse gases (GHG), including carbon dioxide (CO<sub>2</sub>). While it is world-wide emissions that contribute to climate change, reductions in GHG emissions will be addressed at the local/community level.

Is there evidence of climate change for Fairfax County? 2010 had the second warmest first eight months in recorded history (1998 was the warmest). We are seeing more poison ivy, which has been attributed to slightly warmer temperatures. The Federal Emergency Management Agency (FEMA) has redrawn floodplain lines, which has put more home structures in floodplains. The Governor's Commission on Climate Change estimates that there will be a sea level rise between 1 and 1.6 feet by 2050 and between 2.3 and 5.2 feet by the year 2100. Similar impacts are being predicted around the world. National and international responses to climate change are expected and while there are few national mandates to address climate change, Fairfax County is fortunate that we are actively pursuing opportunities to inventory and reduce GHG emissions.

### 1. Introduction and Background

In the summer of 2006, Fairfax County was approached by the Sierra Club and was asked to join its Cool Cities Program. This program was designed to help cities meet the conditions of the U.S. Mayors Climate Protection Agreement, which was to reduce their greenhouse gas outputs seven percent below their 1990 levels by 2012. Chairman Gerald E. Connolly and other members of the Fairfax County Board of Supervisors decided to develop a program that would be more robust and contain similar goals and be better suited to county protocols. This program, Cool Counties, which was first mentioned by Chairman Gerald E. Connolly in his 2007 State of the County address, was developed in collaboration with the Sierra Club and other local government partners, and was officially unveiled in July 2007 at the National Association of Counties annual conference that was held in Richmond, Virginia.

Much of what Fairfax County lists within the framework of this Cool Counties program was initiated previously to address clean water and clean air issues. However, on October 1, 2007, county staff presented its climate change initiatives as part of its fiscal year 2009 Environmental Improvement Program (<http://www.fairfaxcounty.gov/living/environment/eip/>).

Solving climate change is admittedly a daunting task by any measure, but we as county governments have a unique role to play in this effort. Through our regional cooperation and influence on major environmental policy and operations like air quality, land use planning and zoning, transportation, forest preservation, solid waste management and recycling and water conservation, we can lead by example by looking at our own operations to assess what policy or program changes we have the authority and resources to enact in order to lower the emissions produced by our operations.

Fairfax County has already taken a number of these actions, such as purchasing hybrid vehicles, promoting green buildings, purchasing wind power and teleworking to name just a few. Fairfax County now has hybrids as part of its vehicle fleet. Fairfax County now has 112 hybrids in its vehicle fleet. In 2006, the county converted one of its Toyota Priuses to a “plug-in-hybrid-electric” vehicle. This car travels up to 30 miles on electric power from the grid before engine-generated electric power is used; on some trips it has a fuel efficiency of over 100 miles per gallon of gas (plus grid electricity).

In addition, Fairfax County is purchasing energy from renewable energy sources, which both reduces GHG emissions and encourages the further development of renewable energy sources. In April 2007, the county signed a new three-year wind energy purchase contract with 3-Phases Climate Solutions, Inc. Fairfax County continued the commitment of purchasing five percent of the general county’s electricity from wind energy in 2007 and 2008 and expanded that commitment to 10 percent of the general county usage in 2009. The county executive and Board of Supervisors opted not to extend our “Wind Energy” contract beyond March 31, 2010. Wind energy credits/purchase is now available on a facility-by-facility basis through Dominion Virginia Power. While Fairfax County does not receive information on residential purchases of wind or solar energy purchases, such purchases are available through Dominion Virginia Power.

Telework is another effective tool for reducing our GHG emissions by taking cars off our roadways and commuters out of already-crowded trains and buses. Removing just five percent of cars from the road reduces traffic congestion by up to 20 percent. In 2000, the Metropolitan Washington Council of Governments set the goal of having at least 20 percent of all eligible workers in our region telecommuting one day a week by 2005. All 17 jurisdictions in the region endorsed that goal, and Fairfax County was the first to achieve it.

Climate change is a phenomenon that can have real impacts on our lives and yet the effects of local actions are more limited than those associated with other environmental problems. Counties across the U.S. are taking steps to reduce GHG emissions and inform people who live and work in these counties. To address this challenge, Fairfax County is exploring the use of social media to facilitate communications and education on climate change.

One of the most significant activities that Fairfax County has undertaken is the preparation of a GHG emissions inventory. The inventory will conform to reporting standards so that it can readily be combined with other regional and national inventories to provide a snapshot of Fairfax County's GHG emissions. While this inventory is in process, it was not completed in time to be reflected in this report.

A few additional examples of current county efforts that support greenhouse gas reductions follow.

## **2. Land Use and Transportation Solutions**

### **a. Board of Supervisors' Environmental Agenda and the Fairfax County Comprehensive Plan**

Both the Board of Supervisors' Environmental Agenda and the county's Comprehensive Plan support development in transit-oriented, pedestrian friendly, mixed use centers. The concentration of new development in relatively high intensity, transit-oriented centers characterized by a mix of residential, employment and retail uses, and the provision of opportunities for non-motorized transportation to, from and within these centers should serve to reduce, in aggregate, the number of motor vehicle trips and vehicle miles traveled, and the associated GHG emissions, that would otherwise occur through more traditional suburban development patterns in the region.

Numerous Area Plan Amendment and zoning actions have been taken to encourage and implement this approach to development, and the Board of Supervisors has adopted a definition and guidance for transit-oriented development in the Comprehensive Plan.

### **b. Ride Sharing, Telework and Other Transportation Policies**

Transportation policies that serve to reduce vehicle trips and vehicle miles traveled (e.g., provision of transit support facilities, transportation demand management efforts such as ride sharing programs and incentives, telework opportunities, bicycle parking and shower facilities in offices, shuttle bus service, transit incentives, etc.) are implemented routinely through the zoning process.

### **c. Transportation Programs**

Numerous transportation programs are also in places that serve to reduce vehicle trips and vehicle miles traveled, therefore reducing overall GHG emissions. These include:

- **Employer Services Program** – This program promotes transportation demand management strategies and associated outreach efforts to employers in Fairfax County, thereby reducing single occupancy vehicle trips.
- **South County Bus Plan** – This program has increased bus ridership significantly on Richmond Highway.
- **Fairfax County Transit Program** – This multi-modal transportation program supports Metro and Virginia Railway Express services. Metrorail trains will soon expand to eight car trains, VRE is replacing existing cars with double deck passenger cars, and CUE bus service will continue to be subsidized. Ridership on all transit systems (Fairfax Connector, Metro, VRE) serving the county has increased. To further encourage the use of mass transit, on Code Red and Code Purple Days, transit systems throughout the entire region offer free rides to all passengers. GHG emissions reductions attributed to the Fairfax Connector totals 5,766 tons of GHG for fiscal year 2009. If the Fairfax Connector Bus services were not available, county staff estimates that there would be an additional 7,543 tons of GHG emissions.
- **Metrocheck** – This is a fare card voucher program that benefits employees using public transportation. Fairfax County’s Employees Transportation Benefits Program provides up to \$105.00 per employee per month for transportation by bus, rail or vanpool.
- **Ridesources** – This program provides ridematching services to county employees and residents along with a marketing program to encourage its use.
- **County telework program** – **Approximately 1,500** county employees telework. Fairfax County is the first jurisdiction to reach—and then exceed—the regional goal set by the Metropolitan Washington Council of Governments to have 20 percent of the eligible workforce teleworking by the end of 2005. The county’s outreach efforts on telework and other transportation demand management efforts have broader benefits countywide.

Facilities that support non-motorized transportation also serve to reduce motor vehicle trips and motor vehicle miles traveled. The county has provided substantial funding for the construction of trails in support of nonmotorized transportation.

**d. Tree Preservation and Planting**

Planting efforts reduce GHG concentrations, as trees sequester carbon by absorbing GHG during photosynthesis and by storing carbon as biomass. For every acre of forest that the county is able to preserve and keep healthy, approximately 20 to 30 tons<sup>1</sup> of carbon is stored. Fairfax County's tree canopy is currently estimated to cover 40 percent (104,000 acres) of the county; therefore, this equates to between roughly two and three million tons of carbon storage. It should be noted that the acreage of tree canopy has dropped slightly since last year because of development. An earlier study estimated that the biomass of the county's tree canopy stored over 3.5 million tons of carbon. It has also been estimated that the county's current tree canopy absorbs and stores an additional 11,700 tons of carbon annually. A single tree is capable of absorbing and storing an additional 600 to 700 pounds of carbon per year. It has therefore been calculated that between 110 and 130 trees can offset the carbon "footprint" (77,400 pounds of CO<sub>2</sub>) that is estimated to be produced by each household in Virginia annually. These data underscore the value of the county's urban forestry programs and other efforts that serve to protect and restore tree cover.

The Fairfax County Board of Supervisors has adopted a tree canopy cover goal for the county of 45 percent coverage by the year 2037 and has approved a tree conservation ordinance to strengthen tree preservation policies and procedures. In addition, actions to improve urban forestry and preserve tree canopy are part of the FY 2010 Environmental Improvement Program.

Chapter 122 of the Fairfax County Code requires the preservation of existing trees during land development (including by-right development) and strengthens expectations to conserve trees during the zoning process. Tree preservation efforts, landscaping efforts and the preservation and restoration of Environmental Quality Corridors and Resource Protection Areas all serve to enhance overall carbon sequestration, thereby supporting reduced atmospheric GHG concentrations. The establishment and enforcement of limits of clearing and grading on site plans, subdivision plans and grading plans also support reductions in GHG concentrations, as do tree planting initiatives and public outreach focusing on land stewardship issues such as tree preservation and planting.

---

<sup>1</sup> Unless otherwise specified, tons are reported as metric tons.

### 3. Energy Efficiency Solutions

#### a. Green Buildings

GHG emissions will be reduced as energy demands are reduced (or as renewable energy sources that do not emit greenhouse gases, such as wind, solar, and geothermal energy are employed). In support of reduced energy use, Fairfax County has adopted green building policies addressing its own capital projects as well as private sector development. Under the Sustainable Development Policy for Capital Projects (adopted by the Board of Supervisors on February 11, 2008), county projects greater than 10,000 square feet in size have a goal of achieving Silver certification through the U.S. Green Building Council's Leadership in Energy and Environmental Design (LEED<sup>®</sup>) program; smaller facilities are recommended for LEED certification.

The Department of Public Works and Environmental Services has also accomplished innovative energy saving measures in many of its industrial plant processes. For example, the Noman M. Cole, Jr. Pollution Control Plant uses methane gas from landfills in its sludge burning process. This is important because methane is approximately 20 times more potent as a greenhouse gas as is CO<sub>2</sub>. As noted below, methane gas is also used to generate electricity at the I-95 Landfill site. The Division of Solid Waste collects and transports trash in Fairfax County to produce electricity in the Waste to Energy Facility. The Fairfax Center and Crosspointe Fire Stations are both complete and certified under the LEED program at the Certified and Gold levels, respectively. The Burke and Oakton Libraries are also both completed and certified under the LEED program at the Silver level. DPWES has also completed two projects that are certified under the Green Building Initiative program, Foundations (2- Green Globes) and Hanley Family Shelter (1- Green Globe). In addition to these six certified green buildings, DPWES is continuing to incorporate the green building approach on another twenty active building development projects. The Park Authority will also be using green building technology on an expansion to one of its recreation centers.

On December 3, 2007, the Board of Supervisors adopted an amendment to the Policy Plan volume of the Comprehensive Plan that incorporated within the Plan support for green building practices and that served to promote the application of these practices. Included in the amendment were new policies establishing linkages between the incorporation of green building/energy conservation practices and the attainment of certain Comprehensive Plan Options, planned uses or densities/intensities of development. In the county's growth centers, commitments for green building practices sufficient to attain certification through the LEED program or its equivalent are expected for certain nonresidential and

multistory multifamily residential proposals (e.g., proposals seeking development at the high end of the planned density/intensity range; development seeking a Comprehensive Plan Option; development involving a change in use from what would be allowed as a permitted use under existing zoning; development at a planned Overlay Level). ENERGY STAR<sup>®</sup> Qualified Homes designations are expected for any other residential development proposed at the high end of the Plan density range. The Planning Commission's Environment Committee is in the process of reviewing the Policy Plan guidance.

**b. Energy Efficiency**

The county's Facilities Management Department has started an energy efficiency program for the buildings in its inventory. Total energy measured in 1,000 British Thermal Units (kbtu) in 2008 was 513,779,217 and in 2009 it was 622,511,335. This is clearly an increase in total use. There is also an increase in use per square foot. The addition of the county's McConnell Public Safety and Transportation Operations Center (MPSTOC) and the Courthouse expansion with high energy intensity are the main reason for these increases. However, despite these recent increases, total avoided energy use measured in kbtu and the associated cost avoidance between fiscal year 2001 and fiscal year 2009 exceeds 417,000,000 kbtu and \$6.7 million.

Natural gas consumption was also reduced by 14,802,596 therms between FY 2001 and FY 2008. However, natural gas consumption increased by 59,658,438 therms in FY 2009, primarily due to the addition of MPSTOC and Courthouse Expansion.

The Facilities Management Department has set an internal goal of a one percent annual reduction in kBTU/SF; between FY 2001 and FY 2008, the annual reduction averaged 1.8 percent per square foot, and the total consumption reduction during this time was 12.6% per square foot. During FY 2009, there was a 9% increase in total energy consumption, thereby reducing the net savings per square foot since FY 2001 to 4.5%.

The Fairfax County Park Authority has initiated efforts to continuously identify energy management opportunities and plan and execute appropriate energy projects in the park facilities. These efforts will improve energy efficiency and conservation in the facilities' infrastructures and operations, and will consequently reduce energy consumption and decrease GHG emissions. Included are: lighting and control system retrofits; energy efficient motor upgrades; Web-based control systems; automation and programmable controls for mechanical system operations; and development/implementation of procedural energy policies. The Park Authority's energy management efforts are being continued in indoor and outdoor facilities, including recreation facilities, nature centers, historic buildings and park/area management facilities.

The Park Authority is committed to addressing energy management programmatically and has an internal position to coordinate energy management initiatives and conservation throughout the agency. The Park Authority also is monitoring and tracking the energy usage at the sites to provide feedback and will take appropriate actions based on this feedback. The energy saving retrofits will reap long term, system-wide environmental and cost benefits while maintaining or improving quality of services.

Some of the energy projects being pursued by the Park Authority are:

- **Lighting and control systems improvements** in Providence RECenter consist of installation of energy efficient lighting fixtures and, electronic ballasts.
- **Motion/ultrasonic/daylight detection sensors** have been provided in whole facilities including swimming pools, spas, racquetball courts, lobbies and hallways, fitness centers, and activity rooms. This comprehensive project has provided over 60% savings in electricity for lighting in implemented places and approximately 20% savings in whole facility electricity bills.

Other energy projects completed or in progress include: Lee District RECenter lighting and control system upgrades; Frying Pan lighting and daylight harvesting control system in the activity center and visitor center; athletic fields lighting Web-based control system project; and outdoor lighting and control upgrades in parking lots and courts.

The Health Department also reported that there were 81 Geothermal Well Permits issued.

## **4. Renewable Energy Solutions**

### **a. Wind Energy Purchase**

The county purchased 5.8 million kWh of wind energy in 2005 from Washington Gas Energy Services/Community Energy/Mountaineer Wind Farm in West Virginia, bringing a reduction of 6.2 million pounds of CO<sub>2</sub> in the two-year contract. Fairfax County has continued its commitment of purchasing wind energy and expanded this commitment in 2009 from five to 10 percent of the general county government usage. Tables I-1 and I-2 summarize information on the purchase and cost of wind energy by Fairfax County. The county executive and Board of Supervisors opted not to extend our “Wind Energy” contract beyond March 31, 2010. Wind energy credits/purchase is now available on a facility-by-facility basis through Dominion Virginia Power.

<b>Table I-1 Fairfax County Wind Energy Purchase: April 1, 2007 – March 31, 2010</b>			
	<b><u>kWh</u></b>	<b><u>Price</u></b>	<b><u>Cost per kWh</u></b>
<b>Year 1</b>	5,800,000	\$130,500	\$0.0225
<b>Year 2</b>	7,250,000	\$163,250	\$0.0225
<b>Year 3</b>	11,600,000	\$261,000	\$0.0225
<b>Total</b>	24,650,000	\$554,750	\$0.0225

**b. Waste-to-Energy and Landfill Gas Recovery and Utilization**

County recycling, landfill gas to energy, waste to energy and transfer station operations reduce GHG emissions significantly when compared with disposal of waste in landfills. These efforts have resulted in an annual reduction of CO<sub>2</sub> equivalents of 913,583 tons.

The county has adopted a waste-to-energy approach, recovering methane, controlling nitrous oxide and generating electricity from solid waste. Methane traps 21 times more heat per molecule than CO<sub>2</sub>, and nitrous oxide absorbs 310 times more heat. The waste-to-energy plant at the I-95 Landfill generates over 80 MW of electricity, offsetting an estimated 1,000,000 tons (approximately) of GHG emissions that would have been generated by a conventional power plant of this size.

Recently, however, property managers of buildings in Arlington County, the District of Columbia and parts of Maryland switched to a more comprehensive recycling program, which is being offered by one company. One of the reasons that this program for waste management is being selected is that the cost is reportedly similar to the cost of less comprehensive waste and recycling services. Material recycled includes the materials that most waste companies offer (i.e., glass, aluminum, newspaper) as well as other materials that include: batteries; plastic bags; and any material that can be

composted (i.e., food waste, soiled paper towels and other materials). In addition to providing for a more comprehensive recycling program, the composting of food waste and other materials decreases waste. Also, because these “waste materials” are not going to landfills, there should be a reduction in the release of greenhouse gases such as methane. Recycling of materials that would otherwise be incinerated reduces the release of some of the most potent greenhouse gases. Because this approach to management of waste will have a lower impact on GHG emissions than placing this material into landfills or incineration of this waste, the composting of waste materials that can be composted should be examined as a means to further reduce GHG emissions.

**c. Landfill Gas Recovery and Utilization**

The county is in the process of using landfill gas (LFG) generated by the closed I-66 Sanitary Landfill as a fuel source to heat county buildings on the West Ox Campus. In particular, the Department of Vehicle Services Maintenance Facility has infrared heaters that have been converted to burn landfill gas in the bays of the original West Ox facility. The total project cost was approximately \$375,000, and will provide estimated annual savings of \$70,000 per year in reduced natural gas consumption. In addition, LFG is used at the I-95 Landfill to generate six MW of electricity which is sold to Dominion Energy, and also as the fuel for sludge processing at Noman M. Cole, Jr. Wastewater Treatment Plant.

**5. Green Vehicle Solutions**

**a. Hybrid Vehicle Replacement Program**

As of July 2010, the county’s vehicle fleet had the following hybrid vehicles: 53 Toyota Priuses, 55 Ford Escape Hybrids, 3 Ford Fusion Hybrids and one Freightliner hybrid box delivery truck. The county plans to continue its hybrid vehicle replacement program in 2011 at a reduced pace due to continuing budget constraints. In FY 2010, the use of these vehicles resulted in a decrease in GHG emissions equivalent to 131 metric tons of CO<sub>2</sub> based on calculated fuel savings. In 2006, the county converted one of its Priuses to a “plug-in-hybrid-electric” vehicle. This car travels up to 30 miles using electric power from the grid before engine-generated electrical power is used. It achieves fuel efficiency on some trips of over 100 miles per gallon of gas, plus grid electricity. Using funding from the American Recovery and Reinvestment Act of 2009, the county expects to receive a plug-in hybrid electric school bus and a hydraulic hybrid refuse collection truck near the end of 2010. We expect that the school bus could achieve a 40 percent decrease in diesel fuel consumption and the truck a 25 percent decrease with corresponding decreases in greenhouse gas emissions.

**b. Diesel Exhaust Retrofits**

The county is in the process of retrofitting 32 school buses with an EPA-listed “emerging technology” to reduce emissions of oxides of nitrogen (NO<sub>x</sub>) by a projected 65 percent. Test results on these systems will support an EPA decision on whether to verify the technology for commercial use. To remove the NO<sub>x</sub>, the retrofits use selective catalytic reduction, the same chemical process most engine manufacturers will use to meet the stringent “2010” emissions requirements for certification of new, heavy duty engines. The “emerging technology” retrofits, however, will not use diesel exhaust fluid, a mixture of high-grade urea and purified water carried in a separate tank on the vehicles that will have 2010-certified engines. Development of this system could relieve a logistical burden fleets will otherwise face in the coming years.

In previous years the county has retrofitted 1,012 school buses, 167 Connector buses, and 113 heavy duty trucks with exhaust after-treatments that reduce particulate emissions. The bus retrofits include 436 school buses and 57 Connector buses with treatments that also reduce nitrogen oxides (a precursor to the formation of smog). These retrofits also indirectly benefit greenhouse gas reduction. In addition, Fairfax County Public Schools purchased 147 school buses with the reduced emissions engine control.

**c. Idle shutoff and horsepower reduction**

All county solid waste trucks and all Fairfax Connector buses have automatic idle shutdown programmed into their engine controls. In addition, the engines on 25 Connector buses have been de-rated by 25 horsepower to reduce fuel consumption and corresponding emissions of regulated pollutants and greenhouse gases by five percent for affected buses. According to the Department of Transportation, engine control module (ECM) data that are downloaded at each service (about every six weeks) provide information on the compliance with idling restrictions. One reason for the downloading and review of ECM data is for excessive idling time.

**d. Regional preparation for retail introduction of plug-in electric vehicles**

Several initiatives are underway to prepare the Washington metropolitan area and the state of Virginia for the imminent arrival of electric and plug-in hybrid electric cars in major auto manufacturers’ dealerships. These vehicles have the potential to bring drastic reductions in petroleum consumption and in net emissions of criteria pollutants and greenhouse gases. A wide range of issues are anticipated as large numbers of these vehicles begin placing demands on the electrical grid and as drivers seek

recharging ability both at home and in other locations. These vehicles will also enter, and eventually have a prominent place in, the county fleet.

**e. Cool Capital Challenge information update: Hybrid drive vehicles**

The Department of Vehicle Services reports that Fairfax County has purchased hybrid vehicles and provided the following update:

**March 2008 input recap (additional vehicles purchased):**

- 12 Ford Escape Hybrids purchased
- 26 tpy reduction in CO<sub>2</sub> emissions (these are 2,000-lb. tons, not metric tons)
- Cost per vehicle: \$26,947
- Cost for comparable non-hybrid (Ford Escape 4-cyl.): \$19,318
- Fuel cost saving projected: \$650 per year per vehicle (\$2.8744/gal)

**September 2009 update (additional vehicles purchased):**

- 24 tpy reduction in CO<sub>2</sub> emissions
- 10 vehicles purchased:
  - 6 Ford Escape Hybrids (MY 2009)
  - 1 Freightliner M2-106 Hybrid box delivery truck (MY 2009)
  - 3 Ford Fusion Hybrids (MY 2010)
- Cost per vehicle:
  - Escape Hybrid: \$27,951 vs. Escape: \$17,655.66
  - M2-106 Hybrid: \$136,500 vs. M2-106: \$73,000
  - Fusion Hybrid: \$25,500 vs. Fusion: \$15,419
- Projected fuel cost saving (EIA projected prices for 2010: \$2.143/gal unleaded; \$2.006/gal diesel):
  - Escape Hybrid: \$259/yr (121 gal.) per vehicle
  - M2-106 Hybrid: \$969/yr (483 gal.) per vehicle
  - Fusion Hybrid: \$268/yr (125 gal.) per vehicle

**July 2010 update:**

- No new hybrids were purchased since last update (Sept. 2009).
- These emissions and fuel consumption comparisons are for all fleet hybrids compared to comparable fleet non-hybrids for operations in FY 2010:
  - 131 MT CO<sub>2</sub>e avoided
  - Fuel saved: 15,255 gal. unleaded; 280 gal diesel
  - 53 kg NO<sub>x</sub> and 44 kg VOC avoided

## **B. FAIRFAX COUNTY'S PARTICIPATION IN REGIONAL EFFORTS**

While progress to reduce GHG emissions takes place at the local level, the greatest benefits of GHG emissions reductions will be realized as Fairfax County, neighboring counties, the Commonwealth of Virginia, other states and foreign countries undertake efforts to reduce GHG emissions. At a regional level, Fairfax County is a leader. Moreover, the county's elected leadership plays an active leadership role in the formulation of county and regional strategies to effectively reduce GHG emissions.

Regional efforts to address climate change over the past year are expected to be key in the development of state, regional and county plans for reducing GHG emissions. The following actions should be noted:

- On December 21, 2007, Governor Tim Kaine issued Executive Order 59, creating the Governor's Commission on Climate Change and setting a target of reducing statewide greenhouse gas emissions to 30% below business as usual by 2025.
- The Governor's Commission on Climate Change (December 2008) recommended the following:
  - Virginia will reduce GHG emissions by increasing energy efficiency and Conservation.
  - Virginia will advocate for federal actions that will reduce net GHG emissions.
  - Virginia will reduce GHG emissions related to vehicle miles traveled through expanded commuter choice, improved transportation system efficiency, and improved community designs.
  - Virginia will reduce GHG emissions from automobiles and trucks by increasing efficiency of the transportation fleet and use of alternative fuels.
  - Virginia will reduce GHG emissions through accelerated research and development.
  - Virginia will reduce GHG emissions by increasing the proportion of energy demands that are met by renewable sources.
  - Virginia will reduce GHG emissions by increasing the proportion of electricity generation provided by emissions-free sources of energy.

- Virginia will reduce net GHG emissions by protecting/enhancing natural carbon sequestration capacity and researching/promoting carbon capture and storage technology.
- The Commonwealth and local governments will lead by example by implementing practices that will reduce GHG emissions.

Most planning for regional issues in the metropolitan Washington DC area takes place with the Metropolitan Washington Council of Governments. In November 2008, the Climate Change Report was issued, which provided a number of recommendations that call for reducing GHG emissions. The Climate, Energy and Environment Policy Committee is currently working to develop implementation plans. Fairfax County is an active participant in these efforts and residents should watch these efforts to see both what steps are being taken and how they might contribute to further reducing GHG emissions.

## **C. NATIONAL RECOGNITION FOR COUNTY EFFORTS**

Fairfax County has received national recognition for many of its efforts, including the following:

- In 2009, the Tree Conservation Ordinance received a “Best in Category” Achievement Award from the National Association of Counties.
- In 2009, the county received an “Achievement Award” from the National Association of Counties for the Herrity Building garage vegetated roof.
- Member U.S. Environmental Protection Agency Green Power Partnership.
- Certified as a Green Government through Virginia Municipal League/Virginia Association of Counties Go Green Virginia Initiative.
- Recognition by 3Degrees Energy for Extraordinary Environmental Leadership through the Support of Renewable Energy.
- Initiated the State Wide Local Government Energy Efficiency and Conservation Committee through the Virginia Energy Purchasing Governmental Association.
- In 2008, the county received the 2007-2008 PTI Technology Solutions Award for Sustainability from the Public Technology Institute for its Plug-In Hybrid Vehicle Fleet Trial.
- In 2007, the county was recognized as a Green Power Partner by the U.S. Environmental Protection Agency for efforts to reduce the risk of climate change through green power purchasing.

- In 2007, the county joined the U.S. Environmental Protection Agency's ENERGY STAR® Challenge program.
- In 2006, the county received a National Association of Counties Achievement Award for Environmental Excellence for the Board of Supervisors' Environmental Agenda ("A 20-Year Vision") and for the Environmental Improvement Program.
- In 2006, Fairfax County was first among large counties in the National Association of Counties Change a Light Campaign, a two-month nationwide campaign challenging county employees to change incandescent bulbs with compact florescent bulbs.
- In 2005, the county received recognition as the U.S. Environmental Protection Agency Landfill Methane Outreach Program Community Partner of the Year Award for use of landfill gas as a renewable energy source, saving the county \$5,000 a year in fuel.
- In 2005, the county received a National Association of Counties Achievement Award for "Improving Air Quality in the Washington Metropolitan Region, a Commitment to Air Quality Excellence - Air Quality Protection Strategy".

## **D. STEWARDSHIP**

The regional greenhouse gas emissions reduction implementation plans that Fairfax County will be contributing to for the region will serve as a guide for both things that must be done and steps that can be taken on a voluntary basis. Some efforts, such as saving energy, reducing vehicle miles, carpooling or maybe riding a bike to work will involve changes in lifestyle that can be better for the planet and good exercise. Opportunities for reducing one's personal GHG footprint can be organized in many ways but the following suggestions may be helpful.

- Reduce home energy demands. Insulation, energy efficient windows, solar panels, geothermal energy and wind power can all help to reduce GHG emissions. As the use of renewable energy sources increases, the availability and cost of these sources will hopefully decrease.
- Reduce the use of single occupancy vehicles by carpooling, using mass transit, bicycle, walk or other alternatives (including work at home opportunities).
- Participate in local efforts to plan for efforts to improve land use planning and encouraging energy efficient construction practices. Participating in these local efforts will also help to ensure that energy efficient construction practices will have a better chance of acceptance and success.

## **E. COMMENTS**

1. The Facilities Management Department cost avoidance from FY 2001-FY 2009 for electricity and natural gas is \$6.7 million without dedicated staffing. For example, one energy project performed by part-time efforts of one staff member resulted in a cost avoidance of approximately \$83,000 annually at the Government Center complex (variable frequency drives, lighting retrofits and lighting software upgrades). More could be accomplished with dedicated staffing. EQAC commends the county for its past efforts and looks forward to working with the county in the future on its climate change program.
2. EQAC commends the county for assembling an inventory of GHG emissions for Fairfax County facilities and for designing a GHG reporting program for the county that allows for GHG emissions to be easily combined with reporting of other jurisdictions.
3. EQAC commends the county for research on social media to more effectively communicate information on global climate change.

## **F. RECOMMENDATIONS**

1. While EQAC commends Fairfax County for its many efforts to improve energy efficiency and reduce the emission of greenhouse gases, EQAC also recognizes that Fairfax County operations comprise only a fraction of the overall GHG emission inventory for Fairfax County. EQAC strongly recommends that Fairfax County explore methods to reduce GHG emissions from sources that are not operated by the county. For example, for new building construction, Fairfax County should explore whether commitments can be sought from developers to: (1) encourage reporting of greenhouse gas emissions estimates, which could be based on energy consumption of fuels that release greenhouse gases; (2) reduce their greenhouse gas emissions by reducing their energy consumption or by obtaining energy from sources that do not emit greenhouse gases (e.g., energy from wind, solar, hydroelectric and/or geothermal sources); and (3) expand efforts to benchmark energy use and energy efficiency beyond residential construction to include multi-use, office and commercial buildings.
2. While EQAC commends the county for work on the GHG inventory and the use of social media to facilitate communications and education, EQAC recommends that the board direct staff to undertake education efforts to advise both businesses and residents on ways that they can play a role in making Fairfax County a leader in reducing GHG emissions.
3. The Board of Supervisors should direct county staff to evaluate alternatives for the county to further reduce GHG emissions. More specifically, composting efforts similar to what is being pursued in the District of Columbia and Arlington County

should be considered. Increasing the amount of waste recycled or composed will lower GHG emissions beyond reductions seen in incineration.

4. While the county has promoted the incorporation of energy efficient certification, such as LEED at the Silver level or higher, the Board of Supervisors should promote the evaluation of energy use for LEED certified buildings.

---

ANNUAL REPORT ON THE ENVIRONMENT

**CHAPTER II**

**LAND USE AND  
TRANSPORTATION**

---

## II. LAND USE AND TRANSPORTATION

### A. OVERVIEW AND ISSUES

This chapter considers the environmental aspects of land use and transportation, both separately and as they relate to each other from an environmental perspective. According to the Fairfax County Comprehensive Plan, “If current trends continue, the supply of land presently planned for residential development will be all but exhausted shortly after the turn of the century [2000].”<sup>1</sup> As the county approaches this “buildout,” the focus of land use across the county is shifting from new development to revitalization and redevelopment. Each acre in the county becomes more valuable every day. The desire to maximize land utilization or productivity puts a strain on all types of land, from residential to commercial to parkland.

While the amount of available land has decreased, the Plan potential has been increasing. The potential is the number of units that can be built in the county according to the current Plan. It changes as requests are evaluated and adopted by the board. Since 1989, there have been over 80,585 new townhouses and multifamily units added and 927 single family homes removed from the Plan. This clearly demonstrates the increased intensity planned for the county.

At the same time, transportation systems across the county and metropolitan region are becoming increasingly congested. During rush hour, most highways in the county receive a failing grade for peak hour level of service. Over the past 15 years, highway construction in the Washington area outpaced population growth<sup>2</sup>, yet congestion has still increased. This is due to increased per capita vehicle mileage that puts severe strains on the transportation infrastructure. According to the Texas Transportation Initiative, our region is the second most congested in the country. In 1982 the average metropolitan resident spent 16 hours in congestion; by 2007 that ballooned to 62 hours wasted in congestion. That can be translated into \$2.8 billion, 133 million hours and 90 million gallons of gas in lost productivity and wasted fuel.<sup>3</sup>

Public transportation systems are becoming increasingly important to the county and region. Metrorail is the second largest rail transit system and Metrobus is the fifth largest bus network in the nation. Every day Metro carries nearly 20 percent of all rush-hour trips in the metropolitan area, carrying as many people each day as 1,400 miles of new traffic lanes — equivalent to an 11 percent expansion of the region’s road system. From a purely environmental standpoint, Metrorail and Metrobus eliminate more than 10,000 tons of pollution each year and save the

---

<sup>1</sup> Fairfax County Comprehensive Plan, 2007 Edition, Land Use Chapter

<sup>2</sup> “Where We are Growing”, Southern Environmental Law Center, 2002

<sup>3</sup> Texas Transportation Initiative, 2009 Urban Mobility Report

region from using 75 million gallons of gasoline each year.<sup>4</sup> Public transit is clearly an important part of the future.

The buildout of the county's land use plan combined with the overload of the transportation infrastructure will continue to increase as the county population increases. In 2006 the county released a comprehensive demographic study, *Anticipating the Future: A Discussion of Trends in Fairfax County*. The report presents much needed data to plan for the future and incorporate future population and trends. It clearly points out that higher density residential development in Fairfax County and its neighboring jurisdictions will increase traffic congestion. This density, however, will make public transportation alternatives more viable.

As noted throughout this Annual Report, pressures from growth throughout the county directly affect the environment and consequently affect quality of life, health and natural experiences. The Comprehensive Plan specifically provides strategies and practices that can address land use and transportation together. Mixed-use development is an important tool to combine residential and commercial development to "enhance the sense of community" and to "increase transportation efficiency." It provides an opportunity for residents to live and work in the same area, thus reducing transportation needs while increasing the population density to support local businesses and mass transit.

The Board of Supervisors highlighted the effects of growth and congestion in its vision paper: *Environmental Excellence for Fairfax County, A 20-Year Vision*. A variety of tools were emphasized, including mixed use development and Low Impact Development. In addition, problems that at first seem tangential to the environment, such as neighborhood disruption through tear-down development and low income housing, were raised. Teardowns are becoming more common across the county, as single family homes are replaced with larger homes. The lack of low-income housing means workers cannot afford to live and work in Fairfax County and need to commute from outside the county, which exacerbates problems of both pollution and congestion. Furthermore, this situation skews the affordable housing debate, because it undercounts the number of households needing affordable housing and/or makes it appear as though "non-residents" (i.e., non-tax-payers) simply want to take advantage of Fairfax County affordable housing opportunities.

The county faces great challenges from the combined effect of:

- Land use constraints that result from reaching build-out and transitioning from a growth focus to redevelopment.
- Transportation systems strained by congestion and getting further constrained by sprawl beyond the county.

---

<sup>4</sup> Washington Metropolitan Area Transit Authority,  
[http://www.wmata.com/community\\_outreach/kids\\_zone/](http://www.wmata.com/community_outreach/kids_zone/)

- Population growth that will require additional residential and commercial facilities and transportation options.

Due to a variety of reasons, land use and transportation decisions in the county have often been made separately in the past. More recently and most pronounced in 2010, the county has made great strides in integrating land use and transportation planning and decision making, as evidenced by many of the programs and projects detailed in this chapter. The challenge will always remain, however, in part because the county and individual landowners have primary authority for land use while the state has primary authority for transportation. The issues stemming from state control over practically all of the roads in the county will remain a major stumbling block. The challenge will also remain as an effect from the necessity of breaking down complex issues in order to manage them, to the point of establishing organizational structures based on the pieces, but not having the resources or authorities to put them back together in a comprehensive manner. The HOT Lanes for the Beltway introduce yet another wrinkle, with a private corporation building a significant for-profit component to our infrastructure.

Environmental stewardship and high quality of life demand a holistic systems approach to the inevitable urbanization of Fairfax County. The “silver lining” is that urbanization, to be sustainable – environmentally, socially and economically – demands the same.

This chapter provides:

- Some background on current trends and concepts.
- An overview of planning technology.
- A discussion of county land use characteristics and planning tools.
- A discussion of county transportation characteristics a summary of transportation programs, projects and analyses with land use implications.
- A section that demonstrates the county’s integration of land use and transportation through ongoing projects and programs.

The chapter closes with sections on environmental stewardship, accomplishments and EQAC’s comments and recommendations.

## **1. Trends and Concepts**

The Department of Planning and Zoning (DPZ) has the lead responsibility for land use planning in the county. Over the past several years, there has been a concerted effort to improve how the county plans for development and redevelopment around mixed use centers. The Mixed-Use Centers were identified in the 1990 Concept Map for Future Development and are the areas that have the most concentrated development and the best potential for redevelopment. In the past, one or two areas would undergo a multi-year special study with other areas being handled as part of the larger area-wide Plan review that occurs at least once every five years (known as the Area Plans Review [APR] process). The trend has been to put more focus on these special

studies and try to leverage best practices and lessons to increase the quality and quantity of them. There are currently eight special studies under way or in the process of implementation.

The most significant special study covers Tysons Corner. The Board of Supervisors appointed the Tysons Land Use Task Force in 2005 with a very ambitious charge to consider the redevelopment of the “downtown” for Fairfax County. The task force met for over five years and published “Transforming Tysons: Vision and Area Wide Recommendations” in 2008. The vision was assigned to the Planning Commission, which, in turn, appointed a special task force to craft language for a Comprehensive Plan Amendment. The task force worked with staff, the Tysons Land Use Task Force and the community to propose an amendment that was formally adopted by the board in June 2010.

The scope of Tysons Corner required new and creative approaches. The task force consisted of appointees who represented a wide swath of stakeholders. It included developers, landholders and residents, as well as advocates for neighboring communities, distant communities, affordable housing, the arts, the environment, transportation, biking, accessibility and others. The task force worked together with professional assistance from county staff, a world-recognized urban design firm, experts in transportation and modeling and advisors on communications.

Technology was incorporated throughout the process with models and digital mockups that showed massing and expected growth projections. These were shared with members of the community to help them visualize the proposed vision. With the plan approved, new mechanisms will need to be adopted that encourage and monitor the vision and provide the ability to monitor the macro effects and provide mitigation options to make sure the reality aligns with the vision.

Every one of the ongoing special studies requires a similar collaborative effort that brings together the community, interested parties, county staff and elected officials. While there is some commonality across the areas, they each have unique aspects that need to be addressed. EQAC commends DPZ for undertaking this transformation that combines all aspects of the study area, including land use and transportation, into a holistic process. At the same time, performing so many special studies concurrent with the Area Plans Review process is a significant workload. EQAC has been advocating that the county undertake a strategic review of the Comprehensive Plan. Our recommendation this year has been modified to encompass both the strategic review as well as the planning process to put more focus on holistic planning, as practiced by the special studies, and less focus on the Area Plans Review.

**a. Sustainability**

Key concepts are emerging to reflect the interconnectedness of land use and transportation, as well as other factors such as housing, economic development and quality of life. As the most holistic of the concepts, “*sustainability*” may be a general term with specific meanings as it is adapted to practical purposes. The EPA website<sup>5</sup> provides a good overview:

*The traditional definition of sustainability calls for policies and strategies that meet society’s present needs without compromising the ability of future generations to meet their own needs.*

*The 1970 National Environmental Policy Act (NEPA) formally established as a national goal the creation and maintenance of conditions under which humans and nature “can exist in productive harmony, and fulfill the social, economic and other requirements of present and future generations of Americans” [emphasis added].*

*The concept of sustainable development was described in a 1981 White House Council on Environmental Quality report: “The key concept here is sustainable development. If economic development is to be successful over the long term, it must proceed in a way that protects the natural resource base of developing countries.”*

*Over the past 30 years, the concept of sustainability has evolved to reflect perspectives of both the public and private sectors. A public policy perspective would define sustainability as the satisfaction of basic economic, social, and security needs now and in the future without undermining the natural resource base and environmental quality on which life depends. From a business perspective, the goal of sustainability is to increase long-term shareholder and social value, while decreasing industry’s use of materials and reducing negative impacts on the environment.*

Sustainability harmonizes the concepts of *Sprawl* and *Smart Growth*. Sprawl is the very evident unrestricted growth out from the core of a city or a county. In the 1970s, Fairfax was one of the nation’s fastest growing counties. Today that rapid growth is happening beyond Fairfax County, in Loudoun and Prince William counties. As of 2003, Loudoun County was the fastest growing county in the nation, averaging 12.6 percent growth per year. This outer county sprawl directly affects Fairfax County through increased road congestion, changing property values and inefficient use of Fairfax County’s infrastructure.

<sup>5</sup> <http://www.epa.gov/sustainability/basicinfo.htm>

*Smart growth* is the antithesis of sprawl; it can be defined as environmentally-sensitive land development with the goals of minimizing dependence on auto transportation, reducing air pollution and making infrastructure investments more efficient. The Coalition for Smarter Growth lists the following principles for Smart Growth:

- Mix land uses.
- Take advantage of compact building design.
- Create housing opportunities and choices.
- Create walkable communities.
- Foster distinctive, attractive communities with a strong sense of place.
- Preserve open space, farmland, natural beauty and critical environmental areas.
- Strengthen and direct development toward existing communities.
- Provide a variety of transportation choices.
- Make development decisions predictable, fair and cost-effective.
- Encourage community and stakeholder collaboration in development decisions.

Reston and the Orange Line corridor through Arlington are good examples of smart growth.

#### **b. New Urbanism**

*New Urbanism* is a design movement that is going beyond smart growth into community building based on traditional urban centers. New Urbanists strive to improve land use by focusing on walkable communities and town centers.<sup>6</sup> A walkable community reduces the distance between where people are and where they want to go.

An important New Urbanist concept to encourage consistent planned development in a community is called **Form Based Codes**. These codes define an appropriate form of development, that is, how it should look rather than function (for example, how a building looks rather than its use for commercial or residential purposes). Such codes also provide incentives for developers to adopt them. They have been successfully adopted as part of the Columbia Pike revitalization in Arlington County. The community worked through a series of **charrettes** with a planning consultant to create a vision for the new “pike.” Form Based Codes provide clear direction on the adopted vision, while incentives encourage developers to adopt the form as the Pike is redeveloped. In particular, developers who follow the codes have an expedited review and approval process.

---

<sup>6</sup> Charter of the New Urbanism at: <http://www.cnu.org>

The county has been adopting the use of **facilitated planning** for many of the special studies. The Tysons Corner Task Force utilized a private consultant, PB Placemaking, to facilitate community sessions. The Urban Land Institute has been assisting with the several other studies.

**c. Additional concepts**

More specific concepts apply to particular situations. **Infill and Clustering** are ways to increase density in a neighborhood. Infill is the process of filling in larger lots with multiple or larger housing and is a technique to reduce urban sprawl.<sup>7</sup> Infill development can provide new housing or commercial development on vacant or underutilized sites within developed areas, taking advantage of existing infrastructure. While infill provides increased land utilization, it also has the potential to increase the environmental impact upon the infilled community. Particular concern should be paid to the impacts of infill, such as increased stormwater runoff and heating due to additional impervious surface and loss of tree canopy.

Clustering provides residential development that allows homes to be built close together with the remaining acreage left as open space in perpetuity. Generally, homes are sited on smaller lots, with the remaining land dedicated to open space. In most cases, the density of homes in a cluster development is the same as what would have been built on the entire site; the development is just configured differently. The challenge with clustering is the lack of public trust that the open space will remain open.

**Multimodal transportation** refers to a transportation strategy that incorporates multiple forms of transportation. Multimodal transportation encourages the use of walking, biking or public transit for transportation instead of the sole use of the automobile. The use of multimodal transportation involves an increase in the accessibility of all transit options as well as the increase in transportation options.

**Transit Oriented Development or Design** is another approach to creating walkable, livable communities. TOD encourages increased multi-use density around transit centers. The goal of TOD is to promote walking, biking or transit as a means of getting to work or the store instead of by car. By focusing development around transit centers, ideally communities will have increased transit ridership, less traffic, reduced pollution and a better quality of life.

**Transportation Demand Management** is typically associated with a TOD proposal. TDM is a plan to reduce automobile trips that cause congestion.

---

<sup>7</sup> Greenbelt Alliance, Smart Infill: Creating More Livable Communities in the Bay Area, at [http://www.greenbelt.org/downloads/resources/report\\_smartinfll.pdf](http://www.greenbelt.org/downloads/resources/report_smartinfll.pdf)

Some elements of a TDM plan include easier and safer pedestrian access, local amenities, and shuttle service.

**Low Impact Development** is an approach that reduces the impact of development on a site. The goal of LID is to better integrate the natural environment with the built environment. LID techniques are intended to mimic an area's natural hydrology to manage stormwater on site, thereby reducing adverse downstream impacts.<sup>8</sup> For example, LID will reduce the amount of impervious surface on a site and reduce the amount of stormwater runoff leaving the site. LID tends to be relatively economical and is flexible enough to be applied to different types of landscapes.

**Green Building** is another approach to lowering the impact of development by designing structures to conserve resources and using technology that is more efficient. Green roofs can be built with succulent plant gardens that absorb water during rain storms and gradually release it back to dramatically reduce runoff and stream pollution. One of the first green projects in the county was the green roof at the Providence District Supervisor's office.

**High Occupancy Toll Lanes** are a tool to ease traffic congestion in urban areas. The idea behind HOT lanes is to open High Occupancy Vehicle lanes up to single occupant vehicles that pay a toll. The price of the toll varies, depending on the time of day and amount of traffic. An additional benefit of HOT lanes is that they can provide additional revenue to pay for other transportation improvements<sup>9</sup>, such as rebuilding aging bridges over the Beltway.

## 2. Macro Considerations

Many decisions in the county that affect land use and transportation are made on a micro level. That is, they affect a single parcel or neighborhood. The macro effect of many small changes has a great impact on the county environment. These macro consequences are lost in the day-to-day planning and construction that happens across the county. As higher densities and infill occur, their effects are cumulative and significant. For example:

- Small neighborhoods with a stable environmental footprint are being transformed with larger houses. These newer houses bring additional impervious surface through larger roofs and additional pavement. They also displace trees that protect the parcel with a green canopy, which provides shade, air cleansing and light dampening, and provide haven for birds and wildlife. While the effect of a single home is small, the macro effect on

---

<sup>8</sup> Low Impact Development Center at: <http://www.lid-stormwater.net/intro/background.htm>

<sup>9</sup> U.S. Department of Transportation, Federal Highway Administration, [A Guide for Hot Lane Development at http://www.itsdocs.fhwa.dot.gov/JPODOCS/REPTS\\_TE/13668.html](http://www.itsdocs.fhwa.dot.gov/JPODOCS/REPTS_TE/13668.html)

community channels more runoff and pollution into the watershed, increases the ambient temperature and displaces wildlife.

- Large scale development, such as that contemplated by the ongoing special studies, bring additional residential and commercial density to a region. By including all facets of a large scale development impact into a special study, the increased density can be combined with infrastructure investments that improve the community and environment.

**a. Understanding Macro Changes**

These macro effects are going to become more pronounced with the county build out and change from development to redevelopment. The lessons learned from special studies and from the results of similar projects across the nation need to be incorporated into our planning process. Up to now, regional aggregations and averages were sufficient to predict development impacts. The Concept Map for Future Development, included in the Comprehensive Plan, has done a good job guiding decisions and projecting impact at a broad macro level. Moving into the future, tools are necessary to provide a finer resolution of real time changes that can be quickly aggregated into a macro view.

These new tools should combine the county GIS capability with the existing planning and zoning databases. The data are readily available at a parcel level, but the ability to view the data and use the data to model macro effects is not possible. Understanding and modeling the macro changes happening across the county will help provide insight to the Board of Supervisors and Planning Commission as they deal with micro decisions.

**b. Creative approaches**

The county also needs to consider creative approaches to address these macro effects. One way to avoid macro consequences is to reduce the impact of micro decisions. For example:

- Modifying the Public Facilities Manual to encourage Low Impact Development can protect streams and mitigate the micro impact of infill development.
- Providing incentives for green building can protect streams and decrease heat generation from asphalt roofs. This encouragement will be a win-win for the county and for developers.
- Utilizing Transportation Demand Management plans can mitigate unforeseen impacts of development. The TDM plan included in the Fairlee/Metro West rezoning set the standard for TDM in the county.

Due to economic reasons, the development has not yet occurred, so the results of the plan are to be determined. However, the potential for TDM should be leveraged in all new development projects.

- Continuing to develop comprehensive plans for multi-modal transportation alternatives can reduce transportation impacts of additional density. The pedestrian and bicycle programs are an excellent example of building a long term strategy that can be implemented as opportunities arise.

These creative approaches begin to mitigate micro changes that combine into unexpected and often unintended larger problems.

### c. **Additional Macro Considerations**

The sections above focus on changes caused by development and redevelopment. There are also macro effects generated by non-development changes, such as work patterns, mixed-use opportunities and economic considerations, that affect the county environment.

**Telecommuting**, or **telework**, reduces or eliminates the traditional commute to the office. Teleworkers work from home or at local work centers that provide infrastructure for a community of workers. This reduces pressure on the transportation network without building physical infrastructure. The county has an aggressive telework program in place for county employees.

**Mixed-use development** brings work, play and home closer together, reducing the distance for trips and commutes. Mixed use is proliferating across the county, providing economic growth with less congestion than traditional separated communities.

**Economic factors**, such as increasing or decreasing property values, also affect the overall county environment. Low-income residents are struggling to find affordable housing near their jobs in the county and frequently choose to live outside the county. This negatively impacts the transportation system. As property values rise, homeowners choose to expand their residences rather than relocate. As they decrease, the tax base shrinks, adversely affecting such quality of life factors as a healthy environment, excellent schools and functional transportation systems, which may send communities into decline.

The Board of Supervisors has specifically raised **affordable housing** and **infill development** as an environmental concern in their Environmental Vision.

Macro considerations need to be better understood and modeled as the county increases in density. Traditional models did not need to consider macro changes, and the resolution and quality of data is insufficient for planning and protecting the environment. Dealing with the proliferation of small changes across the county will take creative approaches using all available tools, including the Comprehensive Plan, the Public Facilities Manual, special ordinances and public outreach.

## B. TECHNOLOGY TO UNDERSTAND THE COUNTY

Fairfax County is a recognized leader in utilizing technology to better understand, explain and predict changes within our borders. The centerpiece of the technology is the Geographic Information System. GIS provides a capability to “see” the county through maps, imagery and other geospatial data. To compliment the GIS, the county has assembled a comprehensive digital inventory of the 395 square miles within our borders. These investments in information technology (IT) and GIS are paying dividends in increased staff productivity using more and better data.

The new **Virtual Fairfax** 3-D application is a wonderful example of the power of digital technology. EQAC strongly applauds the county for making Virtual Fairfax available to residents on the Internet. Besides being fascinating to fly through our neighborhoods, it is very practical for boards and commissions to visualize proposed changes and make more informed decisions and recommendations.

Over the past several years, EQAC has advocated for an enhanced IT capability for managing and monitoring land use. Our original recommendations in this area focused on updating the 1970s mainframe-based Urban Development Information System. In 2005, the Integrated Parcel Lifecycle System debuted--IPLS combines parcel based information from various county agencies with the GIS system. Many agencies work on parcels for a particular period, but IPLS allows that full lifecycle to be captured across agencies. Layering these data on the GIS system allows for a visualization of how land in the county is used and how it changes over time. Through work with the county’s Department of Information Technology, EQAC has become more familiar with capabilities and possibilities for using GIS. There are three attributes that must be in place for the technology to be effective:

- The GIS and IPLS capability—these are the technical systems that gather, move, manipulate and display information based on geographic location.
- Data that are geographically located, also called spatial data—this is an expensive component that needs to be constantly updated as the county changes. There are many sources of data, from aerial imagery to U.S. census data to county records, which need to be transformed into useable information.

- Models and applications that can use the data to prepare for future scenarios and advanced visualization tools to help with decision making. The Visual Fairfax application is an example that leverages the GIS and data to help make informed decisions.

The next sections cover each of these topics in more detail.

## **1. GIS and Integrated Parcel Lifecycle System**

The IPLS System is in production and staff has been doing outreach to train users across agencies on how to leverage the capability. The main transformation is that IPLS provides users with relevant data that can be used for analysis. Prior systems would produce a report that summarized the data. This opens new possibilities for understanding and innovating with information.

The current parcel data include:

- Housing Units.
- Households.
- Population.
- Gross Floor Area.
- Housing Value.
- Residential Development.
- Existing Land Use.

All data are spatially enabled and can be analyzed with the GIS tools.

This information managed by IPLS is used by the county to help determine services and service provision levels, respond to state and federal reporting requirements and respond to regional initiatives such as transportation planning, air quality modeling and other programs of regional significance. One example of the increased resolution the system provides is enhanced demographic forecasts that take advantage of parcel characteristics such as age of structure, location, steepness and other features. County staff can evaluate 30 year demographic forecasts including low, high, and “most likely” estimates. Staff is also able to produce reports in a GIS environment using user defined geographies. Reports can be generated for population density, population forecasts, housing starts and completions, vacant land and underutilized land.

The uses of these data clearly go beyond the scope of EQAC but illustrate the interconnectedness of the systems. EQAC’s recommendation was narrowly focused on improving the county’s land use planning capability to enable better integration of land use and transportation. It turns out that many other organizations and departments also benefit from this capability.

EQAC commends the Department of Systems Management for Human Services for its leadership and advocacy on the IPLS. EQAC also congratulates the department on receiving the 2007 GIS Excellence Award for the Best GIS Integration or Application Development.

One of the benefits of tracking information at the parcel level is that very detailed analysis can be accomplished. However this granularity highlights the fact that the existing categories are no longer appropriate, especially as the county adopts more transit-oriented designs that incorporate mixed use development. Parcels in a mixed use development cross categories and parcels with multiple stories of mixed use further complicate simple analyses.

With IPLS in place, the county needs to develop an updated reporting methodology to accurately reflect the land use across the county. IPLS provides a base to analyze parcel information, but there is a considerable task remaining to synthesize that information and turn it into useful land use reports.

## **2. Data**

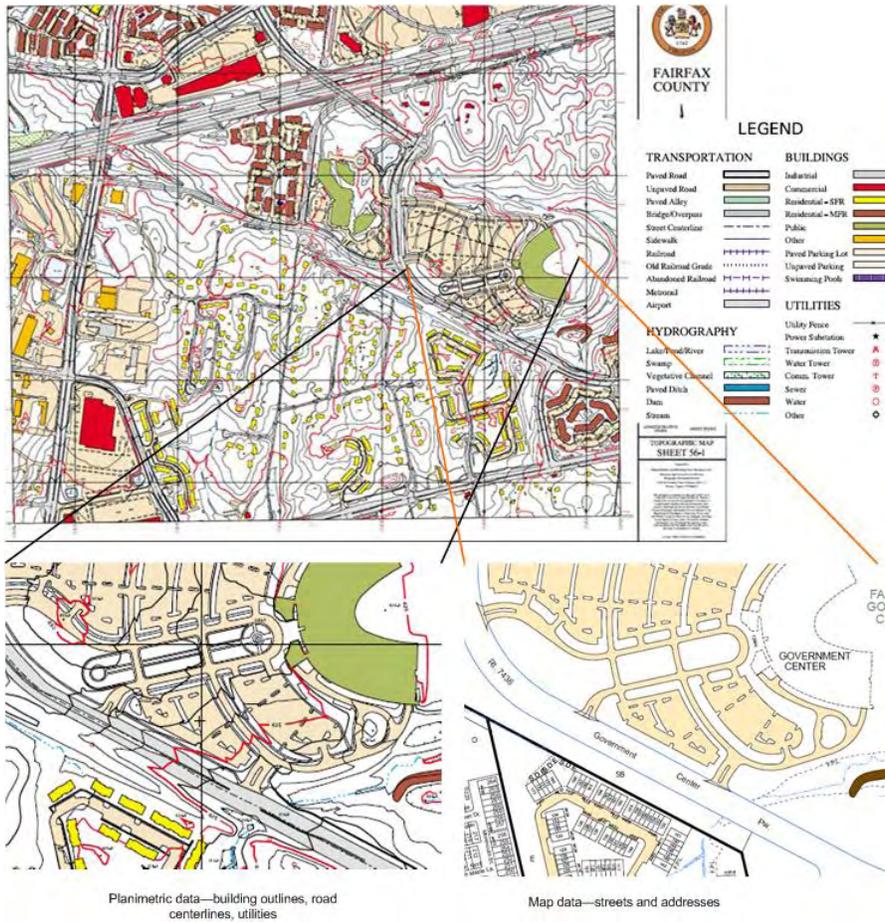

The GIS systems are only as reliable as the data they process. The county has acquired significant data and maintains these data on a regular basis. Prior EQAC recommendations focused on enhancing different types of data in particular:

- Planimetric data—features you can see, such as buildings, driveways, pools, railroads, ponds, trees.
- Oblique imagery—creating three-dimensional images and incorporating them into the planning process.
- Natural Resource data – identification of resources that should be considered during environmental and conservation planning efforts.

### **a. Planimetric Data**

Planimetric data are the features that can be seen. These data typically come from an aerial image or photograph of the county. The image is analyzed by a specialized contractor to extract features for the GIS system. The current planimetric database was created from imagery gathered in 1997. The following GIS pictures show a map around the county's Government Center with planimetric data and a blowup of some types of information it portrays. It is contrasted with a normal map that has streets and addresses. The planimetric data show the reality of the building outlines and the actual road path. It correlates the data on the map with the actual data and adds additional information not shown on a map.

**Figure II-1. Planimetric Information—  
Fairfax County Government Center**

The county is planning another round of planimetric data gathering and is considering adding additional feature extraction to include driveways, sidewalks, pools, patios, decks, sheds and tennis courts. These impervious surfaces are of interest in modeling the effects of property improvements and calculating the effects that increasing small scale imperviousness have on a macro level.

**b. Oblique Imagery**

Oblique imagery is taken from an aircraft at an angle rather than straight down. The images can then be processed by software to show the sides of buildings and structures and measure their heights. The primary users of the oblique imagery are agencies such as the Department of Public Works, the Department of Tax Administration and public safety agencies to reduce field time in assessing and planning. The image below is a sample oblique image of the Government Center:

**Figure II-2: Oblique Imagery—Fairfax County Government Center**

It begins to enable three-dimensional models and can have wide applicability beyond the county operations to public participation. In particular, the Area Plan Review process can benefit from better understanding three-dimensional areas around sites subject to proposed amendments.

Looking into the future, it is possible to begin accepting Land-Use proposals with three-dimensional Computer-Aided Design and Drafting data. The CADD models can be combined with oblique data to provide accurate 3-D representations of the changes. In effect the county can begin examining proposals using fly-through technology overlaid on ground truth. This will be much more illustrative than artistic interpretations.

The county has oblique imagery collection in the current IT plan. EQAC recommends that the county continue to gather these data and to expand the use of 3-D analysis in planning.

**c. Natural Resource Data**

In 2006, county staff began a series of discussions to determine which agencies currently possess ecological data and whether or not other agencies could utilize various ecological data as a shared resource. These data include Resource Protection Areas, wetlands, vegetative communities, hydric soils, tree cover and open space as well as archaeological and

cultural resources. The Park Authority has spearheaded the effort to identify data resources and to develop analysis models to evaluate these data. Once appropriate models and protocols have been developed, they may be used in the future to identify areas that could be targeted for conservation or protection. Currently, the final product of this endeavor is envisioned as a model that will allow county staff to evaluate ecological resources. Also included will be a detailed report listing data sources needed and a plan to consolidate these data and recommendations on the applicability and appropriateness of the model and its limitations.

### **3. Models and Visualization**

While the GIS system and new data provide valuable insight by which to view the county, they do not necessarily provide new information. Models are computer programs that analyze the data and create reports or projections of future scenarios. The county regularly uses transportation and traffic models to analyze congestion. Some of this information is reviewed in this chapter.

Computer models are complicated and expensive. However their use is becoming more important and expected for the special study planning approaches that are under way. The Tysons Land Use Task force relied on traffic projections for several development scenarios, and the results of these models weighed heavily in the decision to adopt the 2010 Comprehensive Plan for Tysons Corner.

The county made great strides in visualization tools available to the public with the Virtual Fairfax application. EQAC expects this application to greatly enhance the work of Area Plans Review task forces and encourages all new development proposals to include data sets compatible with Virtual Fairfax. Some sample screenshots of the Tysons Corner area are shown below. The second figure shows the proposed new density overlain on the existing conditions. Note that the 2-D screenshots are a poor substitute for the actual 3-D application.

Figure II-3: Virtual Fairfax--Tysons Corner Area

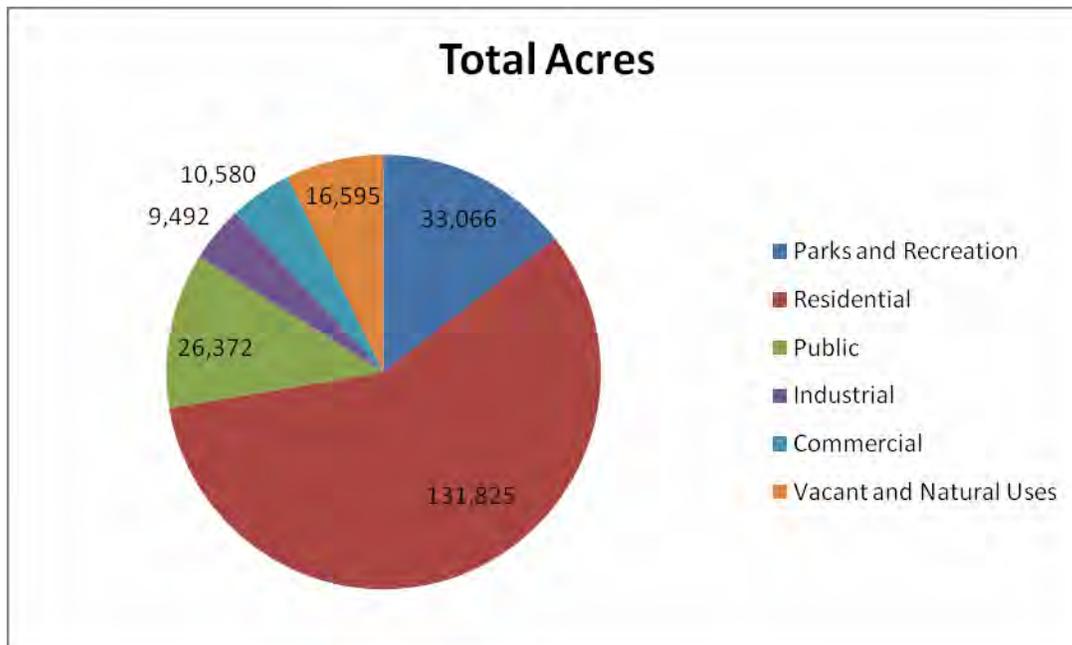

## C. LAND USE

Land Use and Transportation will be examined separately in this and the next section; they will then be discussed with respect to their systemic interrelationships in section E. This section describes land use and land use decision-making in Fairfax County. The data were extracted from the Fairfax County Demographic Report, which applies information from the IPLS system.

### 1. How Is Land Used In Fairfax County?

Fairfax County has 227,929 total acres of land, excluding areas in roads, water or small areas of land unable to be zoned or developed. Those acres are organized into the broad categories identified in Figure II-4.

**Figure II-4: Existing Land Uses in Fairfax County**

Source: Fairfax County Department of Systems Management for Human Services, 2009 <http://www.fairfaxcounty.gov/demogrph/Lusebut.htm>. Note: Land in Towns of Clifton, Herndon and Vienna included. Total acreage figures do not include areas in roads, water or small areas of land unable to be zoned or developed.

- Residential—acres dedicated to living. Residential acres are measured by the number of dwelling units per acre. For example, a low-density neighborhood has a DU/AC from .1 to .5, a suburban neighborhood ranges from 1-20 and an urban center has a core DU/AC of 35-60.
- Commercial/Retail—acres developed for people to work or shop. Commercial space is measured by looking at the Floor Area Ratio, which is the ratio of gross floor area to the size of the lot. For example,

an FAR of 0.5 means that a single story building can cover half the lot, a two-story building can cover 1/4 of the lot and a four-story building can cover 1/8 of the lot. FAR does not include other impervious surfaces, such as parking lots.

- Industrial—acres zoned for industrial use. Industrial space is measured by FAR.
- Parks and Recreation—acres dedicated to public enjoyment and recreation.
- Public—acres owned by the public but not for parks or recreation. This includes: Fort Belvoir; Dulles Airport; the campus of George Mason University; county government facilities such as fire stations, landfills, police stations, training facilities, schools and government centers; and other publicly-owned properties.
- Vacant—acres currently unused, either natural or vacant, but zoned for Residential, Industrial or Commercial uses.

## **2. Land Use Planning**

The Fairfax County Comprehensive Plan is a guide for making land use decisions in Fairfax County. Major Plan revisions took place in 1975 and 1991. The 1991 Plan, that is the foundation for the current 2007 edition, was developed around 18 Goals for Fairfax County (a 19th goal was added later). The 2007 edition of the Fairfax County Comprehensive Plan consists of the Policy Plan, four Area Plans, the Plan map, and the Transportation Plan map. The Policy Plan has ten functional sections plus a Chesapeake Bay Supplement. The functional sections are: Land Use, Transportation, Housing, Environment, Human Services, Public Facilities, Parks and Recreation, Revitalization, Economic Development and Heritage Resources.

### **a. Concept Map for Future Development**

In 1990, the county's Concept Map for Future Development was developed. This map identified 23 mixed-use centers; the Concept Map has been revised slightly since then and includes Lorton-South Route 1 and the South County Center, for 25 mixed-use centers shown (Figure II-5). While the Concept Map was not formally adopted, it is an integral part of the Area Plans.

## CONCEPT MAP FOR FUTURE DEVELOPMENT

### CONCEPT MAP FOR FUTURE DEVELOPMENT

#### LOCATIONS OF MIXED-USE CENTERS

##### Urban Center

1. Tysons Corner Urban Center

##### Suburban Centers

2. Fairfax Center
3. Dulles (Route 28 Corridor)
4. Reston-Herndon
5. Merrifield
6. Flint Hill
7. Centreville
8. Lorton-South Route 1

##### Community Business Centers

9. McLean
10. Seven Corners
11. Baileys Crossroads
12. Annandale
13. Springfield (West)
14. Kingstowne
15. North Gateway and Penn Daw
16. Beacon/Groveton
17. Hybla Valley/Gum Springs
18. South County Center
19. Woodlawn

##### Transit Station Areas

20. Huntington Metro Station
21. Van Dom Metro Station
22. Franconia/Springfield Metro Station
23. West Falls Church Metro Station
24. Dunn Loring Metro Station
25. Vienna Metro Station

#### LOCATIONS OF LARGE INSTITUTIONAL AND INDUSTRIAL AREAS

##### Industrial Areas

26. Beltway South
27. Ravensworth
28. I-95 Corridor

##### Large Institutional Land Areas

29. Washington Dulles International Airport
30. George Mason University
31. Fort Belvoir  
(Main Post and North Area)

### LEGEND

**Suburban Neighborhoods**  
(Residential density ranges defined in Area Plans; 0.15-0.25 FAR\* for neighborhood-serving non-residential use)

**Low Density Residential Areas**  
(Residential density of 0.1 to 0.5 du/ac \*\*, specific density ranges in Area Plan; Non-residential use intensity 0.05 to 0.1 FAR)

**Tysons Corner Urban Center Core** (1.0-1.65 FAR; 35-60 du/ac)  
**Non-Core** (0.25-1.0 FAR; 8-45 du/ac)

**Suburban Centers Core** (0.3-0.8 FAR; 15-35 du/ac)  
**Non-Core** (0.15-0.30 FAR; 5-25 du/ac)

**Community Business Centers** (0.20-0.50 FAR; 5-25 du/ac; if a core is designated, intensities of up to 0.70 FAR may be allowed)

**Transit Station Areas** (0.30-1.00 FAR; 8-45 du/ac)

**Industrial Areas** (0.25-0.50 FAR for Industrial Uses)

**Large Institutional Land Areas**

\* FAR - floor area ratio  
\*\* du/ac - dwelling units per acre

In 1995, a study of the Plan was prepared entitled: *State of the Plan, An Evaluation of Comprehensive Plan Activities Between 1990-1995 with an Assessment of Impacts Through 2010*. This study outlined a series of recommendations for the county to improve its ability to meet the Plan goals. Many of those recommendations are still applicable.

Currently, the Policy Plan is reviewed by functional sections. The Parks and Recreation section was reviewed in 2003. The Transportation Section was reviewed in 2005 with recommendations presented in 2006. A comprehensive review of the complete Policy Plan is not anticipated in the future due to the overall complexity of the complete document.

**b. Area Plans Review**

The Area Plans Review process is a community-wide review of site specific changes proposed to the Area Plan volumes of the Comprehensive Plan. The APR process is organized by the Supervisor Districts.

The APR task force for each district is appointed by the district supervisor. Each task force reviews proposed changes at a public hearing and submits a recommendation to the Planning Commission. This is accompanied by a staff recommendation that may or may not concur with the task force recommendation.

APR nominations span the county. Whereas the plans for Urban, Suburban, and Transit Stations are comprehensive in scope, the APR nominations are opportunistic. Each nomination is analyzed thoroughly by staff to consider factors such as impact on transportation, education, and environmental resources of the individual nominations. The cumulative effects--the macro considerations, however, are not analyzed. Such a concern was the motivation to defer nominations in Tysons Corner and appoint a task force to look at comprehensive changes.

The northern portion of the county, which includes Dranesville, Hunter Mill, Providence and Sully districts, was reviewed in 2009. The South County APR is being reviewed in 2010.

**c. Recent Special Studies and Selected Amendments to Area Plans<sup>10</sup>**

i. [Springfield Connectivity Plan Amendment](#)

On January 12, 2010, the Board of Supervisors approved an amendment to the Comprehensive Plan for the Franconia-Springfield Area. The Plan amendment brings together the final report recommendations of the Springfield Connectivity Study, published August 2008, and the

---

<sup>10</sup> <http://www.fairfaxcounty.gov/dpz/comprehensiveplan/planadopted.htm>

land use changes proposed in several BRAC Area Plans Review nominations, located in the Franconia-Springfield Area. The amendment primarily focuses on new areawide guidance pertaining to urban design, streetscape and placemaking concepts. Transportation recommendations for improved connectivity, such as an enhanced circulator service, complete streets, and improved road network, also have been adopted. Portions of the Community Business Center, north and south of Old Keene Mill Road, have been replanned as an urban village and commuter parking facility, respectively.

ii. [Loisdale Road Special Study](#)

On April 6, 2010, the Board of Supervisors adopted a Comprehensive Plan amendment for the approximately 120 acre Loisdale Road study area. The study area is planned for industrial use at an intensity up to .35 FAR (floor area ratio). The Plan amendment added an option for office use at an intensity up to .77 FAR on 30 acres, vehicle sales and service or comparable uses at an intensity up to .10 FAR on 30 acres and public parks.

iii. [Tysons Corner Urban Center](#)

On June 22, 2010, the Board of Supervisors adopted a Comprehensive Plan amendment to guide future redevelopment in the Tysons Corner Urban Center. The Tysons Plan amendment sets forth a vision and implementation approach and area-wide recommendations for land use, transportation, environmental stewardship, public facilities and urban design. The Plan amendment also contains district recommendations for the four new Metrorail stations that are part of Metrorail's Silver Line (Tysons East, Tysons Central 123, Tysons Central 7, and Tysons West) that are referred to as Transit Oriented Development Districts (TODs). Four districts are identified as Non-TOD Districts with recommendations that provide a transition between the higher intensities planned near the stations and the surrounding communities.

iv. [Baileys Community Business Center](#)

On July 13, 2010, the Board of Supervisors adopted a Plan amendment for the Baileys Crossroads Community Business Center. The Plan amendment identifies a Town Center District along Leesburg Pike (Route 7). The Plan Amendment identifies the Town Center area as a prime redevelopment area because of its strategic location with respect to the proposed streetcar route from Pentagon City to Baileys Crossroads and encourages redevelopment of the Town Center according to a new land use concept that promotes higher density mixed use development with urban parks and pedestrian amenities. Guidance

for the redevelopment of the other areas of the Baileys Crossroads CBC and transportation recommendations is also provided.

v. [Inova Fairfax Hospital/Woodburn Center for Mental Health](#)

On July 27, 2010, the Board of Supervisors approved an amendment to the Comprehensive Plan for the 66-acre site currently developed with the Inova Fairfax Hospital campus, the Woodburn Center for Community Mental Health and Woodburn Place. The approved amendment allows for an option for additional medical care facility and related uses up to 1.0 FAR for the subject area.

vi. [2009 Heritage Resources Plan Update](#)

On March 9, 2010, the Board of Supervisors adopted a Plan Amendment to update information on heritage resources throughout the county. The amendment updates the Inventory of Historic Sites tables and maps, and revises language in the Area Plans related to heritage resources to reflect changes, such as where research has uncovered more accurate information on a site. In addition, fifteen sites were added to the inventory tables.

**d. Lee District Planning Process**

The Lee District planning process is a unique review process that has been in place since 1976. This interjects a step before the public hearing at the Fairfax County Planning Commission. All land use cases (rezonings, special exceptions, and changes to the Master Plan) are presented to the Lee District Land Use Advisory Committee. The committee asks questions, makes comments, etc. When all the information is available, the committee votes to either recommend approval or denial of the application. The Lee District Planning Commissioner participates in these meeting and typically supports the committee decision at the Planning Commission public hearing.

**e. Recent Amendments to the Policy Plan<sup>11</sup>**

As stated in the 2007 Edition of the Comprehensive Plan:

*The purpose of the Policy Plan is to provide a concise statement of objectives, policies, and guidelines for implementing the County's Goals that apply to the future development pattern of the built environment in Fairfax County, while protecting natural and cultural resources for present and future generations.*

The following amendments to the Policy Plan were adopted recently:

---

<sup>11</sup> <http://www.fairfaxcounty.gov/dpz/comprehensiveplan/planadopted.htm>

i. [Visual and Performing Arts](#)<sup>12</sup>

On May 11, 2010, the Board of Supervisors adopted an amendment to the Policy Plan to add a new section on the visual and performing arts. Additions include: 1) an introduction; 2) a Board of Supervisors goal that expresses support for the visual and performing arts; and 3) objectives and related policies that support the display of arts and encourage investment in existing and new arts facilities, support the provision of a variety of arts venues and address mitigation of new and renovated arts facilities on surrounding land uses, environment, transportation and public infrastructure.

ii. [Disturbances to Environmental Quality Corridors](#)<sup>13</sup>

On July 27, 2010, the Board of Supervisors adopted an amendment to the Policy Plan to clarify policy guidance regarding circumstances under which proposals for disturbances to EQCs should be considered favorably. The amendment essentially groups such proposals into three categories: (1) Disturbances that, by their nature, are unavoidable or otherwise supported by Comprehensive Plan policy; (2) disturbances associated with stormwater management; and (3) other proposed disturbances. Because the amendment links the evaluation of some proposed disturbances to EQCs to the purposes of the EQC system, the amendment also revises these statements of purpose.

**f. Chesapeake Bay Preservation Ordinance**

Another important ordinance that affects land use is the county's Chesapeake Bay Preservation Ordinance. Amendments to this Ordinance were adopted on November 18, 2003 by the Board of Supervisors. This Ordinance codifies the county commitment to protect the Chesapeake Bay. An important aspect is the designation of Resource Protection Areas around all water bodies with perennial flow. RPAs are the corridors of environmentally sensitive land that lie alongside or near the shorelines of streams, rivers and other waterways. They include any land characterized by one or more of the following features:

- A tidal wetland.
- A tidal shore.
- A water body with perennial flow.
  
- A non-tidal wetland connected by surface flow and contiguous to a tidal wetland or water body with perennial flow.

---

<sup>12</sup> <http://www.fairfaxcounty.gov/dpz/comprehensiveplan/planadopted.htm>

<sup>13</sup> <http://www.fairfaxcounty.gov/dpz/comprehensiveplan/planadopted.htm>

- A buffer area that includes any land within a major floodplain or any land within 100 feet of a feature listed in the four bullets above.

The Chesapeake Bay Supplement, which was incorporated into the Policy Plan in 2004, provides an excellent overview of land use factors in Fairfax County that affect the Chesapeake Bay.

The Comprehensive Plan plus the Chesapeake Bay Preservation Ordinance provide an outline for how and where development is planned to occur in Fairfax County. They can be used to analyze the **potential** development that can occur within the county. The **realization** of that potential is subject to many external variables.

### 3. Land Use History and Buildout Projections

The Comprehensive Plan contains land use recommendations for all of the land in the county. When the concept plan was conceived in 1990, there was a significant amount of vacant land, so it could address changes across the county. That vacant land has been steadily decreasing as shown in Table II-1. In 2007, with only approximately 7.5 percent vacant and much of that fragmented, the decisions are much more constrained. Significant planning changes require decisions that will most likely affect existing developed land.

Table II-1 Vacant Land in Fairfax County			
Year	Vacant Land (acres)	Total Planned Land (acres)	Percent Vacant
1980	75,550	234,744	32.2 percent
1985	66,685	232,941	29.2 percent
1990	45,042	230,678	19.5 percent
1995	37,006	229,366	16.1 percent
2000	29,529	228,541	12.9 percent
2007	17,117	228,240	7.5 percent
Planned land does not generally include public roads and water Note: Some of the decrease in vacant land between 2000 and 2007 is due to a change in the definition of vacant land. Areas previously classified as vacant but owned by tax exempt entities such as houses of worship and private schools are no longer included as vacant land.			
Source: Fairfax County Department of Systems Management for Human Services (IPLS), 2007			

A general overview of how land is used in Fairfax County is provided in Table II-2 below. The table shows that 57.8 percent of the county land has been developed for residential use, with 4.6 percent for commercial. These numbers show the land devoted to each use type, but they do not show the corresponding density/intensity. It is also difficult to determine the footprint of mixed-use

acreage since it is not classified as a separate category. As the current Plan is exercised and the county reaches build-out, much more land will become mixed use.

<b>Table II-2 Acres of Land by General Land Use Category</b>		
<b>Existing Land Use</b>	<b>Total Acres</b>	<b>Percent of Total</b>
<b>Parks and Recreation</b>	33,066	14.5
<b>Residential</b>	131,825	57.8
<b>Public</b>	26,372	11.6
<b>Industrial</b>	9,492	4.2
<b>Commercial</b>	10,580	4.6
<b>Vacant and Natural Uses</b>	16,595	7.3
<b>Fairfax County</b>	<b>227,929</b>	<b>100.0</b>
Source: Fairfax County Department of Systems Management for Human Services , 2009		

#### 4. Plan Density Increases

The aggregate acreage available in the county is relatively constant, with occasional changes as land is converted to other uses, such as roads and drainage ponds. The Comprehensive Plan capacity, however, is constantly increasing as new density is allocated across the county. This occurs primarily by increasing the Floor Area Ratio (FAR), and allowing higher buildings to be built that have additional capacity in the same acreage.

#### 5. Plan Density Trends

Informal observations show that the overall residential units are:

- Increasing in total number—as the population grows, Fairfax County is able to expand through Plan changes that increase the number of potential units.
- Getting closer—the trend is to add more multi-family units (an 84 percent increase since 1989) while maintaining a consistent number of single family detached homes.

The Tysons Corner vision highlights the density increases. The vision called for increasing from 17,000 to 100,000 residents and from 120,000 to 200,000 jobs. This growth, which will all occur as redevelopment within an existing developed area, will be more complex than any other development in the county’s history.

With that increasing density, the Tysons Corner plan provides a comprehensive urban vision that provides:

- 95% of all development within an easy walk of transit.
- A new transit oriented focus with public circulators and Metrorail stops.
- A jobs/housing balance of approximately 4.0 jobs per household.
- A sustainable Tysons with restored streams, new parks and green buildings.

This vision highlights the need for new analysis techniques and models to better understand and prepare for future land-use decisions.

## **D. TRANSPORTATION**

This section examines transportation and transportation decision making in Fairfax County.

### **1. How do People and Things Move About Fairfax County?**

There are numerous options for people and things to move about the county.

- Private, motorized transportation is one of the most significant elements of transportation that has a major effect on the environment and is most closely related to land use and development. In modern times, people have become more reliant on the use of automobiles for business, pleasure and various daily functions and activities. The urban sprawl that has been experienced in Fairfax County has greatly influenced this problem, causing major congestion on roadways, particularly during rush hour as many individuals are commuting long distances to and from their jobs.
- Rail and rapid bus transit has long been looked upon as a means of reducing traffic congestion and thereby creating a positive impact on pollution and air quality. It also has a direct relationship to land use planning and development because rail transport centers are ideal locations for business and housing developments. There are numerous projects that have long been in the planning phase; due primarily to budget constraints, however, virtually none of them have reached the actual development phase.
- Commercial vehicular transportation, mainly trucks and buses, are another serious factor impacting the environment. Trucks, whether they are local, inter-county or interstate, are serious contributors to the environmental crisis. In addition to many of them using “dirty” diesel fuel, they also have a negative impact on traffic congestion. Bus traffic includes school buses, most of which are transporting students during

rush hour periods. Many of these buses are old and are a hazard to the environment, because of the type of fuel they use.

- Non-motorized transportation opportunities, namely walking and biking, have been looked upon as viable alternatives for reducing traffic congestion and improving air quality. Not having sufficient infrastructure for walking and biking is a major deterrent to that form of transport, not to mention the frame of mind of the general public that has become automobile-dependent over the years, even for short trips. This component has an important relationship to land use planning and development in order to ensure that adequate facilities (walking and biking trails) are included in the plans.
- “Virtual transportation” has surfaced in recent years as another viable alternative to motorized transportation. Modern technology has created opportunities for people to work out of their homes, using computers for telecommuting and e-commerce to perform their jobs. If these techniques become a more widely accepted means of performing one’s job, it would have a significant positive impact on reducing pollution and improving air quality. Fairfax County is a leader in this field with the Fairfax County Government Telework Program.

## **2. Vehicular Congestion and Volume to Capacity Ratio Maps**

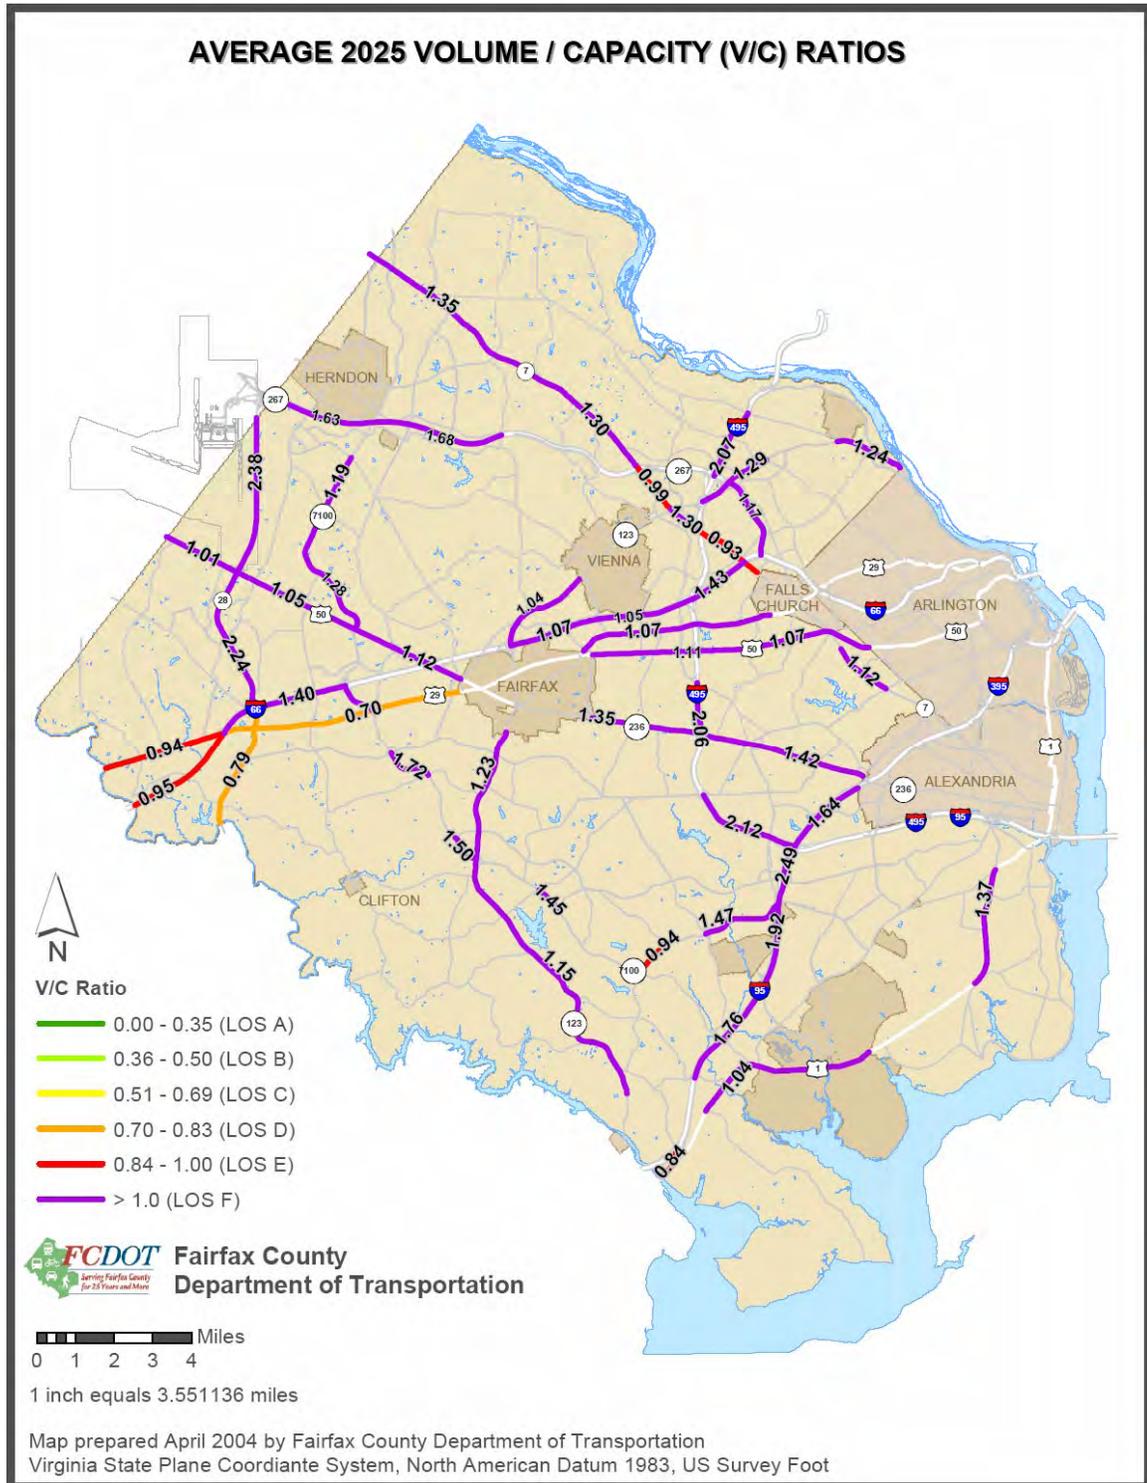

This section examines vehicular transportation options and the associated congestion that is experienced every day by drivers. Vehicle congestion on roadways is typically measured by volume to capacity ratio. The Fairfax County Department of Transportation’s Planning Division created a map for this report that shows the current and projected V/C ratios on major Fairfax County roadways. As V/C increases from zero to one, the volume approaches the road capacity. Over one, there is more volume than the road can support. The Level of Service is a measure of congestion; once V/C reaches one, the road is fully saturated and the LOS is graded an F for failing.

V/C ratios on county highways as of 2002 are shown in Figure II-6. Major portions of the Beltway, I-66 and the Fairfax County Parkway already have a failing LOS.

Projected V/C ratios for 2025 are shown in Figure II-7. This information considers population growth and settlement projections. Comparing the current V/C ratio map with the future V/C ratio map provides many insights into how the transportation infrastructure grows with population.

Figure II-7.

Some observations:

- The failing highways are still failing, some much worse and others actually better:
  - I-66 West of the City of Fairfax will get increasingly more congested, while I-66 east of Fairfax will get less congested.
  - The Beltway will become considerably more congested, with V/C ratios ranging from 1.5 to over two. Congestion in the “mixing bowl” area (the I-95/I-395/I-495 interchange area) will continue to get worse. The impacts of the reconstructed mixing bowl are not yet factored into the model; however, interchanges are modeled separately from segments and the data may not reflect the current improvements.
  - I-95 outside the Beltway will get significantly worse, with V/C ratios increasing from 1.01-1.04 to 1.76 or greater.
- Major roads closer to Washington D.C. will not change considerably over this period. This includes Route 29, Route 50.
- Major roads in the western part of the county will get more congested; this includes portions of Routes 28, 123 and 7 west of Reston. This will primarily be induced by commuters from outside the county.

The maps do not include potential improvements from mass transit. In particular, the Dulles Rail extension will impact congestion in the Tysons Corner area, and an Orange Line extension to Centreville will impact congestion along I-66 throughout the county. The maps also do not show changes from the proposed HOT lanes on the Beltway.

Both of these improvements have a dynamic component and are more difficult to model accurately. One of the recommendations of this Chapter is to continue studies to better model the effect of transit on congestion and other dynamic aspects of a modern transit system. These improvements are being considered as part of the Transportation Section review of the Comprehensive Plan that is currently under way; the improvements need to be implemented to provide the board with better data to make future transportation decisions.

Frequently the focus of transportation congestion is on big projects, such as Tysons or HOT lanes. This needs to be balanced with regular maintenance of the existing infrastructure. An important policy identified by the Coalition for Smarter Growth is “fix-it-first” to ensure that all state maintenance needs are met and to direct funding to fixing problems on existing roads and transit prior to funding new construction.<sup>14</sup> As infill becomes the primary mode of development, the existing infrastructure will demand more resources to accommodate denser developments.

---

<sup>14</sup> <http://www.smartergrowth.net/vision/regions/region.html>

### 3. Residential Commuting

An interesting statistic on commuter patterns is that over 50 percent of the residents in Fairfax County work in Fairfax County (see Table II-3), with another 17 percent working in the District of Columbia. Similarly, most of the workers in Fairfax County live in Fairfax County (see Table II-4); however over 80,000 workers commute to jobs in Fairfax County from Prince William and Loudoun counties. Only 12,000 workers commute to the county from the District of Columbia.

The following has been noted by the Metropolitan Washington Council of Governments in its January 2006 publication “Fairfax County and the Washington Region: A Look at Economic and Demographic Characteristics” (see page five):

*“Nearly three-quarters of Fairfax County resident workers commute to work by driving alone, compared to 68 percent of the Washington region’s workers. Seven percent of Fairfax County’s resident workers use public transportation, compared to 11 percent of the Washington region’s workers. Thirteen percent of resident workers of both Fairfax County and the Washington region use car pooling as a means of transportation to their jobs.*

*Of the 350,714 owner-occupied housing units in Fairfax County, four percent (14,207 housing units) do not have vehicles. For renter-occupied housing units, approximately nine percent do not have vehicles.”*

<b>Table II-3 Where do Residents of Fairfax County Go to Work?</b>		
<b><u>Destination</u></b>	<b><u>Number of Commuters from Fairfax County</u></b>	<b><u>Percent of Total Commuters from Fairfax County</u></b>
Fairfax Co, VA	278,064	52.72 percent
District of Columbia	88,908	16.86 percent
Arlington Co, VA	48,670	9.23 percent
Alexandria City VA	27,641	5.24 percent
Montgomery Co, MD	16,943	3.21 percent
Loudoun Co, VA	16,420	3.11 percent
Fairfax City, VA	15,741	2.98 percent
Prince George's Co, MD	9,594	1.82 percent
Prince William Co, VA	7,013	1.33 percent
Falls Church City, VA	4,061	0.77 percent

#### 4. Transportation Decision Making

Management of transportation to maximize its usefulness and minimize its adverse impact on the environment is made very difficult because of the complex interrelationships of federal, state, regional, sub-regional and local entities that are all involved in Fairfax County transportation planning and funding. Local initiative in addressing transportation needs is further limited because the commonwealth of Virginia owns and maintains every public road in the county. Even subdivision cul-de-sacs are state roads.

The complexity of solving transportation problems in Fairfax County and mitigating the adverse environmental impact of inadequate or less than optimum projects can be better visualized by reading the *Northern Virginia Transit Funding Resource Guide* issued by the Northern Virginia Transportation Commission. This Resource Guide describes the many sources of funds that are available for transit projects and lists over 50 federal and 30 state and local funding programs. However, with governments at all levels facing a severely reduced capability to fund projects, they cannot provide funding levels to qualify for matching grants from many of these sources.

A variety of funds are available from the federal government, but they all come with specific requirements. Federal regulations, standards and guidance must be met before consideration will be given as to whether federal share contributions will be made available toward transportation needs.

In Virginia, the **Commonwealth Transportation Board** has final approval authority over the six-year transportation program for the entire state. Under guidance of the CTB, the Virginia Department of Transportation is responsible for building, maintaining and operating the state's roads, bridges and tunnels.

For Fairfax County, the transportation goals are included in, and promulgated through, the Fairfax County Comprehensive Plan. Those projects that are to be funded by county resources are included in the county's Capital Improvement Program. However, transportation projects that are to be funded through state and federal funding are included in the Virginia Department of Transportation's six-year transportation program.

The **Northern Virginia Transportation Coordinating Council** has developed a Northern Virginia 2020 Transportation Plan, December 1999, which is a comprehensive study identifying a multi-modal transportation solution to provide safe, efficient and economical choices for travel and transport of goods. The Plan has become part of the broader planning effort of the Transportation Planning Board of the Metropolitan Washington Council of Governments. Specific projects will be submitted by the commonwealth of Virginia for inclusion in Washington, D.C. region's financially Constrained Long Range Plan as funding streams open up.

The Fairfax County Department of Transportation initiated a **Transit Development Plan** study in January 2008.<sup>16</sup> This study, being conducted by a consultant team, will result in a 10-year plan to enhance the efficiency and expand the coverage of bus transit in the county. The study has four major elements: data collection; public outreach; analysis of existing service; and development of recommendations. The initial phase of public outreach was completed in September 2008. The data collection and analysis phase was completed in November 2008. The service recommendations were completed by the end of December 2009. Four additional tasks related to materials and processes used to provide information about Fairfax Connector bus service were begun in January 2010.

A further description of the interplay of planning and funding of projects between agencies in the metropolitan Washington area can be found in "A Citizens Guide to Transportation Decision-Making in the Metropolitan Region," 5/30/2008, which is available from the Transportation Planning Board of the Metropolitan Washington Council of Governments.

## **5. Programs, Projects, Analyses and Accomplishments**

### **a. Walking and Biking Facilities**

There are many potential environmental improvements that can be brought about by providing greater opportunities for non-motorized means to commute, travel or obtain recreation. They include: reducing air pollution caused by traffic congestion; reducing water pollution caused by roadway and parking lot construction made necessary by traffic demands; reducing

---

<sup>16</sup> Transportation Information for EQAC Updated July 20, 2010, Dan Southworth, FCDOT

noise pollution caused by on-road vehicles; and reducing energy consumption required to operate motorized vehicles.

i. Pedestrian Program<sup>17</sup>

Fairfax County's Pedestrian Program was started in 2002 following a spike in pedestrian fatalities. In 2006, the board endorsed a ten-year funding goal of \$60 million for new pedestrian projects. Through FY 2012, Fairfax County has designated \$58 million in federal, state and county funding to construct pedestrian improvements in high-priority areas of Fairfax County.

Major sidewalk projects are complete along Route 1, Route 29 and Route 236. Pedestrian intersection improvements are complete along Route 7, Route 28, Route 29, Route 50, Route 123, the Fairfax County Parkway and Old Keene Mill Road. At the beginning of FY 2011, over 100 pedestrian projects and over 100 bus stop projects are currently under design for future construction. Pedestrian and bike access are being constructed on most of the bridges crossing the I-495 HOT Lanes project and will improve some of the worst barriers to pedestrian and bicycle movement in Fairfax County.

The Fairfax County Department of Transportation has also funded priority roadway lighting projects and countdown signal improvements as part of the Pedestrian Program. In coordination with DPWES, roadway lighting projects are under way at initial project locations including George Mason University, Route 1, Columbia Pike and Oakwood Road at Van Dorn Metro. Fairfax County also has a greater number of modern countdown signals installed than any other jurisdiction in Virginia. The Fairfax County Department of Transportation initially funded VDOT signal upgrades at 150 locations, and VDOT has continued upgrading with state funding.

The Pedestrian Program also has a role in pedestrian education and outreach in Fairfax County. Fairfax County is the local government funding leader for regional Street Smart Pedestrian and Bicycle Safety Media campaigns, which have used television, radio, print and bus advertising to promote safety awareness responsibilities of drivers and pedestrians. The Pedestrian Program Manager, Bicycle Program Coordinator, Bus Stop Coordinator, Pedestrian/Bicycle Planner and Pedestrian Outreach Coordinator are all involved in community outreach. The Fairfax County Department of Transportation

---

<sup>17</sup> Transportation Information for EQAC Updated July 20, 2010, Dan Southworth, FCDOT; Fairfax County Pedestrian Program Activity Status Summary presented on August 11 to EQAC, and EQAC Minutes from the August 11<sup>th</sup> Meeting

coordinates with other facility resources and departments as appropriate.

The Fairfax County Police Department conducts pedestrian safety enforcement in high pedestrian crash areas countywide. In addition, Fairfax County is one of the few jurisdictions in Virginia permitted to install “Yield to Pedestrians in Crosswalk \$100 - \$500 Violation Fine” signs. Fairfax County has installed and maintains over 1,800 of these signs at 455 intersections.

ii. Fairfax County Comprehensive Bicycle Initiative<sup>18</sup>

The Fairfax County Comprehensive Bicycle Initiative, launched in 2006, continues to address the growing needs of area bicyclists and is making Fairfax County bicycle-safe and friendly. The program has four major goals: (1) creating a county bicycle route map; (2) establishing a staff position with substantial responsibilities devoted to bicycle facility planning, implementation, and coordination; (3) identifying roadways that may accommodate on-road bike lanes with little or no additional construction; and (4) creating a pilot program in a specific area of the county for the establishment of an interconnected bicycle network.

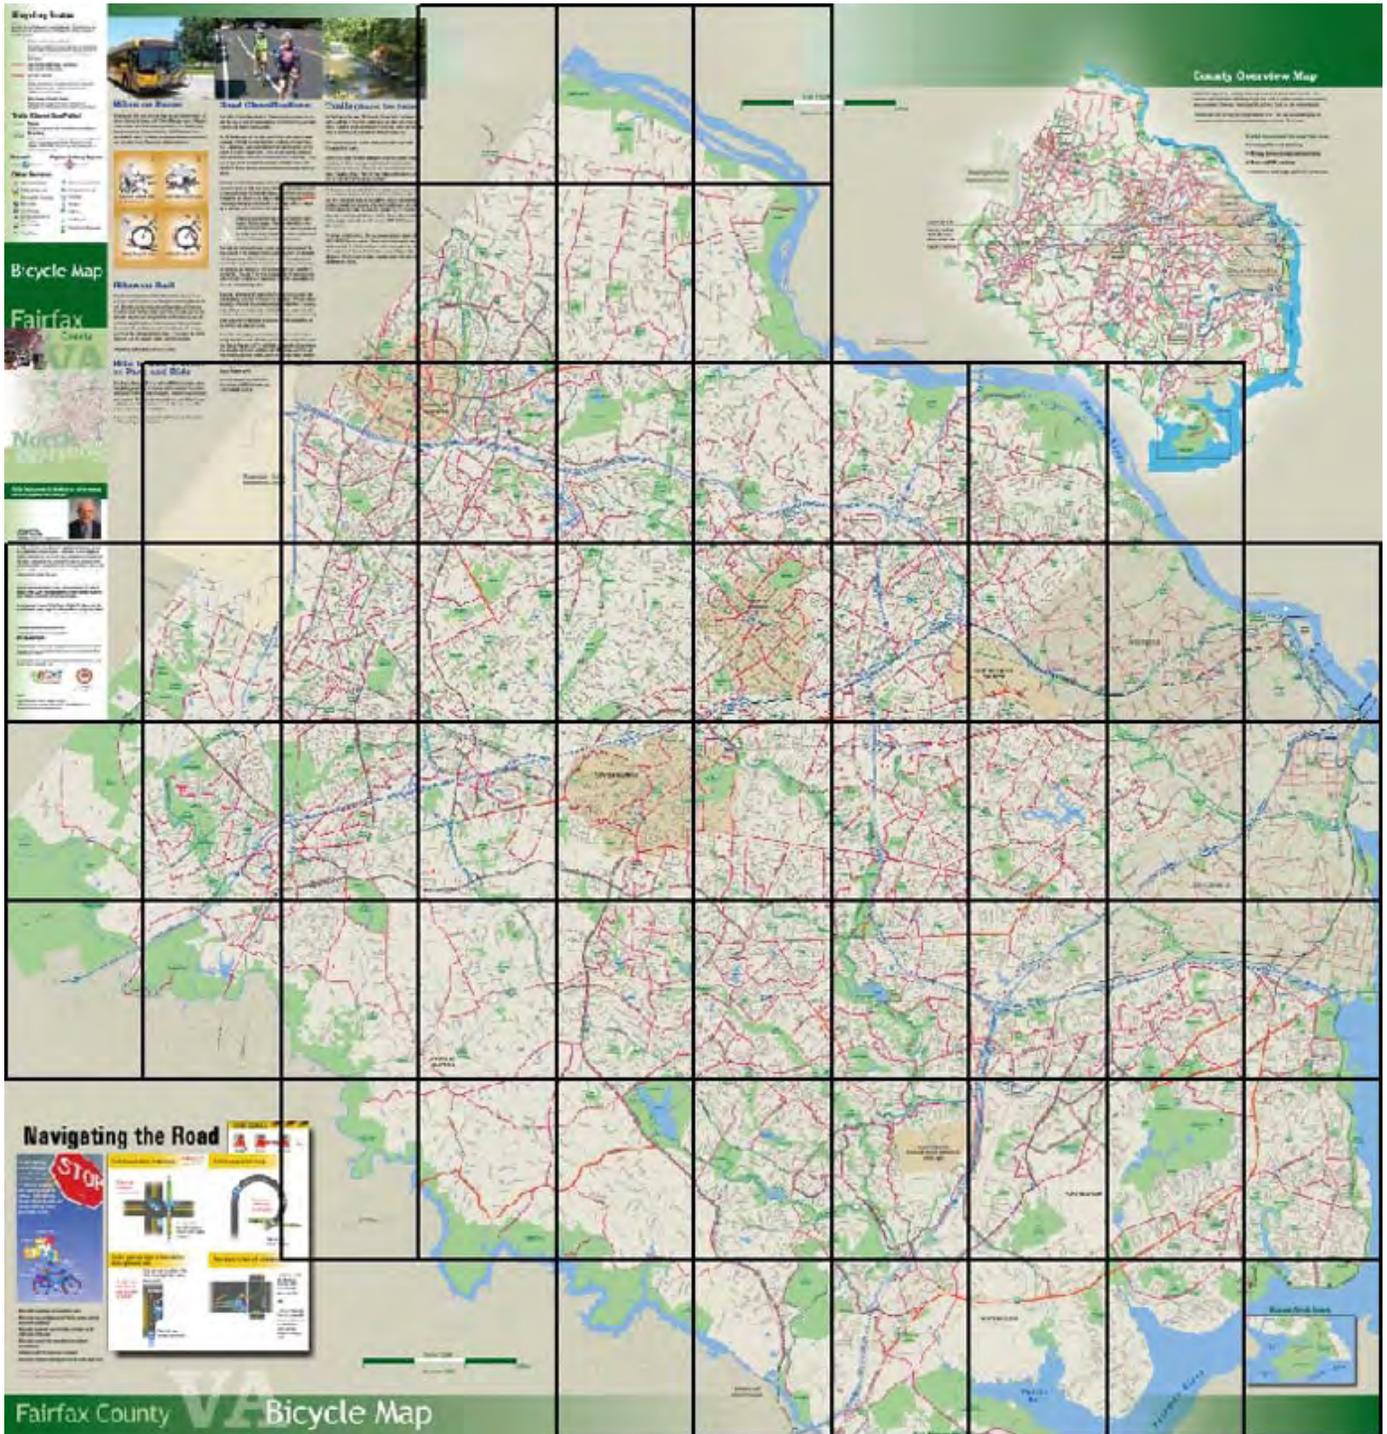

As directed by the Board of Supervisors, a major goal was the development and printing of the first “Fairfax County Bicycle Route Map,” issued on May 16, 2008, “Bike to Work Day.” The map defines a network of preferred as well as less preferred on-road bike routes that enable bicyclists to traverse the county. The county printed about 6,000 copies in the initial print job and will follow up with another run of approximately 41,000 more as a result of demand for the maps. The Fairfax County Department of Transportation was also awarded a transportation enhancement grant for fiscal year 2010 to complete a bicycle map that highlights a route along historic Civil War sites in Fairfax County. Electronic copies of the “Fairfax County Bicycle Route Map,” map are available for download in PDF format at <http://www.fairfaxcounty.gov/fcdot/bike/bikemap.htm>. A small scale copy of this map is shown in Figure II-8.

Utilizing county transportation bond funds and federal Congestion Mitigation and Air Quality Grant funds, project scopes are being prepared for bicycle spot projects countywide. Projects include the installation of bicycle racks and lockers, construction of missing segments of trails and bridges in order to provide connectivity and

---

<sup>18</sup> Transportation Information for EQAC Updated July 20, 2010, Dan Southworth, FCDOT; EQAC Minutes from August 11, 2010

Figure II-8. Fairfax County Bicycle Route Map

Source: Fairfax County Department of Transportation, <http://www.fairfaxcounty.gov/fcdot/bike/bikemap.htm>.

retrofitting roadways with on-road bicycle facilities. Working in conjunction with the Fairfax County Park Authority, the Fairfax County Department of Transportation completed the Wolftrap Road Bike/Pedestrian bridge in 2010. Planned construction includes the Pohick Stream Valley “VRE 2 VRE” connection and the “Bobann Bikeway” project, which would connect Centreville to the Stringfellow Road Park and Ride.

The Fairfax County Department of Transportation continues to manage a bicycle locker rental program that was initiated in 2007 at the Reston East and Herndon Monroe Park-and-Ride lots. Additional lockers and racks are planned at various locations countywide. Over 150 new bicycle racks are in the process of being installed in 2010, with 48 new lockers to come in the following year.

Other bicycle-related county projects include the development of bicycle parking standards for Fairfax County, working with VDOT to develop bicycle-way signage, providing support to the development community and continuing outreach and safety efforts.

**b. Fairfax County Telework Initiative and Employer Services Program<sup>19</sup>**

Fairfax County has a teleworking option for the county staff. The support from the Board of Supervisors and the County Executive, plus the marketing and training campaign and technology enhancements, are working. Increased interest in telework is evident in the number of employees who participate in training sessions, ask for information via email and phone and sign up for telework. There are now teleworkers in departments that previously had none. Managers have expressed an interest in telework as a way to continue business operations during inclement weather or emergencies. The county’s active partnership in regional efforts to expand telework keeps it current on best practices and identifies the county as a resource for other businesses on teleworking.

With respect to the county’s telework program, the increased publicity and organizational focus on teleworking has resulted in an increase in the number of teleworkers, from 138 in December 2001 to over 1,000 by 2005 (thereby meeting a goal that was set based on the Metropolitan Washington Council of Governments’ goal of having 20 percent of the regions’ eligible workforce teleworking by 2005), and the number of teleworkers continues to increase, as there are, **as of August 2010, 1,500 county teleworkers**. Based on information provided to EQAC previously regarding the 2005 telework goal, it is estimated that county teleworkers potentially saved roughly 80,000 commuting hours and 2.5 million commuting miles in

<sup>19</sup> E-mail from Catherine Chianese, Assistant Fairfax County Executive, August 13, 2010

a year. The county will continue to increase the number of county workers who telework and will emphasize telework as an important component of its Continuity of Operations Planning, in order to ensure that county workers have the tools to work from remote sites.

Promotion of teleworking is also part of the county's Employer Services Program. This program partners with area businesses to facilitate the creation and implementation of commuter programs. Commuter programs have been shown to improve productivity, make recruitment and retentions easier and improve morale. The Employer Services Program also partners with businesses and the state and federal governments to encourage telecommuting and the use of mass transit, carpools, vanpools, biking and walking instead of drive-alone commuting.

A description of the Employers Service Program can be found on the county's website at: [www.fairfaxcounty.gov/fcdot/Employer.htm](http://www.fairfaxcounty.gov/fcdot/Employer.htm).

**c. Major Transportation Projects<sup>20</sup>**

**i. Dulles Rail Project**

The Dulles Corridor Metrorail Project (DCMP) has completed its first 15 months of construction along the extension between I-66 at the Dulles Connector Road and Wiehle Avenue in Reston. Approximately 12% of the construction is complete, with major work efforts under way: on the alignment along the Dulles Connector road; along Route 123 between International Drive and Route 7 in Tysons Corner (tunnel construction); and station construction at the Tysons East station, Central 123 station and Wiehle Avenue station. Utility work is approximately 90% complete along Route 7 and major reconstruction of Route 7 began in July 2010. The project is within budget and is slated to begin passenger service in December 2013.

The DCMP has been working closely with landowners in Tysons Corner to accommodate requests by landowners to provide for direct connections to the Metrorail system. At the Tysons West station, the entry pavilion on the east side of the station will be relocated into the proposed development by Georgelas and Cherner at the intersection of Route 7 and Spring Hill Road. SAIC has requested a direct connection to the entry pavilion on the east side of the Central 7 station and has submitted a request to DPZ to amend its development plan to include an elevated pedestrian bridge to the station. Along Route 123, Capital One has requested an additional ground level entry to the station to accommodate its employees and a future 'knockout' panel at the mezzanine level as its site fully develops. Work is continuing with

---

<sup>20</sup> Transportation Information for EQAC Updated July 20, 2010, Dan Southworth, FCDOT

Tysons Corner Center to adapt the south side entry pavilion at the Central 123 station to accommodate the development conditions placed on its approved rezoning.

The Fairfax County Planning Commission and the Board of Supervisors approved the rezoning for a transit oriented, mixed use (TOD) development on nine acres of county land at the Wiehle Avenue station. Comstock Companies will construct the development as well as a below-grade 2,300 space parking garage, 12 bus bays, 45 kiss-and-ride spaces and 150 secure bicycle spaces for the Metrorail station. The project will include approximately 1.3 million square feet of office, retail and residential uses; 19.5% of the residential units will be affordable dwelling units. The Metrorail facilities will be operational when the DCMP opens for passenger service in December 2013.

The Metropolitan Washington Airports Authority (MWAA) anticipates completing Preliminary Engineering (PE) for Phase 2 of the Dulles Corridor Metrorail Extension (Wiehle Avenue to Dulles International Airport, and Loudoun County) by spring of 2011. At the completion of Phase 2 PE, and the delivery of a cost estimate for Phase 2, Fairfax County will have 90 days to determine if it will participate in the project or forego three additional rail stations at Reston Town Center, Herndon-Monroe and Route 28. In December 2009, the Board of Supervisors approved a petition of landowners to form a Phase 2 tax district to provide \$330 million to fund a major portion of the county's portion of Phase 2 of the DCMP. MWAA will initiate Phase 2 final design and construction through a competitively procured design/build contract that will be awarded by the 1<sup>st</sup> quarter of 2012. This process will result in rail passenger service commencing by late 2016 to early 2017.

On February 23, 2010, the Board of Supervisors approved a Special Exception Amendment (SEA) for expansion of the West Falls Church Service and Inspection Yard to accommodate rail car storage and maintenance for Phase 1 of the DCMP extension to Wiehle Avenue. The SEA will expand the yard capacity by 42 rail cars and add more maintenance bays in a new annex building. As part of the approval, MWAA and the Washington Metropolitan Area Transit Authority (WMATA) agreed to construct a new stormwater detention pond and rehabilitate the existing stream that runs through the property. In addition, a \$10 to \$12 million cover box will be installed over the eastern most curved track in the yard to reduce "wheel squeal" that occurs as rail cars are moved within the yard. These improvements will be implemented to coincide with the initiation of passenger service to Wiehle Avenue.

The Dulles Corridor Metrorail Project website is at:  
<http://www.dullesmetro.com/>

ii. Tysons Metrorail Access Group<sup>21</sup>

On June 1, 2009, the Board of Supervisors directed staff to develop a comprehensive public participation mechanism to bring relevant Tysons Corner studies and projects together to allow the public to evaluate and comment on program improvements to the bus, pedestrian and bicycle network accessing the four Tysons Metrorail stations. To meet this objective, the Tysons Metrorail Station Access Management Study (TMSAMS) started in January of 2010. A TMSAMS Advisory Group has been formed to guide the study, determine how to present the information to the public and collect public input. Ultimately, the public input collected through this process will be used to prioritize bicycle, bus transit and pedestrian transportation improvements that will enhance access to the four new Metro Stations in Tysons Corner.

The first TMSAMS Advisory Group meeting was held in March 2010. Since then the advisory group has been meeting twice per month. The advisory group is currently developing a TMSAMS website, designed to inform the public about planned facilities and obtain input for project prioritization. The Fairfax County Department of Transportation has fairly detailed information regarding planned bus transit and pedestrian improvements that will serve Tysons. However, the Tysons Bicycle Master Plan study is just beginning, and taking this into consideration, the advisory group decided to time the TMSAMS public outreach concurrently with the Tysons Bicycle Master Plan schedule. Bicycle facility recommendations from the Master Plan should be available by the beginning of the fall 2010. When these facility recommendations are available, the TMSAMS effort will move forward to present these options to the public along with the planned facilities currently available for bus transit and pedestrian improvements. Until bicycle facility recommendations are available, the advisory group will work on refining the data currently available, determine how best to present this data to the public and collect input.

Approximately \$4 million in Congestion Mitigation and Air Quality funds are being used to implement pedestrian and bicycle improvements identified in the *Reston Metrorail Access Group* study for the Wiehle Avenue station.

iii. Columbia Pike Streetcar Project<sup>22</sup>

The Columbia Pike Transit Alternatives Analysis (Pike Transit Initiative) was conducted by WMATA and its engineering consultants with the cooperation of Arlington and Fairfax Counties from spring

---

<sup>21</sup> Transportation Information for EQAC Updated July 20, 2010, Dan Southworth, FCDOT

<sup>22</sup> Transportation Information for EQAC Updated July 20, 2010, Dan Southworth, FCDOT

2004 to spring 2006. WMATA undertook the Pike Transit Initiative to consider the development of an advanced transit system connecting the Pentagon/Pentagon City area with Bailey’s Crossroads. In May 2006, the Fairfax County Board of Supervisors endorsed the “Modified Streetcar Alternative” recommended in the Columbia Pike Transit Alternatives Analysis as the preferred transit alternative for the Columbia Pike corridor. The endorsement allowed the project to advance to the next phase of project development in which the project team developed a financial strategy.

After the conclusion of the Columbia Pike Transit Alternatives Analysis, the project team was awaiting the outcome of Virginia legislative action regarding the Northern Virginia Transportation Alliance funding assumption that changed due to the ruling of the Virginia Supreme Court. Based on the ruling, the project team decided to enter the Small Starts program (through the Federal Transit Administration (FTA)) to assist with financing the construction of the project.

Currently, the Pike Transit Initiative has entered the environmental documentation stage. A letter from the FTA agreed with the recommendation by the counties and its consultants that the environmental documentation needed for this project is an Environmental Assessment (EA). As part of the EA, the project team will determine the environmental impacts, ultimate alignment, minor preliminary engineering, a financial strategy and a project sponsor/operator that will advance the project through full engineering, construction and operation.

Funding for this project is anticipated from FTA, local and state transportation fund fees and taxes, as well as other options. Fairfax County’s current commitment for the environmental documentation phase is 20 percent. Fairfax County’s commitment for the total capital and operating expenses will be determined at a future date. Total capital costs for the board-adopted modified streetcar alternative are currently estimated at \$160 million. The annual operations and maintenance costs based on assumed operating plans and fleet sizes were estimated to be \$5 million (2005 dollars).

iv. High Occupancy Toll Lanes on the Beltway<sup>23</sup>

This project will build fourteen miles of new HOT lanes (two in each direction) on I-495 between the Springfield Interchange and just north of the Dulles Toll Road. These HOT lanes will allow the Beltway to offer HOV-3 connections with I-95/395, I-66 and the Dulles Toll Road

---

<sup>23</sup> Transportation Information for EQAC Updated July 20, 2010, Dan Southworth, FCDOT

for the first time. When completed, buses, carpools and vanpools with three or more people, and motorcycles can ride in the new lanes for free. Vehicles carrying two people can either travel for free in the regular lanes or pay a toll to ride in the HOT lanes. Tolls for the HOT lanes will change according to traffic conditions, which will regulate demand for the lanes and keep them congestion free - even during peak hours.

In addition to providing new travel choices, this project will also make a significant contribution to the Beltway's 45-year-old infrastructure, replacing more than 50 aging bridges and overpasses, upgrading 10 interchanges and improving new bike and pedestrian access. This project is made possible through a public-private partnership between the Virginia Department of Transportation (VDOT) and Fluor-Transurban.

Project construction is ongoing. At several interchanges, new overpasses have been constructed. Major traffic switches are scheduled for this construction season, realigning the main lanes of interstate 495 to their ultimate configuration and then construction will proceed creating the new inner lanes. VDOT continues to work and coordinate the project landscaping efforts with the Fairfax County Restoration Project. The project has an estimated completion date of early 2013, with revenue service collection in December of 2012.

v. I-95/395 HOV/BUS/HOT Lanes<sup>24</sup>

The Virginia Department of Transportation (VDOT) is partnering with Fluor-Transurban to develop an innovative project to relieve congestion on one of the nation's most heavily traveled roadways. It provides new choices that benefit everyone – carpools, transit riders, drivers, “slugs,” businesses and communities. The I-95/395 HOV/Bus/HOT Lane project will improve vital links between key employment, commercial and residential centers, ensure that the interstate continues to support the economic vitality of the region and create new public transportation and carpooling opportunities.

The project will expand the existing High Occupancy Vehicle (HOV) lanes on I-95/395 from two to three lanes and extend two new lanes south to Massaponax. All of these lanes will become High Occupancy Toll (HOT) lanes – meaning buses and carpools with three or more people can continue to use the lanes for free, while non-HOV motorists can choose to pay a toll and access the lanes as well.

---

<sup>24</sup> Transportation Information for EQAC Updated July 20, 2010, Dan Southworth, FCDOT

A Public Hearing was held February 9-11, 2009. Fairfax County submitted formal comments to VDOT, based on the March 30, 2009 Board item. VDOT is negotiating the project scope and price and finalizing the comprehensive agreement with Flour-Transurban. Fairfax County is coordinating with VDOT Mega projects on corridor issues such as transit, the Franconia-Springfield Pedestrian Bridge and Park and Ride lots.

VDOT and the private partners have not yet reached an agreement due to local government and community concerns and challenging credit market conditions. In the meantime, VDOT is continuing project development by:

- Addressing local traffic issues between Eads Street and Duke Street by working collaboratively with Arlington, Alexandria and Fairfax County staff.
- Working with Stafford, Prince William and Fairfax Counties and appropriate transit staff to develop a HOT lanes project from Garrisonville Road to just inside the Beltway.
- Working collaboratively with all affected stakeholders to assure that the significant transit capital and transit operating commitments are met.

**d. Transportation Alternatives and Accomplishments<sup>25</sup>**

i. Transportation Demand Management (TDM)

The county has integrated Transportation Demand Management (TDM) strategies into the land development process and is working to formalize this program. TDM proffers promote alternatives to single occupant vehicle trips. These proffers contain commitments to provide TDM services, goals for percentage trip reduction and remedies or penalties for non-attainment of proffered goals. The TDM proffer coordinator is negotiating proffers and monitoring implementation and performance of existing proffers. In FY 2010, TDM proffers were committed for new developments in Reston and Fairfax; such proffers are being considered in Tysons Corner, Merrifield, Mount Vernon and Newington. Proffer monitoring continues for properties in Tysons Corner, Vienna, Herndon and Fairfax.

A consultant study on integrating TDM into the land use and approval process is near completion. In fall 2010, the study and recommendations on TDM reductions and parking strategies for transit-oriented development will be completed and discussed in one or more

---

<sup>25</sup> Transportation Information for EQAC Updated July 20, 2010, Dan Southworth, FCDOT

public presentations. If adopted, the study recommendations will lead to more effective TDM strategies and formal arrangements for TDM proffers.

Preliminary findings from the TDM study were used to inform the TDM and Parking sections of the land use plan and zoning ordinance amendments approved for Tysons Corner.

ii. Bus Stop Safety and Access (Bus Stop Improvement Program)

Fairfax County places a priority on providing safe access to efficient transportation options, including pedestrian amenities and transit service. A comprehensive inventory and study of all bus stops in Fairfax County identified undesirable bus stop conditions for priority action. The board has identified \$2.5 million from the general fund and \$7.75 million in the 2007 Transportation Bond for improvements to the priority stops identified in the study. Since implementing the program, 73 sites have been completed. There are currently 129 sites in design, 25 in land acquisition and 11 under construction.

iii. Programs and Accomplishments

The combined demand management programs and outreach efforts of the Fairfax County Department of Transportation's Transportation Services Group, along with programs sponsored by the Metropolitan Washington Council of Governments' Commuter Connections programs, have allowed the county to continue to reach thousands of people who live or work in Fairfax County with messages about environmentally friendly transportation options.

- Over 400 Fairfax County employers have implemented Transportation Demand Management (TDM) programs. Over 205 of those are at level three or four, which means they have implemented benefits or programs that significantly help to reduce single-occupant vehicles. Outreach to businesses to encourage employee transportation benefits programs this year reached over 187 new employers and 50,688 employees.
- The RideSources Program received over 1,576 applications from commuters looking for car or vanpool matches last year. Of the 18,845 people already in the ride-matching database commuting via car or vanpool, just under 2,789 reside in Fairfax County and approximately 1,811 work in the county.
- Within Fairfax County government, 199 employees participate in the Commuter/Transportation Benefits Program, taking public

transportation to work, and 20 percent of employees (roughly 1,500) telework at least one day a week. The county also provides reserved parking spaces for car and vanpools at some facilities.

- Information about transportation options such as the HOV lanes, Ridesharing, Guaranteed Ride Home, car sharing, using bus and rail and teleworking is disseminated at outreach events throughout Fairfax County. In total, The Fairfax County Department of Transportation participated in 47 events this year within the community such as town fairs, employer fairs, and public meetings.
- Fairfax County continues outreach efforts including congestion mitigation and support for BRAC construction and relocation efforts.
- Fairfax County is working with the VDOT Mega Projects construction and the Employer Solutions Team to provide transportation alternatives to employers impacted by both HOT Lanes and Rail to Dulles construction. This activity has given the Employers Services and RideSources Team additional exposure to decision makers with many of the top corporations and organizations in Fairfax County.
- The Fairfax County Community Residential Services Program has partnered with over 210 multi-family complexes, area developers and civic organizations to promote telecommuting and the use of mass transit, carpools, vanpools, biking and walking instead of drive-alone commuting.
- The Fairfax County Transportation Services Group also supports Transportation Management Associations and other organizations that assist commuters and the community, including the Dulles Area Transportation Association, LINK of Reston Town Center, TyTran in Tysons Corner and the Transportation Association of Greater Springfield.
- TaxiAccess, first initiated on May 1, 2007 for members of the Fairfax County disabled community, continues to provide subsidized taxicab service to Fairfax County residents who are currently registered users of MetroAccess, which is a transportation service provided by the Washington Metropolitan Area Transit Authority. TaxiAccess was implemented originally as a one-year pilot program and its funding has continued to be extended. It continues to provide its users with the ability to purchase up to eight coupon booklets (\$240.00 value) per year at only one-third the cost (\$80.00).

- *Seniors On-The-Go!* is the subsidized taxicab program that offers Fairfax County seniors the opportunity to purchase up to eight coupon booklets (\$240.00 value) at a discounted price. For the first time since the program's inception on March 1, 2001, the \$10 purchase price for a 33-ticket coupon booklet was raised on July 1, 2009 to \$20 due to the county's FY10 budget shortfall. Despite the increased price, the program remains popular, with over 250 participants added in FY10. Since the inception of the program, *Seniors-On-The-Go!* has enrolled 4,984 senior participants.

**e. Honing the "527 Process"**

At the request of the Board of Supervisors, EQAC reviewed impacts on Fairfax County operations and residents from the passage of Chapter 527 of the 2006 Acts of Assembly, Traffic Impact Analysis Regulations, effective June 30, 2008. EQAC reviewed this issue with VDOT and county staff. The review was to assess any burdens imposed or values gained from the VDOT 527 process based on the first-hand experiences of staff. The general consensus is that, after working out initial start-up issues and adapting county procedures, the regulations have not added a significant burden and have provided a value to the county by improving the quality and consistency of proposals submitted for consideration by the development community.

County staff addressed concerns that the process could be burdensome, time consuming and intrusive. Fairfax had processes in place that were already performing the substance of the studies through various practices and timeframes that 527 would supplant. Through the startup phase, staff adapted its procedures to comply with the regulations while gaining value from the process.

The general view is that the county has gotten through the bugs of implementation and now there is added value in the standardization of submissions. In addition, staff cited some examples where the 527 process was leveraged to improve the level of developer commitment. The 527 process encourages developers to provide more rigorous transportation studies in a standardized system. Prior to the 527 process, staff requested such information but received studies that were inconsistent or incomplete. By having studies done up front, the county gets good information for the rezoning process that is used to enhance the decision and negotiating process.<sup>26</sup>

---

<sup>26</sup> Memo from Stella Koch, Chairman, Environmental Quality Advisory Council to the Board of Supervisors August 11, 2010

## **E. THE INTERRELATIONSHIP BETWEEN LAND USE AND TRANSPORTATION**

The above sections presented “Land Use” and “Transportation” as separate environmental issues. The focus of this section is on the interrelationship between land use and transportation. Throughout this chapter, three fundamental challenges are addressed:

- The county is rapidly approaching build-out and is transitioning from a growth focus to redevelopment.
- The county transportation systems are strained by congestion and getting further constrained by sprawl beyond the county.
- The county will continue to grow in population and prosperity, putting more pressures on the environmental quality and quality of life, which are underpinnings of that growth and prosperity. It needs to provide residential, commercial and transportation options for more people while increasing environmental stewardship.

As the concept plan becomes realized, the transportation infrastructure must be in place to accommodate those new living and working populations. With the county reaching build-out, the transportation options are constrained. Dense options, such as Metrorail and HOV, are enablers of future growth. Alternatives and choices, such as mixed-use development, transit-oriented development, telecommuting and flex-work, reduce the amount of transportation that is required.

Combining the land use projections with transportation planning is essential for the county to continue to grow and prosper in a way that is sustainable. By considering the land use and transportation facets of future decisions together, the county can continue to maintain a high quality of life. Conversely, when land use or transportation decisions are made in isolation, they will exacerbate the problems of build-out and congestion and negatively impact quality of life.

The county is well along this path with the designation of Urban, Suburban and Transit centers, and the progress made in 2010 as described throughout this chapter. The Board of Supervisors has adopted Comprehensive Plan guidance for several areas based on the recommendations of board-appointed task forces. The comprehensive results of these efforts have been impressive, and EQAC anticipates similar results from ongoing and future task force efforts. Equally important are policy changes that encourage more comprehensive planning, such as Transportation Demand Management.

## 1. Programs, Projects and Analyses

This section reviews projects that have combined elements of land use and transportation via special studies or revitalization districts that incorporate mixed use and transit oriented development. They are in various stages, from conceptual to planning to implementation, and provide valuable lessons for future projects. A consistent thread that runs through them is the holistic integration of Land Use and Transportation that has contributed to public acceptance and enhanced utility.

### a. Tysons Corner Urban Center

Tysons Corner is the only Urban Center designated in The Fairfax County Comprehensive Plan (June 22, 2010). It consists of 1,700 acres of land that currently house 16,000 residents and provide employment for roughly 105,000 people. The Comprehensive Plan for Tysons Corner has evolved over the past 48 years. In 1960 Tysons Corner was first viewed as having potential to become the Fairfax County “downtown.” In 1975 the Board of Supervisors commissioned a special study that guided development through 1993. In 1994 a second major study was commissioned that produced a significant amendment to the comprehensive plan. The result of this long term planning is mixed. On the positive side, Tysons Corner has become a successful economic engine for the county as the 12<sup>th</sup> largest employment center in the United States. On the negative side however, the area faces significant challenges with traffic congestion, pedestrian accessibility, stormwater management and environmental impact. It has effectively become a destination, not a place to stay, and it lacks the essential 24-hour vibrancy of a traditional downtown.

In March 2005, the Fairfax County Board of Supervisors created the Tysons Land Use Task Force with the following mission to update the 1994 Plan to:

1. Promote more mixed use.
2. Better facilitate transit-oriented development.
3. Enhance pedestrian connections throughout Tysons.
4. Increase the residential component of the density mix.
5. Improve the functionality of Tysons.
6. Provide for amenities and aesthetics in Tysons, such as public spaces, public art, parks, etc.

In September 2008, the task force delivered a report containing a revised Vision and Area Wide Recommendations. Throughout the three year process, the task force worked closely with over a dozen public and private agencies, engaged with world-renowned consultants that specialize in transit oriented design, and conducted 45 public meetings attended by over 2,000 participants.

The recommendations for a transformed Tysons Corner are organized around six key points:

1. Create a people-focused urban setting;
2. Redesign the transportation network to balance walking, biking, transit and the automobile;
3. Place a strong focus on the environment;
4. Develop a vital civic infrastructure of the arts, culture, recreation and the exchange of ideas;
5. Sustain and enhance the contributions of Tysons as the county's employment center and economic engine; and
6. Establish an authority for implementation that provides the flexibility, accountability, and resources necessary to achieve the vision.

The conceptual plan for the vision is shown in Figure II-9. The majority of the development is mixed use with different concentrations highlighted by their primary orientation towards residential, office, or evenly split.

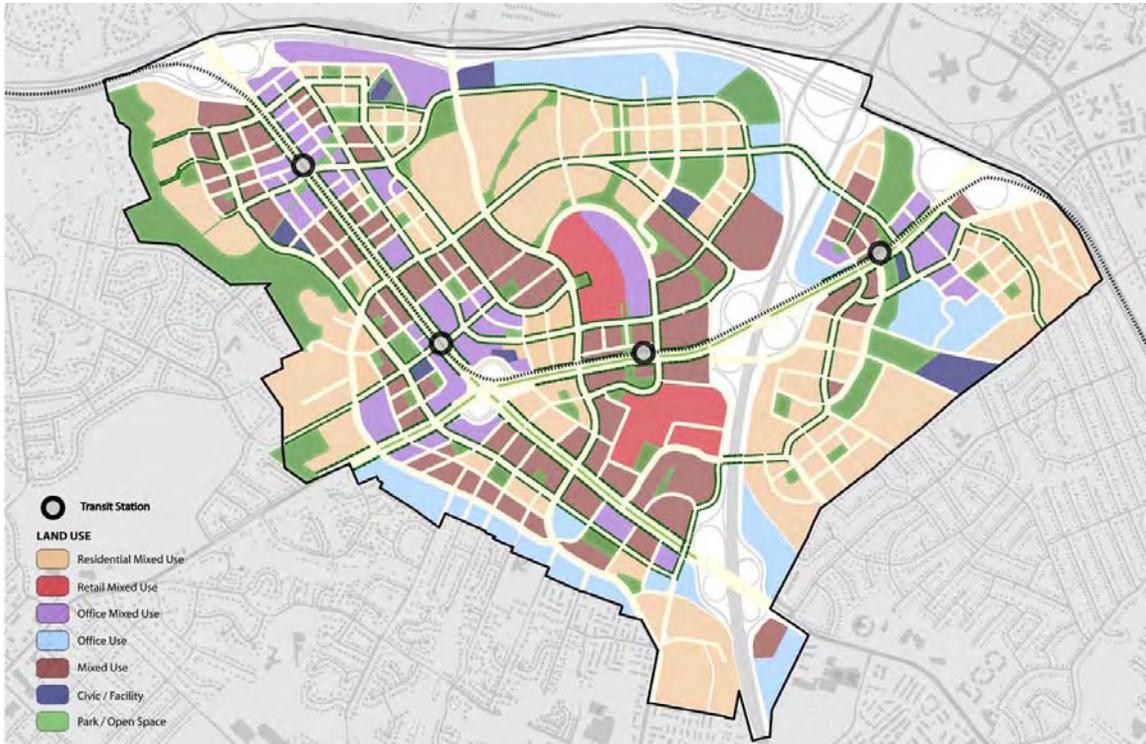

The vision will increase the residential population six-fold from 16,000 to 100,000 and almost double the number of jobs from 116,000 to 200,000. This is more balanced and will increase the vibrancy of the community.

Transportation will be centered on the four metro stops, with significant density within 1/8 mile of each station tapering outward. A new circulator transit is proposed to weave between the metro stops and the community. To encourage development along the circulator routes, additional development density is planned within 400-600 feet of the circulator route.

The plan is subdivided into eight separate districts or places, each with a particular character. These districts are effectively neighborhoods that allow further detailed planning. The connectedness and uniqueness of each place will be mutually supportive and add vibrancy.

Environmental stewardship is an important aspect of the plan. Specific objectives and incentives are presented for green buildings. Open space is an integral part of the conceptual plan, with 160 acres identified as open space or parkland. Rigorous storm-water management practices are recommended to restore stormwater retention to the equivalent of forested condition. Redevelopment will include stream valley restoration. With this green-focused redevelopment the plan should help the county achieve an 80 percent reduction in carbon emissions by 2050 with the goal for Tysons Corner to achieve carbon neutrality by 2030.

**Figure II-9: Tysons Land Use Task Force's  
Recommended Conceptual Plan for Tysons Corner  
(Land Use, Parks and Open Space Network)**

The Vision and Area Wide recommendations were the first milestone for an updated comprehensive plan. The next steps that needed to be taken were the development of Area-wide plan text, District and Sub-district Plan text, and a Draft Plan Amendment. Ultimately, a Comprehensive Plan amendment for Tysons Corner was adopted by the Board of Supervisors on June 22, 2010.

As the county begins to implement the recommendations of the Comprehensive Plan for Tysons Corner, there are two significant transportation projects under way that are being coordinated by other authorities:

1. The Dulles Corridor Metrorail Project is proceeding with plans to extend the Metro from East Falls Church to Wiehle Avenue with four stations in Tyson Corner. The Comprehensive Plan for Tysons Corner is aligned with the Metrorail construction, with specific bonus density increases designed to be phased in with the Metrorail construction. This project is under the authority of the Metropolitan Washington Airports Authority.

2. The I-495 Virginia HOT Lanes Project will deliver the most significant enhancements to the Beltway since its opening in 1964. It includes two new lanes in each direction from the Springfield Interchange to just north of the Dulles Toll Road. This project falls under the authority of a public/private partnership between VDOT and two private corporations.

These three projects are executing concurrently, with agreements to coordinate as they move forward. Having three separate authorities responsible for implementing different aspects of land use and transportation is not an ideal situation. The agreements in place are a first step towards an integrated approach. With multiple levels of decision making authority distributed among the county, state and federal governments, such coordination may be the only practical arrangement. It however highlights the complexity involved in integrating land use and transportation.

#### **b. Dulles Corridor Metrorail Project**

Rail service has been envisioned in the Dulles Corridor since construction of Washington Dulles International Airport in the late 1950s, when the right-of-way for future rail was reserved in the median of the Dulles Airport Access Road. That vision is now becoming a reality. The first phase will connect East Falls Church to Wiehle Ave, passing through Tysons Corner and providing the transit component for the new Tysons Corner Urban Center. The second phase will link Wiehle Ave through Reston to Dulles Airport. The Metropolitan Washington Airports Authority is responsible for the construction with funding being provided by the county, the Commonwealth of Virginia and the U.S. Department of Transportation.

On March 10, 2009, the Secretary of the U.S. Department of Transportation executed the Full Funding Grant Agreement with the Metropolitan Washington Airports Authority to provide \$900,000,000 of federal funds to Phase 1 of the Dulles Corridor Metrorail Project. This action finalized the funding plan for the \$2.7 billion project.

The Dulles Corridor Metrorail Project has completed its first 15 months of construction along the extension between I-66 at the Dulles Connector Road and Wiehle Avenue in Reston. Approximately 12% of the construction is complete, with major work efforts under way: on the alignment along the Dulles Connector road; along Route 123 between International Drive and Route 7 in Tysons Corner (tunnel construction); and station construction at the Tysons East station, Central 123 station and Wiehle Avenue station. Utility work is approximately 90% complete along Route 7 and major reconstruction of Route 7 began in July 2010. The project is within budget and is slated to begin passenger service in December 2013.

Phase II of the Dulles Metrorail project will complete the extension of the new Silver Line to Dulles Airport and into Loudon County. Phase II will be funded primarily through bonds issued in relation to revenue collected from Dulles Toll Road tolls. In December 2009, the Board of Supervisors approved a petition of landowners to form a Phase 2 tax district to provide \$330 million to fund a major portion of the county's portion of Phase 2 of the DCMP. MWAA will initiate Phase 2 final design and construction through a competitively procured design/build contract that will be awarded by the 1<sup>st</sup> quarter of 2012. This process will result in rail passenger service commencing by late 2016 to early 2017.

An additional critical funding source will be the Metropolitan Washington Airports Authority Dulles Toll Road rate increases at specific on-ramps, to take effect in 2010, with an additional increase at the Main Plaza in 2012.

**c. Dulles Corridor Special Study**

On May 18, 2009, the board authorized a special study of the Reston segment of the Dulles Corridor, in conjunction with the review of the Reston Master Plan, to look at the 20 North County Area Plans Review nominations submitted. This special study is being conducted in the following four segments: 1) a land use college and existing conditions analysis; 2) a review of the planning for the Town Center and the Reston areas along the Dulles Corridor; 3) a review of planning principles for Reston and the planning for the Reston residential neighborhoods; and 4) a review of the Reston Village Centers.

**d. Ft. Belvoir—Base Realignment and Closure**

On January 26, 2009, Fairfax County's Board of Supervisors adopted Comprehensive Plan Amendments for seven BRAC Area Plan Review nominations. The adopted changes modify Plan guidance for parts of the Woodlawn Community Business Center along Richmond Highway, the Springfield Community Business Center and a block near the Huntington Metro Station.

The purpose of the BRAC APR cycle is to determine whether amendment of the Comprehensive Plan is warranted given the relocation of approximately 20,000 jobs to Fort Belvoir. The impacts of the planned movements will significantly affect transportation systems, the natural environment and the quality of life both on- and off-post. The new jobs and residents moving to the area also may have a beneficial impact on the local economy.

### e. Revitalization Projects in Targeted Commercial Areas

The Fairfax County Office of Community Revitalization and Reinvestment is facilitating strategic redevelopment and investment opportunities in seven targeted commercial areas. Six of these are summarized below, and the seventh, Merrifield is summarized within the next section of this chapter (Suburban Centers). Unless otherwise noted, quotes are taken from the OCRR website.

**Annandale** - “Annandale business core is a culturally diverse hub that contains more than two million square feet of commercial space, including shops, restaurants, and service businesses that draw customers from throughout the Washington, D.C., Metropolitan Area. Excellent development opportunities exist within Annandale, which is in process of being studied to develop and refine an urban concept, with the goal of creating a town center consisting of a diverse mix of uses.”<sup>27</sup> The Annandale Design Guidelines for developing property or making site or building improvements, in Annandale, was completed in September 2009.

On July 13, 2010, the Board of Supervisors approved the Annandale Community Business Center Comprehensive Plan Amendment that covers approximately 200 acres, including all of the Commercial Revitalization District (CRD). The Plan uses a new form-based approach that provides flexibility by using building form and height to guide development instead of floor area ratios (FARs). The land use guidance recommends a proactive and comprehensive transformation of the existing, suburban form into a walkable, urban and active mixed-use center. Innovated urban design, streetscape, placemaking and context-sensitive techniques are also included. These techniques will enhance street presence, integrate a diversity of land uses and create distinct built form along the streetscape. The built form will relate to a network of usable and public urban plazas and parks at a variety of scales and functions and utilize planned transit services and facilities. These design and transportation elements will contribute to and establish a cohesive and unique identity; they will support revitalization efforts in Annandale.

The Annandale Transportation Study was completed in April 2010. This study “was conducted to analyze transportation system network alternatives, and to develop associated recommendations for a transportation system plan that handles local and through traffic in an efficient manner, while facilitating the community redevelopment and revitalization needs.”<sup>28</sup>

---

<sup>27</sup> <http://www.fcrcvit.org/annandale/index.htm>.

<sup>28</sup> Annandale Transportation Study, Final Report, April 2010, p.ii  
(<http://www.fcrcvit.org/annandale/comprehensive.htm>)

**Bailey’s Crossroads/Seven Corners** - “Located at the eastern edge of Fairfax County, this Commercial Revitalization District includes two dynamic business centers in Bailey’s Crossroads and Seven Corners capitalizing on the close proximity to Arlington County, the City of Alexandria, and downtown Washington, DC. Commercial and retail activity is concentrated along Columbia Pike (Route 244) and Leesburg Pike (Route 7). The core of the district includes Skyline Center, national chains, and a diverse array of locally owned stores and restaurants. Neighborhoods of single-family homes and apartments house the diverse population.

Great development opportunities exist for Bailey’s Crossroads and Seven Corners and it is envisioned to become more urban in character. The area is in the midst of a series of studies to develop and refine an urban concept with the goal of increasing density, mixing uses and improving the transportation network.”<sup>29</sup>

The Baileys Crossroads Planning Study focuses on evaluating and refining the concepts and strategies developed by the Urban Land Institute Advisory Services Panel.

On July 13, 2010, the Fairfax County Board of Supervisors approved the Bailey’s Crossroads Community Business Center Comprehensive Plan Amendment, which covers approximately 530 acres, including portions of the Commercial Revitalization District (CRD). This Plan Amendment sets forth a concept for future development that encourages a transition from a predominately retail environment to one that balances retail, office, residential, civic uses and open space. The plan also supports redevelopment of a “Town Center” to take advantage of the proposed transit stops for the Pike Transit Initiative Route from Pentagon City to Skyline. The recommended transportation improvements are intended to balance land use with infrastructure, and provide intermodal connectivity. Other guidance regarding open space and urban design is also provided in the new plan.<sup>30</sup>

In April 2010, the Bailey’s Crossroads Planning Study was presented to the community, as summarized in a county news release:

“The concept is intended to stimulate revitalization of this area, as well as take advantage of the [proposed streetcar route](#) to run between the CBC and Pentagon City. It features more mixed-used development; easier pedestrian, bicycle and transit rider access; and increased green spaces. Future development also would be compatible with the surrounding neighborhoods. It is envisioned that the densest development will be focused in the area near the future streetcar stop along South Jefferson Street on the north side of

---

<sup>29</sup> <http://www.fcrevit.org/baileys/index.htm>.

<sup>30</sup> <http://www.fcrevit.org/baileys/comprehensive.htm>

Leesburg Pike. This urban-style downtown will incorporate mixed-use buildings with ground-floor retail, a tree-lined grid of streets and a new arts center. A greenway will connect the north and south sides of Leesburg Pike.

...

The preferred concept is based on public input on two previous conceptual options, incorporating desired elements from both. An 11-member Citizens' Advisory Committee led the efforts to solicit public feedback.”<sup>31</sup>

**Lake Anne** – “The Lake Anne Commercial Revitalization Area, which includes the Historic Overlay District, is bounded by Baron Cameron Avenue (Rte 606) to the north, Lake Anne to the south, North Shore Drive to the west and Moorings Drive to the east.” “The Lake Anne Village Center Washington Plaza was the first area developed in the planned community of Reston, and its unique design and sense of place are recognized worldwide by planners, architects and developers.” “An integrated planning effort consisting of a stakeholder charrette, focus groups and planning, parking and transportation studies resulted in an amendment to the Fairfax County Comprehensive Plan on March 30, 2009. These changes reflect community values and perspectives, and position Lake Anne to again become an example of how innovative reinvestment and development can result in a renewed economic future.”

On August 8, 2010, the Lake Anne Village Center Commercial Reinvestment Plan was presented at a public workshop. The Lake Anne Village Center (LAVC) Short and Long Term Commercial Reinvestment Plan Public Workshop was designed to assist the commercial property and business-owners in identifying strategic opportunities to stabilize and sustain current establishments and to attract viable and complementary new non-residential uses to the LAVC. The county has engaged consultants to assess current conditions affecting the LAVC and develop short and long term concepts aimed at strengthening the long term economic viability of the LAVC non-residential uses. At the public workshop, the consultants discussed their findings, presented potential strategies and actions and solicited feedback on the LAVC Current Conditions Assessment, Market & Economic Overview, Commercial Management Program for LAVC and Development Concepts for LAVC.<sup>32</sup>

**McLean** - “The McLean area is renowned for its affluent, stable residential neighborhoods and a wide variety of community serving retail uses and businesses. Seeking to preserve and enhance the McLean Commercial Revitalization District’s small town environment while stimulating change, the revitalization concept for McLean centers on the creation of North and South Villages. This balanced reinvestment strategy primes the area for

<sup>31</sup> <http://www.fairfaxcounty.gov/news/2010/bailys-crossroads-land-use-concept-presentation.htm>

<sup>32</sup> <http://www.fcrevit.org/lakeanne/index.htm>.

expansion of community serving retail and businesses, additional residential development, public amenities and entertainment venues that will draw current and future generations to live, work, and play in the McLean CRD.”<sup>33</sup> The McLean Revitalization Corporation secured funding to test the viability of these concepts, estimate their costs and recommend an approach to implementation. The MRC has also been working with the Supervisor's office and the county to begin the first phase of a long-term process to move utility infrastructure underground.

**Richmond Highway Corridor** - “In general, the Richmond Highway corridor has an uncoordinated, strip-commercial appearance. The corridor itself serves a dual purpose of being a Main Street for surrounding residential development as well as a major north-south oriented transportation route, carrying heavy volumes of commuter traffic. The width of the highway varies from four to six lanes and service drives exist sporadically along its length.”<sup>34</sup>

The Southeast Fairfax Development Corporation (SFDC) is a public/private non-profit economic development corporation established to guide and assist businesses with locating or expanding into southeastern Fairfax County's Richmond Highway (U.S Route 1) Corridor. The SFDC is focused on three key areas: marketing; economic restructuring; and urban design. Since incorporating in 1981, it has been a key player in decisions to invest more than \$1 billion in new construction and redevelopment.  
(cite: <http://www.fcrevit.org/richmondhwy/sfdc.htm>)

**Springfield** - “The Springfield CRD consists of a variety of retail, commercial, office and residential activities clustered at the Franconia Road - I-95 Interchange, accessed via the Old Keene Mill Road, Backlick Road, and Commerce Street roadway network. While there have been some important redevelopment projects in the area such as the Towne Place Suites by Marriott, Waterford Conference Center, and the Marriot Residence Inn, much of the area consists of dated retail and commercial buildings. These sites continue to be rehabilitated over a period of years, creating a Central Business area within Springfield that continues to be functional, busy, providing opportunities for future expansion and development of a variety of business activity. The presence of the rebuilt I-95 Interchange, ramps, and Metro access at the Franconia-Springfield Transit Station, provide the Springfield CRD area with considerable advantages with respect to location and regional transportation access.

A number of projects are ongoing in Springfield and will provide catalyst for future redevelopment within Springfield. Springfield Mall was recently

---

<sup>33</sup> <http://www.fcrevit.org/mclean/index.htm>.

<sup>34</sup> <http://www.fcrevit.org/richmondhwy/index.htm>.

approved for redevelopment as a lifestyle shopping and entertainment center while adding over 2,000 residential units. In the northwestern area, the newly rebuilt [Richard Byrd Library](#) offers modernized facilities, meeting space, and a larger building than the previous library located at the same location. The library will be part of a walkable village town center convenient to well located and well maintained neighborhoods. Older apartment buildings are expected to be renovated and new luxury and workforce housing will be built. The new vision and redevelopment opportunities were recently adopted in the Springfield Connectivity Plan Amendment which was approved by the Board of Supervisors in January, 2010. The Comprehensive Plan changes included raising land use and intensity within the CRD to spur redevelopment, new transportation infrastructure improvements and provide detailed guidance with respect to urban design, streetscape, and placemaking concepts.”<sup>35</sup>

**f. Suburban Centers**

The county has designated seven areas as Suburban Centers. These contain a complementary mixture of office, retail, residential uses and parks (including Urban Parks and active recreation facilities) in a cohesive, moderate intensity setting. The Reston and Merrifield Suburban Centers are presented as representative of the comprehensive approach at each area.

**Reston Suburban Center:** The purpose of the plan for the Reston Suburban Center area is to encourage a more urban and transit-oriented development pattern. The objective is to create, at each Transit Station Area, a pedestrian-oriented core area consisting of mixed-use development that includes support services while maintaining transitional areas at the edges of the Transit Station Area.

Options for development in the Transit Station Areas allow higher intensities based upon compliance with specified conditions. Those options are designed to be site specific.

**The Merrifield Suburban Center:** On June 11, 2001, the Board of Supervisors adopted an amendment to the Comprehensive Plan that created the Merrifield Suburban Center. The area is served by the Dunn Loring – Merrifield Metrorail station and has regional and local access from I-66, I-495, Route 29, Route 50 and Gallows Road. As set forth in the Comprehensive Plan, the vision for the Merrifield Suburban Center includes two core areas: one focuses on development near the transit station and the second is planned to evolve into a town center. A new “Main Street” would connect the two core areas.

---

<sup>35</sup> <http://www.fcrevit.org/springfield/index.htm>.

“With the Dunn Loring-Merrifield Metro station and proximity to Interstate 495 and 66, Merrifield is one of the most centrally located and easily accessible areas in Fairfax County. Taking advantage of its location, Merrifield is planned to accommodate a new town center envisioned to be a thriving mixed-use area attracting new residents to Merrifield while also supporting the surrounding existing neighborhoods. This evolution is underway as recent mixed-use developments have brought additional residential, retail and office space while also providing amenities such as improved pedestrian connections and open space with Merrifield Park.”<sup>36</sup> On April 27, 2009, the Board of Supervisors created the county’s first Community Development Authority for the proposed Mosaic - Merrifield Town Center development.

**g. Transit Station Areas**

The county contains six Metrorail stations with four more slated for Tysons Corner and additional stations stretching through Dulles Airport along the Orange Line. These Metrorail stations are evolving into the transportation hubs for the county. Redevelopment can be seen at each Metrorail station. At both the Vienna and Dunn Loring-Merrifield Metrorail stations, the Washington Metropolitan Area Transit Authority is in the process of selling land adjacent to the stations to be transformed into transit oriented developments. These transit oriented projects provide the density for future growth with a smaller per-person traffic demand than single family housing that is typical in the county.

Some of the important lessons from the Fairlee development proposed adjacent to the Vienna Metrorail station include:

- Metrorail Capacity—the Metro system needs to expand to support new riders at these denser developments. Consideration is needed for both additional Metro cars and bottlenecks in the system, such as the Rosslyn tunnel.
- Replacement of Metrorail Parking—as redevelopment occurs at the transit stations, existing commuters need to be accommodated.
- School Capacity—as density increases, public facilities and schools need to be enhanced and expanded to support new residents.
- Transportation – Transportation Demand Management needs to be in place to verify transportation projections are in line with the development reality and mitigation plans need to be approved in

---

<sup>36</sup> <http://www.fcrevit.org/merrifield/index.htm>.

advance. The Fairlee project highlighted the need for better TDM across the county.

- Environmental Issues—include protecting the environment and providing environmental or natural space for residents. Environmental protection includes stormwater management as well as preserving air quality, managing waste, recycling and “green” building to minimize energy consumption. Environmental opportunity means that additional open space needs to be preserved for a denser human population.
- Mix of Uses—the mix of uses should help to create a synergy of uses resulting in an opportunity for both current and new residents to walk to shopping and other services in their neighborhood.
- Protection of Stable Neighborhoods— any increased density should be focused and constrained in a core area of the Metrorail station platform. The purpose of focusing density is twofold: first, TOD studies show that the highest percentage of transit ridership is generated by development within ¼ mile of the platform and that transit ridership drops off past the quarter mile. Secondly, the protection of stable neighborhoods requires that higher density be constrained and that density does not creep beyond clear, logical boundaries.

These lessons were specifically identified in the Fairlee Comprehensive Plan motion with specific language written into the Plan amendment to address them. As other transit stations are developed, similar consideration will be required.

**h. Cool Counties**

Fairfax County’s implementation of the Cool Counties program includes a number of exemplary efforts to reduce congestion and enhance transportation opportunities. Fairfax County’s Cool Counties strategy reflects the relationship between land use and transportation. The concentration of new development in relatively high intensity, transit-oriented centers characterized by a mix of residential, employment and retail uses, and the provision of opportunities for non-motorized transportation to, from and within these centers should serve to reduce, in aggregate, the number of motor vehicle trips and vehicle miles traveled, and the associated CO<sub>2</sub> emissions, that would otherwise occur through more traditional suburban development patterns in the region.

**2. Summary**

With the advent of build-out and the continued growth within the county, new development will be much more complicated than the initial development

within the county. There will be changes imposed on existing residents and businesses and impacts that are both real and perceived. Integrated land use and transportation planning is essential to maintain our quality of life into the future.

From an environmental perspective, the initial development of the county created a baseline that currently exists. As redevelopment occurs, be it at higher density or simply expanding existing development, the county goal should be to improve the existing baseline. There is no need for any further environmental degradation.

By continuing to integrate land use and transportation planning, the county can change and grow without sacrificing our quality of life.

## **F. STEWARDSHIP**

The array of forces that influence, drive and guide transportation and land use, including individual and corporate interests and behaviors, government regulations and processes, urbanization, climate change and cultural behaviors are highly interactive and complex, but manageable. This report focuses predominantly on the government role in managing these forces, but individual and corporate activities and behaviors are the predominant factors in the success or failure of environmental stewardship.

Fairfax County residents have a huge selection of opportunities to engage in environmental stewardship ranging from personal activities in their daily lives and work, to active participatory citizenship, to serving as a volunteer with government or non-profit organizations. A well-informed, active citizenry is fundamental to good government and livable communities – everyone should know how his or her government operates, what we as a community are up against, where our taxes go in “one of the best-managed jurisdictions in the region” and exactly what government functions are diminished or lost with revenue losses. The county provides extensive opportunities for residents, employers and employees to learn about issues and the functions of government and extensive opportunities to participate. The Fairfax County website is a wealth of well-organized information that can serve as a starting point for stewardship resources and to get involved. The county also performs extensive public outreach for a wide array of programs and development projects, bolstered by project specific efforts like the Reston Land Use College and the Tysons Task Force.

## 1. Stewardship Responsibilities and Opportunities for Individuals

### a. Transportation

Current transportation challenges in the county require critical stewardship activities from every household. According to the FY 2011 financial forecast presented at the Board of Supervisors' retreat in June 2009, there are approximately 945,000 registered vehicles in the county. According to the Metropolitan Washington Council of Governments, there are 350,714 occupied housing units in the county and "nearly three-quarters of Fairfax County resident workers commute to work by driving alone, compared to 68 percent of the Washington region's workers. Seven percent of Fairfax County's resident workers use public transportation, compared to 11 percent of the Washington region's workers. Thirteen percent of resident workers of both Fairfax County and the Washington region use car pooling as a means of transportation to their jobs." (Metropolitan Washington Council of Governments, "Fairfax County and the Washington Region: A Look at Economic and Demographic Characteristics," January 2006, p.5).

Everyone who uses transportation systems in the county can protect and nurture a healthy environment by assessing their needs and habits and looking into the growing number of alternatives to our current traffic volumes. Some examples of these alternatives, from the county website, include the following:

[Bike Program](#) In 2006 the Fairfax County Board of Supervisors approved the comprehensive bicycle initiative--a program committed to making Fairfax County bicycle friendly. The program addresses the needs of bicyclists through construction, planning, and public information.

[Community Residential Program](#) The Fairfax County Community Residential Program partners with residential developments, multi-family complexes and associations to promote use of alternative modes of transportation including public transit. CRP is dedicated to encouraging people who live, work or commute through Fairfax County to use mass transit, carpools, vanpools, walking, biking or teleworking instead of driving alone.

[Employer Services](#) The **Fairfax County Employer Services Program** helps businesses and employees find transportation solutions that will not only make companies more successful, but will improve the economic vitality and quality of life for the entire region. The Employer Services Specialists work on-site with businesses to help them realize the bottom-line benefits of commute alternatives.

[Guaranteed Ride Home](#) The **Guaranteed Ride Home Program** is for commuters who regularly take the bus, rail, vanpool, carpool, bike or walk to work. The program is designed to serve commuters who are worried about how they'll get home when an emergency arises.

[Pedestrian Program](#) The Pedestrian Program for Fairfax County addresses pedestrian safety and community generated pedestrian systems improvements. The Pedestrian Task Force, consisting of residents, appointed commission members and multi-disciplined staff, reviews existing Fairfax County pedestrian programs and activities, makes recommendations on improving these programs, develops coordinated education and outreach efforts and prioritizes funding for pedestrian projects

[Ride Sources](#) The RideSources Program is operated by the Fairfax County Department of Transportation and is a member of Commuter Connections. The RideSources program provides commuters with free ridesharing information, including ridematching assistance to form or join carpools or vanpools.

[Travel Training - MATT Bus](#) is a unique Fairfax Connector bus that has been renovated and designed for training senior citizens to travel safely and independently on regional transit systems.

The county also offers periodic events or opportunities for commuters to test alternatives. For example, Fairfax County participated in Try Transit Week, September 2010, a statewide event sponsored by the Virginia Department of Rail and Public Transportation to encourage everyone to avoid driving solo and give transit options such as bus, rail, carpools, vanpools and telework a try. [Car Free Day](#) is an international event celebrated every September 22 in which people are encouraged to get around without cars and instead ride a train, bus, bicycle, carpool, subway, vanpool, walk or telework. Car Free Day is open to all commuters, students, homemakers and seniors in the Washington metropolitan area.

#### **b. Land Use**

Residents may practice stewardship with regard to land use in three significant arenas: first is on their own properties, condo/homeowners association properties or apartment complexes; the second is in regard to development and revitalization activities in the county; and the third is through volunteering with organizations that have a stewardship mission. Residents can all do their parts at home by becoming aware of the impacts of their activities and the buildings in which they live. Residential stewardship may be as simple as planting a tree or small garden or choosing

more efficient appliances and as complex as retrofitting with green features, reducing impermeable surfaces or creating a certified wildlife habitat.

Land use issues, in terms of development and revitalization, are generally focused through the county's planning and zoning, community revitalization and public works programs, and the county website provides an excellent starting point. LDSnet, which provides access to information in the Fairfax County Land Development System is comprised of the Zoning and Planning System ([ZAPS](#)) and the Plan and Waiver System ([PAWS](#)). Through LDSnet, it is possible to search for individual zoning applications and/or plans and studies submitted to the county to perform land-disturbing activities. In addition, the LDS database can be searched for zoning applications or construction plan submissions meeting any combination of the thirty-one search criteria. The Northern Virginia Soil and Water Conservation District is an excellent starting point for residents wishing to learn more about stewardship practices and is also an entre to other stewardship organizations.

The Office of Community Revitalization and Reinvestment provides a number of online tools for residents to use to learn more about their own properties and revitalization efforts throughout the county. These include county land use applications such as [iCare—Real Estate Assessments](#), the [Land Development System](#) , and [My Neighborhood](#).

Volunteers are increasingly crucial to environmental stewardship, and residents and other volunteers can broaden their knowledge while serving. There are a wide variety and number of environmental organizations from which to choose and the Fairfax County website, at <http://www.fairfaxcounty.gov/volunteering/> and Volunteer Fairfax, at <http://www.volunteerfairfax.org> are good places to start.

## **2. Stewardship Responsibilities and Opportunities for Corporations**

The Fairfax County Economic Development Authority held a conference called “The New Urban Economic Model: The Transformation of Fairfax County” in June 2009 to “highlight what suburban communities can and should do to be well-positioned as the strong business communities of the future.” According to a national survey commissioned by EDA in preparation for the conference, of the respondents who work in the suburbs, nearly half (47 percent) wish that their working environment offered more, such as: more parks and other open spaces nearby; a broader array of employers and work environments; access to convenient public transportation; greater cultural diversity; a more walkable environment; and proximity to housing options. Fairfax County already has many of these characteristics; however, as this EQAC report indicates, these

characteristics may be in jeopardy without informed and concerted environmental stewardship.

As environmental stewardship has become more mainstream, the awareness and practice of corporate social responsibility have developed to address employee sensibilities, community relations and the “double bottom line.” There are tremendous opportunities in Fairfax County for partnerships across the sectors to join resources, interests and expertise to protect and enhance our quality of life. In every major development, and many minor ones, opportunities exist for the environmental and social services agencies to work with EDA, developers, the real estate industry and future corporate tenants in new or revitalized developments. Tysons, the Dulles Corridor and other transportation oriented development projects are good examples of success and foundations for extending strategic stewardship partnerships. Issues such as affordable housing and an aging population in the county have land use and transportation components; these can be folded into broader land use and transportation issues to create broader solutions.

*The involvement of business leaders in crafting a set of locally supported solutions would seem to be a very important element in the future. At the strategic end, business leader actions take the form of information development and communication with the public and decision-makers to emphasize the role of transportation in the state and regional economy. On the tactical end, business and community leaders can make the case for small-scale improvements that may not be evident to the operating agencies. And they can support individual workers who wish to choose carpooling, public transportation, flexible work hours, telecommuting or other route or mode options.<sup>37</sup>*

## **G. ACCOMPLISHMENTS**

Over the past years, Fairfax County has made changes to improve the county’s ability to integrate land use and transportation. EQAC commends the county for these noteworthy accomplishments:

- Adopting the Board of Supervisors Environmental Vision and creating the Environmental Improvement Plan to achieve that vision.
- Implementing powerful GIS technology including the Integrated Parcel Lifecycle System and the Virtual Fairfax 3-D Internet application, as well as acquiring and updating the data repository with planimetric data and oblique imagery.

---

<sup>37</sup> 2009 Urban Mobility Report, Texas Transportation Institute, July 2009

- Completing the demographic survey, which collects important data about future projections for the county population and residents' issues through 2025.
- Adopting the Comprehensive Plan amendment for Tysons Corner to create a new Fairfax County downtown with mixed use development and multi-modal transportation alternatives.
- Initiating special studies for mixed use areas that take a holistic approach to Land use and Transportation.
- Achieving the goal of 20 percent staff participation in telework.

Several lessons have been incorporated into the county planning process and the Area Plan reviews. New projects include staff analysis of induced transportation, educational and environmental impacts. The Planning Commission is also working to incorporate better integration with its work on Transit Oriented Development, Low impact Development standards and Transportation Demand Management.

This continued focus on adopting new techniques and systematic modeling is an accomplishment and EQAC encourages continued improvement in the integration of planning for land use and transportation.

## **H. COMMENTS AND ONGOING CONCERNS**

### **1. Innovative Governance and Collaborative Spirit**

EQAC commends the Board of Supervisors for rising to meet environmental and economic challenges with excellent governance and a persevering commitment to the environmental, economic and social foundations of sustainability.

There has been a truly remarkable convergence of challenges and trends met with the emergence of innovative governance and collaborative spirit in the stewardship of Fairfax County environmental resources in 2010. The convergence of efforts to close budget shortfalls and cope with impacts from the recession; implement significant land use and transportation projects like Tysons, Dulles Rail, HOT Lanes and Ft. Belvoir BRAC; and to manage comprehensively environmental challenges that are increasing in scope and urgency is unprecedented. The county has responded to these challenges with outstanding community engagement efforts on budget development and mega-projects; consolidation and leveraging of some government functions; collaborative planning for Tysons resulting in an exemplary growth and development approach, focused on activity centers, that incorporates many of the principles of sustainable development; continued development and application of the Environmental Improvement Program as a comprehensive integrated mechanism to plan, manage and monitor county-funded cooperative environmental stewardship; and development and commitment to the Greater Washington 2050 Compact.

## 2. Economic Opportunities for Revitalization

EQAC commends the Board of Supervisors for adopting “The Housing Blueprint: A Housing Strategy for FY 2011 and Beyond.” There are many land use and transportation efforts under way with significant relevance to the county’s housing goals. That coupled with evidence that the multifamily residential market holds the greatest potential for growth over the next year creates opportunities to leverage resources and interests.

Recovery from the recession presents a unique opportunity to view foreclosed homes, vacant commercial space and the expected employment rebound as targets of opportunity in achieving transportation and land use goals. EQAC suggests that the county:

- Continue to expand options for affordable housing by investing and partnering appropriately in locations that will need increased affordable options as the economy rebounds.
- Identify vacant offices and homes in locales with good transit options and coordinate with the real estate industry to aid in marketing those properties, thereby supporting new tenants with quality of life perquisites, improved commuting options and better residential/commercial or mixed use utilization.
- Coordinate with agencies and businesses to inform prospective/new workers of opportunities for desirable commutes and local housing amenities.

## 3. Comprehensive Understanding

The county is very good at understanding micro changes in the county. EQAC is concerned that the county is missing the macro effects of these micro changes. The Integrated Parcel Lifecycle System provides a base capability to capture and analyze the changes. EQAC will continue to work with staff as IPLS evolves to realize those benefits:

- Evaluate planning issues and development options, account for Comprehensive Plan changes and capture real time plan changes.
- Facilitate public safety and plan for emergency preparedness.
- Forecast future growth.
- Understand and analyze land use at a finer resolution and provide information on mixed use.
- Evaluate the environmental effect of each parcel and provide data necessary for modeling and understanding the cumulative effect of development.

EQAC commends the county for its decision to acquire a full set of planimetric data and oblique imagery. The full planimetric data layer is an important addition to the

gathering of base land use data. Oblique imagery is just starting to be incorporated and will lead to cost savings in the long run.

#### **4. Green Buildings**

The county is becoming a leader in building green buildings and has adopted Comprehensive Plan policy that includes broad support for green building practices and establishes linkages between the incorporation of green building/energy conservation practices and the attainment of certain Comprehensive Plan options, planned uses and densities/intensities of development, particularly in the county's growth centers. EQAC commends the county for committing to LEED certification (generally at the silver level) for all new county buildings and for its efforts to encourage green building and energy conservation practices through the zoning process. EQAC encourages the county to further support green building design and energy efficient buildings.

### **I. RECOMMENDATIONS**

#### **1. Holistic Land Use and Transportation Planning**

The current Fairfax County Comprehensive Plan traces its roots back to the Planning Land Use System program that culminated in 1975 and the "Goals for Fairfax County" adopted in 1988. Numerous reviews and regular updates have occurred over the past 35 years, yet as stated in the current Plan: "Many of the key components of the 1975 Plan remain in the revised Plan, such as the emphasis on focusing growth in 'Centers'; decreasing automobile dependency; and protecting environmentally sensitive areas and stable neighborhoods. What has changed are some of the means to achieve these ends."

EQAC continues to recommend that the county evaluate the Plan and publish an updated version of the "State of The Plan, An Evaluation of Comprehensive Plan Activities between 1990-1995 with an Assessment of Impacts through 2010" - (published in 1996) to cover plan activities between 1995-2011 and assess impacts through 2025.

With the renewed focus on revitalization, especially in the mixed-use centers, EQAC recommends that the county formalize and prioritize the focus on these centers. The special studies currently under way provide a blueprint and a basis for extracting best practices that can be applied. These special studies bring together a myriad of issues that can be addressed holistically and with public participation. This would be in lieu of a complete review of the Comprehensive Plan. This formalization should include incorporating GIS technology and standards for modeling future conditions and plan potential.

The evaluation and assessment will help clarify the historical lessons learned and identify areas that have proven successful at a macro level across the county and where it needs to be strengthened for a future vision. The comprehensive preparations are timely with the significant changes happening in the county.

## **2. Data and Modeling**

- a. EQAC is an advocate of the county GIS system and the Integrated Parcel Lifecycle System. We understand that there are financial and training costs associated with these advanced technologies, but we recommend that the county continue to invest in these capabilities. In particular:
  - New nonresidential pipeline data needs to be incorporated into IPLS. This would be very useful for forecasting and analyzing with existing data.
  - IPLS should incorporate the COG forecast for regional household and employment data.
- b. These tools have become essential for county staff to get its jobs done. EQAC recommends that the county continue to expand the ability of the general public to access these tools, as appropriate and feasible. This includes the next iteration of My Neighborhood and regular updates of the county digital data holdings.
- c. EQAC is impressed with the ways the county has incorporated GIS technology to transform business practices. We recommend that this continue with a larger focus on strategic applications, such as a GIS Based Digital Comprehensive Plan. This would combine:
  1. The Integrated Parcel Lifecycle System as a base data capability.
  2. Three dimensional representations of the county.
  3. Future projections for planned changes and growth, as well as various alternatives.
  4. Environmental and Transportation models that illustrate local and countywide impacts to understand how micro and macro changes impact the county.

Such information is necessary as the county becomes more complex and densely developed.

## **3. Improve Transit Utilization**

EQAC recommends that the county focus on improving transit utilization through a systematic plan that includes multiple options within a community. For example, the Virginia Railway Express Burke Centre EZ Bus provides a convenient alternative to commuting to the Burke Centre VRE station. This can be combined with pedestrian improvements, more connector bus options and biking trails that together provide a diverse transportation plan.

ANNUAL REPORT ON THE ENVIRONMENT

**CHAPTER III**

**AIR QUALITY**

---

# III. AIR QUALITY

## A. OVERVIEW OF AIR QUALITY IN FAIRFAX COUNTY

### 1. Introduction

Through a federal-state-regional-local partnership, the quality of our air is monitored for specific contaminants and actions are taken against those who cause the contamination level to exceed allowed limits. Fairfax County's major responsibility involves participation and coordination with regional organizations on plans intended to reduce air pollution and improve air quality. In addition, prior to June 30, 2010, county staff operated air quality monitoring sites throughout the county. More recently, the county has also taken a leadership role beyond the limits of its traditional air quality partnership and has helped formulate and subsequently adopted a program to reduce gases that may be the cause of global climate change. With regard to traditional air quality matters, Fairfax County has demonstrated a continuing commitment to being an active partner in improving the region's air quality.

#### a. Budget Impacts

Due to the overall budget constraints in the county, the Board of Supervisors made significant reductions in the budget for the Health Department, which ended the county's air quality monitoring program. Fairfax County's FY 2011 budget eliminated the Air Quality Monitoring Program and the two remaining merit positions that operated the county's air monitoring stations. The Program Manager position that deals with air quality will be retained and will continue to participate in regional air quality planning. On July 1, 2010, all monitoring activities conducted by Fairfax County ceased; at this time, the Virginia Department of Environmental Quality (DEQ) assumed full responsibility for air quality monitoring in the county. Vacant positions in the Fairfax County Division of Environmental Health are being held open as part of the agency's vacancy management initiative related to the FY 2011 budget.

During 2010, EQAC, along with several other parties, had many discussions with DEQ on the ramifications of shutting down air quality monitoring stations for which Fairfax County could no longer provide funding. EQAC examined a report provided by the State Advisory Board on Air Pollution, called "Evaluation of Virginia's Air Monitoring Network; November 30, 2009" (available at <http://www.deq.virginia.gov/air/sabrpts.html>). In addition, EQAC members followed up with an Environmental Health Program Manager to assess the specific monitors for which county funds

could no longer support operations. The Program Manager noted that the Metropolitan Washington area (which includes Fairfax County as well as other parts of northern Virginia, such as Arlington and Alexandria, and portions of Maryland, West Virginia and the District of Columbia) has a total of 17 air monitoring sites, and the U.S. Environmental Protection Agency's (EPA's) minimum requirement for the region is three monitoring sites.

In April 2010, EQAC submitted a recommendation to the Board of Supervisors that the board provide comments to DEQ regarding its annual air monitoring network review. Specifically, EQAC recommended that the board request that DEQ include one or more of the four existing Fairfax County monitors in its future monitoring plans. Given the historically higher level of ozone concentrations at the Mount Vernon station, as compared to other county-run stations, EQAC recommended that the board request that DEQ include the Mount Vernon station in the regional monitoring plans. At that time, similar requests were made by Representative Gerry Connolly (to EPA) and the Air and Climate Public Advisory Committee (to DEQ). The board referred this issue to its Legislative Committee, which discussed the matter in September 2010; EQAC's recommendation was not provided to DEQ.

## **b. Update on Air Quality Regulatory Changes**

### **i. Clean Air Interstate Rule**

In December 2008, the U.S. Court of Appeals for the D.C. Circuit issued an order to EPA to improve and replace the 2005 Clean Air Interstate Rule (CAIR). The court allowed CAIR to remain in effect temporarily while EPA worked to finalize the replacement rule concerning the transport of air pollution across state boundaries. On July 6, 2010, as a response to the court's concerns, EPA proposed a rule known as the Transport Rule that would require 31 northeastern states and the District of Columbia to significantly improve air quality by reducing power plant emissions that contribute to ozone and fine particle pollution. Emissions reductions will begin to take effect in 2012, and by 2014, this rule, along with existing state and EPA actions, would reduce power plant sulfur dioxide (SO<sub>2</sub>) emissions by 71 percent over 2005 levels. Power plant emissions of oxides of nitrogen (NO<sub>x</sub>) would drop by 52 percent. After considering public comments on this proposal, EPA will issue the final Transport Rule in spring 2011.

### **ii. National Environment Policy for fuel efficiency and greenhouse gas pollution**

In April, 2010, EPA and the U.S. Department of Transportation (DOT) announced a new national policy for automobiles that will reduce

greenhouse gas emissions and improve fuel economy for model years 2014 - 2018. The standards proposed would apply to passenger cars, light-duty trucks and medium-duty passenger vehicles covering model years 2012 through 2016. The policy requires these vehicles to meet an estimated combined average emissions level of 250 grams of carbon dioxide (CO<sub>2</sub>) per mile in model year 2016, which is equivalent to 35.5 miles per gallon (mpg) if the automotive industry were to meet this CO<sub>2</sub> level only through fuel economy improvements. Over the lifetime of the vehicles sold during 2012 - 2016, this proposed national program is projected to reduce U.S. CO<sub>2</sub> emissions by 950 million metric tons and save 1.8 billion barrels of oil.

**c. Update on NAAQS for Major Criteria Pollutants**

i. Atmospheric Ozone

In March 2008, EPA tightened the 8-hour ozone National Ambient Air Quality Standards (NAAQS) from 0.08 parts per million (ppm) to 0.075 ppm for both primary and secondary ozone standards, but the standard was challenged by a coalition of environmental and health advocacy groups.

On January 6, 2010, EPA made a proposal to strengthen the 8-hour “primary” ozone standard, designed to protect public health, to a level within the range of 0.060-0.070 ppm. EPA also proposed to strengthen the seasonal “secondary” standard, designed to protect sensitive vegetation and ecosystems, including forests, parks, wildlife refuges and wilderness areas, to a level within the range of 7-15 ppm-hours (cumulative peak-weighted index). EPA was to have issued final standards by October 31, 2010, which was later than the date of completion of this report.

On April 28, 2008, EPA announced that the Metropolitan Washington area (including the District of Columbia and portions of Virginia and Maryland) met the 1996 1-hour ozone National Ambient Air Quality Standard (NAAQS) by the required attainment date of November 15, 2005. Since then, EPA has revoked the 1-hour ozone standard, although some areas still have continuing obligations under that standard (“anti-backsliding”).

ii. Fine Particulate Matter--PM<sub>2.5</sub>

On February 24, 2009, the United States Court of Appeals for the District of Columbia issued its ruling on EPA’s Final Rule on NAAQS for fine particulates. The case involves EPA’s revisions of October 2006 to the NAAQS for particulate matter, particularly the agency’s decision to retain the limit of 15 µg/m<sup>3</sup> for the annual concentration for PM<sub>2.5</sub>

(particulate matter less than 2.5 microns in diameter). The court concluded that EPA failed to adequately explain why the annual standard of  $15 \mu\text{g}/\text{m}^3$  for fine particulates would be sufficient to protect the public health within an adequate margin of safety. The court chose to keep the standard in place so that some protection for fine particulates would remain in place. EPA expects to promulgate a final rule in July 2011.

On January 15, 2009, EPA proposed to revise the agency's Air Quality Index (AQI) to reflect changes to the fine particulate standard made in 2006. The proposed changes would set a  $\text{PM}_{2.5}$  AQI value of 100 at  $35 \mu\text{g}/\text{m}^3$ , which is the level of the 24-hour  $\text{PM}_{2.5}$  NAAQS. This means that any AQI value of 100 or more is unhealthy for sensitive groups.

Effective December 14, 2009, EPA announced that the Metropolitan Washington non-attainment area for the 1997 fine particle ( $\text{PM}_{2.5}$ ) NAAQS had attained the 1997  $\text{PM}_{2.5}$  NAAQS. This determination is based on 2004 - 2006 data and the region has continued to meet the attainment standard based on 2005 - 2007 data.

iii. Nitrogen Dioxide ( $\text{NO}_2$ )

On January 22, 2010, EPA strengthened the health-based NAAQS for  $\text{NO}_2$  to a new 1-hour  $\text{NO}_2$  standard of 0.10 ppm. The standard also requires monitoring that occurs near roads, community-wide  $\text{NO}_2$  concentrations and low income or minority at-risk communities. This level will protect people against adverse health effects associated with short-term exposure to  $\text{NO}_2$ , including respiratory effects. It became effective on April 12, 2010. EPA is also retaining, with no change, the current annual average  $\text{NO}_2$  standard of 0.053 ppm.

iv. Sulfur dioxide ( $\text{SO}_2$ )

On June 2, 2010, EPA strengthened the primary NAAQS for sulfur dioxide ( $\text{SO}_2$ ) by establishing a new 1-hour standard of 0.075 ppm. The new standard is the three-year average of the 99<sup>th</sup> percentile of the annual distribution of daily maximum 1-hour average concentrations. EPA is revoking the two existing primary standards of 0.14 ppm evaluated over 24-hours and 0.03 ppm evaluated over an entire year because these standards will not add an additional public health benefit. EPA is not revising the existing secondary  $\text{SO}_2$  NAAQS of 0.50 ppm over a 3-hour average that is set to protect public welfare, including effects on soil, water, visibility, wildlife, crops, vegetation, national monuments and buildings. EPA is assessing the need for changes to the secondary standard under a separate review.

v. Lead (Pb)

On November 12, 2008, EPA issued a final rule that revised the primary and secondary NAAQS for lead and associated monitoring requirements. The effective date of this standard was January 12, 2009. The primary standard is set at  $0.15 \mu\text{g}/\text{m}^3$  in a rolling 3-month average to protect health. A secondary standard is set at the same level to protect the public welfare, including the environment. The revised standards are 10 times more stringent than the previous standards and will improve health protection for at-risk groups, especially children. This decision marks the first time the lead standards have changed in 30 years.

By October 2011, EPA must designate areas that have to take additional steps to reduce lead air emissions. States will have five years to meet the new standards after designations take effect.

## **2. Air Quality Status in Northern Virginia**

### **a. Air Compliance Program**

Air pollutants are emitted by stationary sources, such as power plants, gasoline service stations and dry cleaners, as well as by mobile and area sources, such as from automobiles, trucks and other highway activities. EPA tracks the emission of air pollutants from stationary sources, including sources in Fairfax County. Some of these emissions are discharged through smoke stacks and some emerge from the source without treatment. All are regulated under law. Virginia DEQ's air compliance program conducts inspections of facilities within Fairfax County and records information on violations in the state's database (Comprehensive Environmental Data System). (<http://www.deq.state.va.us/air/compliance/homepage.html>)

### **b. Update on County and Regional Air Quality Data**

#### **i. Ozone State Implementation Plan**

EPA designated the metropolitan Washington region as moderate nonattainment for the 8-hour ozone standard of 0.08 ppm in April 2004. The Clean Air Act requires states to develop and implement ozone reduction strategies in the form of a state implementation plan (SIP). The SIP is the state's "master plan" for attaining and maintaining the NAAQS. The region had a deadline of June 15, 2010, to meet the 8-hour ozone standard. Air quality data from 2007-2009 suggest compliance with the 0.08 ppm 8-hour ozone standard. However, EPA has not concluded that the region meets this standard, and, as noted above, the standard itself has been, and may further be, strengthened.

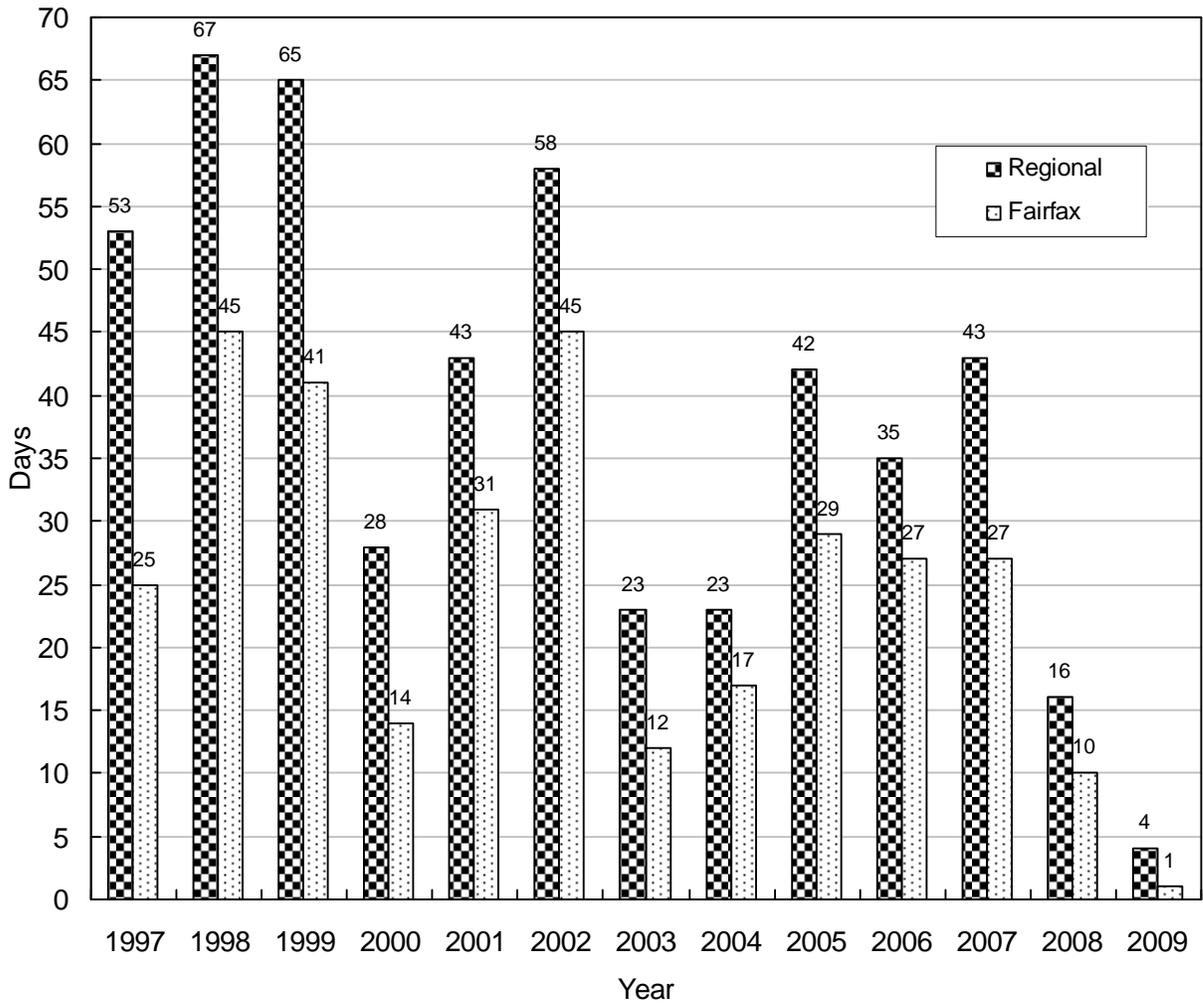

Ground-level ozone is a precursor to smog and can cause breathing problems for those sensitive to smog, especially those with asthma (some use the term smog as a colloquial name for ground level ozone). Figures III-1 through III-4 and Table III-1 present regional and county air quality trends as they relate to the eight-hour ozone standard. Monitors in the metropolitan region recorded data on four days during the 2009 ozone season when ozone values ranged from 0.076 to 0.085 ppm. This was a substantial reduction from the 2008 season, when the region registered 16 days with violations of the eight-hour standard (Note – for comparisons with prior year EQAC reports, these data are in relation to the 2008 NAAQS standard of 0.075 ppm). Various studies have shown that, during certain meteorological episodes, pollution from outside the area can cause ozone exceedances in the Washington metropolitan area.

As described in Section A.1.c.i above, EPA has proposed a new ozone standard in the range of 0.060 and 0.070 ppm. The figures below demonstrate that the metropolitan Washington area needs to continue improving ozone air quality to meet this more stringent range. The final rule that was due to have been promulgated in October 2010 should contain more information on how the new standard will be implemented, including the schedules for both the development and submittal of the attainment plan and for compliance dates to meet the new standard.

ii. Fine Particulate Matter State Implementation Plan

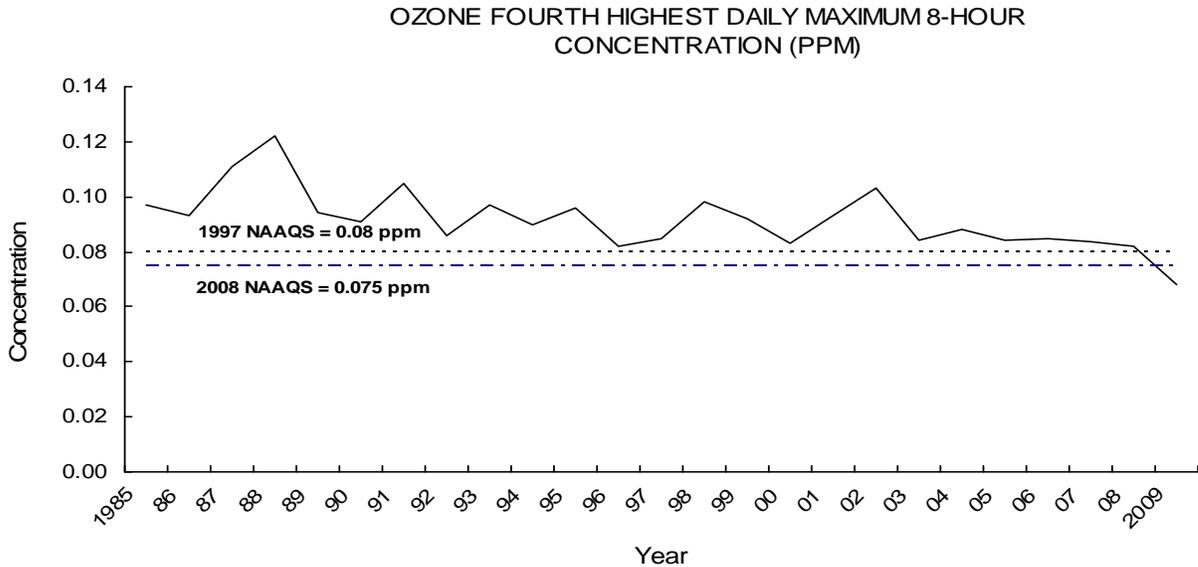

Virginia submitted its PM<sub>2.5</sub> SIP in April 2008, as required by the Clean Air Act. In October 2008, EPA proposed a “clean data determination” for the metropolitan Washington region in regards to the 1997 PM<sub>2.5</sub> NAAQS. This determination alleviated certain requirements of the Clean Air Act on the region, such as the implementation of certain controls and inventory requirements. However, the Metropolitan Washington Council of Governments determined that submittal of the full attainment plan, including the requirements alleviated by the “clean data determination,” was a prudent measure given the legal and regulatory uncertainty. Fine particulate air monitoring data has continued to show good improvements over the past several years, and more improvements are expected due to the installation of upwind control devices.

**Figure III-1. Air Quality Trends in Relation to the Eight-Hour Ozone Standard  
(relative to 0.075 ppm 2008 NAAQS Standard)  
OZONE EXCEEDANCE DAYS**

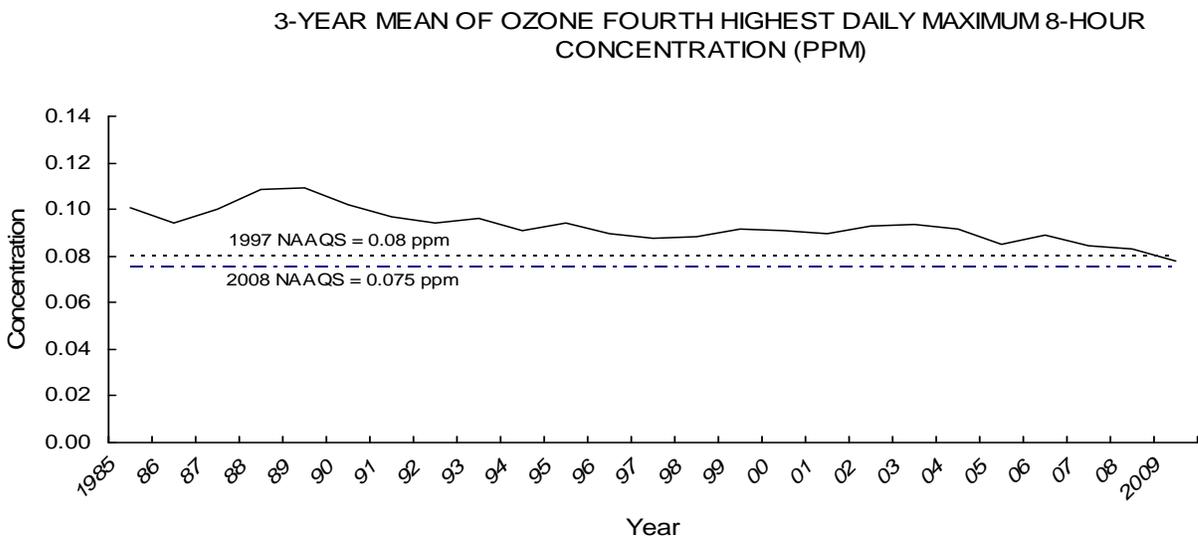

SOURCE: Fairfax County Health Department. 2009 data are preliminary and subject to change after review for Quality Assurance/Quality Control.

**Figure III-4. Air Quality Trends in Relation to the Eight-Hour Ozone Standard (No. of Days with Maximum Daily 8-Hour Concentration Above Ozone Standard in Fairfax County, Relative to 0.075 ppm 2008 NAAQS Standard)**

SOURCE: Fairfax County Health Department. 2009 data are preliminary and subject to change after review for Quality Assurance/Quality Control.

<b>Table III-1. Regional Eight Hour Ozone Exceedances (Relative to 0.075 ppm 2008 NAAQS Standard)</b>		
<b>Date</b>	<b>Number of Stations that Exceeded the Standard</b>	<b>Maximum Values in the Metropolitan Statistical Area; Maximum 8-Hour Ozone (ppb)</b>
<b>6/8/2009</b>	5	85
<b>6/25/2009</b>	1	76
<b>6/26/2009</b>	3	80
<b>8/27/2009</b>	2	80

Source: Metropolitan Washington Council of Governments. 2009 data are preliminary as of July 30, 2010 and are subject to change.

However, the area will remain a nonattainment area for the 1997 PM<sub>2.5</sub> NAAQS until the area develops a redesignation request and maintenance plan, as required by the Clean Air Act. The “clean data determination” does not allow an area to become redesignated to a maintenance area until both a redesignation request and maintenance plan are developed, submitted to EPA, and approved at the federal level. The redesignation request and maintenance plan are needed to ensure that the progress the region has made in meeting and far exceeding the NAAQS is recognized with an attainment/maintenance designation.

iii. Additional Monitors for NO<sub>2</sub> and Other Pollutants

Virginia DEQ provided an update on the status and plans for conducting monitoring for NO<sub>2</sub> in Fairfax County, noting that the agency is currently in the planning stages for a new NO<sub>2</sub> monitor, to be used to assess compliance with the roadside monitoring aspect of the revised NAAQS for NO<sub>2</sub>. There are plans to install one new NO<sub>2</sub> monitor in Maryland and one in Virginia, based on information about the average annual daily traffic count. For Virginia, DEQ is tentatively considering placement of the monitor on property of the Virginia Department of Transportation in the area near the Springfield I-95 interchange, pending development of a memorandum of understanding with VDOT. Current plans call for the monitor to become operational by January 2013.

DEQ may also install additional roadside monitors for carbon monoxide (CO) and fine particulate matter (PM<sub>2.5</sub>), depending on what is included in EPA’s revised NAAQS for those pollutants. For SO<sub>2</sub>, DEQ is examining the need for additional monitoring in a manner different than for NO<sub>2</sub>, CO or PM<sub>2.5</sub>, given the requirement in the SO<sub>2</sub> NAAQS to conduct a mathematical modeling approach to determine compliance.

These projected changes to the air monitoring network in northern Virginia will be included in the Annual Monitoring Network Plan, which is sent by DEQ to EPA by July 1 of each year. This report contains information on the air monitoring network, including projected changes for that calendar year. This report is posted on DEQ’s air quality Web page each year to receive public comment on all aspects of the network plan. DEQ also posts an Annual Monitoring Data Report on the Web page, which contains the monitored results for the previous calendar year. The 2009 data report is now posted at <http://www.deq.state.va.us/airmon/publications.html>.

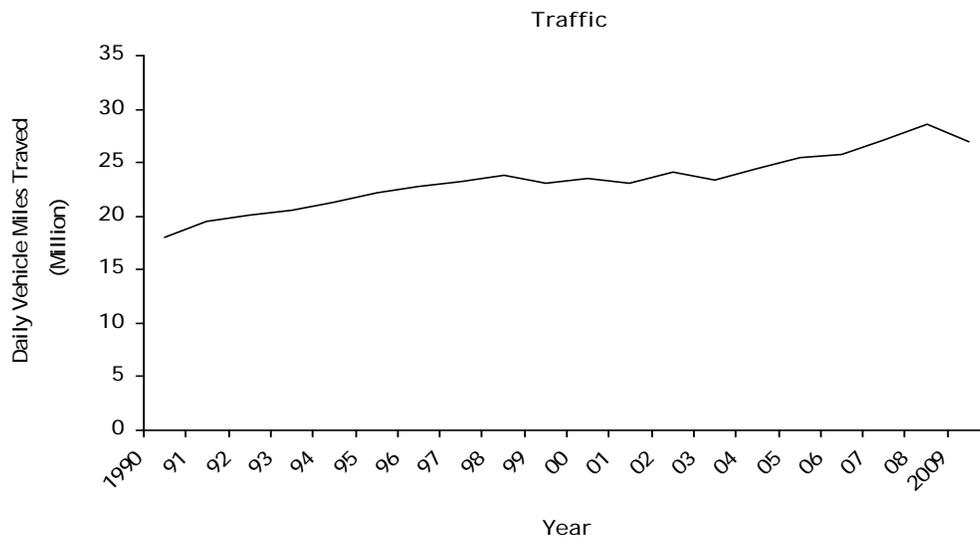

iv. Emissions from Motor Vehicles

One of the key issues related to ozone nonattainment, and other air quality concerns, is the use of motorized vehicles and their emissions. There is extensive use of motor vehicles in Fairfax County, including a

significant number that do not pass the required emissions testing. Figure III-5 shows the daily vehicle miles traveled in Fairfax County, illustrating that more than 25 million vehicle miles were traveled in 2009, a slight decrease from the number for 2008.

VDOT is actively seeking to address transportation modes that can be used as alternatives to motorized vehicles, such as addressing increased safety for bicycling and pedestrians. These types of initiatives can serve to reduce the county's status as being in nonattainment for ozone, and should be commended.

**Figure III-5. Daily Vehicle Miles Traveled in Fairfax County (Millions)**

SOURCE: Fairfax County Health Department.

## **B. MAJOR PUBLIC AGENCY RESPONSIBILITIES**

### **1. Introduction**

Although compliance with National Ambient Air Quality Standards and resulting air quality management responsibilities is a function of federal law, in Fairfax County and in other major metropolitan areas these responsibilities have been split between the Commonwealth of Virginia and the regional metropolitan planning organization (MPO). Fairfax County holds a seat on, and the county staff is required to support, the MPO for the Metropolitan Washington Area. MPOs are set up under the Clean Air Act in metropolitan areas with populations in excess of 50,000. In more difficult situations, MPOs are multi-jurisdictional, as is the case in the Washington MPO. Members of

MPOs are appointed by the governors and mayors of affected jurisdictions to represent areas included in the MPO. The MPO works with state departments of transportation and transit providers in identifying transportation needs and priorities. It makes transportation investment decisions for the metropolitan area and, by default, for the individual regions encompassed within the MPO.

## **2. Commonwealth of Virginia**

### **a. Virginia State Air Pollution Control Board**

This board is authorized to propose policies and procedures for air quality regulatory programs, including emissions standards for landfills and vehicles.

### **b. Department of Environmental Quality**

This department is responsible for establishing or adopting standards for air quality, as well as for performing air quality monitoring, stationary source inspection, new and existing source permitting and vehicular inspection and maintenance programs. Air quality enforcement is handled by DEQ.

### **c. Virginia Department of Transportation**

This department is responsible for planning, developing, delivering, and maintaining transportation for the traveling public.

## **3. Region – The Metropolitan Washington Council of Governments, the Metropolitan Washington Air Quality Committee and the National Capital Region Transportation Planning Board**

COG is the Metropolitan Washington regional planning group that works toward solutions to regional problems related to air and water quality, transportation, and housing. COG also manages other programs such as those responsible for forecasting demographic changes. The MWAQC, which is a part of COG, partners with the air agencies to assist in the development of air quality plans as noted in Section 174 of the Clean Air Act. The authority of MWAQC is derived from the certifications made by the governors of Virginia and Maryland and the mayor of the District of Columbia. In Virginia, the roles of organizations like MWAQC, which function as local planning organizations under Section 174 of the Clean Air Act, are described in *The State Air Pollution Control Board's Regulations for the Control and Abatement of Air Pollution*, specifically at 9 VAC 5-151-70 et seq.

MWAQC was established to work cooperatively with state air agencies to conduct interstate air quality attainment and maintenance planning for the

Metropolitan Washington region. Members are appointed and Fairfax County currently has three members of the Board of Supervisors on the committee. The Transportation Planning Board (TPB) serves as the designated MPO for the Washington region and is responsible for regional transportation planning and conformity. The TPB is staffed by the Department of Transportation Planning, which is part of COG. Members of the TPB are appointed, and Fairfax County currently has two members of the Board of Supervisors sitting on the TPB. TPB and MWAQC work together on air quality and transportation issues. COG is also responsible for issuing air quality indices on a weekly basis. County staff from the Health Department and the Department of Transportation attend MWAQC meetings to support the Fairfax County members.

**a. MWAQC Technical Advisory Committee**

This committee was established to advise and assist MWAQC in planning for and maintaining the region's air quality. Fairfax County is represented on the TAC by county staff from the Health Department and the Department of Transportation along with a member from the Fairfax County Federation of Citizens Associations. Members research, review and discuss technical issues and documents at monthly meetings to develop information and recommendations that are submitted to MWAQC members for their review and approval.

**b. Interstate Air Quality Council**

On May 31, 2005, Virginia Governor Mark Warner, Maryland Governor Robert Ehrlich, Jr., and D.C. Mayor Anthony Williams signed a Memorandum of Understanding creating the Interstate Air Quality Council. The council consists of six members: the secretaries of the environment and transportation from each of the three governments. The IAQC provides overall guidance and streamlined planning to ensure the states and the District meet their shared goals of improved air quality, including compliance with new federal standards for ozone and fine particulates, and efficient transportation. The IAQC works in concert with the air quality and transportation committees of COG to achieve its goals.

**c. Forecasting Subcommittee**

This subcommittee considers how to monitor and report the new eight-hour ozone standard and how to devise guidelines for issuing health alerts during the ozone season.

**d. Attainment Subcommittee**

This subcommittee considers evidence for the case that the Washington nonattainment area can attain the eight-hour ozone standard with the control measures already adopted.

**e. Conformity Subcommittee**

This subcommittee reviews Air Quality Conformity Determinations prepared by the TPB to ensure that regional transportation plans are consistent with plans to improve air quality. This includes verifying that estimated emissions from mobile sources, such as cars, trucks and buses, do not exceed the mobile budget, a cap on regional mobile emissions contained in the region's air quality plan.

**f. Air Quality Public Advisory Committee**

This committee was established to provide a way to brief residents on actions pending before MWAQC. This committee functions as an important source of feedback from the public on air quality concerns in the metropolitan area.

**g. Control Measures Workgroup**

This workgroup was established to research control measures and develop a plan of emission reducing control measures for the region to implement in an effort to reach attainment for ozone.

## **C. STEWARDSHIP OPPORTUNITIES**

Residents of Fairfax County have many opportunities to contribute to improvements in air quality. While some of the Metropolitan Washington area ozone problem originates outside of the area and is beyond the control of Virginia, Maryland and the District of Columbia, there are many aspects of our daily lives that can affect the quality of our air. A significant contributor to air quality issues is vehicle miles traveled. As discussed above, Virginians drive many millions of miles. Reducing the amount of driving, as well as the use of other combustion devices, especially during times where ground-level ozone is of concern (e.g., on hot days with lots of sun and little or no wind), can help to improve air quality. Examples of actions that can be taken include carpooling, taking mass transit, reducing or postponing lawn-mowing, paving and outdoor painting, limiting vehicle idling, bringing a lunch to work, avoiding drive-thru windows and refueling after dark.

**Clean Air Partners Take Action Tips (<http://www.cleanairpartners.net/>)****Small Changes Make A Big Difference**

Begin the day right. Check [today's air quality forecast](#) and modify your plans if unhealthy air quality is predicted. Protect yourself and others in your care, by taking the appropriate actions. Making small changes in your lifestyle at home, at work, and on the road can make a big difference.

**At Home:**

- Postpone mowing and trimming or use electric garden equipment.
- Postpone painting or use water-based paint instead of oil-based paint.
- Replace your charcoal grill with a propane gas grill.
- Choose ENERGY STAR™ appliances and lighting.
- Cut back on heating and air conditioning when you can and turn off lights and appliances when not in use.
- Clean heating filters each month.

**At Work:**

Employers have a unique opportunity to make a difference. They can promote programs that help employees make positive lifestyle changes. For example, employers can encourage staff to use public transportation or carpool. Employers also can give employees the option of working from home. Encourage employees to sign up for [AirAlerts](#), a free service that delivers air quality information straight to their inbox (<http://www.cleanairpartners.net/airalert.cfm>).

**On the Road:**

- Keep driving to a minimum.
- Fill up your gas tank during evening hours. Avoid spilling gas and “topping off” the tank. Replace gas tank cap tightly.
- Have your car tuned regularly by replacing the oil and air filter, and keep tires properly inflated and aligned.
- Carpool or use public transportation when possible.
- Combine your errands into one trip.
- Avoid revving or idling your engine.
- Avoid long drive-through lines; instead, park your car and go in.
- Looking for a new vehicle? Consider purchasing a fuel-efficient model or a hybrid that runs on an electric motor and gasoline engine

## **D. COMMENTS**

1. EQAC performed extensive follow up with DEQ and others about Fairfax County's plans to cease the operation of the four ozone air quality monitors and has expressed concerns about the elimination of those ozone monitors. In April 2010, EQAC provided a recommendation that the Fairfax County Board of Supervisors provide comments to DEQ regarding its Annual Air Monitoring Network review. Specifically, EQAC recommended that the Board of Supervisors request that DEQ include one or more of the existing Fairfax County ozone monitors in its future monitoring plans. Given the historically higher level of ozone concentrations at the Mount Vernon station, as compared to the other county-run stations, EQAC recommended that the Board of Supervisors request that DEQ include the Mount Vernon station in the regional monitoring plans. EQAC plans to continue to follow this issue over the course of the next several years as additional data become available.
2. EQAC appreciates the efforts by the board to maintain funding for the Health Department's Environmental Health Program Manager position, and notes that this is a minimum for the county to do to support air quality planning efforts. The Environmental Health Program Manager will continue to participate in air quality planning through attendance at Metropolitan Washington Council of Governments' Air Quality Committee meetings and participation on the Technical Advisory Committee and subcommittees. This staff position also: collaborates with other local, regional and national air quality organizations, such as Clean Air Partners; provides support to address board matters related to air quality and the environment; coordinates with other county agencies on efforts to reduce air pollution and perform annual county survey to assess progress toward SIP commitments; serves on county groups and committees such as Environmental Coordinating Committee and Environmental Improvement Program Action Group; reviews proposed projects for environmental impact related to air quality; performs legislative reviews; assesses the results of ongoing regional air monitoring; and participates in outreach events and encourages county residents and others to take voluntary actions to improve air quality.

## **E. RECOMMENDATIONS**

None.

ANNUAL REPORT ON THE ENVIRONMENT

**CHAPTER IV**

**WATER  
RESOURCES**

---

## **IV. WATER RESOURCES**

### **A. ECOLOGICAL OVERVIEW**

Water resources include streams, ponds, lakes and groundwater. These resources serve as sources of drinking water, recreation, stormwater conveyance and habitat for numerous organisms. Water quality can be significantly impacted by land disturbances and surface runoff. Over the past decade, Fairfax County has demonstrated a strong commitment to restore and protect its water resources through a variety of management efforts and public outreach initiatives. Unless water resources are managed properly, increasing demands put on watersheds, such as rapid development, can create many problems.

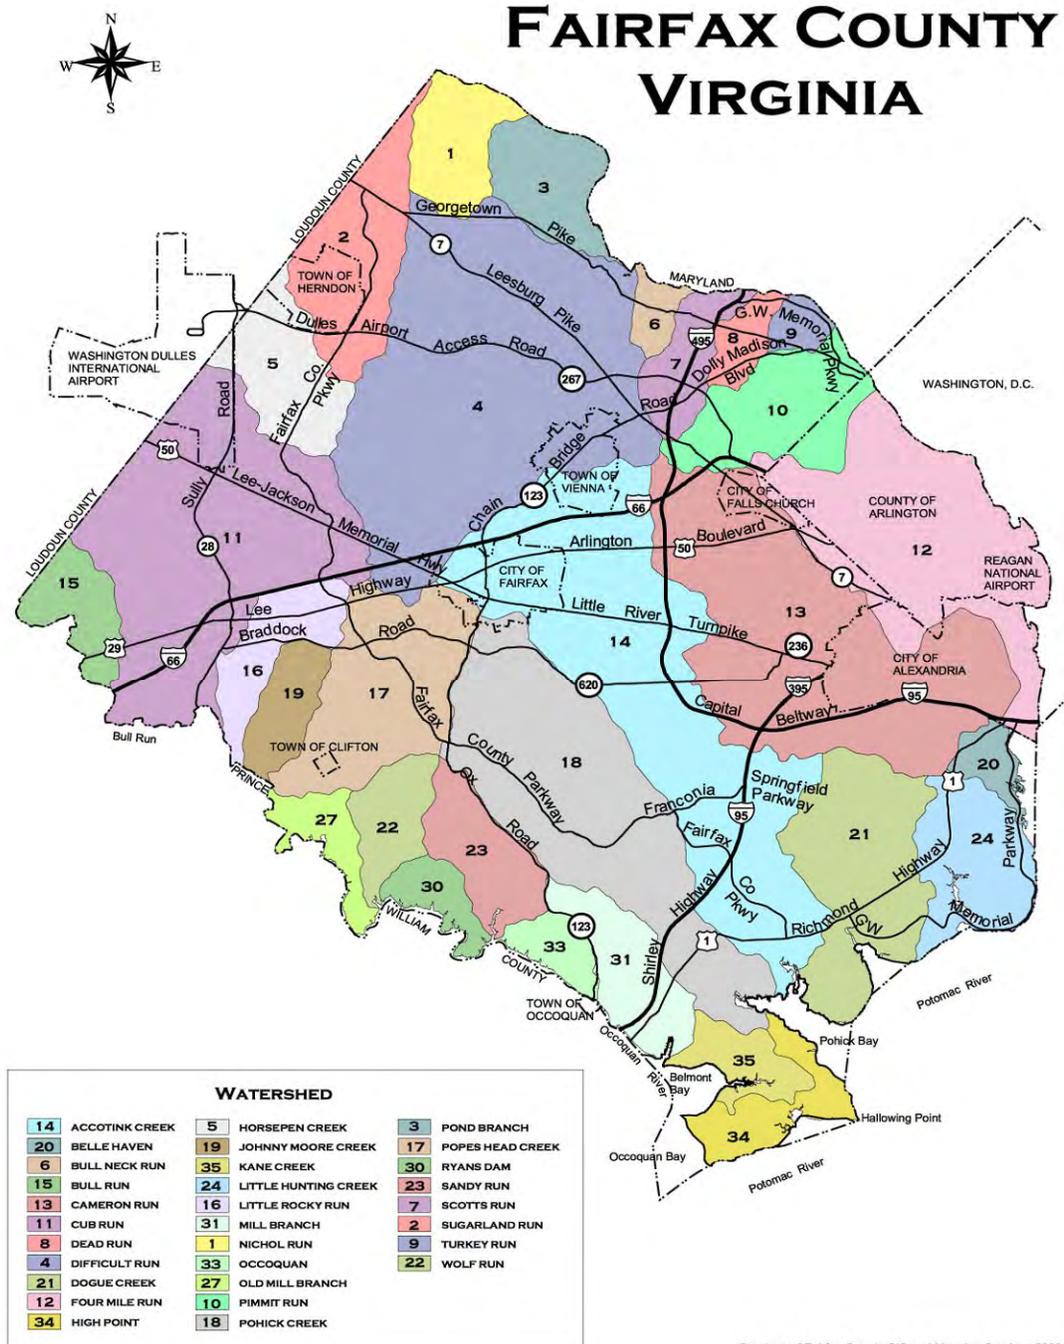

#### **1. Watersheds**

A watershed is a discrete area of land that drains to a common stream, river system or larger body of water. Watersheds include both surface water and groundwater. Everyone lives in a watershed. Large watersheds typically have sub-watersheds. There are 30 separate watersheds in Fairfax County (Figure IV-1). The largest watershed is Difficult Run (58 square miles) with ten streams that drain into the main stream, Difficult Run, which, in turn, drains into the Potomac River. The Potomac River watershed is a sub-watershed of an even larger watershed, the Chesapeake Bay watershed, which has an area of 64,000 square miles and includes portions of the states of New York, Pennsylvania, Delaware, West Virginia, Maryland and Virginia as well as the District of Columbia. All Fairfax County streams are in the Potomac River watershed and subsequently the Chesapeake Bay watershed.

#### **2. Streams**

Fairfax County is criss-crossed by a number of streams, often called runs or creeks. These streams are important aquatic habitats. Rainfall soaks into the earth and drains to low points in the surrounding land, and then emerges from the ground as seeps, springs and trickling headwaters. These small streams join with others in the same drainage area to create a stream system. There is a natural progression in size from the smallest tributaries to the largest rivers into which they eventually flow. Perennial streams flow throughout the year and intermittent streams flow only part of the year. There are approximately 860 miles of perennial streams in Fairfax County. One-third of the land in the Fairfax County Park system, approximately 7,000 acres, is comprised of stream valleys. These stream valleys are significant corridors for wildlife and the county trails system.

Figure IV-1: Fairfax County Watershed Map

The bottom, or bed, of a stream can consist of boulders, cobbles, gravel, sand and/or silt. The type and amount of substrate in a stream makes up the in-stream habitat. Within a stream are shallow, fast flowing areas called riffles. Dissolved oxygen levels are high because water is flowing over rocks, mixing air into the tumbling water. Alternating with riffles are deeper pools and runs where flows slow and particles of inorganic and organic matter fall to the bottom and oxygen levels are reduced. Streams support a diverse community of plants and animals that spend all or part of their life cycles in the water.

The aquatic food chain begins with leaves and other decaying plant and animal material called detritus. These materials are carried into the stream from the surrounding forests and fields by wind and water runoff. Aquatic vegetation such as algae is also an important food source. Benthic (bottom-dwelling) macro (large) invertebrates (without a back-bone) eat this organic matter. Benthic macroinvertebrates include aquatic insect larvae such as stoneflies, mayflies, caddisflies and true flies as well as snails, clams, aquatic worms and crustaceans such as crayfish. Fish, birds and other streamside wildlife, such as frogs, salamanders and small mammals, eat these macroinvertebrates.

### **3. Riparian Buffers**

The area of trees and other types of vegetation adjacent to and lining the banks of streams is called a stream buffer or a riparian area. These areas are essential for healthy streams. The temperature in a stream greatly affects how much oxygen it can hold. Since cooler water holds more oxygen, shade providing trees and vegetation are vital along the edges of streams to help maintain cooler water temperatures so the water will hold more oxygen.

Tree cover provides food and shelter when leaves and branches fall into a stream. Streamside forests offer food, nesting sites and protection to a great diversity of wildlife, including birds, turtles, beaver and snakes. Tree roots help stabilize stream banks and provide cover for fish, crayfish and aquatic insects. Riparian areas help slow down and filter runoff. Excess nutrients carried in runoff are absorbed by vegetation.

## **B. IMPACTS ON WATER RESOURCES**

### **1. Point and Nonpoint Source Pollution**

Water pollution originates from either nonpoint or point sources. Nonpoint sources include surface runoff, atmospheric deposition and groundwater flow. Because of their diffuse and intermittent nature, nonpoint source pollution is difficult to control. Nonpoint source pollutant loads are greatest following rainfall and high flow events. A significant part of the nonpoint source load consists of nutrients, including nitrogen and phosphorus (organic matter, fertilizer), which stimulates algal growth. Other nonpoint source pollutants are

sediment (from erosion, construction sites, eroded stream banks, road sand), toxics (oil, paint, pesticides, chemicals and metals), pathogens and bacteria (animal waste, failing septic systems and leaking sewer systems) and trash.

Point sources are specific locations that discharge pollutants such as a discharge pipe. Because they are relatively constant and provide a steady flow of pollutants, they are easier to monitor and control. In the Potomac River watershed, most point sources are wastewater treatment plants or industrial discharges. Unlike nonpoint sources, point sources contribute relatively small portions of the nutrient loads during high flows and the majority during low flows.

## **2. The Effect of Imperviousness**

As development occurs, natural areas that once had vegetative cover capable of absorbing water and filtering pollutants are replaced by impervious surfaces such as roads, driveways and buildings. With the increase in impervious surface and loss of vegetative cover, there is a concurrent increase in the amount and speed of stormwater runoff flowing into streams. Increased uncontrolled runoff causes stream erosion, resulting in scouring, down cutting and overwidening of stream channels and loss of streamside vegetation. Loss of shade results in increased water temperatures. During summer storms, runoff from heated impervious surfaces also raises water temperatures. In urban and suburban watersheds, rain flows off impervious surfaces such as parking lots and highways, carrying oil and other automobile wastes into streams. When stream channels become incised from down cutting, they become disconnected from their floodplains. Water cannot get out of the banks onto the adjacent floodplain where flows can be dissipated and drop their sediment loads. High flows stay in the channel, resulting in increased erosion. Silt and sediment from erosion smother the stream bottom and destroy in-stream habitat for sensitive benthic macroinvertebrates.

Simultaneously, this results in an increased number of floods in downstream areas, due to the increased volume of water. Over time, increased erosion, flooding and sediment deposition leads to habitat loss, water quality problems and damage to utilities and infrastructure.

## **C. SURFACE WATER MONITORING AND ANALYSES**

The Fairfax County Department of Public Works and Environmental Services, Fairfax County Park Authority, Virginia Department of Environmental Quality, local water treatment plants and other organizations regularly conduct water quality monitoring and testing. The Northern Virginia Soil and Water Conservation District also collects monitoring information through its volunteer water quality monitoring programs. All of these data help provide a comprehensive understanding of the condition and health of Fairfax County's water resources.

## 1. Countywide Watershed and Stream Assessments

### a. Stream Protection Strategy Baseline Study

The Stream Protection Strategy Baseline Study, published in 2001, provides a holistic ecological base-line assessment of county streams. The study provides information on fish taxa, benthic macroinvertebrates, general evaluation of watershed and stream features and calculations of the percent impervious cover within each watershed. The Stream Protection Strategy Baseline Study can be viewed online at:

[www.fairfaxcounty.gov/dpwes/environmental/sps\\_main.htm](http://www.fairfaxcounty.gov/dpwes/environmental/sps_main.htm).

### b. 2009 Annual Report on Fairfax County's Streams

#### i. Overview

This report provides data from sampling efforts conducted in 2009 and documents overall stream conditions based on the health of fish and benthic macroinvertebrate communities. In addition, the potential human health risk associated with wading or swimming in streams is assessed based on analyses of E. coli bacteria.

A probability-based site selection sampling methodology was used to identify randomly-selected stream bioassessment locations throughout Fairfax County. These sites were stratified and proportionally distributed throughout the county based on Strahler stream order applied to all perennially flowing streams in Fairfax County. This methodology eliminates any site selection bias and is commonly used as a cost-effective way of obtaining a statistically defensible determination of stream conditions at a countywide scale. A total of 67 sites were sampled in 2009: 40 sites randomly selected within Fairfax County as part of the annual probabilistic monitoring program; 14 trend-monitoring sites in the County; 11 piedmont reference locations in Prince William National Forest Park; and two coastal plain reference sites in the Kane Creek watershed of Fairfax County. **Results from the 40 randomly selected sites suggest that approximately 88 percent of the county's waterways are in "Fair" to "Very Poor" condition based on a decrease in biological diversity.** The monitoring program is part of the framework to establish a baseline to evaluate future changes in watershed conditions. Results may be viewed at

[http://www.fairfaxcounty.gov/dpwes/stormwater/stormwater\\_status.htm](http://www.fairfaxcounty.gov/dpwes/stormwater/stormwater_status.htm).

#### ii. Dry and Wet Weather Monitoring

In 2009, the county selected 99 outfalls in its Municipal Separate Storm Sewer System (MS4) for dry weather screening and recorded physical

parameters at each outfall. Water was found to be flowing at 45 of the outfalls and was tested for a range of pollutants (ammonia, conductivity, surfactants, fluoride, pH, potassium, phenol, copper, and chlorine) using field test kits. Of the outfalls tested, 12 required follow-up investigations because they exceeded the allowable limit for at least one pollutant. Upon retesting these sites, 10 continued to exceed the screening criteria, and further testing was conducted in an attempt to track down the source.

Two of the sites were determined to be water line leaks and the county is working with the Fairfax Water to correct these issues.

One site had high levels of copper, phenol and chlorine. This site has a large sediment pit that is draining directly into a storm inlet. It appeared that the high levels of sediment were skewing the water quality results. Soil and water samples were sent to the wastewater treatment facility for further analysis, which confirmed that the high levels of copper and phenol were most likely skewed due to the high levels of sediment in the water. The county and DEQ will work with this site to develop proper sediment storage techniques and develop an inspection schedule for future monitoring. Of the two remaining sites, the sources of copper were identified as Interstate 95 and a railroad.

Wet weather screening and industrial high risk monitoring were completed in 2009. Field screening for the seven sites yielded water chemistry data on pollutant concentrations in stormwater runoff that were generally typical of published data on industrial runoff characteristics.

**c. Physical Stream Assessment**

Completed in 2004, the Stream Physical Assessment Study provides field reconnaissance data for the county's watershed management plans including information on habitat conditions, impacts on streams, general stream characteristics and geomorphic classification of stream type. The Countywide Stream Assessment can be obtained by contacting the Fairfax County Stormwater Planning Division at 703-324-5500.

**d. Perennial Stream Mapping**

In 2003, the Board of Supervisors adopted a revised Chesapeake Bay Preservation Ordinance in order to comply with amendments to the state's Chesapeake Bay Preservation Area Designation and Management Regulations. The ordinance incorporated changes to the designation criteria for Resource Protection Areas to include water bodies with perennial flow, resulting in a significant expansion to the county's RPAs. Fairfax County's

Chesapeake Bay Preservation Ordinance is available on-line at:  
<http://www.fairfaxcounty.gov/dpwes/environmental/cbay/>.

On November 17, 2003, based on the Perennial Streams Identification and Mapping program conducted by staff of the Department of Public Works and Environmental Services, the Board of Supervisors adopted new Chesapeake Bay Resource Protection Area maps, increasing the amount of stream miles protected by 52 percent (from 520 to 860 miles).

In 2004, the Quality Assurance/Quality Control Study of the Perennial Streams Identification and Mapping was conducted. A total of 10 percent of the streams initially surveyed between 2002 and 2003 were selected for the QA/QC study. The results of the QA/QC Study were presented to the Board of Supervisors in 2005 along with revised Chesapeake Bay Preservation Area Maps, which were approved.

The Fairfax County Stream Classification Protocol, Field Data Sheets, QA/QC study and the county's revised map of Chesapeake Bay Preservation Areas are available online at:  
[www.fairfaxcounty.gov/dpwes/watersheds/perennial.htm](http://www.fairfaxcounty.gov/dpwes/watersheds/perennial.htm).

#### **e. USGS Water Science Center Sampling**

In June 2007, a joint funding agreement between the DPWES Stormwater Planning Division and the United States Geological Survey (USGS) was signed by the Board of Supervisors. This agreement established a study designed to be an ongoing, long-term (5-10 year) monitoring effort to describe countywide conditions and trends in water-quality (e.g. nutrients and sediment) and water-quantity. Ultimately, the information gathered will be used to evaluate the benefits of projects implemented under the watershed planning program.

The monitoring network designed to fulfill the objectives of the study consists of four automated continuous water-resources monitoring stations and 10 less-intensely monitored sites. The automated stations were constructed in 2007 and achieved full operational capability in 2008. Instruments at these stations collect stream flow and water quality (water temperature, pH, specific conductance, and turbidity) data every 15 minutes; data are then transmitted via satellite and posted to a USGS Web page hourly. These automated stations also capture storm event samples to be analyzed for sediment and nutrient concentrations. Additionally, samples are collected monthly at all fourteen sites under various hydrologic conditions and analyzed for the same suite of constituents. Nutrient analyses are conducted by the Fairfax County Environmental Services Laboratory and the suspended sediment analyses are conducted by the USGS Eastern Region Sediment Laboratory.

Each year, the automated stations collected as many as 35,000 data points for each of the continuously measured parameters (water level, water temperature, pH, specific conductance and turbidity at 15-minute intervals for 365 days). The monthly and storm event sample collection activities result in the collection of hundreds of samples from the 14 sites. These data, as well as additional study details, are available online via map interface at <http://va.water.usgs.gov/cgi-bin/fairfax.cgi>.

Interpretation of water-quality conditions and trends requires multiple years of data for statistically rigorous evaluation; thus, thorough analyses are not yet available for this study. Preliminary evaluations of general patterns in water-quality conditions have been conducted. Results of these evaluations demonstrate that the nutrient and sediment yields from streams in Fairfax County are comparable with yields measured in other urban/suburban areas of the eastern United States. These evaluations will be furthered to explore relations between environmental setting, land use and water-quality conditions.

## **2. Volunteer Water Quality Monitoring Programs**

The Northern Virginia Soil and Water Conservation District manages volunteer stream monitoring programs in Fairfax County.

NVSWCD volunteers conduct biological and chemical monitoring and a habitat assessment, using the Save Our Streams protocol four times a year. The District added bacterial and temperature monitoring programs in 2005. Monitors collected data at 30 active monitoring sites in 2010. In addition, 45 public stream monitoring workshops and field trips were held throughout the county and 365 county citizens attended. At each workshop or field trip, biological monitoring was performed and information was presented on stream ecology, stormwater runoff, urban hydrology and watersheds. More information can be found at [www.fairfaxcounty.gov/nvswcd/monitoring.htm](http://www.fairfaxcounty.gov/nvswcd/monitoring.htm). Information about the NVSWCD volunteer monitoring program can be found at <http://www.fairfaxcounty.gov/nvswcd/monitoring.htm>.

The Audubon Naturalist Society program uses a modified version of the EPA's Rapid Bioassessment II protocol, which includes assessment of in-stream and streamside habitat parameters and a survey of benthic macroinvertebrate populations. There were five monitoring stations in Fairfax County. In 2008, ANS monitoring stations were incorporated into the NVSWCD volunteer monitoring program.

Volunteers and Reston Association staff monitor Reston's streams four times a year using the Virginia Save Our Streams protocol. Twenty-four volunteers collect data at eleven monitoring sites in Reston. The Reston Association works

closely with the Northern Virginia Soil and Water Conservation District program. It conducted two stream monitoring workshops since June 2009.

Data are forwarded to Fairfax County, the Virginia Department of Environmental Quality, and other interested organizations or individuals. This program helps supplement the county's monitoring programs, including the Annual Report on Fairfax County's Streams.

### **3. Fairfax County Park Authority Stream Monitoring**

The Park Authority continues to support volunteer stream monitoring programs through partnerships with NVSWCD and ANS. Stream monitoring is conducted by staff and volunteers at Ellanor C. Lawrence, Riverbend and Lake Accotink Parks.

### **4. Virginia Department of Environmental Quality**

#### i. Overview

DEQ performs long-term trend monitoring at 23 stations in 17 water bodies that are either in Fairfax County or border the county.

- 11 stations are long term, trend monitoring stations
- Biological monitoring data was collected at five stations
- Continuous monitoring data, from April through October, were collected at a station in Pohick Bay
- Burke Lake was monitored from April through October.

#### ii. Probabilistic Biomonitoring and Chemical Monitoring Program in Virginia Non-Tidal Streams

DEQ's probabilistic monitoring program began in the spring of 2000. This program consists of three sampling components: a thorough examination of the benthic macroinvertebrate community utilizing the EPA's Rapid Bioassessment Protocols; sampling a full suite of chemical parameters in water and sediment; and a physical habitat evaluation at each station. The stations are biologically sampled twice a year. Chemical sampling is performed each spring and fall in conjunction with biological monitoring. The physical habitat evaluation is conducted each fall when the biological monitoring is performed. In 2009, DEQ sampled one probabilistic station in the spring and fall for a total of two sampling events in Fairfax County. Since 2004, as part of the probabilistic program, DEQ has participated in a grant study with the National Academy of Sciences to collect data on periphyton/algae in freshwater systems. Samples for that study are collected at every probabilistic monitoring station each fall.

## **5. Potomac River Monitoring**

### **a. Metropolitan Washington Council of Governments Chain Bridge Monitoring Program**

Since 1983, the Metropolitan Washington Council of Governments has contracted with the Occoquan Watershed Monitoring Laboratory to operate the Chain Bridge monitoring station on the Potomac River. The purpose of this monitoring station is to measure water quality in the Potomac River as it crosses the fall line and enters the Potomac estuary. Parameters collected include dissolved oxygen, biological oxygen demand, turbidity, temperature, conductivity, total suspended solids, fecal and total coliform bacteria, chlorophyll-a and nutrients.

The Chain Bridge monitoring station consists of an automated sampler that simultaneously monitors the river stage at Little Falls while directly sampling at Chain Bridge, about 1.5 miles downstream, in response to changes in river flow volume. Base and storm event samples are taken throughout the year.

### **b. Potomac River Water Quality Monitoring**

COG continues to serve as the water quality monitoring coordinator and regional repository for water quality and wastewater data in the Washington metropolitan region, as it has for more than two decades. Presently, COG serves as a repository for physical/chemical water quality data, hydro-meteorological data and wastewater loadings for the COG region, as produced by federal, state, and local government agencies. This includes data from 99 stations on the main stem of the Potomac River and the mouths of its tributaries (Point of Rocks to Point Lookout) and 46 stations in the Anacostia watershed. In addition, more than 33 wastewater treatment plants send their monthly discharge monitoring reports and monthly operating reports to COG. COG supplements these data with flow gage data from the USGS and meteorological data from the National Weather Service

### **c. Virginia Department of Environmental Quality Monitoring in the Tidal Potomac**

DEQ's Northern Regional Office initiated a long-term water quality monitoring project in the Occoquan River tidal embayment in the spring of 2005. To better characterize the water quality in the Occoquan River tidal embayment, water quality measurements were made using fixed continuous monitors and grab samples. The water quality monitoring for this study was conducted from April to October 2005. The primary objective of this study was to collect monitoring data throughout the warm season to better characterize the water quality and provide detailed monitoring data to

support the development of a Total Maximum Daily Load (TMDL) for pH. A secondary objective of this study was to provide continuous monitoring data to enable a more accurate assessment of the Chesapeake Bay water quality criteria for dissolved oxygen, water clarity and chlorophyll.

In 2007, DEQ initiated monitoring in the tidal embayment of Pohick Creek. The monitoring period for these areas was conducted from April to October 2007. Data for all of the long-term water quality monitoring deployments were collected using YSI Model 6600 EDS multi-meters. These instruments were configured to measure and store water temperature, pH, dissolved oxygen, turbidity and chlorophyll measurements in fifteen-minute increments. In addition to the continuous monitoring with these meters, water column grab sampling, light attenuation and Secchi depth measurements were performed at each of the stations where the continuous monitors were deployed. Continuous monitoring was continued at the Pohick Bay station in 2008 and 2009.

## **6. Update on Potomac River Water Quality**

The tidal section of the Potomac River is affected by many sources of pollution. With rapid population growth in the region over the past century, the Potomac River has faced water quality problems such as bacterial contamination, low dissolved oxygen and nuisance algal blooms. The implementation of secondary and advanced wastewater treatment in the National Capital Region has resulted in significant improvements in water quality and ecological conditions in the Potomac Estuary, including healthy dissolved oxygen levels, reduced nuisance algal blooms and the return of important living resources such as large mouth bass and submerged aquatic vegetation.

Results from a summer 2010 news release reviewing an 18-year study of submerged aquatic vegetation in the tidal Potomac River concluded the following:

- Native SAV cover increased tenfold from 288 to 3,081 acres.
- The overall area covered by SAV in the Potomac (both native and exotic) more than doubled since 1990, increasing from 4,207 to 8,441 acres.
- The diversity of SAV has increased. In 1990 the exotic hydrilla was 10 times more abundant than any other species. In 2007 the abundance of the seven most frequently occurring species are more evenly matched.
- In 1990, more than 80% of the total SAV was hydrilla; in 2007 hydrilla declined to 20%.
- Results suggest declining fitness of exotic species relative to native species during restoration.

The study was supported by: the USGS National Research Program; the U.S. Army Corps of Engineers, Baltimore; the Metropolitan Washington Council of Government's Aquatic Plant Management Program; and the Fisheries Division of the District of Columbia Department of Health.

The United States Geological Survey monitors water-quality on the Potomac River at Chain Bridge as part of the Chesapeake Bay River Input Monitoring Program. The results of this work can be obtained on the website <http://md.water.usgs.gov/gis/trends/>.

## **7. Occoquan River**

The Occoquan River straddles the southern border of Fairfax County and the northern border of Prince William County. The river has been dammed near the town of Occoquan. The Occoquan Reservoir, created by the damming, serves as one of two primary sources of drinking water for Fairfax Water, which operates a facility along, and withdraws water from, the reservoir. Because of its use as a drinking water source, water quality in the reservoir is highly monitored and water from a sewage treatment plant upstream of the reservoir is carefully treated.

### **a. Occoquan Watershed Monitoring Laboratory**

The following summary has been revised only slightly from an overview that was provided to EQAC by the Occoquan Watershed Monitoring Laboratory on September 22, 2010:

The Occoquan Watershed Monitoring Laboratory (OWML) has administered a comprehensive hydrologic and water quality monitoring program in the Occoquan Watershed since 1972. The program is jointly funded by Fairfax Water and the six jurisdictions within the watershed. OWML operates nine automated stream monitoring and flow gaging stations located on the major tributary streams of the watershed. These stations record stream flow and automatically collect water samples during storm events. During base flow (non-storm flow) conditions, samples are collected weekly during the spring, summer and fall seasons, and biweekly in the winter. In late 2006, additional equipment was installed at the stream monitoring station on Bull Run at Virginia Route 28 to continuously monitor dissolved oxygen, temperature, pH, conductance, turbidity and nitrate in the stream. Seven stations in the Occoquan Reservoir are sampled on the same weekly/biweekly schedule. The OWML also operates thirteen rain gage stations in the watershed.

The Lake Manassas watershed monitoring program is funded by the City of Manassas, and has seven stream and eight lake stations at which water and

sediment samples are taken. Lake Manassas is currently considered to be a moderately enriched lake.

Synthetic organic compounds (SOCs) have been monitored quarterly in the Occoquan Watershed since 1982. The program is funded by the Fairfax County Health Department and was established under the recommendation of EQAC. Initially, the program monitored water samples, but quarterly sediment and semi-annual fish samples were added at stations within the Occoquan Reservoir. The Lake Manassas program also funds the monitoring of SOCs in the Lake Manassas watershed.

As in past years, the most-frequently detected SOC is atrazine, typically detected in the spring and early summer months when it is commonly applied. In 2009, although some concentrations in the range of 1.0-2.7 µg/L (microgram per liter) were detected, these were all lower than the drinking water MCL (maximum contaminant level) of 3 µg/L. Other SOCs were also detected in 2009, although generally at concentrations one or more orders of magnitude lower than the MCL or other level of concern. The detected compounds included carbaryl, dual (metolachlor), mocap, some phthalates, anthracene, heptachlor, chlorpyrifos, naphthalene, fluoranthene and fluorene.

In the case of heptachlor (an insecticide), one November 2009 sample from Bull Run above the Occoquan Reservoir had a value of 0.43 ug/L, which was slightly higher than the drinking water MCL of 0.4 µg/L. It should be noted here that the MCL values are used as a reference point for SOC measurements, but they have no regulatory significance in the raw water source or its tributary streams before treatment. The MCL concentration values are typically set for lifetime exposures in finished drinking water, and occasional measurements exceeding those values in the watershed are not unexpected. However, such measurements are useful to detect trends (should they develop) as indicators of fundamental changes in historical conditions. It is encouraging that no such trends have as yet been detected for monitored constituents.

Overall, it may be observed that the general condition of the waters of the Occoquan Watershed with respect to SOCs is good, in that most compounds are either not detected at all or are detected at concentrations below the MCL.

Other water quality trends in the Occoquan Reservoir indicate that, although the reservoir continues to be enriched with respect to nutrients, water quality has remained stable. As is to be expected, there are variations due to weather and precipitation patterns. The OWML monitoring program serves as a means of providing advance notice should any conditions deteriorate, whether in the short or the long term.

OWML works on many other projects within the region that have a water focus. The Potomac regional monitoring program, where OWML operates an automated station at Chain Bridge, is performed for the Metropolitan Washington Council of Governments (COG), and has been in continuous operation since 1982. A brief summary of this program, as provided by COG, is presented in another section of this report.

Over the last eight years, OWML staff has developed a complexly linked watershed and reservoir water quality model for the Occoquan Watershed (including Lake Manassas and the Occoquan Reservoir). The model replaced a mainframe model that was developed in the early 1980s, and the simulation period currently extends from 1988 to 2007. The model is updated to reflect changing land use as the data become available, and improvements to the model are incorporated as new data or research come available. Both the watershed and reservoir components of the model have been used to provide simulations to support reservoir and/or water quality management decisions.

In cooperation with faculty from the Virginia Tech Biological Systems Engineering Department, OWML recently started up a project to evaluate the effectiveness of floating treatment wetlands as an enhancement to urban wet pond best management practices (BMPs). The project was funded by the National Fish and Wildlife Foundation, and the results should be useful to local governments wishing to enhance the nutrient removal performance of existing or contemplated stormwater management practices.

For several years, OWML has had a website ([www.owml.vt.edu](http://www.owml.vt.edu)) through which stakeholders can access near-real-time field data at various stream sites. An effort has been under way to update the website, particularly with respect to the data management and display capabilities. The revamped website is expected to launch within the next few months, and it is hoped that other data (including laboratory measurements) will also be available for display and download.

## **8. Kingstowne Monitoring and Stream Restoration**

In 1999, the Department of Public Works and Environmental Services, the Northern Virginia Soil and Water Conservation District, the USDA Natural Resources Conservation Service, the Friends of Huntley Meadows and the Citizens Alliance to Save Huntley formed a partnership to restore a stream in the Kingstowne area, with the help of a grant from the Virginia Department of Conservation and Recreation. The Kingstowne stream is a tributary of Dogue Creek, receives runoff from a 70 acre watershed and is upstream of Huntley Meadows Park. Monitoring and testing have substantiated that the stream segment is stable, erosion has been brought under control and water quality and habitat in the stream are improved.

During the July 2008-June 2009 monitoring period, 15 storm events and base flow samples collected at the Kingstowne station and collected at the Dogue Creek station were analyzed to determine pollutant loads in Dogue Creek. The Kingstowne station data suggest that erosion and sediment controls, including stormwater best management practices, are minimizing sediment loads to Dogue Creek. The permit phosphorus load reduction target of 50 percent was attained for South Van Dorn during this monitoring period. The mean annual total phosphorus concentration measured at South Van Dorn during storm events was 0.116 mg/L. Phosphorus data were only available for the South Van Dorn Station.

## 9. Gunston Cove Aquatic Monitoring Program

Gunston Cove is the site of the outfall of Fairfax County's Noman M. Cole, Jr. Pollution Control Plant. The primary objective of this George Mason University program is to determine the status of the ecological communities and physical-chemical environment in the Gunston Cove area of the tidal Potomac for evaluation of long-term trends. This helps provide the basis for well-grounded management strategies to improve water quality and biotic resources in the tidal Potomac. Monitored since 1984, data from Gunston Cove and the nearby Potomac River provide valuable information regarding long-term trends; this information will aid in the continued management of the watershed and point source inputs.

Data from 2009 generally reinforced the major trends which were reported in previous years. First, phytoplankton algae populations in Gunston Cove have shown a clear pattern of decline since 1989 (although chlorophyll values increased somewhat in 2008).

Accompanying this decline have been more normal levels of pH and dissolved oxygen, increased water clarity and a virtual cessation of cyanobacteria blooms such as *Microcystis*. The increased water clarity has brought the rebound of SAV, which provides increased habitat value for fish and fish food organisms. The SAV also filters nutrients and sediments and itself will inhibit the overgrowth of phytoplankton algae. This trend is undoubtedly the result of phosphorus removal practices at the Noman Cole wastewater treatment plant which were initiated in the late 1970s. This lag period of 10-15 years between phosphorus control and phytoplankton decline has been observed in many freshwater systems, resulting at least partially from sediment loading to the water column, which can continue for a number of years. Gunston Cove is now an internationally recognized case study for ecosystem recovery due to the actions that were taken and the subsequent monitoring to validate the response.

In short, due to the strong management efforts of the county and the robust monitoring program, Gunston Cove has proven an extremely valuable case

study in eutrophication recovery for the Chesapeake Bay region and even internationally.

For a copy of the “Ecological Study of the Gunston Cove 2009” Final Report, contact R. Christian Jones, Professor and Project Director at George Mason University.

## **10. Total Maximum Daily Loads**

Under the Clean Water Act, states are required to monitor water quality and assess compliance with water quality standards every two years. If monitoring data indicate that a water body does not meet water quality standards, the water body is listed as impaired and a Total Maximum Daily Load (TMDL) must be developed. A Total Maximum Daily Load is a watershed-specific plan for bringing an impaired water body into compliance with the Clean Water Act goals. A 1999 Consent Decree required the state to develop TMDL plans for all impaired streams listed on the 1998 303(d) Impaired Waters List by 2010.

A total of 41 water bodies with a total of 92 impairments in Fairfax County are included in 2008 Virginia’s 305(b)/303(d) Water Quality Assessment Integrated Report (the listing of impaired waters.) The most common causes of impairment for riverine segments are bacteria (*Escherichia coli* or fecal coliform), impacts to benthic macroinvertebrates and polychlorinated biphenyls (PCBs) in fish tissue. For the estuarine water bodies, the most common causes of impairment are PCBs in fish tissue and bacteria. The causes of impairment in the Occoquan Reservoir are dissolved oxygen and PCBs in fish tissue. Water Quality Assessments are performed by the Virginia Department of Environmental Quality (DEQ) and are available at:

<http://www.deq.virginia.gov/wqa/homepage.html>

County staff tracks development of new TMDLs and addresses impairments on stream segments located within the county. Watershed management plans advocate best management practices to address uncontrolled stormwater runoff and associated pollutant loadings to streams.

A representative sampling of some Fairfax TMDLs: Bacteria TMDLs have been established for six stream segments in the county, including one section each of Bull Run, Difficult Run, Four Mile Run and Popes Head Creek and two sections of Accotink Creek. Sediment TMDLs have been established for three stream segments in the county, including Bull Run, Difficult Run and Popes Head Creek.

Bacteria and benthic TMDL plans are being developed for Hunting Creek and Accotink Creek, respectively. Both TMDLs fall under the 1999 Consent Decree. DEQ had obtained an extension from EPA on the Hunting Creek TMDL until October 2010 in order to address concerns raised by the City of

Alexandria regarding potential impacts of the TMDL to their combined sewer system. EPA has taken over development of the Accotink Creek benthic TMDL. While sediment has been identified as the pollutant of concern that is causing the benthic impairment, EPA has proposed an approach that would use flow as a surrogate for sediment. EPA's stated goal was to have established the flow TMDL in September 2010. Information on TMDL development in Virginia is available on DEQ's website:

<http://www.deq.virginia.gov/tmdl/homepage.html>

#### **a. Accotink Creek TMDL**

Accotink Creek was first listed as impaired on the 1996 303(d) Priority List of Impaired Waters for not meeting the aquatic life use due to poor health in the benthic biological community. This impaired segment of Accotink Creek stretches from the confluence of Calamo Branch with Accotink Creek and extends downstream to the start of the tidal waters of Accotink Bay (7.35 miles). This segment was listed in Attachment A, Category 1 (Waters Listed on Part 1 of Virginia's 1998 303(d) Report) of the 1999 Consent Decree.

Benthic macroinvertebrate data from 1990 – 1994 indicate that Accotink Creek at Station 1AACO006.10 (located at Alban Road--Route 790) is moderately impaired. This trend remains relatively unchanged through 2008. The benthic community in Accotink Creek continues to reflect an urbanized environment, with Hilsenhoff Biotic Index scores remaining in the 6-7 range, and organism density continuing to be low. This station exhibits a benthic impairment for the entire period of record of biological monitoring (1990 to present). The benthic impairment reflects not only the lack of pollutant intolerant species, but also the lack of benthic macroinvertebrates in general. Biological monitoring data from 1994 to the present indicate a benthic impairment on Accotink Creek, with Stream Condition Index scores ranging from the mid-20s to the low 40s.

The United States Environmental Protection Agency is the lead agency for completing the Accotink Creek benthic TMDL. To date, three Technical Advisory Committee Meetings (December 2008, August 2009, January 2010) and one Public Meeting (September 2009) have been held for this project. This TMDL will be completed by May 1, 2011.

#### **b. Four Mile Run TMDL**

Due to high levels of fecal coliform bacteria, Four Mile Run was listed in 1996 and 1998 on the 303(d) Impaired Waters List. Although only the very upper reaches of Four Mile Run are located in Fairfax County, it is important to note the existence of a TMDL study for Four Mile Run and the

participation of Fairfax County in the Four Mile Run TMDL study and implementation plan.

The Four Mile Run Fecal Coliform Study, which identified the sources of fecal coliform bacteria in the watershed using DNA testing, was completed in 2000. The study found that waterfowl contribute over one-third (31 percent) of those bacteria that could be matched. Eighteen percent of the bacteria originated from humans, 13 percent from dogs, six percent from deer, 19 percent from raccoons and 13 percent from other sources. Bacteria from humans appear to be highly localized. There were indications in that, without regard to specific host animals, *E. coli* bacteria seem to regenerate, through cloning, within the storm drains and stream sediments, which in turn perpetuates bacteria levels.

In 2002, the bacteria TMDL study for Four Mile Run developed by the Northern Virginia Regional Commission and the VA DEQ was approved by the EPA. NVRC, under a grant from VA DEQ, worked with four jurisdictions (Fairfax and Arlington counties and the cities of Falls Church and Alexandria) to develop an implementation plan for the TMDL study. Completed in 2003, the plan focuses on reducing bacteria contamination from human and pet sources in the watershed and includes several initiatives from community outreach efforts to large capital projects. The plan can be viewed on-line at: <http://www.novaregion.org/index.asp?nid=394>.

NVRC continues to evaluate the impact of drainage modification projects in the Four Mile Run Watershed and ensures that the projects do not increase peak discharges in the lower Four Mile Run. As a part of this program, updated GIS data are being compiled with the intent of updating the Four Mile Run Computer Model. NVRC also supported the U.S. Geological Survey to provide continuous stage, flow and precipitation data at Shirlington Road bridge station and tidal stage data at the Rt. 1 Bridge station on Four Mile Run.

**c. Hunting Creek, Cameron Run, Holmes Run – Bacteria TMDLs**

Portions of Hunting Creek, Cameron Run and Holmes Run have been identified as impaired on the Clean Water Act §303(d) list for not supporting the primary contact recreation use due to elevated levels of *E. coli* bacteria. The Hunting Creek, Cameron Run and Holmes Run watersheds are located within Arlington County, the City of Alexandria, the City of Falls Church and Fairfax County. The impaired portion of Hunting Creek extends from Route 241 (Telegraph Road) bridge crossing downstream to the confluence with the Potomac River. The impaired reach of Cameron Run extends from the confluence with Backlick Run, downstream to the end of the free-flowing waters (Route 241, Telegraph Road bridge crossing). The impaired portion of Holmes Run extends from

the mouth of Lake Barcroft, downstream to the confluence with Backlick Run.

To date, three Technical Advisory Committee Meetings (March 2009, June 2009 and June 2010) and two Public Meetings (March 2009 and June 2009) have been held for this project. These TMDLs were to have been completed by October 1, 2010.

**d. Potomac PCBs TMDL**

The county is participating in a cooperative effort among Maryland, the District of Columbia and Virginia to develop a TMDL for PCBs for the Tidal Potomac River. A PCB TMDL has been established for the Tidal Potomac River that assigned waste load allocations to 14 county waterways.

**e. Chesapeake Bay TMDL**

A preliminary notice of TMDL development for the Chesapeake Bay was published by EPA in the Federal Register on September 17, 2009. In order to provide reasonable assurance that the Chesapeake Bay TMDL can be achieved, EPA is requiring states and the District of Columbia to develop Watershed Implementation Plans that document how each jurisdiction will partner with federal and local governments to achieve and maintain water quality standards. EPA's stated goal is to establish the Chesapeake Bay TMDL by December 31, 2010. Information on the Chesapeake Bay TMDL is available on EPA's website at:

<http://www.epa.gov/reg3wapd/tmdl/ChesapeakeBay/index.html>

**f. Public Participation in the TMDL Process**

Public participation is a key component of the TMDL process in Virginia. Public meetings are held at the onset and closure of each TMDL project. Anyone is welcome to attend these meetings. Meetings are advertised through several methods, including published notices in the Virginia Register, announcements in the community calendar of local newspapers, fliers posted at public locations throughout the impaired watershed and through e-mail distribution lists. The purpose of the public meetings is to educate the community about the TMDL process and allow the public to ask questions and provide feedback on how to improve the project. Any questions relating to the TMDL process should be directed to the TMDL Coordinator at the Northern Regional Office of DEQ:

<http://www.deq.virginia.gov/regions/northern.html>

**g. TMDLs completed in 2009**

There were no TMDLs completed in Fairfax County in 2009.

## 11. Pond and Lake Monitoring and Management

There are a number of significantly sized private and public ponds and lakes throughout the county. All ponds and lakes in Fairfax County are man-made by excavation and/or the damming of streams. Most of these ponds and lakes serve as stormwater management facilities for developments and have houses along their shorelines. There are also numerous smaller ponds associated with commercial developments, golf courses or farm properties. These open water impoundments provide habitat for a number of aquatic organisms and waterfowl as well as recreational opportunities for humans. Due to increased runoff from development and in-stream bank erosion, these water bodies are often subject to heavy sedimentation, which requires frequent dredging in order to maintain pond or lake depth. Heavy nutrient loading results in large algal blooms during warmer months. Other problems that plague urban ponds and lakes include thermal stratification, reduced water clarity, decreased dissolved oxygen levels, trash and nuisance invasive vegetation.

### a. Reston Lakes

The Reston Association, the homeowners association for the planned community of Reston, has an active watershed and lake management program. Four lakes, Audubon, Anne, Thoreau and Newport, as well as two ponds, Bright and Butler, are monitored. Dissolved oxygen, dissolved oxygen saturation, temperature, pH, conductivity, total phosphorus, Secchi depth transparency, chlorophyll a, phytoplankton and zooplankton are monitored. Fecal coliform and E. coli bacteria testing have been conducted in Lake Audubon for annual swimming events. Detailed monitoring information and data can be found in the 2009 Reston Lakes Annual Monitoring Report. This report and other information about Reston's lakes can be obtained by contacting the association's watershed manager at 703-435-6560 or visiting the website: [www.reston.org](http://www.reston.org).

In 2007, Lake Anne was randomly chosen to be surveyed as part of EPA's National Lake Survey. In June 2008, USGS sampled the bottom sediments at Lake Anne as part of a national study of water quality trends. The scientists learn about trends by studying bottom sediment cores from lakes, in a similar way to using tree rings to look at historical climate. The scientists took sediment cores from Lake Anne in 1996 and analyzed them for metals and organic compounds and will update the trends they saw a decade ago by comparing them to the 2008 samples. Some of the most common compounds used to date the sediment cores include DDT and lead. In addition, the amounts of Polycyclic Aromatic Hydrocarbons, which most commonly are found in coal tar asphalt sealers, are analyzed. For more information on the national study of water quality trends visit: <http://tx.usgs.gov/coring/index.html>.

Purple loosestrife, a noxious weed in Virginia, was well established at Lake Newport and was discovered on the other three lakes in 2008. In 2010, the Reston Association's staff continued the massive removal of purple loosestrife from the shoreline at all four lakes.

In 2010, Lake Newport was also treated to control the spread of water lilies.

RA treats Lake Anne seasonally in the summer to prevent blue green algae blooms. Lake Anne is the oldest lake and has been treated since 2005.

Lake Audubon was dredged in the summer of 2010, removing about 10,000 cubic yards of material.

**b. Pohick Watershed Lakes**

The six Pohick watershed lakes (Barton, Braddock, Huntsman, Mercer, Royal and Woodglen) are inspected annually for dam structure but are not monitored for biological or chemical parameters.

**c. Lake Barcroft**

The Lake Barcroft Watershed Improvement District is a local taxing district authorized under Virginia law for conservation purposes. The WID is responsible for the management of Lake Barcroft and regularly monitors water quality. Due to sediment loading the lake is in need of dredging. Given the significant amount of sediment that needs to be removed, there are continuous concerns with the lack of adequate local disposal areas. For more information about Lake Barcroft, contact the Operations Director at 703-820-1300 or see the website: [www.lakebarcroft.org](http://www.lakebarcroft.org).

**d. Lake Accotink**

Lake Accotink is owned and managed by the Fairfax County Park Authority and is a key feature of Lake Accotink Park. The lake was originally created by construction of a dam across Accotink Creek in 1918. The existing dam was constructed in 1943. Similar to other urban lakes and ponds, Lake Accotink has been significantly impacted by accelerated sedimentation, which has reduced the average depth of the lake to less than four feet. Project funding in the amount of \$6.15 million was included in the 1998 Park Bond Program to dredge the lake and make repairs to the dam.

In September 2005, the Park Authority Board approved a contract award to Mobile Dredging and Pumping to hydraulically dredge 161,000 cubic yards of silt from Lake Accotink and pump the material to a property owned by Virginia Concrete for dewatering and disposal. The Department of Public

Works and Environmental Services is overseeing the construction contract because of its past experience on other similar type projects.

Mobilization began in October 2005 and the 2.8 mile long slurry pipe line installation was completed in June 2006. Dredging began in July 2006. The project also includes expanding and enhancing existing wetlands. At the Park Authority's request, DPWES performed a preliminary evaluation to determine if the Virginia Concrete disposal site could accommodate additional dredge material above the 161,000 cubic yards currently specified in the contract. Based on this review, up to 204,000 cubic yards of material can be disposed of at the Virginia Concrete site, and DPWES agreed to provide \$1,545,000 in additional funding to dredge and dispose of 43,000 additional cubic yards. In June 2006, a major storm caused a significant amount of silt to flow into the marina area, reducing water depth. In combination with the drought conditions, boat access from the marina to the main lake channel has been limited. DPWES has agreed that a portion of the additional 43,000 cubic yards of dredge material could be reprogrammed for dredging in the vicinity of the marina, reducing the dredge amount at the top end of the lake by an estimated 10,000 cubic yards.

Approximately, 195,000 cubic yards of material was removed by project completion in September 2008.

## **12. Groundwater Monitoring**

The United States Geological Survey maintains a series of wells throughout the nation to monitor groundwater levels and drought. Two wells are located in Virginia; one such well (Site 385638077220101) in Fairfax County has been maintained since 1976. This well provides continuous real-time data that is used to assess ground water levels. Information on this well is available on-line at: <http://groundwaterwatch.usgs.gov>.

### **a. Leaking Underground Storage Tanks**

In 2009, there were 133 new release cases investigated by the Virginia Department of Environmental Quality. Of the new cases, 117 were closed. As of December 2009, there were a total number of 2,619 cases from years past, of which only 118 remain open.

## **13. Stream Restoration and Ecosystem Function**

The Hydroecology of Flowing Waters group in the National Research Program of the United States Geological Survey is currently conducting a study on two streams in Fairfax County to evaluate the effects of stream restoration on stream ecosystem functioning at low levels of the food chain. By changing the morphology of the stream, restoration activities change the distribution of

habitats for primary producers and consumers and the amount of time it takes water to move through those habitats. Restoration activities also change the quantity of light reaching the stream, altering the amount of primary production by algae. Both factors influence the balance between the production and respiration of organic matter, which in turn strongly influences food web structure and water chemistry. The USGS study focuses on obtaining a fundamental understanding of the linkage between flow, the transport of sediment and organic matter, the physical structure of the stream and the resulting production and respiration of organic matter in a restored section of Accotink Creek, compared to an unrestored section of Upper Difficult Run. Initial efforts are under way to understand how spatial differences in the physical characteristics of these streams control spatial differences in primary production and respiration. Future efforts will involve laboratory and numerical modeling studies to determine how storm flows influence these processes.

## **D. WATERSHED MANAGEMENT**

### **1. Watershed Master Plans**

In 2003, the Stormwater Planning Division of the Fairfax County Department of Public Works and Environmental Services commenced a watershed planning program to develop management plans for all 30 county watersheds. Data from the Physical Stream Assessment, Stream Protection Strategy Baseline Study and other monitoring information are being used in the development of the watershed plans. The plans encourage public involvement; provide an assessment of stormwater conditions; recommend protection strategies and improvement projects including stream restoration, riparian buffer restoration, installation of low impact development practices and retrofitting and improving existing stormwater management facilities and infrastructure; and recommend modifications to the County Code and Public Facilities Manual.

Six watershed management plans (Little Hunting Creek, Popes Head Creek, Cub Run/Bull Run, Difficult Run, Cameron Run and Middle Potomac) have been completed and approved by the Board of Supervisors. Combined these six plans cover 11 watersheds and 50 percent of the land area in the county. Plans for the remaining watersheds in the county (Accotink Creek, Dogue Creek, Little Rocky Run/Johnny Moore Creek, Pohick Creek, Sugarland Run/Horsepen Creek, Lower Occoquan Watersheds and Nichol Run/Pond Branch) are anticipated to be completed by the end of 2010.

## 2. Restoration Efforts

### a. Department of Public Works and Environmental Services Stream Restoration and Stabilization Projects

#### i. Stormwater Capital Projects.

In 2009, the county and its partners continued to implement stormwater management-related capital projects, including 12 flood mitigation projects, more than 25 stormwater management facility retrofits, 14 low impact development (LID) projects and three stream restoration and stream stabilization projects. Staff continued to monitor the quantity and quality of runoff from three innovative stormwater management systems throughout the county. Flood insurance premiums dropped in 2009 for residents of Fairfax County who have or may purchase flood insurance on their properties in Special Flood Hazard Areas due to an improved rating from the Federal Emergency Management Agency.

#### ii. Stream and outfall improvements

The Poplar Springs stream restoration project was a 692 linear foot stream restoration project in Burke, Virginia, on an unnamed tributary to Pohick Creek, within property owned by the Fairfax County Park Authority that is known as Hatches Lake. The goal of the project was to use natural channel design techniques to install a self-sustainable, regenerative stream design that reduces erosion processes, improves water quality and restores the ecological structure and function of the stream corridor. The project was also implemented to protect private property adjacent to the project area. This project restored the stream by establishing a stable stream morphology through the use of natural channel design principles and soil bio-engineering. The riparian area was restored through establishing a multi-layered riparian forest of native trees, shrubs, herbaceous plants and grasses. Construction lasted five months and was substantially completed in April 2009.

#### iii. Detention Basin retrofits

Eleven detention basins throughout the county were retrofitted for enhanced detention capacity and improved water quality. In addition, new riser structures and sediment forebays help to facilitate maintenance efforts. Specially designed seed mixes enhance basin function and vegetation longevity with native species.

#### iv. Water Quality Retrofits

Three locations were retrofitted for water quality with rain gardens and/or tree boxes. These locations include schools and parks.

#### **b. Riparian Buffer Restoration**

The Fairfax County Park Authority, Fairfax ReLeaf and the Virginia Department of Forestry hosted independent stream buffer restorations in the county in 2009. The Park Authority completed its fifth year of riparian buffer enhancement. To date, there have been 35 projects on parkland throughout the county. These projects have focused on the conversion of mowed grass to areas of native trees and shrubs typical of riparian areas. Park Authority staff completed additional planting projects in the RPA unrelated to the county's buffer planting program. Two such projects in 2009 were the planting of 50 trees in Pohick Stream Valley Park and the planting of over 240 trees and shrubs in Accotink Stream Valley Park to promote reforestation after the completion of a federally funded commuter and stream valley trail. Other projects were focused on reforestation of uplands to include the planting of over 70 trees at Pinecrest Golf Course and 75 trees at Mount Vernon District Park.

#### **c. Huntley Meadows Park**

In June 2006, the Fairfax County Park Authority and DPWES completed a stream stabilization and stormwater control improvement project on Barnyard Run above Huntley Meadows Park. The project involved creating a number of step pools in the stream to reduce energy and erosive force and stabilization of several hundred feet of stream bank using bioengineering techniques and native plant seedlings. In 2007, additional live stakes, tublings and biologs were installed to further stabilize banks. Maintenance of construction access points continued in 2007.

In 2007, the county began working on the plan for Huntley Meadows Wetland Restoration project. The goal of the project is to restore the wetland to its previous, more water-filled condition with the aid of an earthen berm, water control structure and several wetland pools. The project is ongoing. Information about the project can be found on-line at:  
<http://www.fairfaxcounty.gov/parks/huntley/restorationproject.htm>.

#### **d. Reston**

In 2006, Reston Association worked with Northern Virginia Stream Restoration, L.C., to establish the Reston stream mitigation bank. The restoration bank was approved in March 2006. Aerial photography of watersheds and surveying/tagging of thousands of trees in the stream valleys

was conducted as part of establishing the groundwork for future restoration projects. The project will implement the recommended stream restoration projects outlined in the Reston Watershed Management Plan. A team of regulatory agencies, including the U.S. Army Corps of Engineers, the U.S. Environmental Protection Agency, the U.S. Fish & Wildlife Service and the Virginia Department of Environmental Quality, will oversee the progress of the bank.

In 2007, Reston Association continued to work with Northern Virginia Stream Restoration, L.C., managed by Wetland Studies and Solutions, Inc., to help coordinate the Reston stream mitigation bank. The project is implementing the recommended stream restoration projects outlined in the Reston Watershed Management Plan.

The groundbreaking for Phase I, which covers 14 miles of stream, occurred on February 12, 2008. As of August 2010, approximately seven miles of stream in the Snakeden Branch watershed have been restored, fully funded by the Northern Virginia Stream Restoration, L.C. Construction, planting and cleanup should be finished on The Glade by the end of 2010. Survey and data collection is complete in the Colvin Run Watershed. Design plans for the first two priority stream reaches in Colvin Run have been developed. For more information on the stream restoration project in Reston, visit <http://reston.wetlandstudies.com> or <https://www.reston.org/ParksRecreationEvents/StreamRestoration/BackgroundInformation/Default.aspx?qenc=HzT9ACzZbNs%3d&fqenc=IuyzM7YCiW14%2b790IAj6bg%3d%3d>.

**e. Little Pimmit Run**

In June 2007, the Northern Virginia Soil and Water Conservation District completed the Little Pimmit Run Stream Restoration project. The project involved a public-private partnership that used natural stream channel design and innovative techniques to restore 675 feet of a severely degraded stream segment. It also protected three threatened sanitary sewer lines that are parallel to and crossing the stream. Nearby homeowners assumed two-thirds of the cost for design and construction of the project, which is located primarily within parkland. NVSWCD partnered with an engineering firm to design and oversee the project. Other partners, in addition to the homeowners, included the Park Authority, DPWES-Wastewater Collection Division, the Dranesville District Supervisor and Angler Environmental Construction. The design included two stacked stone walls to bankfull height, five j-hooks to control and direct flow, bankfull benches, riffles and pools throughout the segment, an integrated trail crossing, floodplain and upland grading and planting with native grasses, shrubs and trees.

Since completion, the restored channel functions as designed and successfully conveys stormwater flows. The neighbors are exploring how they can help with stewardship of the project, including the riparian buffer. Both the stream and riparian habitats are improving, and the trail users enjoy the new stream crossing.

### **3. Support Programs**

#### **a. Northern Virginia Soil and Water Conservation District**

The Northern Virginia Soil and Water Conservation District is a political subdivision of the commonwealth of Virginia that has the same boundaries as Fairfax County. The district's goal is to promote clean streams and protected natural resources. NVSWCD works to lessen the impacts of urban/suburban activities on land and water resources in Fairfax County by working with government agencies, industry and the general public and providing technical assistance and outreach programs.

NVSWCD provides information, educational programs, volunteer opportunities and newsletters to residents on many aspects of water quality, erosion and drainage, nonpoint source pollution and stream health. NVSWCD reviews and provides comments to the county's Department of Planning and Zoning on rezoning and special exception applications, with particular attention to the properties of soils, the potential for erosion, the impact on drainage, stormwater management and the surrounding land uses and environment. The District has partnered with many groups to implement several stream restoration and low impact development (LID) projects.

#### **b. Virginia Department of Forestry**

The Virginia Department of Forestry helps protect water quality and forest resources in Fairfax County. In 2009, VDOF partnered with a number of organizations and volunteers including the Potomac Conservancy, the Fairfax County Park Authority, Earth Sangha, Fairfax, Eagle Scouts and the Chesapeake Bay Foundation to plant approximately 5,000 seedlings throughout Fairfax County.

VDOF, the Fairfax County Park Authority and the Department of Public Works and Environmental Services are partnering on a stream buffer restoration project that will replenish areas along streams with deficient riparian vegetation. Areas will be determined based on data from the Stream Physical Assessment Study, which identified deficient buffers along over 800 miles of streams.

**c. Reston Association**

Reston Association presented 3 **Make Your Own Rainbarrel workshops** in 2010. Approximately 80 barrels were made and distributed.

RA is actively involved in public education and innovative approaches to erosion and drainage control. Examples of watershed management practices in Reston include water quality monitoring, stream bank and shoreline stabilization, erosion abatement, fisheries monitoring, algae and invasive aquatic weed control, waterfowl management, trash removal, dredging and riparian buffer restoration.

In 2010, RA worked with several clusters and individual homeowners and conducted several shoreline stabilization projects using biologs, erosion cloth and native plantings. RA continues to promote natural shoreline stabilization and encourages the use of more environmentally sensitive materials for docks, such as recycled plastic materials, as opposed to conventional pressure-treated timber.

In 2010, Reston continued marking 200 storm drains with the message **“No Dumping, Drains to Difficult Run”** or “Sugarland Run.” The storm drain marking project is part of the countywide initiative to educate residents on the impact of nonpoint source pollution.

**4. Reston Storm Water Trail**

The Reston Association received a grant for \$8,500 from the Chesapeake Bay License Plant fund, \$4,000 from Fairfax Water and a donation from Deloitte LP to implement a self-guided Storm Water Trail in Reston that serve as a guide to help community associations, residents and youth to better understand stormwater management. It will also encourage individuals to implement at least one of the demonstrated techniques to protect water quality from nonpoint source pollution and to buffer storm runoff.

The Storm Water Trail includes best management practices or low impact development techniques, including an infiltration sidewalk that uses porous paver bricks. Also included is a rain garden that collects water from the gutter and downspouts at Brown’s Chapel; it filters the water through a mixture of sand, topsoil and leaf mulch before conveying the drainage into a gravel layer, a drainage swale, a garden planted with native species that grow well in the Northern Virginia area which require little maintenance and a rain barrel that will be used to collect and conserve rainwater to be used to water the gardens in between rainstorms.

The Storm Water Trail helps satisfy the goal outlined in Reston’s watershed plan of expanding environmental education opportunities in the watersheds of

Reston. On-site controls have been implemented that include low impact development technologies to reduce storm water runoff volume and peak flows and to implement best management practices and retrofits to take advantage of natural storm water infiltration that is provided in natural stream valleys.

Reston's watershed master plan is available online at:

<https://www.reston.org/ParksRecreationEvents/Nature/NaturalResources/Watershed/WatershedMasterplan/Default.aspx?qenc=HzT9ACzZbNs%3d&fqenc=nvONwrgxjZ6oyRuamln6yw%3d%3d>.

## **5. Organized Countywide Stream CleanUps**

### **a. Alice Ferguson Foundation**

On April 10, 2010, the annual Alice Ferguson Foundation Potomac River Watershed Cleanup was held; there were 575 cleanup sites in four states and the District of Columbia. Cleanups were conducted at numerous state, county and local parks (see below) and the county wastewater treatment plant. In Fairfax County and the City of Fairfax, 2,115 volunteers removed over 58,600 pounds of trash, which included 340 tires, over 26,200 bottles and over 2,200 cigarette butts. In FY 2009, the Alice Ferguson Foundation also held two site leader trainings in Fairfax County with approximately 25 participants. These trainings were to prepare volunteers and site leaders for the Potomac cleanup as well as inform them on the workings of the Trash Free Potomac Initiative.

### **b. Clean Virginia's Waterways**

According to Clean Virginia Waterways, a total of 805 volunteers participated in the International Coastal Cleanup in Fairfax County during September and October 2009. More than 20 stream and shoreline miles were cleaned, and over 30,600 pounds of trash and marine debris were removed. Litter from recreational activities and fast food consumption (e.g. plates, forks etc.), beverage containers and plastic bags were the most commonly collected trash items collected in the county.

### **c. General**

During 2009, various "Friends of" citizen groups reported that over 88 bags of general trash, 323 plastic shopping bags, 318 pounds of bulk items and 18 tires were removed from county streams by 86 adult, teen and child volunteers.

As in past years, the Fairfax County Park Authority hosted and organized numerous cleanup events in many stream valley parks and two lake front parks during 2009. Over 61 stream cleanups were conducted on county

parkland as part of the Alice Ferguson Foundation's Potomac Watershed Cleanup (see the above discussion for 2010 cleanup data from Fairfax County and the City of Fairfax—the county parkland cleanups were a subset of the larger watershed cleanup event). These events provided an excellent learning opportunity for a reported 1,023 volunteers who removed 46,612 pounds of trash from county streams and water bodies.

## **E. STORMWATER MANAGEMENT, ENFORCEMENT AND INSPECTIONS**

### **1. NPDES Municipal Separate Storm Sewer System Permit**

Fairfax County's National Pollutant Discharge Elimination System Municipal Separate Storm Sewer System permit (known as the "MS4 permit") requires the county to prevent the discharge of pollutants such as oil, fertilizer, pet waste and trash from the stormwater management system into waterways to the maximum extent practicable.

The permit also prohibits non-stormwater discharges into the storm drain system, such as from illicit sanitary sewer connections or illegal dumping. It also requires storm event monitoring and assessment of the effectiveness of stormwater controls being used in the county.

The MS4 permit is issued to the county as a whole and elements of the stormwater management program are implemented by a broad range of county agencies and partners. The Stormwater Planning Division and the Maintenance and Stormwater Management Division manage the majority of stormwater management program elements, including comprehensive watershed management planning, long term biological monitoring, infrastructure mapping, inspections and maintenance, retrofitting developed areas with water quality control facilities and public outreach and education. Inspections of privately owned stormwater management facilities are conducted on a regular basis (every five years). Water quality is monitored at selected storm sewer outfalls four times per year (seasonally). Outfalls are monitored during dry weather to determine the presence of illicit discharges.

The Virginia Department of Conservation and Recreation (DCR) took over administration of the MS4 permit program as part of the Virginia Stormwater Management Program (VSMP) in 2005. The county's current MS4 permit expired in January 2007; however, the county is operating under an administrative continuance of the existing permit while the county and state work on reissuing the permit. In July 2006, the county submitted its MS4 permit reapplication to DCR. County staff has been working with DCR and other municipalities on the development of the new permit requirements. In March 2010, the county responded to DCR's fourth preliminary draft permit.

The latest preliminary draft includes incorporation of Fairfax County Public Schools into the countywide permit, as well as new requirements related to MS4 program plan updates, inventory control, monitoring, public outreach, employee training and development of TMDL action plans. The county is working diligently with the state to obtain a new permit. Fairfax County MS4 annual reports can be viewed on-line at:

[www.fairfaxcounty.gov/dpwes/stormwater/ms4permit.htm](http://www.fairfaxcounty.gov/dpwes/stormwater/ms4permit.htm).

## **2. Regional Stormwater Management Pond Program**

Since the early 1980s, the county's Public Facilities Manual has included a provision that encourages the concept of regional stormwater management. As opportunities arose, major developers and county staff pursued regional stormwater management primarily through the development process. A plan identifying the most appropriate locations for regional facilities was needed to improve this process.

The Regional Pond Subcommittee, an ad hoc subcommittee of the Fairfax County Environmental Coordinating Committee, reviewed the county's stormwater management plan and developed recommendations. The Board of Supervisors tasked the subcommittee in January 2002 to examine the role of regional ponds as well as other alternative types of stormwater controls as watershed management tools. The report, which identified 61 recommendations to improve Fairfax County's stormwater management program and to clarify the role of regional ponds, was submitted to and accepted by the Board of Supervisors. The Regional Stormwater Management Plan is being replaced as countywide watershed management plans are being developed.

Although innovative stormwater management practices are being explored and applied throughout the county, construction of regional ponds continues to be an option used by the county to retrofit areas needing stormwater controls.

No regional ponds were completed in 2009.

## **3. Stormwater Management Facilities and Infrastructure**

Fairfax County maintains more than 1,400 stormwater management facilities (which are inspected annually), 1,500 miles of pipe and 45,000 inlets and manholes and over 100 miles of manmade channels. The county also inspects one-fifth of the over 3,200 privately maintained stormwater facilities every year.

In 2009, the Maintenance and Stormwater Management Division inspected 926 county-maintained SWM and BMP facilities at least once, which represents approximately 72 percent of the 1,284 existing facilities in the inventory at the start of 2009. This represents a shift to inspecting most pond facilities on a biannual basis, yet complies with the permit requirement to inspect all county-

maintained facilities once during the term of the permit. MSMD inspected 570 of the 3,234 privately-maintained facilities in 2009 with the goal of inspecting all privately-maintained facilities at least once during the permit cycle as required.

In 2009, MSMD continued its maintenance program for county stormwater management facilities. Maintenance can include repairs to stormwater management facility structures and removal of sediment. During 2009, the county cleaned and/or mowed 1,074 dam embankments, including 39 regional ponds which were maintained four times each during the calendar year. Cleaning involves removing trash, sediment and debris from the trash rack, control structure and all inflow channels leading to the control structure. At each stormwater management facility, deposited sediment is removed from the trickle ditch upstream from the control structure and deposited offsite. The cleaning keeps the facility functioning properly by conveying water and performing the BMP function as designed.

In 2009, MSMD completed 264 work orders, including: un-blocking stormwater ponds and pipes to avoid flooding or damaged infrastructure; channel and pond cleaning, mowing, weeding and planting; outfall repair; and stream restoration and bank stabilization.

#### **4. Low Impact Development Techniques**

Environmentally sensitive site design and low impact development practices serve to minimize impervious cover and replicate natural hydrologic conditions. The county is recommending and encouraging that “Better Site Design” development techniques and that LID practices be used to the full extent allowed by the county’s Public Facilities Manual.

Six low impact development practices (bioretention basins and filters, vegetated swales, tree box filters, vegetated roofs, permeable paving and reforestation) were developed for inclusion in the Public Facilities Manual in 2006. In 2007, the Board of Supervisors adopted the amendments. The county is continuing its work with the Engineering Surveyors Institute, Northern Virginia Regional Commission and other local jurisdictions on developing a design and construction standards manual for LID applications. The manual will be recommended for adoption into the county’s PFM.

The county continues to implement a number of demonstration projects including several vegetated roofs. The West Ox Operations Center green roof was substantially completed on October 16, 2008. The approximately 1,000 square-foot green roof is an extensive type of green roof located on the administration-building roof of the bus operation center facility. The construction of the green roof went smoothly from the initial step of flooding the roof to insure no leaks, to the finished product of thriving sedums with very

little maintenance requirements. The administration building provides stair access to the roof with pavers to and around the green roof, for easy viewing access. The total cost of the green roof was \$34,194.

With the addition of these important techniques comes the challenge of what will be a significant increase of small stormwater management facilities that will need to be tracked, inspected, and maintained. Enforcing maintenance requirements will also be a challenge given limited staff.

In 2007, with the help of a grant from the Virginia Department of Conservation and Recreation, the Northern Virginia Soil and Water Conservation District conducted a study of 20 existing rain gardens in the county, three to five years old, both publicly and privately maintained. The evaluation focused on their physical characteristics, in relation to how well they were functioning. The analysis included infiltration tests and lab analyses of soil texture, organic matter content and bulk density. The filter media were examined to determine the type and level of pollutants retained and their relationship to the area drained. The actual installation of each rain garden was compared to the approved design. In general, publicly maintained rain gardens fared better than private ones, as did those built according to their approved designs. The study suggests several design recommendations. Perhaps the most important recommendations for overcoming the problems that were observed are for training and education that would ensure rain gardens are properly installed and well-maintained.

## **5. Erosion and Sediment Control**

DPWES continues to make improvements to the county's erosion and sediment control program, resulting in a greater emphasis and a higher quality of inspection services. DPWES developed a quality assurance program and trained field specialists on how to handle erosion and sediment control violations. DPWES also developed a prioritized inspection program, in accordance with guidelines established by the Virginia Department of Conservation and Recreation, that will consider slope, soil type, proximity to streams and extents of buffer areas to determine an overall rating for any given site. In March 2008, the Virginia Department of Conservation and Recreation approved the county's program, finding it to be "fully consistent with the requirements of the Virginia Erosion and Sediment Control Law and Regulations."

There were five complaints received by DCR from residents on properties in Fairfax County for FY09; all but one were addressed by county and DCR staff and closed. The remaining one is currently being addressed but is not yet closed.

In 2006, DPWES and the Engineers and Surveyors Institute conducted a class and workshop on constructability issues. In addition, in February 2006, a Letter to Industry was issued to announce the addition of two amendments to the PFM. The first clarified the requirements for drainage divides; the second clarified the adequate outfall requirements.

In 2009, a total of 616 erosion and sediment control plans were submitted and approved for projects that would disturb a land area of 2,500 square feet or more. Fairfax County's Alternative Inspection Program, established in cooperation with DCR, resulted in 33,797 Erosion and Sediment control inspections. This number represents 54 percent of the 62,546 total site inspections conducted by the Environmental and Facilities Inspection Division. In 2009, the county issued 108 notices of violations given to developers who failed to take required corrective action. In 2009, the county investigated 178 reports of illegal land disturbing and Resource Protection Area (RPA) violations, resulting in 36 criminal proceedings to achieve compliance.

## **6. Illicit Discharges**

The Fire and Rescue Department responds to all reported incidents of hazardous material releases, spills, and discharges in the county (regardless of whether the material has potential to enter the county-operated MS4 or another system, such as VDOT's). The department's Fire and Hazardous Materials Investigative Services (FHIS) personnel receive regular training in pollution prevention and are equipped to initiate spill control measures to reduce the possibility of hazardous materials reaching the MS4. Resources available to personnel include personal protective equipment, technical tools and equipment for spill control and absorbent products such as pads and booms for spill containment. The section also maintains a contract with a major commercial hazardous materials response company to provide additional containment and clean-up support for large-scale incidents.

In 2009, FHIS received 465 complaints. Approximately 292 of the complaints involved the actual release of various petroleum or chemical substances. Of the 292 releases, 174 involved diesel fuel (30), home heating fuel oil (49), gasoline (33), motor oil (17) or hydraulic oil (45). Other releases investigated involved antifreeze, paint, sewage, mineral oil and mercury. Storm drains were involved in 52 of the releases.

## **F. WASTEWATER TREATMENT**

Wastewater is primarily treated two ways in Fairfax County. In most cases it is collected from homes and commercial sites and carried through the sanitary sewer pipe system to large treatment facilities that release the treated waters into local waterways. For a small percentage of Fairfax County residents, wastewater is

treated on-site via septic systems where the water infiltrates into ground and ultimately reaches groundwater.

## 1. Treatment Facilities

### a. Upper Occoquan Sewage Authority

The following information has been provided by UOSA:

UOSA operates an advanced water reclamation facility in Centerville, Virginia and serves the western portions of Fairfax and Prince William counties, as well as the cities of Manassas and Manassas Park. The water reclamation plant includes primary-secondary treatment followed by advanced waste treatment processes: chemical clarification, two-stage recarbonation with intermediate settling, multimedia filtration, granular activated carbon adsorption, chlorination for disinfection and dechlorination. The plant's rated capacity is 54 million gallons per day.

UOSA operates under a Virginia Pollutant Discharge Elimination System Permit, which is issued by the Virginia Department of Environmental Quality. The permit limits and 2009 plant performance are listed in Table IV-1.

<b>Table IV-1. UOSA Permit Requirements and 2009 Performance</b>		
<b>Parameter</b>	<b>Limit</b>	<b>Performance</b>
Flow	54 mgd	31 mgd
Fecal Coliform	<2/100 mg/l	<1.1/100 mg/l
Chemical oxygen demand	10.0 mg/l	<5.0 mg/l
Turbidity	0.5 NTU	<0.1 NTU
Total Suspended Solids	1.0 mg/l	<0.1 mg/l
Total Phosphorus	0.1 mg/l	<0.1 mg/l
Surfactants	0.1 mg/l	0.011 mg/l
Total Kjeldahl Nitrogen	1.0 mg/l	0.3 mg/l
Dissolved Oxygen	>5.0 mg/l	8.1` mg/l
Dechlorination Chlorine Residual (mg/l)	Non detect	Non detect

Source: Upper Occoquan Sewage Authority

The influent highest rolling 30-day flow was observed during the 30-day rolling period ending on December 31, 2009 at 40.9 mgd. The UOSA Plant continues to produce high quality reclaimed water.

UOSA produces and treats two types of residuals: biosolids from conventional treatment and lime solids from chemical treatment. UOSA produces Exceptional Quality (EQ) biosolids utilizing a dryer-pelletizer process. EQ biosolids have commercial potential in the agricultural and

horticultural markets. As back up to the EQ biosolids process, UOSA produces Class B biosolids through a combination of digestion and dewatering followed by lime stabilization. Class B biosolids are applied to agricultural land. Thickened lime residuals are gravity thickened and dewatered on the recessed chamber filter presses. All lime solids are landfilled on site in a permitted industrial landfill owned by UOSA. UOSA's lime solids are registered with the Virginia Department of Agriculture and Consumer Services as an industrial co-product for use as a soil amendment. However, because agricultural lands are located in areas far away from UOSA, their distribution is not currently cost effective.

#### b. Noman M. Cole Jr. Pollution Control Plant

The NMCPCP, located in Lorton, is a 67 million gallon per day advanced wastewater treatment facility that incorporates preliminary, primary, secondary and tertiary treatment processes to remove pollutants from wastewater. The original plant, which began operation in 1970 at a treatment capacity of 18 million gallons a day, has undergone three capacity and process upgrades to meet more stringent water quality standards. After treatment, the wastewater is discharged into Pohick Creek, a tributary of Gunston Cove and the Potomac River. The plant operates under a VPDES permit. The plant is required to meet effluent discharge quality limits established by the Virginia Department of Environmental Quality. Table IV- 2 presents the facility's performance and current effluent monthly limitations.

<b>Table IV-2 NMCPCP Permit Requirements and 2009 Performance Averages</b>		
<b>Parameter</b>	<b>Limit</b>	<b>Performance</b>
Flow	67 mgd	40.8 mgd
CBOD <sub>5</sub>	5 mg/l	< 2 mg/l
Suspended Solids	6 mg/l	2.4 mg/l
Total Phosphorus	0.18 mg/l	< 0.10 mg/l
Chlorine Residual	0.008 mg/l	< 0.008 mg/l
Dissolved Oxygen	6.0 mg/l (minimum)	8.6 mg/l
pH	6.0-9.0 (range)	6.9
E. coli Bacteria	126/100mls*	< 1/100mls*
Ammonia Nitrogen	1.0 – 2.2 mg/l (seasonal)	< 0.10 mg/l
Total Nitrogen (Annual)	7 mg/l	4.61mg/L

\*Geometric mean

Source: Fairfax County Department of Public Works and Environmental Services

In 2009, 59,928 wet tons of sludge were generated and incinerated. Inert ash from the process was disposed of in a monofill at the county's I-95 campus.

The Virginia Department of Environmental Quality issued a new general permit for nutrient discharge limits for sewage treatment facilities in Virginia's portion of the Chesapeake Bay watershed. These proposed changes will further limit nutrient discharges from the NMCPCP and require substantial modifications by 2010. Design and construction of the new modifications have begun. The NMCPCP has volunteered to comply with the phosphorus requirement five years early.

NOTE: In the past five years, electrical usage has been cut by 18% through changes in pumps, lights and spending strategies. The reduction in annual electricity usage of 8,400 MW cut green house gas emissions by 4,500 metric tons.

### Water Reuse Project

The purpose of the project is to provide treated effluent that can be used by various users in lieu of potable water as allowed by state regulations. The Water Reuse project includes the design and construction of approximately 20,000 linear feet of water reuse main, an elevated water tank, a pump station upgrade at the Treatment Plant, a wastewater pump station upgrade at the county's Energy/Resource Recovery Facility (E/RRF), an irrigation pump station upgrade at the Laurel Hill Park Golf Course and an irrigation system at the Lower Potomac ball fields. The project will reduce the treatment plant effluent discharge into Pohick Creek by providing approximately 560 million gallons per year to E/RRF for use in its cooling towers and approximately 24 million gallons per year to the Lower Potomac ball fields and Laurel Hill Park golf course for irrigation purposes, for a total of 584 million gallons per year. The notice to proceed on the reuse project was issued on December 23, 2009. The project duration is 20 months with a completion date of August 2011.

## **2. Septic System Permitting and Repairs**

### **a. Overview**

An estimated 23,000 homes and business are served by on-site sewage disposal systems in Fairfax County. 645 of these systems are alternative sewage disposal systems, which require regulating the operation and maintenance on the part of the home owner. The county's Health Department reported that, in fiscal year 2010, 86 New Sewage Disposal Permits were issued for single family residences. There were 88 new sewage disposal systems installed--52 percent were alternative type systems and 48 percent were conventional systems. Approximately 766 sewage disposal system repair permits were issued; repairs ranged from total replacement of the system to minor repairs such as broken piping or pump replacement. There were 6,390 septic tank pumps outs.

In fiscal year 2010, notices were sent to homeowners to remind them to turn their system's flow diversion valve and pump out the septic tank every three to five years.

**b. Septic system failures**

There are challenges to sustainability of existing onsite sewage disposal systems through proper use, maintenance and upkeep by the homeowner. There remains a concern for future failing septic systems. There are also challenges associated with the increasing reliance on alternative systems.

Areas of the county with marginal or highly variable soils that have been deemed unsuitable for onsite sewage disposal systems in the past are now being considered for development utilizing alternative onsite sewage disposal technology. In addition, alternative systems are becoming the norm for developers who want to maximize lot yield from properties that are not served by the sanitary sewer system. Alternative on-site systems require more aggressive maintenance on a regular schedule for the systems to function properly. Some require maintenance contracts as part of the permitting process. Homeowners are really not aware of their responsibilities for maintaining these systems. Education from the private sector and government sector are essential.

To address concerns about the management of onsite sewage disposal systems, Health Department staff and representatives from American Water/Applied Water Management conducted a study to examine the feasibility of establishing an onsite sewage disposal management entity in Fairfax County. If deemed feasible, the entity would be responsible for ensuring that proper and timely system maintenance is performed on all onsite sewage disposal systems. This project was completed in a four phased approach. Phase four of final technical report was provided to Health Department at the beginning of FY 2010. The Health Department has been reviewing the report as to its applicability to legislation approved by the Virginia General Assembly in 2009 and 2010. The legislation specifically required the State Health Department to adopt *Emergency Regulations for Alternative Onsite Sewage Systems* that establish performance requirements, maintenance requirements and reduced vertical soil setbacks distances to restrictions for all Alternative Onsite Sewage Systems. The emergency regulations were adopted on April 7, 2010. These regulations are substantially different from the recommendations of American Water/Applied Water Management. The Health Department is reviewing the regulations and recommendations of the contractor for applicability in Fairfax County.

### **3. Sanitary Sewer Maintenance, Repairs and Rehabilitation**

The Wastewater Collection Division within the Department of Public Works and Environmental Services manages the county's operation and maintenance program for the 3,300 mile sanitary sewer system. Closed circuit television inspection is used to inspect trunk sewer mains to identify defective lines in need of repair and/or rehabilitation. In 2009, 226 miles of old sewer lines and 7.7 miles of new sewer lines were inspected using CCTV. Approximately 114,681 feet of sanitary sewer lines were rehabilitated and 32 dig-up and 118 trenchless point repairs were completed (118 tophats). Over the past 12 years, 274 miles of sewer lines have been rehabilitated.

## **G. DRINKING WATER**

The county's water supply comes from the Potomac River, the Occoquan Reservoir, Goose Creek, community wells and private wells. Fairfax Water withdraws water from the Potomac River near the James Corbalis Water Treatment Plant and from the Occoquan Reservoir at the Frederick Griffith Water Treatment Plant. Fairfax Water provides drinking water to most Fairfax County residents. Fairfax Water also provides drinking water to the Prince William County Service Authority, Loudoun Water, Virginia America Water Company (City of Alexandria and Dale City), Town of Herndon, Fort Belvoir and Dulles Airport. The City of Fairfax receives its water from the Goose Creek Reservoir in Loudoun County, and the City of Falls Church buys its drinking water from the Washington Aqueduct's Dalecarlia Plant on the Potomac River.

With the exception of some wells, water must be treated prior to use. Fairfax Water provided 52,869 billion gallons of drinking water in 2009.

Federal regulations require water suppliers to provide annual reports on the quality of the drinking water to their customers through the Consumer Confidence Report Rule. The 2010 Water Quality Report is available for review on the Fairfax Water website at <http://www.fairfaxwater.org/water/water.htm>.

### **1. Wells**

The Fairfax County Health Department has developed and maintains an extensive data base and GIS layer of all water well systems installed in the county. The Health Department permits and inspects all new well construction, existing well repairs and well abandonments. In FY 2009 there were 50 new well approvals, 39 well repairs and 153 Water Well Abandonments issued. There were 81 Geothermal Well Permits (HVAC) issued.

<b>Table IV-3 Fairfax Water -Water Supply Sources, 2009</b>	
<b>Sources</b>	<b>Gallons (in billions)</b>
Occoquan Reservoir (Lorton/Occoquan)	20.474
Potomac (Corbalis)	32.295
Wells	0.000
Purchased	0.02
Untreated	0.08
<b>TOTAL</b>	<b>52.869</b>

Source: Fairfax Water

The Virginia State Health Department Office of Drinking Water regulates 78 public well water supplies in Fairfax County. The operators of these systems are required to conduct quarterly water sampling and analysis.

Fairfax Water no longer operates public wells.

There are approximately 13,249 single family residences and businesses that are served by individual well water supplies in Fairfax County.

## **2. Source Water Assessments**

The 1996 Amendments to the Safe Drinking Water Act provided for source water assessment and protection programs designed to prevent contamination to drinking water. Under SDWA, states are required to develop comprehensive Source Water Assessment Programs that identify areas that supply public tap water, inventory contaminants and assess water system susceptibility to contamination. Fairfax Water has completed an inventory of potential sources of contamination and a survey of land use activities within the Potomac and Occoquan Watersheds.

Fairfax Water's Source Water Assessment is available on-line at:  
[www.fairfaxwater.org](http://www.fairfaxwater.org).

## **3. Treatment Facilities**

### **a. Occoquan Reservoir Facilities**

The Frederick P. Griffith, Jr., Water Treatment Plant, sourced by the Occoquan Reservoir, came on line in 2006 and has a current capacity of 120 million gallons per day. The plant is designed for an ultimate capacity of 160 mgd. In addition to flocculation and sedimentation, the Griffith Plant includes advanced treatment processes of ozone disinfection and biologically active, deep bed, granular activated carbon filtration. Chloramines are used for final disinfection.

**b. Potomac River Facilities**

The James J. Corbalis, Jr., Water Treatment Plant, sourced by the Potomac River, has a current capacity of 225 mgd. The plant is designed for an ultimate capacity of 300 mgd. The plant uses ozone as a primary disinfectant, flocculation-sedimentation, biologically active filters with carbon caps and chloramine final disinfection.

**4. Drinking Water Quality Monitoring**

Federal regulations require water suppliers to provide annual reports on the quality of the drinking water to their customers through the Consumer Confidence Report Rule. The 2010 Water Quality Report is available for review on the Fairfax Water website at [www.fairfaxwater.org](http://www.fairfaxwater.org), and includes much of the following information.

**a. Disinfection by-Products**

Trihalomethanes are by-products of chlorination water treatment and are suspected carcinogens at elevated levels. The 2009 distribution system averages continue to be below the federally mandated Maximum Contaminant Levels for total trihalomethanes. In addition to the trihalomethanes, haloacetic acid levels, another by-product of chlorination, continue to be below the required maximum contaminant level. The presence of chlorine in drinking water supplies remained below the required Maximum Residual Disinfectant Level.

**b. Metals**

Fairfax Water also tests for the following regulated elements: aluminum, antimony, arsenic, barium, beryllium, cadmium, calcium, chromium, copper, iron, lead, manganese, magnesium, mercury, nickel, potassium, selenium, silver, sodium, thallium and zinc. The levels of these metals in 2009 continued to be below their MCLs. The concentration levels for unregulated metals were within the expected range. Test results for these and other constituents are available on-line at: <http://www.fairfaxwater.org>.

**c. *Cryptosporidium***

*Cryptosporidium* is a microbial pathogen sometimes found in surface water throughout the United States. Although filtration removes *Cryptosporidium*, the most commonly used filtration methods cannot guarantee 100 percent removal. Fairfax Water consistently maintains its filtration process in accordance with regulatory guidelines to maximize removal efficiency. Fairfax Water's monitoring indicates the occasional presence of these

organisms in the source water. Current test methods do not help determine whether the organisms are dead or if they are capable of causing disease.

Ingestion of *Cryptosporidium* may cause cryptosporidiosis, an abdominal infection. Symptoms of infection include nausea, diarrhea and abdominal cramps. Most healthy individuals can overcome the disease within a few weeks. However, immuno-compromised people, infants, small children and the elderly are at greater risk of developing life-threatening illness. Fairfax Water encourages immuno-compromised individuals to consult their doctors regarding appropriate precautions to take to avoid infection.

*Cryptosporidium* must be ingested in order to cause disease. It may be spread through means other than drinking water, such as other people, animals, water, swimming pools, fresh food, soils, and any surface that has not been sanitized after exposure to feces.

Fairfax Water has completed monitoring of the Potomac River and Occoquan Reservoir for compliance with the EPA Long Term 2 Enhanced Surface Water Treatment Rule (LT2ESWTR). EPA created this rule to provide for increased protection against microbial pathogens, such as *Cryptosporidium*, in public water systems that use surface water sources. Fairfax Water's monitoring program began in 2004 and involved the collection of two samples from water treatment plant sources each month for a period of two years. Once monitoring for compliance with the LT2ESWTR was complete, Fairfax Water continued to monitor for *Cryptosporidium* at water treatment plant sources.

Under the LT2ESWTR, the average *Cryptosporidium* concentration determines whether additional treatment measures are needed. A *Cryptosporidium* concentration of 0.075 oocysts/Liter will trigger additional water treatment measures. Fairfax Water's raw water *Cryptosporidium* concentrations consistently remain below this threshold.

#### **d. Emerging Water Quality Issues**

An emerging water quality issue of particular media interest this year is a group of compounds including: (1) pharmaceuticals and personal care products; and (2) endocrine disrupting compounds. While the presence of these substances in source and drinking water has been a recent issue of national interest, to date research has not demonstrated an impact on human health from these compounds at the trace levels discovered in drinking water.

There are tens of thousands of compounds that are considered potential endocrine disrupting compounds or pharmaceuticals and personal care products. In establishing a protocol for monitoring these compounds,

Fairfax Water carefully considered the most prudent use of its resources when developing the list of compounds to test for in raw and treated water. Fairfax Water looked at influences in the Potomac and Occoquan River Watersheds (industrial, agricultural uses, etc.) to determine which compounds are most likely to be present in the raw water. Fairfax Water then looked at the treatment process to determine which compounds would not be readily removed through treatment. Finally, Fairfax Water looked at which compounds could be measured in water and chose 19 compounds to test for in the source and treated waters. Samples were sent to an independent laboratory proficient in this type of analysis.

To date, none of these compounds have been detected in Fairfax Water's finished drinking water during this study. As expected, very, very small amounts of a few compounds were found in the source waters - the Potomac River and Occoquan Reservoir. Research shows that there is no indication of human health concern at the levels found in the source waters. In addition to research and testing, Fairfax Water continually employs advanced water treatment technologies, ozonation and granular activated carbon to treat all of the water in its system. Ozone breaks down organic matter in the water that is then captured in the granular activated carbon filtration process. Research has shown that the combination of ozone and filtration is highly effective in removing broad categories of the compounds of concern. To view the results from Fairfax Water's monitoring of these compounds and to learn more about emerging water quality issues, visit the Fairfax Water website at [www.fairfaxwater.org/current/special\\_statement\\_120408.htm](http://www.fairfaxwater.org/current/special_statement_120408.htm) or call 703-698-5600, TTY 711.

The Fairfax County Health Department participated as part of a countywide technical working group to explore the issue of the disposal of unwanted and expired pharmaceuticals. The group produced an informational brochure and website promoting no flush disposal of pharmaceuticals and achieved agreement from all county agencies to adopt no flush disposal methods. The group is also working with a coalition of groups at the state level consisting of representatives from DEQ, the State Board of Pharmacy and the State Police to enact a statewide pharmaceutical take back/mail back program.

**e. Special Perchlorate Monitoring Study**

Perchlorate is a naturally occurring as well as a man-made compound. Its presence in drinking water is currently unregulated and utilities are not required to monitor for it. In mid-2007, Fairfax Water began voluntarily participating in a 12-month non-regulatory perchlorate sampling project for the Potomac River funded by the EPA. The EPA initially established a reference dose of 24.5 parts per billion for perchlorate and beginning in

2009 has proposed an interim health advisory of 15 ppb. A reference dose is a scientific estimate of a daily exposure level that is not expected to cause adverse health effects in humans. The reference dose concentration was used in EPA's efforts to address perchlorate in drinking water and to establish the interim health advisory.

The source and treated water samples collected in 2007 and 2008 from Fairfax Water's Potomac River treatment plant showed only trace amounts of perchlorate at levels less than 1.1 parts per billion, far below the EPA reference dose level of 24.5 ppb or the interim health advisory of 15 ppb. Based on EPA's research, the levels of perchlorate observed in the Potomac plant waters are not considered to be a health concern. If you have special health concerns, you may want to get additional information from the EPA at [www.epa.gov/safewater/contaminants/unregulated/perchlorate.html](http://www.epa.gov/safewater/contaminants/unregulated/perchlorate.html) or contact the EPA's Safe Drinking Water Hotline at 800-426-4791, TTY 711.

#### **f. Tap Water Monitoring**

In 2009, Fairfax Water monitored 3,301 taps for coliform bacteria. The monthly monitoring results were within EPA required limits. Fairfax Water also monitored surface source water and finished drinking water for 42 volatile organic compounds and 40 synthetic organic compounds. Low levels of atrazine, simazine, metolachlor, and 2,4-D were detected in the source waters, and a very low level of atrazine was detected in finished waters sourced by the Occoquan Reservoir. Total trihalomethanes, a subset of volatile organic compounds, as discussed above, were also detected at low levels in the finished water as expected in a chlorinated system.

Fairfax Water has been testing for lead and copper in customer tap samples in accordance with EPA's lead and copper rule since 1992 and has consistently tested below the action level established in the rule. In 2009, the 90<sup>th</sup> percentile value for lead was 0.77 parts per billion, compared to the EPA action level of 15 ppb. For copper, the 90<sup>th</sup> percentile value in 2008 was 0.064 part per million, compared to the EPA action level of 1.3 ppm. Additional information on these programs and more can be found at: [www.fairfaxwater.org](http://www.fairfaxwater.org).

### **5. Regional Cooperative Water Supply Agreements**

In order to protect the Potomac River ecosystem during low flow periods, the three major water utilities in the Metropolitan Washington area developed water allocation agreements for water use during low flow periods. Two upstream dams, Jennings- Randolph on the Potomac River and the Savage River Dam, along with Seneca Lake in Montgomery County, Maryland, are storage facilities for drinking water supplies during low flow periods. While the Potomac River has flows that average above 7,000 million gallons per day, the river has often

reached flows well below that, usually in late summer and early fall. The lowest recorded flow in this region was 388 mgd at Little Falls in September during the drought of 1966. This is an adjusted figure that does include the withdrawal allocation of 290 mgd (e.g., with that adjustment, the flow was actually 98 mgd).

In 1981, the three major metropolitan water utilities, including Fairfax Water, signed the Low Flow Allocation Agreement, which creates a protocol for allocation of water from the Potomac during periods of low water. The current environmental flow recommendations are 300 mgd downstream of Great Falls and 100 mgd downstream of Little Falls. In 2002, the Maryland Department of Natural Resources revisited this issue of the flow level necessary to support aquatic habitat in the Potomac River and was unable to replicate the methodology used to create the present low flow requirements in the agreement. Droughts that occurred in 1999 and 2002 called attention to the concern that these flow regimes, derived by the 1981 study (which was conducted during a period without extreme low flows), needed to be revisited in light of new scientific methods and low-flow information. During the drought of 2002, the Maryland Department of Natural Resource's Power Plant Siting Program assembled teams of biologists from its staff and Versar, Inc, with assistance from Montgomery County, Maryland and the Interstate Commission on the Potomac River Basin, which performed habitat assessments during that year's low flow conditions.

On April 8, 2003, the Maryland Power Plant Research Program and the Interstate Commission on the Potomac River Basin sponsored a one-day workshop with a panel of nationally recognized experts on habitat assessment to investigate and develop methods to evaluate the environmental flow-by requirements. Their conclusion of the present low-flow agreement is that: "Existing biological data and understanding are inadequate to support a specific, quantitative environmental flow-by." At this workshop, members of the special panel collectively considered and debated the various methodologies applicable to the Potomac River to address the flow-by issue. The final product of the workshop is a set of recommendations for 1) the best method or approach, given current financial resource limitations, to address the Potomac Flow-by Study objectives and the level of confidence associated with their recommendations and 2) an alternative long-term method or approach which could better accomplish those objectives, yet might exceed current resources or available data, and recommended guidelines for achieving the objectives in a longer time-frame.

In September 2003, the Maryland Department of Natural Resource's Power Plant Siting Program issued a report entitled Habitat Assessment of the Potomac River From Little Falls to Seneca Pool (Final Document #PPAD-03-1), which provided substantial background information describing the history of current low-flow requirements, a review of the studies conducted to support those

requirements and a report on habitat assessment conducted during low-flow conditions in 2002. The assessment included development of a habitat map, a field survey of habitat types and measurements of hydraulic and water quality conditions, spanning the period of July through October 2002 when flows were as low as 151 million gallons per day at the gage at Little Falls Dam.

In November 2004, ICPRB convened an update meeting to discuss recent developments in USGS mussel studies and further defining desired hydrological regimes.

Full reports on these activities can be viewed at:

[www.esm.versar.com/pprp/potomac/default.htm](http://www.esm.versar.com/pprp/potomac/default.htm).

In December 2005, Fairfax Water adopted a revision to the Occoquan Reservoir Shoreline Easement Policy, which places limits on what may be done within the utility's easement surrounding the reservoir. The policy prohibits construction of any structures other than piers and floats. Removal of any vegetation, storage of fuels or chemicals, application of pesticides and placement of debris are also prohibited in this area. The policy is intended to protect the reservoir's riparian buffer.

The U.S. Army Corps of Engineers, The Nature Conservancy and the Interstate Commission on the Potomac River Basin are collaborating on a multi-year watershed assessment of the Potomac River basin. The assessment will consider water supply, environmentally sustainable flows, ecosystem protection and restoration, drought preparedness and watershed resource management in the Middle Potomac River watershed in the District of Columbia, Maryland, Pennsylvania, Virginia and West Virginia. The project will describe current and future conditions that are likely to have significant impacts on human and ecological needs within the basin. The assessment will include modeling activities, data gathering and ecological investigations. The goal is to identify key ecological needs, current and future human activities (especially withdrawals, dam operations and land use change), potential effects of climate change on the basin's hydrology and how these might be balanced and mitigated to prevent water use conflicts and ecological degradation of the Potomac River's native species and natural communities in a 50 to 100-year timeframe.

The watershed assessment will investigate the following:

- Surface and groundwater withdrawals.
- Dams and other impoundments.
- Effects of land use change and increase in impervious surfaces on flow.
- Cumulative hydrologic impacts of withdrawals and impoundments.
- Projected changes to water demand in the basin (including consumptive use).

- Condition and flow requirements for the basin's aquatic species and ecosystems.

A symposium hosted by the Nature Conservancy at the National Conservation Training Center in Shepherdstown, West Virginia on September 24-25, 2010 drew together 70 scientists and interested individuals representing a broad spectrum of interest to continue work on the low-flow issue.

The State Water Control Board's Water Supply Planning Regulation (9 VAC 25-780) requires all cities and counties in the commonwealth to submit water supply plans to the Virginia Department of Environmental Quality. Each water supply plan must include a description of existing water resources and water use, projected demands, a description of water management actions/conservation measures, segment of need for future supplies and alternative analysis and local government resolution approving the plan. Fairfax County is participating in a Regional Water Supply Plan, which is required to be submitted to DEQ by November 2011.

**a. Interstate Commission on the Potomac River Basin Cooperative Water Supply Operations**

The ICPRB plays several important roles in providing for the region's current and future water supply needs. The Cooperative Water Supply Operations Section facilitates the agreement among the three major water utilities (including Fairfax Water) that requires water suppliers to coordinate resources during times of low flows in the Potomac River. The Water Resources Section also provides technical water resources management assistance to the jurisdictions throughout the basin. Flow in the Potomac River was more than adequate to meet drinking water withdrawal needs by the region's major utilities in 2009. No releases from upstream reservoirs to augment water supplies were needed in that time, and it is unlikely that releases will be needed for the remainder of 2010. In October 2007, ICPRB worked with the region's utilities and the U.S. Army Corps of Engineers to conduct several test releases from upstream reservoirs. These test releases provided useful data on how the river behaves during droughts and will help to make drought management activities more efficient in the future.

The ICPRB annually coordinates a weeklong drought management exercise that simulates water management operations and decision making under drought conditions for the Metropolitan Washington area. Annual simulation allows for renewal of coordination procedures with the water suppliers and other agencies, opportunities for public education and outreach and review and improvement of operational tools and procedures. Information on water supply status, recent streamflow, reservoir storage, water supply outlooks and precipitation maps can be found in the publications section of the ICPRB website, [www.potomacriver.org](http://www.potomacriver.org).

Every five years since 1990, the section for Cooperative Water Supply Operations on the Potomac of ICPRB has conducted a 20-year forecast of demand and resource availability on behalf of the three major water utilities in the Washington D.C. Metropolitan Area (including Fairfax Water). The ongoing study has two parts to it. Part one of the study, "Demand and Resource Availability Forecast for Year 2040," contains the most recent demand forecast of future water use, analysis of current resources and evaluation of resource alternatives. The main focus of the study is to assess the ability of the region's water resources to meet the water supply needs of the Washington metropolitan area population as it continues to increase. Different possible climate change scenarios for the region will be evaluated using climate change models and the results will be incorporated into the water utility planning model to better help forecast future demands and the constraints that need to be overcome to meet the demands.

The first part of the 2010 study has been finalized is available on ICPRB's website: <http://www.potomacriver.org/cms/publicationspdf/ICPRB10-01.pdf>

Part two of this study, which is scheduled to be completed in December 2010, will address the potential impacts of climate change. Different possible climate change scenarios for the region will be evaluated using climate change models and the results will be incorporated into the water utility planning model to better help forecast future demands and the constraints that need to be overcome to meet the demands.

#### **b. Metropolitan Washington Council of Governments**

In response to the droughts of 1998 and 1999, COG brought together a task force in May, 2000 to coordinate regional responses during droughts to reduced availability of drinking water supplies. The plan consists of two components: (1) a year-round plan emphasizing wise water use and conservation; and (2) a water supply and drought awareness and response plan. The Interstate Commission on the Potomac River Basin handles the administration of the coordinated drought response for water withdrawals from the Potomac River and during low flows. Additionally, the Cooperative Water Supply Operations Section works with COG and the Drought Coordination Committee to assist in providing accurate and timely information to residents during low-flow conditions.

The plan includes four conditions of water supply: 1) Normal, focusing on a year-round program emphasizing "Wise Water Use;" 2) Watch, where the Potomac River basin is in a drought of level D1 as defined by the National Oceanographic and Atmospheric Administration; 3) Warning, when combined storage in Jennings Randolph and Little Seneca reservoirs is at less than 60 percent of capacity, triggering voluntary water use restrictions;

and 4) Emergency, when the probability of meeting water supply demands during the following 30 days is 50 percent or less, triggering mandatory water use restrictions. These drought levels were adopted by the COG Board of Directors in June 2000 and represent a concerted effort to coordinate interjurisdictional drought response.

COG is also looking at issues such as effects of chemical environmental pollutants, specifically endocrine disruptors, in the Potomac River and their impacts on wildlife and humans. COG staff organized workshops over the past year that addressed subjects such as endocrine disruptors in the Chesapeake Bay watershed and contaminants of emerging concern in the Potomac and Anacostia Rivers.

COG put forward a report on the effects of climate change in the National Capital Region in November 2008. The issues addressed in the report have a direct impact on the direction of future growth and development in the region. The report also identified potential impacts of climate change on the water resources of the region. It sets forth relevant time lined goals for reduction of greenhouse gas emissions in the region. The report also contains recommendations to help reduce the emissions, which will ultimately help conserve the natural and water resources in the region, in face of the adverse effects of climate change.

In coordination with the water utilities in the Washington area, including Fairfax Water, a Water Emergency Response Plan was develop and completed in 2005, and recently updated in 2009. The Plan provides communication and coordination guidance to area water utilities, local governments, and agencies in the event of a drinking water related emergency. The Plan replaced the 1994 Water Supply Emergency Plan.

#### **c. NVRC Water Supply Plan**

The State Water Control Board's Water Supply Planning Regulation (9 VAC 25-780) requires all cities and counties in the commonwealth to submit water supply plans to the Virginia Department of Environmental Quality. Work is under way by more than 20 local governments (including Fairfax County) and the Northern Virginia Regional Commission on the first Northern Virginia Regional Water Supply Plan project. This is the first time that so many local jurisdictions and water supply utilities are working together on a region-wide project and this is the first water supply plan that encompasses all municipalities in Northern Virginia.

The Northern Virginia Regional Water Supply Plan will include information on water sources, water use, water resource conditions, projected water demand, water management actions and an analysis of alternatives, drought and contingency plans in the event of water deficits. The plan, expected to

be completed in 2011, will include water supply projections for the next 30 years.

## **6. Environmental Stewardship**

### **a. Occoquan Shoreline Easement Policy**

In December 2005, Fairfax Water adopted a revision to the Occoquan Reservoir Shoreline Easement Policy, which places limits on what may be done within the utility's easement surrounding the reservoir. The policy prohibits construction of any structures other than piers and floats. Removal of any vegetation, storage of fuels or chemicals, application of pesticides and placement of debris are also prohibited in this area. The policy is intended to protect the reservoir's riparian buffer.

### **b. Water Supply Stakeholder Outreach Grant Program**

Fairfax Water offers grants to qualified organizations that undertake water supply education or watershed protection projects. Projects eligible for grants include educational efforts, source-water protection efforts, water quality monitoring projects and Occoquan Reservoir stabilization projects. The project must address issues within areas served by Fairfax Water or watershed lying in Fairfax, Loudoun, Prince William or Fauquier Counties. Eligible education projects may include seminars, programs or displays on hydrology, water treatment processes, distribution, nonpoint source pollution, erosion and sediment control, water quality monitoring or any related topic. Eligible watershed protection projects may include stream restoration projects, nonpoint source pollution management projects or other activities aimed at improving water quality within Fairfax Water's watershed.

Since beginning the program in 2000, Fairfax Water has awarded 59 water supply stakeholder outreach grants totaling \$238,662.

More information about the grant program is available at:

[www.fairfaxwater.org/outreach/grants.htm](http://www.fairfaxwater.org/outreach/grants.htm)

## **H. REGULATIONS, LAWS AND POLICIES**

### **1. Buffer Protection for Headwater and Intermittent Streams**

On February 25, 2008, the Board of Supervisors adopted an amendment to the Policy Plan to strengthen Comprehensive Plan guidance regarding the protection and restoration of streams and associated buffer areas along stream channels upstream of Resource Protection Areas and Environmental Quality

Corridors. This new guidance augments the EQC policy by explicitly encouraging stream and buffer area protection and restoration in these headwaters areas. Details are available at <http://www.fairfaxcounty.gov/dpz/comprehensiveplan/adoptedtext/2007p-03.pdf>. On July 27, 2010, the EQC policy was further amended to clarify circumstances under which proposals for disturbances to EQCs should be considered favorably. Details are available at <http://www.fairfaxcounty.gov/dpz/comprehensiveplan/adoptedtext/2007p-07.pdf>.

## **2. The Virginia Chesapeake Bay Preservation Act and Regulations**

The Virginia Chesapeake Bay Preservation Act was passed as part of Virginia's commitment to the second Chesapeake Bay Agreement's goals to reduce nonpoint source phosphorus and nitrogen entering the Bay. In November 2004, the Board of Supervisors adopted an amendment to the Comprehensive Plan to ensure it was consistent with the Act and satisfied all requirements. The amendment included revisions to text in the environment section of the Policy Plan as well as the incorporation of a Chesapeake Bay Supplement. In March 2005, the Chesapeake Bay Local Assistance Board determined that the Comprehensive Plan, as amended, is fully consistent with the Chesapeake Bay Preservation Act and Regulations.

The Chesapeake Bay Exception Review Committee was formed to hear requests for exceptions to the regulations. The Committee is composed of 11 county residents appointed by the Board of Supervisors--one member from each magisterial district and two at-large members. As part of the exception review and approval process, public notice and a public hearing is required. In 2006, the committee heard and denied one exception request.

The Chesapeake Bay Program is a cooperative arrangement among three states (Virginia, Pennsylvania and Maryland), the District of Columbia and the federal government (represented by the Environmental Protection Agency) for addressing the protection and restoration of the water quality, habitats and living resources of the Chesapeake Bay and its tributaries. Each state determines how it will meet the various commitments, and the approaches to implementation often vary greatly among states. All streams in Fairfax County are tributaries of the Potomac River, which flows into the Chesapeake Bay.

## **3. Stormwater Legislation HB 1177**

This legislation, signed on April 8, 2004 by Governor Warner, encourages jurisdictions to adopt stormwater management ordinances that use the concept of Low Impact Development to the maximum extent practicable. The bill also transferred regulatory authority of the National Pollutant Discharge Elimination System programs associated with municipal separate storm sewer systems and

construction activities from the State Water Control Board to the Soil and Water Conservation Board and transferred oversight of these programs from the Department of Environmental Quality to the Department of Conservation and Recreation. As a result, DCR is responsible for the issuance, denial, revocation, termination and enforcement of NPDES permits for the control of stormwater discharges from municipal separate storm sewer systems and land disturbing activities under the Virginia Stormwater Management Program. The legislation allows the state to transfer the administration of the Erosion and Sedimentation permitting for land disturbing activities to jurisdictions, allows these jurisdictions to charge permitting fees for review and establishes that jurisdictions must transmit 30 percent of these fees to the state.

#### **4. Virginia Stormwater Management Program**

In 2010, the Virginia General Assembly passed legislation (SB 395/ HB 1220) that delayed implementation of the regulation that establishes local program criteria and delegation procedures and the water quality and water quantity criteria. The measure provides for the regulation to be adopted within 280 days after the establishment of the U.S. Environmental Protection Agency's Chesapeake Bay-wide total maximum daily load, but no later than December 1, 2011. The measure also directs the Virginia Soil and Water Conservation Board to establish an advisory panel to review the regulation and make recommendations on possible revisions to the regulation.

#### **5. New Dam Safety Regulations**

Virginia Impoundment Structures Regulations- A new Virginia Impoundment Structures Regulations (4VAC50-20 et. seq.) was adopted by the state on September 26, 2008. Among other things, the new regulations totally overhauled the dam classification system, streamlined and improved the hydrologic and hydrologic design requirements for dams and instituted provisions aimed at improving the Emergency Action Plans that are designed to facilitate emergency responses to potential dam breaks. Since the adoption of this regulation, the Virginia Soil and Water Conservation Board (VSWCB) has developed draft guidance related to Virginia Impounding Structure Regulations and administration of the Virginia Dam Safety Program that should assist dam owners and industry professionals in gaining a better understanding of the regulation requirements. The draft guidance documents cover roadways below dams, agricultural exemptions, dam-break inundation zone mapping and incremental damage analysis, hazard potential classification, crediting of certificate fees and criteria for special low hazard. The VSWCB invited public comments on the draft guidance documents in March 2010 and is currently working to address these comments before the guidance documents are adopted.

Fairfax County DPWES is responsible for the operation and maintenance of 18 state-regulated dams. DPWES is currently working through the Virginia

Municipal Stormwater Association (VAMSA) to promote improvements to these guidance documents. For further information on the Virginia Impoundment Structures Regulations visit:

[http://www.dcr.virginia.gov/dam\\_safety\\_and\\_floodplains/index.shtml](http://www.dcr.virginia.gov/dam_safety_and_floodplains/index.shtml)

## **6. Summary/status of Amendments to Chapter 68.1 of the Fairfax County Code on Alternative Septic Systems**

The Commonwealth of Virginia, State Board of Health is in the process of revising the state Sewage Handling and Disposal Regulations. The Board of Health was also directed by the 2007 General Assembly to adopt Alternative Onsite Sewage System maintenance regulations that were to begin on July 1, 2009. As a result, interim Emergency Regulations for Alternative Onsite Sewage Systems were adopted on April 7, 2010. The final regulations for alternative onsite sewage disposal systems proposed completion date is December 31, 2010. Chapter 68.1 of the Fairfax County Code is being reviewed for possible future amendments to address changes in the state regulations and advances in the field of onsite sewage disposal systems.

# **I. STEWARDSHIP OPPORTUNITIES**

There are numerous actions that county residents can and should take to support water quality protection.

## **1. Disposal of Household Hazardous Wastes**

Medicines, paints and other toxics should NOT be flushed down toilets and should NOT be dumped down storm drains. Instead, they should be taken to one of the county's household hazardous materials collection sites. For a list of common household hazardous materials and how to dispose of them, go to <http://www.fairfaxcounty.gov/dpwes/trash/disphhw.htm>.

## **2. Septic System Pumpouts**

Septic systems must be pumped out every five years—it's the law! Residents with questions or with problems with their septic systems should call the Fairfax County Health Department at **703-246-2201, TTY 711**.

## **3. Yard Management**

Residents are encouraged to get soil tests for their yards before fertilizing and then to apply fertilizers and pesticides responsibly. Grass should not be cut to the edge of a stream or pond; instead, a buffer should be left to filter pollutants and provide wildlife habitat.

The Northern Virginia Soil and Water Conservation District can advise homeowners on problems with ponds, eroding streams, drainage, problem soils and other natural resource concerns. More information about managing land for a healthier watershed is available from the NVSWCD publications "You and Your Land, a Homeowner's Guide for the Potomac River Watershed" (<http://www.fairfaxcounty.gov/nvswcd/youyourland/intro.htm>) and the "Water Quality Stewardship Guide" (<http://www.fairfaxcounty.gov/nvswcd/waterqualitybk.htm>).

Advice regarding drainage and erosion problems in yards can be provided by the technical staff of the Northern Virginia Soil and Water Conservation District. They can assess the problems and advise on possible solutions. Interested parties can send an e-mail to NVSWCD at <https://www.fairfaxcounty.gov/contact/mailform.aspx?ref=9990> or call 703-324-1460.

#### **4. Volunteer Opportunities**

There are numerous opportunities throughout the year to participate in stream cleanups, storm drain labeling, volunteer water quality monitoring and tree planting projects. Interested parties can send an e-mail to NVSWCD at <https://www.fairfaxcounty.gov/contact/mailform.aspx?ref=9990> or call 703-324-1460. EQAC also commends the efforts of the Alice Ferguson Foundation and encourages residents, employers and employees in Fairfax County to participate in these initiatives. Visit the foundation's website at [www.Fergusonfoundation.org](http://www.Fergusonfoundation.org) for further information.

#### **5. Reporting Violations**

Vigilance in reporting activities that threaten water quality is important to the protection of water resources.

Sediment runoff from construction sites can be reported to Fairfax County's Code Enforcement Division at 703-324-1937, TTY 711; e-mail reports can also be filed at <https://www.fairfaxcounty.gov/contact/mailform.aspx?ref=70003>.

Improper disposal of motor oil, paint or other materials into streams or down storm drains should be reported through a phone call to 911. This is particularly important if the substance being dumped can be identified as motor oil or another toxic substance but also applies to any other substance; assumptions regarding the contents of the materials should not be made. Callers to 911 should be prepared to provide specific information regarding the location and nature of the incident. If the person dumping materials into the stream or storm drain has a vehicle, the tag number should be recorded.

Storm drains are for stormwater only, NOT motor oil, paint, or even grass clippings.

If dumping is not witnessed but is instead suspected, and if no lives or property are in immediate danger, the suspected incident can be reported to the Hazardous Materials and Investigative Services Section of the Fire and Rescue Department at 703-246-4386, TTY 711. If it is unclear as to whether or not there may be a danger to life or property, 911 should be called.

A more comprehensive table addressing how to report environmental crimes is provided in the Hazardous Materials chapter of this report.

## **J. ONGOING CONCERNS**

1. EQAC commends the county for developing and adopting amendments to the Public Facilities Manual's provision for adequate drainage that require analysis of adequacy of outfalls during the construction phase. This is another enforcement tool that will protect streams during the construction phase. However, EQAC cannot over-emphasize the importance and need for increased monitoring of predevelopment stormwater management controls and for enforcement action to ensure inadequate controls are corrected prior to construction and, if necessary, during construction. It is also important that the county hire the appropriate number of staff to handle the estimated inspection workload.
2. EQAC continues to support the full funding and implementation of the comprehensive countywide watershed management program. EQAC strongly endorses the ongoing work of county staff on the watershed planning and public outreach efforts and the comprehensive stream monitoring program. EQAC continues to support continued assessments of watersheds and development of a stream protection and restoration program that has adequate sustainable funding. EQAC continues to stress that equal importance should be devoted to environmental protection, restoration and monitoring as compared to infrastructure improvement and maintenance.
3. EQAC commends the county for its existing stream protection requirements for perennial streams. EQAC thanks the Board of Supervisors for its recent efforts to protect intermittent and headwater streams by the establishment of protective buffers.
4. EQAC is pleased to note the MS4 requirement to develop a long-term watershed monitoring program to verify the effectiveness and adequacy of stormwater management goals and identify areas of water quality improvement or degradation is being implemented. While EQAC understands that a comprehensive countywide program to monitor effectiveness can be cost-prohibitive, data are still needed, as it is still unclear as to which structures and requirements are effective and working well.

5. EQAC continues to encourage Fairfax County (the Board of Supervisors, the Planning Commission, the Board of Zoning Appeals, the Fairfax County Park Authority and various county agencies) to coordinate efforts and develop a protocol for assessing the impacts and cumulative effects of land use considerations and decisions on the county's water resources. EQAC urges these groups to use and disseminate information to protect the county's watersheds. EQAC commends the Board of Supervisors for adopting Residential Development Criteria that include supporting the provision of adequate outfall drainage and innovative water quality measures.
6. As sedimentation of stormwater management ponds from upstream bank erosion continues, the need to dredge facilities becomes more frequent. Facility owners are having difficulty conducting necessary dredging operations given rising expenses and lack of local, adequate disposal areas. EQAC commends the county for establishing an interagency work group to explore options, such as creating spoil disposal/recycling areas in various parts of the county to assist private facility owners and help protect water quality. EQAC is pleased that staff will investigate the pros and cons of dredging, hauling, and disposal options and will present its findings and recommendations to the Board of Supervisors.
7. Given the anticipated increase in the number of small individual low impact development (LID) facilities that will be installed throughout the county, EQAC recognizes that the county will have an additional challenge of developing a program to track, inspect and ensure adequate maintenance of these LID facilities.

## **K. COMMENTS**

1. EQAC notes with concern that results from the 40 randomly selected sites in the 2009 Stormwater Status Report suggest that now approximately 88 percent of the county's waterways are in "Fair" to "Very Poor" condition based on a decrease in biological diversity. This is significant downward trend from the previous years where about three quarters of the county's streams were considered "Fair" to "Very Poor".
2. EQAC commends the Board of Supervisors for its actions of the past few years authorizing one penny of the real estate tax to be dedicated to the stormwater management program. The amount increased from the original amount of \$17.9 million for FY 2006 to \$22.8 million for FY 2009. In FY 2010 however, this amount decreased to about \$10.3 million due to the creation and structuring of the Service District as a funding mechanism halfway through the Fiscal Year.

While various maintenance repairs were implemented in FY 2010, the Board of Supervisor's adoption of the FY 2011 stormwater tax district rate of 1.5 cents has allowed the Maintenance and Stormwater Management Division to increase stormwater management infrastructure replacement, create a more comprehensive low impact development maintenance program, and rehabilitate a number of older stormwater management dams and other critical components. Much of the

stormwater infrastructure in Fairfax County is reaching the end of its useful life, and as the system ages it will be critical to maintain adequate inspection and rehabilitation programs to avoid infrastructure failures and ensure the functionality of stormwater treatment systems. In addition, it is critical for MSMD to implement cost effective solutions such as trenchless pipe replacement technologies, naturalizing stormwater management facilities and partnering with other county agencies such as Fairfax County Schools and the Park Authority to create efficiencies.

The county's existing stormwater conveyance infrastructure includes about 1,500 miles of pipes and paved channels, in addition to over 850 miles of perennial streams and unknown miles of non-perennial streams. The majority of the stormwater control facilities and pipes were constructed 35 years or more ago. Prior to the board providing a dedicated penny to stormwater in FY 06, there had never been consistent funding to proactively inspect or reinvest in these stormwater systems. When the video inspections of the inside of pipes were first undertaken in FY 2007, over 5% of the system was identified as being in a state of failure and another 10% in need of rehabilitation. With the recently adopted stormwater service rate, it is estimated that the reinvestment cycle for stormwater infrastructure has been reduced from well over 1,000 years to around 400 years.

In addition to the conveyance system, the county owns and maintains roughly 1,300 stormwater management facilities ranging from large flood control lakes to LID techniques such as small infiltration swales, tree box filters or rain gardens. Again, prior to providing a dedicated funding source there was not funding for reinvestment in these LID facilities. Eighteen of the county's stormwater management facilities have dam structures that are regulated by the state. The county must provide rigorous inspection and maintenance of these 18 facilities in order to comply with state requirements. In addition to providing required inspection and maintenance of these facilities, the county must provide significant upgrades to the emergency spillways on two more of our PL-566 dam structures to comply with current state dam safety requirements. The construction for one of these spillway upgrades is being funded with FY 11 funds. The remaining spillway upgrade is planned be constructed as part of the FY 12 stormwater budget. In addition, it is estimated that the sediment accumulating in just the five county maintained PL-566 flood control lakes have a combined annual removal cost of between \$750,000 and \$1,100,000, which is in addition to an estimated \$16 to \$25 million to remove the silt that has already accumulated. The current program includes a \$500,000/yr for dredging projects that will begin to restore capacity in these lakes as well as the other stormwater management facilities.

In addition to supporting infrastructure reinvestment, the capital program funds critical capital projects from the watershed management plans including: flood mitigations; stormwater management pond retrofits; implementation of low impact development techniques; and stream restorations. It is important to note that these projects are necessary to address current community needs, mitigate the environmental impacts of erosion and comply with our current MS-4 permit. The

benefits of these projects include: reducing property damage due to flooding and erosion; reducing excessive sediment loading caused by erosion; improving the condition of streams; and reducing nutrient loads to the Chesapeake Bay.

The county must meet the federally mandated requirements of its Municipal Separate Storm Sewer System (MS4) permit. Fairfax County and Fairfax County Public Schools are combining their MS4 responsibilities into a single permit that will be administered by the county. Following negotiations with the state, the new permit will be forwarded to the U.S. Environmental Protection Agency (EPA) for approval. Recent permits that have been approved or issued for public hearing by the EPA have included aggressive requirements to retrofit significant amounts impervious area, such as school and county buildings and parking lots, with more effective stormwater controls. We are anticipating that these extensive additional requirements also will be included in the new MS4 permit that is issued to Fairfax County.

Staff estimated the annual cost needed to comply with current and anticipated stormwater regulatory requirements and a sustainable infrastructure reinvestment program would likely be between \$80 and \$100 million/year. One approach to achieve these challenging requirements could be a phased approach that builds capacity over a period of time that can be based on success and experience and should result in a more cost effective and efficient program

## **L. RECOMMENDATION**

1. EQAC recommends that Fairfax County continue to adequately fund and implement its ongoing stormwater program, which includes dam maintenance, infrastructure replacement, water resource monitoring and management, watershed restoration and educational stewardship programs. EQAC realizes the current budget constraints have removed monies available from the general fund and that the funding for the stormwater program will come from funds generated through the Service District rates.

EQAC recommends that the Stormwater Service District rate be increased in FY 2012 by a half penny, from a rate of 1.5 cents per \$100 assessed real estate value to 2.0 cents per \$100. This would, once again, result in the restoration of some more funding for modest watershed improvement programs and a somewhat more realistic infrastructure replacement timeline. We realize that there will likely be a need for additional increases for water quality projects to meet future permit conditions, and for infrastructure reinvestment, as the system is continually growing and aging.

ANNUAL REPORT ON THE ENVIRONMENT

**CHAPTER V**

# **SOLID WASTE**

---

## **V. SOLID WASTE**

### **A. ISSUES AND OVERVIEW**

The Fairfax County Solid Waste Management Program continues to effectively manage solid waste recycling, collection and disposal within the county through operation of existing programs, implementation of the county's Solid Waste Management Plan and code compliance activities. As it has for many years now, Fairfax County's recycling rate far exceeds the Virginia minimum requirement of 25 percent. The program achieved a recycling rate of 39% last year. Slight variations can be anticipated due to climate variations from year to year and economic conditions. As always, the county has also met the minimum 930,750-ton annual waste delivery obligation to the Energy/Resource Recovery Facility, which is located at the county's I-95 landfill complex and which is owned and operated by Covanta Fairfax, Inc.

The program continued to provide waste collection and recycling services to over 45,000 homes in designated County Sanitary Districts. The program also moved a daily average of 170 tractor-trailer loads of municipal solid waste from the I-66 Transfer Station to the Energy/Resource Recovery Facility and other appropriate disposal locations.

#### **1. Energy/Resource Recovery Facility and Landfill Capacity**

The E/RRF continued to serve as the primary disposal location for the county's municipal solid waste, processing approximately 1,015,000 tons of waste in FY 2010, a four percent reduction from FY 2009, primarily due to reduced waste generation associated with the economic downturn. The county bypassed 17,000 tons of waste to a municipal solid waste landfill, primarily due to a major scheduled maintenance of one of the turbine generators.

This reflects the Solid Waste Management Program's efforts to deliver all of the county's municipal solid waste to the E/RRF if possible. In addition to avoiding the increased cost of hauling that waste to a disposal site far away, the policy of maximizing the use of the E/RRF also provides substantial environmental and public safety benefits due to having fewer trash trucks driving shorter distances on the region's local roads and highways.

Another ancillary benefit of this E/RRF-centered strategy is that the county can, at its discretion, offer a closer and better waste disposal option to its neighboring jurisdictions. Approximately 16 percent of waste processed by the E/RRF was from neighboring jurisdictions, including Prince William and Loudoun Counties, and the District of Columbia.

## 2. Solid Waste Management Plan Implementation

The 20-year Solid Waste Management Plan was approved by the Board of Supervisors in 2004. Highlights of the implementation actions as the Plan enters its sixth-year milestone include the following:

**a. Environmental Excellence.** The Solid Waste Management Program continued to maintain its Environmental Enterprise certification with the Virginia Environmental Excellence Program, administered by the Virginia Department of Environmental Quality.

Other Solid Waste Management Environmental Excellence goals and objectives for 2010 include the following:

- Continue to support a progressive policy through which currently 17 employees telecommute (34 percent of eligible employees).
- Maintain involvement with the Businesses for the Bay Certification Program.
- Continue to celebrate Earth Day and America Recycles Day to educate residents about environmental issues.
- Continue to provide technical and logistical support during implementation of a project that will provide an alternative water supply for the E/RRF, using effluent from the Noman M. Cole Pollution Control Plant.
- Continue to sponsor community recycling events for a variety of items such as cellular telephones, rechargeable batteries, bicycles eye glasses and many other durable household goods. These recycling events are conducted in partnership with a variety of non-governmental organizations and private businesses.

### Accomplishments of E2 Program in FY 2010

Continued to operate six hybrid vehicles and two electric vehicles, reducing air emissions from the operating fleet.

Operated the landfill gas-to-energy project at the closed I-66 Landfill and Vehicle Repair Facility and proceeded with implementation of an additional heating project.

Continued to operate two landfill gas-to-energy projects at the I-95 Landfill complex and the space heating project.

Held 11 Electric Sunday events in FY 2010, serving about 8,400 individuals. The 11 events in calendar 2010 will include three at the I-95 Complex in Lorton. Of particular note is Covanta's generous contribution of \$35,000 towards the cost of properly recycling old televisions and computer monitors collected at these events.

Held three Conditionally Exempt Small Quantity Generator events in FY2010, serving 71 companies.

Sponsored one remote household hazardous waste collection event, in addition to two permanent drop-off centers.

Worked with property managers to educate them about new recycling requirements.

Expanded recycling in county buildings by providing new containers to collect paper for shredding and recycling.

Continued the program at the Government Center where the public can properly dispose of used compact fluorescent light bulbs.

**b. Non-Residential and Construction Demolition Debris Recycling**

The Solid Waste Management Program continues to target education and outreach activities towards these newcomers to the county’s requirement to recycle. The focus of these efforts has been not only to educate business owners and contractors, but also to help these important community groups educate their customers about the need to recycle.

**c. Remote Household Hazardous Waste Collection Events**

In addition to its permanent collection sites at the I-66 and I-95 complexes, the Solid Waste Management Program conducted one remote household hazardous waste collection event during FY 2010. Remote events were funded as part of the county’s Environmental Improvement Program; funding was not continued due to the difficult economic conditions. However, EQAC understands that the Solid Waste Management Program plans to hold three remote household hazardous waste events over the next year, funded from tipping fees. EQAC supports the decision to reinstitute these events and urges the county to continue to schedule and publicize these events in the future.

**3. Solid Waste Disposal Fee**

The contract waste disposal fee, offered to companies that sign agreements with the county, remained at \$55.00 per ton in FY 2010 and FY 2011 disposal fees now support all solid waste public benefit programs such as recycling education, code compliance and household hazardous waste. The base solid waste disposal fee remains at \$60.00 per ton for FY 2011. A complete list of fees for various materials is posted on the county’s website and at the facilities.

**B. PROGRAMS, PROJECTS AND ANALYSIS**

**1. Waste Disposal Program**

**a. Overview**

The Solid Waste Management Program’s Division of Solid Waste Disposal and Resource Recovery is responsible for providing the municipal solid waste disposal capacity required by both private- and public-sector waste collectors countywide. This is accomplished through a network of facilities and programs including:

- The I-95 Landfill Complex and Recycling & Disposal Facility.
- The I-95 Energy/Resource Recovery Facility.
- The I-66 Transfer Station Complex and Recycling & Disposal Center.
- The Household Hazardous Waste Program.
- Other Relevant Activities.

Each element of this network is described under separate heading below.

**b. I-95 Landfill Complex and Recycling & Disposal Center**

**i. Groundwater Monitoring**

Groundwater Protection Standards were established for the I-95 Sanitary Landfill on November 20, 2000, through an amendment to the facility permit. In accordance with Waste Management Regulation 9 VAC 20-80-250.D.6.g, an Assessment of Corrective Measures report was submitted to the Virginia Department of Environmental Quality in August 2002 as the groundwater protection standards were exceeded for some constituents. VDEQ commented on the ACM and the county addressed VDEQ's comments by submitting a revised ACM and Corrective Action Plan on April 30, 2004. VDEQ has now accepted the county's recommendations, and the Corrective Action Plan will be implemented after a permit amendment is completed. The reports describe the nature and extent of groundwater contamination, provide a risk assessment for these conditions and establish a proposed program of corrective action. The county has proposed to implement a five-part remedy for groundwater at the I-95 Landfill complex. Proposed components of the program consist of:

- Institutional controls.
- Engineering controls.
- Monitored natural attenuation.
- Accelerated bioremediation (reductive dehalogenation).
- Direct oxidation.

The county will implement institutional controls in accordance with the closure and post-closure care plan. A number of engineering controls (leachate collection, landfill gas system and placement of cover) have been installed. Placement of the cap on the municipal solid waste portion of the landfill was completed during 2008. As presented in the Assessment of Corrective Measures report, the concentration of most regulated constituents began to attenuate relatively abruptly after engineering controls were implemented during the 1990s. Natural attenuation will be enhanced by injection of food grade material that will enhance microbial activity via reductive dehalogenation. Direct oxidation will be employed in one area of the facility. Two common forms of permanganate (potassium and sodium) will be used. Both are strong oxidizing agents. This will be done in the selected areas.

As part of the investigation, the county has drilled and sampled 16 additional monitoring wells to further delineate and remediate any groundwater problems. Staff will continue to perform the groundwater monitoring to comply with VDEQ's requirements of assessment monitoring. Further, staff will monitor the additional parameters at supplemental locations as specified in the Corrective Action Plan.

## ii. Landfill Closure

Capping of the municipal solid waste section of the landfill (an area of 260 acres) was completed during 2008. Phases I and II of the closure of this section were completed by placing a synthetic cap over an area of 125 acres, and Phases III and IV of the closure consisted of capping 135 acres of landfill with a thick, low permeability soil layer to minimize surface water infiltration. The capping work on some of the side slopes of the Area Three Lined Landfill was completed during 2008 by using a synthetic landfill cap.

## iii. Landfill Gas System and Air Emissions

The I-95 Landfill operates one of the largest landfill gas collection systems in Virginia, with over 350 installed wells extracting landfill gas for energy recovery. Approximately 2,500 cubic feet per minute of this gas is distributed to a variety of energy recovery systems, including the six-megawatt Michigan Cogeneration Systems electric generating facility, and the three-mile landfill gas pipeline that provides fuel as a substitute for natural gas at the Noman M. Cole Pollution Control Plant. The landfill gas pipeline project continues to provide significant energy cost savings at the NMCPCP.

During FY 2010, county staff continued to install new landfill gas wells and replace existing wells that cease to function properly due to normal landfill settlement.

County staff has also converted space heating at the landfill shop facility to landfill gas (the original heating system used bottled propane gas). This conversion is saving approximately \$9,000 per year in heating costs, and received a National Award from the U.S. Environmental Protection Agency.

During the reporting period, the county continued its solid compliance history with Virginia's air pollution, landfill gas control and storm water management regulations. Methane gas surface emission and perimeter monitoring are conducted as per regulations, and annual air emission reports were submitted to the VDEQ. VDEQ has found all submittals to be acceptable.

## iv. Ash Landfill

Ash resulting from the E/RRF combustion process reduces the processed waste to only 10 percent of its original volume and about 25 percent of its original weight. Therefore, ash disposal requires significantly less landfill space than that which is consumed by the disposal of raw municipal solid waste. Incinerator ash from the E/RRF, from a similar Covanta facility serving the City of Alexandria and Arlington County, and from the NMCPCP are all disposed at the I-95 Ash Landfill (Area Three Lined Landfill). Ash is placed in a double-composite lined landfill, controlled by state-of-the-art leachate collection and detection systems. The collected leachate is transported to the NMCPCP for treatment.

The ash landfill has four phases. Phases I and II have reached capacity and an intermediate cover has been placed. Approximately 1,000 tons of ash is placed daily in the ash landfill. Approximately 6,000 tons of shredded tires were used as a protective layer during the construction of Phase II of the ash landfill. Using this material not only recycled the tires, but also saved approximately \$86,000 in the cost of gravel and other aggregate materials. Construction of Phase IIIA of the ash landfill was completed during March 2008. A certificate to operate from VDEQ was obtained on August 21, 2008 and the county has been placing ash in the new cell since October 2008. Phase IIIA has capacity for ash for an additional five years.

The E/RRF's suite of pollution control equipment includes a dolomitic lime system that chemically treats the ash to reduce the possibility of metals leaching from the ash after landfilling. The ash is tested twice per year. During FY 2010, the independent lab found the ash to be within the regulatory limits for all constituents (i.e., it is non-hazardous).

A metallic constituent of the E/RRF's ash of particular concern is cadmium. The Solid Waste Management Program supports and actively publicizes efforts to collect rechargeable nickel-cadmium batteries separately for recycling. Through a partnership with the Rechargeable Battery Recycling Corporation, large retailers such as Wal-Mart, Radio Shack and Best Buy are collecting old batteries as new ones are sold. The batteries are recycled at a permitted waste management facility specifically designed to recover these metals. This effort is anticipated to significantly reduce the amount of cadmium present in E/RRF ash. Electronics recycling will also assist in reducing metals in the ash.

#### v. Recycling and Disposal Center

The Recycling and Disposal Center allows county residents and small businesses to bring their municipal solid waste and recyclables directly to the I-95 Complex for disposal. The center offers a full range of recycling opportunities, as well as household hazardous waste disposal service. Recycling is free to residents. During FY 2010, users visited the I-95 Recycling and Disposal Center over 66,000 times.

**c. Energy/Resource Recovery Facility**

i. Overview

Operations at the Energy/Resource Recovery Facility continue to meet or exceed accepted industry standards, as evidenced by the annual independent engineering report prepared by Dvirka and Bartilucci Consulting Engineers

in October 2010. This report states, “CFI [Covanta Fairfax, Inc.] has complied with the requirements of the Service Agreement, as amended, and has complied with the Facility’s various environmental permit and regulatory obligations.”

Since 2008, when CFI was released from the E/RRF’s federal output limit of 80 megawatts, the plant now generates an additional one to four MW of electricity during peak periods, which is sold at premium prices on the PJM regional energy market (extra revenues being shared with Dominion Virginia Power, which facilitates the sale). Revenue from the sale of the “extra” electricity is used to keep the disposal fees lower.

ii. Quantity of Waste Processed

The county has guaranteed to provide and the E/RRF has agreed to process at least 930,750 tons of municipal solid waste per year. In FY 2010, the E/RRF processed approximately 1,015,000 tons of waste (almost 84,600 tons per month). Approximately 757,000 tons of this waste (75 percent) originated in Fairfax County, with the remainder coming primarily from Prince William County and the District of Columbia. The quantity of Fairfax County waste generated has been reduced, mostly due to the economic slowdown.

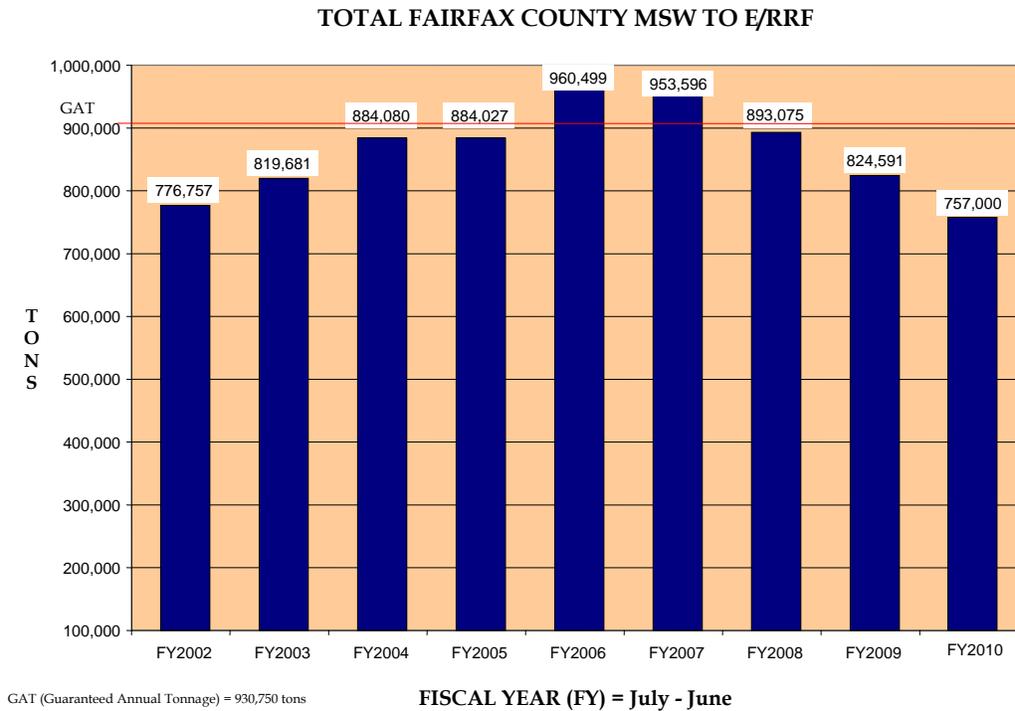

Figure V-1. Total Fairfax County Municipal Solid Waste to E/RRF, FY2002-2010

iii. Air Quality

The E/RRF’s continuous emissions monitoring systems sample flue gas from the combustion process and alerts CFI operating personnel when monitored emissions are approaching the concentration limits specified in the facility’s air pollution control permits. Permit exceedances must be reported to VDEQ, with an explanation as to the circumstances of the event and proposed solutions, as warranted. The E/RRF continues to meet its air permit limits, with most parameters well below their regulatory limits. Table V-1 presents stack emissions data as documented by an independent lab test and reported to VDEQ.

iv. Material Recovery

In addition to recovering energy from municipal solid waste, metals are recovered from the ash residue and recycled. In FY 2010, 22,645 tons of ferrous metal and 1,415 tons of non-ferrous metal were recycled from the ash.

<b>Table V-1                      Energy/Resource Recovery Facility Emissions Results                      June 2009</b>		
<b>Parameter</b>	<b>Permit Limit</b>	<b>Average E/RRF Result</b>
Sulfur Dioxide (SO <sub>2</sub> )	29 ppm	9.45 ppm
Carbon Monoxide (CO)	100 ppm	7.75 ppm
Nitrogen Oxides (NO <sub>x</sub> )	205 ppm	176 ppm
Hydrochloric Acid (HCl)	29 ppm	7.87 ppm
Particulate Matter (PM)	27 mg/dscm	4.23 mg/dscm
Mercury (Hg)	0.080 mg/dscm	0.00110 mg/dscm
Dioxin/Furans*	2.0 ng/dscm	0.0180 ng/dscm

ppm = parts per million  
 Dscm = dry standard cubic meter

mg = milligram

ng = nanogram  
 \* only one unit tested annually

I-95 Energy/Resource Recovery Facility, Annual Operations Monitoring Report, Fiscal Year 2009, October 2009, Dvirka and Bartilucci, Consulting Engineers

**d. I-66 Transfer Station & Recycling and Disposal Center**

The I-66 Transfer Station continues to handle approximately 75 percent of the county’s municipal solid waste destined for disposal. The Transfer Station consolidates waste delivered by individual residents and businesses, and also private sector and county collection vehicles, into large transfer trailers. These trailers are hauled over the road to a final

disposal site, primarily to the E/RRF. Primary benefits from this type of transfer system are a reduction in the number of vehicles traversing the county to reach the final disposal point, and reduced operating costs for the county’s solid waste management system as a whole. Further, the Transfer Station plays a pivotal role when waste needs to bypass the E/RRF.

VDEQ regularly inspects the Transfer Station; the facility was found to be in full compliance during all inspections in FY 2010.

**i. Transfer Operations**

The main role of the Transfer Station is to move waste collected in the northern and western parts of the county to the E/RRF in the south. The county has supplemented its fleet of tractor trailers with private trucking contractors.

The county vehicle fleet, including the transfer trucks at the Transfer Station, now uses ultra-low-sulfur diesel fuel and exhaust after- treatment- systems. These changes reduce air pollutant emissions as much as possible, while performing the mission of transporting of waste.

An automated truck wash system was installed in the truck wash building. The state-of-the-art system better recovers and recycles water, discharging minimal amounts to the sewer while reducing manpower requirements to wash large vehicles. Other county vehicles, including waste collection vehicles, are washed here as well.

In FY 2009, a project to convert space heaters to use landfill gas at the Department of Vehicle Services shop near the closed I-66 landfill was completed. An additional project to heat the adjacent bus garage is in development.

In a pilot program to reduce fuel consumption and air emissions in the transfer fleet, by decreasing the amount of time idling, six of the program's tractors have been equipped with battery-powered heat and air conditioning systems that provide up to two hours of air conditioning comfort without running the truck's engine. At this early stage, the units seem to be performing well, but computer analysis of the engine idling times will be the true test. Given continued success with this pilot program, it is anticipated that additional trucks will be converted if funding is made available.

ii. Recycling and Disposal Center

Photo of the Recycling and Disposal Center under construction in April 2008

The Transfer Station Complex also has one of the county's two Recycling and Disposal Centers where residents and small businesses self-haul their waste and recyclables. In FY 2010, users visited the I-66 site more than 198,000 times. The facility has undergone

significant modernization to accommodate growing local demands for recycling and disposal services. New scales and booths, improved entrance and egress, and newer technology have been installed to improve customer service and increase capacity.

**e. Household Hazardous Waste Program**

The Household Hazardous Waste and the Conditionally Exempt Small Quantity Generator collection programs are operated by the Solid Waste Management Program. The statistics about the program results are provided in the Hazardous Materials chapter of this report.

## **f. Other Relevant Activities**

All solid waste collection companies in Fairfax County must hold a Certificate to Operate and individual vehicle permits, both issued by the Solid Waste Management Program. An integral requirement of these permitting programs is that permitted collectors must demonstrate that they comply with all applicable provisions of Chapter 109.1, the county's solid waste management ordinance.

The Solid Waste Management Program has responsibility for enforcing Chapter 109.1 and for resolving any potential violations observed by program staff. In addition to this responsibility, the program also coordinates with other county agencies as necessary to lead enforcement of relevant provisions of other chapters of the County Code related to the solid waste management aspects of public health menaces, nuisance noise and debris landfills.

## **2. Waste Reduction and Recycling Programs**

The Solid Waste Management Program's Division of Solid Waste Collection and Recycling assumes the lead role regarding the management and implementation of the countywide recycling program.

The Virginia Department of Environmental Quality is responsible for establishing the regulations that require all municipalities in the commonwealth to recycle a certain minimum percentage of the total volume (by weight) of Municipal Solid Waste generated in the jurisdiction. These regulations are codified as 9 VAC 20-130-10, and Fairfax County is responsible for meeting a 25 percent requirement. Smaller communities, with low population or low employment statistics, are required to meet a lower threshold, set at 15 percent. Reports documenting the recycling rate for the preceding calendar year are required to be sent to VDEQ each year in the spring. Fairfax County's recycling rate for calendar year 2009 was 39 percent, which represents a full fourteen percentage points above the required rate of 25 percent.

Chapter 109.1 requires annual reports on the tonnages of recyclables collected by a broad spectrum of businesses and commercial establishments, material recovery facilities, and other entities that operate in the county. These reports are compiled to calculate the countywide recycling rate. Figure V-2 depicts the historical quantities of recyclables collected in the county since 1999. Since the recycling program's inception in 1988, the county has recycled over 7.5 million tons and continues to exceed the state-mandated requirement.

Currently, all residential properties in Fairfax County receiving curbside trash collection must also be provided with recycling collection. Recyclables that must be collected at the curb, in conformance with Chapter 109.1, include: metal food and beverage containers; glass bottles and jars; plastic bottles and jugs; mixed paper; cardboard; and yard waste.

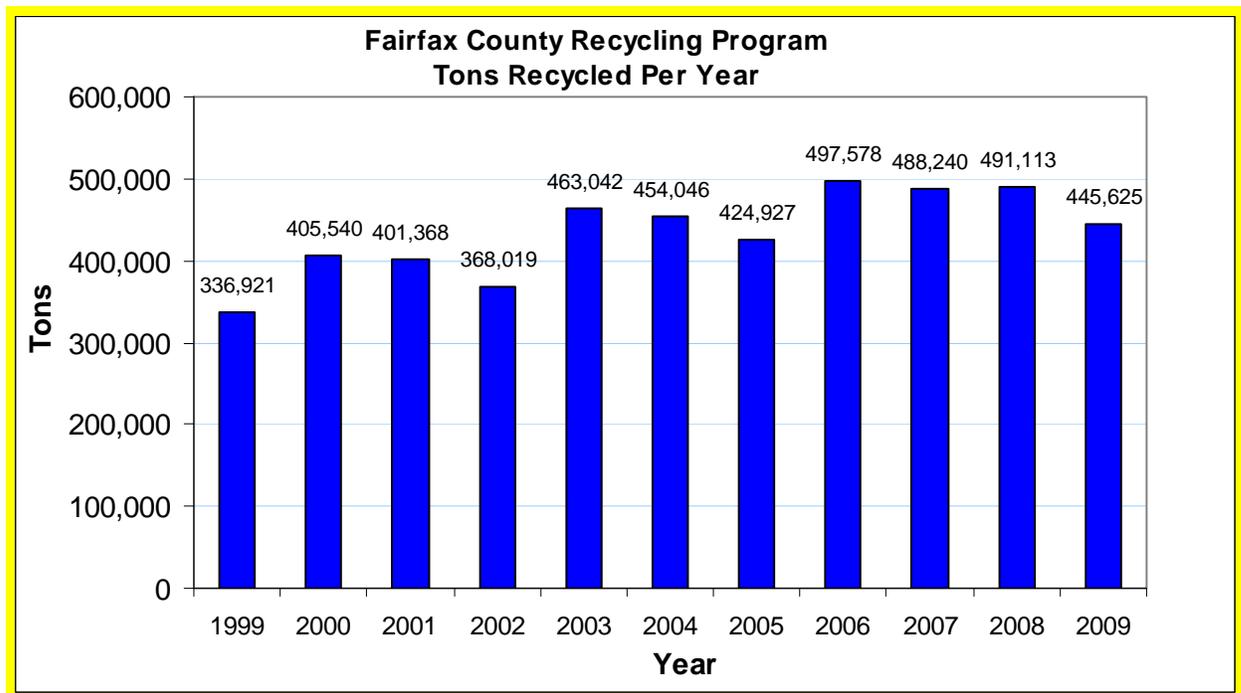

Figure V-2 - Historical Quantities of Materials Recycled in Fairfax County

Recycling of mixed paper and cardboard is required for all nonresidential properties in the county. All nonresidential entities that generate a principal recyclable material other than mixed paper and cardboard are required to recycle that material in addition to the mixed paper and cardboard.

Recycling of mixed paper and cardboard is required for all multifamily buildings in existence prior to July 2007.

Recycling of mixed paper, cardboard, metal food and beverage containers, glass bottles and jars and plastic bottles and jugs is required for all multifamily buildings constructed *after* July 2007. Appliances from these properties are also required to be recycled.

Recycling of mixed paper and cardboard is required for all schools and institutions.

All construction and demolition contractors are required to recycle cardboard.

#### **a. Major Program Elements in FY 2009**

##### **Compact Fluorescent Lamps**

The management of compact and other fluorescent lamps from residences in the county is addressed in several ways. CFLs and other fluorescent lamps can be taken to either of the county's Household Hazardous Waste facilities at the I-66 Transfer Station complex in Fairfax or the I-95 Landfill complex in Lorton. Both of the facilities take these lamps at no charge to county residents. Advertising

placed in print media for the e-waste recycling events, known as *Electric Sunday*, has emphasized the fact that fluorescent lamps can be recycled during these events. Participation in the e-waste collection events has resulted in increased participation in the county's HHW program, resulting in collecting increased amounts of fluorescent lamps for recycling.

CFL collection for Fairfax County residents and employees is also available in the program's office location at 12000 Government Center Parkway, Suite 458. Information detailing these recycling opportunities is on the county website at: <http://www.fairfaxcounty.gov/dpwes/recycling/mat-light.htm>. This portion of the website also provides information about other organizations in the county that are accepting CFLs for recycling.

### **E-Wastes**

In FY 2010, the Solid Waste Management Program continued its *Electric Sunday* program whereby, on one Sunday each month, residents can bring their e-wastes, including televisions, for recycling to either the I-66 Transfer Station or the I-95 Solid Waste Complex.

In FY 2010, 11 *Electric Sunday* events were held where residents may recycle obsolete and/or broken computers and peripherals as well as televisions. At these events, 6,973 televisions and 6,907 computer monitors were collected for recycling, along with the CPUs and peripherals that go along with computers. Over 8,400 customers were served during the eleven events. As reported to the county from all sources, 982 tons of e-wastes were recycled from residents and businesses in the county in calendar year 2009.

### **c. Review of Collection and Recycling Programs**

In addition to county-wide recycling program management, the Solid Waste Management Program is responsible for:

- Collection of refuse and recyclables from about 44,000 residences, primarily on the east side of the county in designated Sanitary Districts.
- Collection of refuse and recyclables from county-owned buildings.
- Seasonal curbside vacuum leaf collection for about 25,000 residences.
- The management of eight Recycling Drop-Off Centers.
- Removal of oversized piles of trash through the *Clean Streets Initiatives* and *MegaBulk* programs.
- Refuse removal due to evictions and other court orders.
- Assistance in the removal of materials damaged by storm, floods or other emergency situations.
- Public outreach and education on recycling, household hazardous waste and solid waste management.

The Megabulk program was originally established for county refuse and recycling customers in Sanitary Districts to collect oversized piles of refuse and yard debris.

Customers schedule this service and pay an additional fee for the collection of oversized quantities of materials that are not part of the basic level of service for routine weekly collections. The service is now available to residents countywide, based upon equipment and personnel availability.

Working in conjunction with the Fairfax County Health Department, the Solid Waste Management Program's Clean Streets Initiative is designed to address complaints from residents about piles of refuse that are placed in neighborhoods where the property owner does not take responsibility for its timely removal, or where no responsible party can be found. Under this initiative, the property owner is notified that the refuse must be removed, and if he or she fails to do so or otherwise cooperate, the Solid Waste Management Program removes the refuse and bills the owner for removal of the material. If the property owner refuses to pay that bill, a lien is placed on the property.

i. Yard Waste

Recycling of yard waste (brush, leaves and grass) is required for all residential properties in Fairfax County, and collection of that yard waste is required to be provided as part of the base level of service by all permitted collection companies operating in the county from March 1<sup>st</sup> through December 24<sup>th</sup> of each year. Yard waste recycling is suspended in the months of January and February because very few leaves and virtually no grass are generated during that part of the year.

Townhouse communities may apply to the county for approval of an alternative yard waste recycling system. The reason for this flexibility is because lawns are typically small and these communities contract with landscaping firms that groom common areas. For almost three years now, Fairfax County has required all townhouse communities to apply for

approval of an alternative yard waste recycling system. Approximately 200 townhouse communities have approved alternative recycling systems for yard waste.

Woody materials, referred to as brush, comprise a significant portion of the yard waste collected in the county. Brush is managed at either the I-66 or I-95 facility and is ground into mulch. The mulch from these facilities is available free to county residents who can self-haul the material to the end use location. Typically, mulch is used as a top-dressing around decorative plantings to reduce weed growth and to maintain soil moisture.

Leaves and grass comprise the balance of the yard waste managed in the county. This material is generally collected in bags or by curbside vacuum collection and is sent to either of two composting facilities where the material undergoes biological decomposition to turn it into compost. Typically, compost is used as a soil amendment or substitute. In 2008, over 200,000 tons of yard waste were recycled in Fairfax County.

Leaves collected in the fall by the county for customers receiving (and paying for) curbside vacuum leaf collection are ground during the vacuuming process. These ground leaves are taken to several Fairfax County parks where the ground leaf mulch is available for use by the Park Authority and by residents who can haul it away themselves for use in their yards.

ii. Recycling Drop-Off Centers

Fairfax County operates eight Recycling Drop-Off Centers at various locations throughout the county. These are unmanned facilities, open 24 hours, and there is no fee to use them. No new centers have been added to the county system in approximately 11 years, but the existing facilities are used frequently by residents and small businesses. About 5,000 tons of recyclables are collected annually in the drop-off centers. Recycling Drop-Off Centers continue to play an important role in supporting recycling in the community, serving patrons in multifamily units and small businesses.

iii. County Agency Routes

All county agencies receiving refuse collection and recycling services from the Solid Waste Management Program participate in the county recycling program. In FY 2010, county agency locations recycled approximately 875 tons of material. The program provides containers for the collection of bottles and cans (plastic bottles, aluminum beverage cans and glass bottles) from buildings owned and occupied by Fairfax County and its employees. Recycling collection containers have been placed in all of the county's larger office buildings and most of the smaller agency buildings in areas where beverages are sold and consumed like cafeterias and conference rooms.

iv. Document Shredding

Fairfax County offers residents the opportunity to shred personal documents at certain locations around the county, usually in conjunction with electronic recycling events or household hazardous waste collection events. This service is offered to help residents protect their personal financial information while directing the shredded paper to a recycling facility. In FY 2010, 10 document shredding events were held. As of January 2010, approximately 300 tons of personal documents had been shredded.

v. Public Education and Outreach

Public education and outreach are key components of any successful municipal recycling program. To that end, the Solid Waste Management Program has focused on developing creative education programs that take advantage of its partnerships with county agencies, Fairfax County Public Schools, community organizations commercial businesses and privately-owned collection companies. Outreach programs consist of: activities and displays at county festivals; support and publicity for several events specifically dedicated to recycling; public speaking opportunities; and technical support in the research of recycling technologies and issues.

The Solid Waste Management Program continues to partner with the Fairfax County Wastewater Treatment Program in its educational effort entitled “Sewer Science.” This program is a hands-on class that Wastewater Management employees have introduced into Fairfax County high schools. The program teaches high school students about municipal wastewater treatment through a week-long laboratory that simulates wastewater treatment processes. Sewer Science, which supports the Virginia Standards of Learning for biology and chemistry, is taught by science teachers with assistance and support from county employees.

Both the county’s stormwater program and the solid waste management program have been invited to assist in the Sewer Science program to teach high school students about how stormwater is managed and what happens to refuse and recyclables in the county. Staff members from all three of these county environmental programs collaborate with high school science teachers to tailor information to meet the educational needs of the students. To date, the Solid Waste Management Program has made over 200 presentations to Fairfax County high school students about how trash and recycling are managed in the county.

The Solid Waste Management Program continues to work closely with the Northern Virginia Regional Commission on a regional public information program entitled “KnowToxics.” The purpose of this program is to educate business owners about their responsibility to comply with federal and state regulations that require proper disposal or recycling of spent fluorescent lamps, rechargeable batteries and computers and related electronics. The program is centered on its website: [www.KnowToxics.com](http://www.KnowToxics.com) which provides a resource where businesses can learn how to legally and appropriately manage these materials.

The Solid Waste Management Program has also continued a rechargeable battery recycling program, in collaboration with the Rechargeable Battery Recycling Corporation Program. RBRC is an industry-funded program where rechargeable batteries can be collected and sent for recycling at no charge. Collection boxes for rechargeable batteries are now located at offices of all members of the Fairfax County Board of Supervisors and at major county

buildings. A complete listing of collection locations is on the county website at: <http://www.fairfaxcounty.gov/dpwes/recycling/mat-bat.htm>

The Fairfax County Solid Waste Management Program partnered with the Metropolitan Washington Council of Governments to produce the Builder's Guide to Refuse and Recycling.

The Solid Waste Management Program continues to be a prime sponsor of Fall for Fairfax. This event provides a great opportunity to conduct public outreach and disseminate technical guidance and practical information on using the county's solid waste management system.

The Solid Waste Management Program is a proud financial sponsor of the annual Earth Day/Arbor Day celebrations promoted by Clean Fairfax. The program also supports the Johnie Forte Jr.

Environmental Scholarship, which awarded fourteen \$500 grants to applicants from the Fairfax County Public Schools. Student groups

receiving the grants are invited to make a presentation regarding their use of the grant in front of members of the Board of Supervisors, at the annual Earth Day/Arbor Day celebration at Northern Virginia Community College. Details of the Johnie Grant Jr. program are available on Clean Fairfax's website at: <http://www.cleanfairfax.org/forte.html>

This scholarship program is a portion of the Schools/County Recycling Action Partnership. This partnership was created by the Fairfax County Public Schools and the Solid Waste Management Program to provide opportunities for the students of Fairfax County Public Schools to learn about recycling and other environmental issues and to enhance recycling throughout the system. The program developed the scrapbook, a resource tool distributed to all science teachers in the school system, that details all of the opportunities provided by the program and Clean Fairfax to aid in the instruction of students, including training and presentations, tours and how to apply for the Johnie Forte grant award.

The Solid Waste Management Program also supports Fairfax County's Employees for Environmental Excellence (FEEE). The group meets monthly and works on projects designed to encourage county employee participation in recycling and other environmental protection activities. The group coordinates the county employee's Earth Day Expo celebration and the Employee Recycling Committee Recycler of the Year Award. It also supports the FEEE

website available in the county's intranet, where information about recycling in county buildings is provided .

The county Earth Day Expo is held annually at the Government Center, in conjunction with another event for all administrative assistants in the county. Many county agencies with responsibility for environmental protection and stewardship in the county participate, with informational booths staged in the Government Center during the lunch hour. These booths provide an opportunity for attending employees to better understand the services provided by these agencies.

America Recycles Day 2009 was celebrated on October 24, 2008, with the Community Recycling Roadshow at Herndon High School. The Solid Waste Management Program collected eyeglasses for the Lion's Club of Fairfax and cellular telephones for OAR of Fairfax County.

Document shredding service was provided at the event where about 10 tons of paper were shredded. Bikes for the World received about 95 bicycles. Art for Humanity collected sewing machines, window air conditioning units, baby strollers and microwaves and filled a 16-ft. trailer completely with clothing, towels and linens.

The Rechargeable Battery Recycling Corporation Program received more than 1195 pounds of rechargeable batteries collected in Fairfax County.

Another aspect of the Solid Waste Management Program's public outreach and education effort is active involvement in community events and public speaking opportunities and support to various community special interest groups such as the Lorton Citizens Alliance Team and the annual Residents Solid Waste Forum. The Residents Solid Waste Forum meeting was held on May 18, 2010.

The program also uses the Internet by posting pertinent information about timely subjects on the program's website. Information about the program's involvement in community events, as well as new information about solid waste matters, can be found at: [www.fairfaxcounty.gov/living/recycling](http://www.fairfaxcounty.gov/living/recycling).

Staff continues to update the Solid Waste Management Program's website to improve its ease of use for residents and businesses. More information was added to help county residents, solid waste industry companies and schools access forms, data and publications about the program.

The program also published an electronic "listserv" to county collection customers to automatically send updates to customers on the program and to provide updates regarding service changes due to inclement weather. A similar "listserv" tool was developed to give vacuum leaf collection customers the most up-to-date information on the exact dates that the leaf collections would be conducted on their streets in order to ensure that residents would have time to rake their leaves to the curb.

The Solid Waste Management Program published for distribution to county residents (and others, upon request) a brochure that consolidates and summarizes information about the program. Printed on recycled paper, the color brochure briefly provides an overview of the program.

### **3. Clean Fairfax**

Clean Fairfax Council, now known as Clean Fairfax, is a private, nonprofit (501(c)(3)) corporation dedicated to educating residents, students and businesses in Fairfax County about litter prevention and recycling. Clean Fairfax focuses on environmental education provided to students and adults throughout the county. The organization is currently working toward a less paper-intensive outreach program including e-newsletters, an environmental blog and updated website, educational videos, interactive programs for students, community service opportunities for students (i.e., support at the organization's office), classroom presentations and presentations to homeowner associations and other groups. All of the organization's informational brochures are translated into the six major foreign languages used in Fairfax County: Korean; Spanish; Urdu; Farsi; Vietnamese; and Chinese.

A key effort of Clean Fairfax is the sponsorship of spring and fall cleanups. These cleanups are implemented by volunteers who desire to clean up a certain area of the county. The organization asks volunteers to plan their cleanup by selecting a site, gathering volunteers and setting a date and time. The Clean Fairfax website provides all information needed to plan and coordinate a clean up, including tools for reporting what was collected in an effort to quantify the amount of litter in the county. Volunteers are provided trash bags, recycling bags, vests and safety tips in order to perform the clean up along with an automobile litter bag and a memento for each participant.

In its FY 2010 annual report to the Virginia Department of Environmental Quality, Clean Fairfax reported that 1,608 people participated in 127 cleanup events, with over 285 cubic yards of litter collected.

Clean Fairfax conducted a complete redesign of its website at [www.cleanfairfax.org](http://www.cleanfairfax.org). One of the main features of the website redesign is the ability to use the "Report a

Litterer” program on line. This program allows residents who observe someone littering from a car to report information about the vehicle to Clean Fairfax. Clean Fairfax provides this information to the Fairfax County police, which issues letters to the vehicle owner about littering.

There are many other programs offered by the Clean Fairfax, including programs that are beyond litter prevention/control aspects. For more information, please visit the website at [www.cleanfairfax.org](http://www.cleanfairfax.org).

#### 4. Alice Ferguson Foundation

The nonprofit Alice Ferguson Foundation was established in 1954. While chartered in Maryland, it has implemented programs throughout the Potomac River watershed, with benefits to the main stem of the river as well as tributaries in Washington, D.C., Maryland, Pennsylvania, West Virginia and Virginia. As stated on its website, the foundation’s mission is “to provide experiences that encourage connections between people, the natural environment, farming and the cultural heritage of the Potomac River Watershed, which lead to personal environmental responsibility.”

On April 10, 2010, the foundation held its 22<sup>nd</sup> annual **Potomac River Watershed Cleanup**. This was truly a comprehensive, watershed-wide effort, in that there were 575 cleanup sites in four states and the District of Columbia. A total of over 252 tons of trash were removed by over 14,500 volunteers. Items removed included over 21,500 plastic bags and 1,844 tires. In Fairfax County and the City of Fairfax, 2,115 volunteers working at 89 sites collected over 58,600 pounds of trash, including 340 tires, over 26,200 bottles and over 2,200 cigarette butts.

Other programs implemented by the foundation include:

**Trash Free Potomac Watershed Initiative**—This is a program to reduce trash and increase recycling, education and awareness of trash issues in the watershed

**Potomac Watershed Trash Treaty**—As of fall 2008, this treaty commits 100 signers to achieving a “Trash Free Potomac by 2013” and to: support and implement regional strategies aimed at reducing trash and increasing recycling; increase education and awareness of the trash issue throughout the Potomac watershed; and reconvene annually to discuss and evaluate measures and actions addressing trash reduction. Fairfax County was one of the founding signers of the treaty in 2005.

**Potomac Watershed Trash Summit**—The foundation convenes this meeting annually to provide a venue for key stakeholders to collaborate on strategies to eliminate trash from waterways, communities, streets and public lands, including regional public policy, model best management practices, business actions and public education.

**Enforcement**—The foundation worked in partnership with the Metropolitan Washington Council of Governments’ Police Chief Committee on “Litter Enforcement Week,” which provided a focus on litter-related crimes and raised awareness of the harmful effects trash has on communities and the environment.

There are numerous other programs and initiatives that are implemented by the foundation; the reader is encouraged to visit the foundation's website at [www.fergusonfoundation.org](http://www.fergusonfoundation.org).

## **C. RECOMMENDATIONS**

No new recommendations are proposed this year.

## **REFERENCES**

Much of the narrative and illustrations were supplied by the following agencies of the Department of Public Works and Environmental Services:

- Division of Solid Waste Collection and Recycling.
- Division of Solid Waste Disposal and Resource Recovery.

EQAC also acknowledges Clean Fairfax and the Alice Ferguson Foundation for information provided through e-mails.

---

ANNUAL REPORT ON THE ENVIRONMENT

**CHAPTER VI**

**HAZARDOUS  
MATERIALS**

---

# V. HAZARDOUS MATERIALS

## A. ISSUES AND OVERVIEW

### 1. Overview

Fairfax County hazardous materials concerns may be considered less significant as compared to other jurisdictions; the industrial base within the county is relatively “clean.” Nevertheless, the county does have its share of problems. The main concerns are hazardous materials incidents involving spills, leaks, transportation accidents, ruptures or other types of emergency discharges. Secondary is the use and disposal of hazardous materials in either daily household activities or by small quantity commercial generators. The final concern is the clean up and regulation of hazardous materials.

Although the news media are constantly reporting industrial and transportation related hazardous materials incidents, there is a general lack of awareness by the public of health and safety risks associated with the use, storage and disposal of common household hazardous materials. Educating the public on the implications of these hazardous materials on peoples’ lives remains a significant goal.

The discarding of older model televisions, as well as computer monitors and peripherals requires continued effort to help keep lead from entering the solid waste system. Compact florescent light bulbs contain small amounts of mercury; they therefore must be disposed of properly when the bulbs are used as well as if they are broken. With the 2012 mandatory change to compact florescent light bulbs, proper disposal will become a bigger issue.

Finally, there were two FY 2010 budget impacts that had direct impact on environmental programs: reorganization of the Hazardous Materials and Investigative Services Section and the loss of the Local Emergency Planning Committee Coordinator. The HMIS reorganization did not involve any reduction in service or mission objectives for the section. Resources were reallocated to better distribute workload and address concerns for officer safety and staffing. The duties of the LEPC Coordinator were reassigned to the alternative placement Lieutenant assigned to the Hazardous Materials Technical Support Branch. The long-term impact for the loss of the LEPC Coordinator will come in 2012 when the alternative placement Lieutenant retires. The Fire and Rescue Department purchased Tier II Manager Software in an effort to compensate for the loss of the LEPC Coordinator position. This allows for Web-based entry of Tier II information by submitting facilities. The most significant advantage of this software is that it automatically generates the Hazardous Material Emergency Response Plan for the critical hazard facilities.

(13)

## **2. Hazardous Materials Incidents**

### **a. Overview of 2009 Hazardous Materials Incidents**

In 2009, the Fire and Rescue Department's Hazardous Materials and Investigative Services section received 735 complaints involving hazardous materials (a sharp increase from 418 in 2008 and 288 in 2007), 303 of which were reported spills, leaks or releases of hazardous materials into the environment (a decrease from 330 in 2008). Of the 303 releases, 204 involved petroleum based products. There were 48 hydraulic oil spills/releases (mostly from trash trucks), 48 fuel oil or home heating oil releases, 34 gasoline releases and 31 diesel fuel releases. The remainder consisted of a variety of materials including paint, antifreeze, cleaners, various gases, various chemicals and mercury. There were 55 incidences where the release of hazardous materials did impact storm drains or surface waters. Currently, 52 sites are being tracked for long term remediation. The most significant of these is the Pickett Road Terminal Site (Fairfax Tank Farm) release which started in 1991. Also being assessed is the underground methane production situation in a residential neighborhood. This problem originated in early 2005. The Hazardous Materials and Fire Investigation Mobil Lab was requested to address 7 incidents or events. Personnel in this section maintain relationships with the major pipeline companies and blasting companies that operate in the county. (1)

### **b. Hazmat Response Team Information**

The Fire and Rescue Department maintains a well equipped hazardous materials response team for emergency response. The primary unit operates out of Fairfax Center Fire Station 40. There are four satellite stations located throughout the county in support. These stations are located at Fire Station 1 in McLean, Fire Station 11 in Penn Daw, Fire Station 19 in Lorton and Fire Station 26 in Springfield. These units are strategically positioned to provide rapid response and adequate coverage throughout Fairfax County. Response personnel are trained and equipped to initiate product control and mitigation measures to prevent or minimize the adverse environmental impact and damage. All units are staffed 24 hours per day, seven days per week. (1)

The Hazardous Materials Response Team responded to 814 calls in CY 2009 (slightly down from 994 in 2008). The team responded to a myriad of incidents including methane/propane gas emergencies, transformer fires, overturned gasoline/ethanol tank trucks, weapons of mass destructions investigation for suspicious packages or white powder, mercury events, chemical odors or spills, petroleum releases, the dumping of hazardous materials and various other Department of Transportation HazMat Class events. (1)

In addition to the efforts of the Operations Division and Hazardous Materials Investigative Services Section personnel, the Fire and Rescue Department maintains a contract with a major commercial hazardous materials response company to provide additional support for large-scale incidents. The Fire and Rescue Department has stressed its commitment to protecting the environment and residents through proper enforcement of the Fairfax County Fire Prevention Code and through rapid identification, containment and cleanup of hazardous materials incidents. The Fire and Rescue Department, in conjunction with the Fairfax Joint Local Emergency Planning Committee, purchased a new online software program called Tier 2 Manager. This program will allow companies that use, store or manufacture chemicals in the county to report this information electronically to the department and FJLEPC so that the community and first responders will be aware of these chemicals within our community as required by the Emergency Planning and Community Right to Know Act. (1)

**c. Fairfax County Department of Health, Environmental Hazardous Investigation Section**

The Air Quality chapter of this report discusses the elimination, due to FY 2010 budget reductions, of the Environmental Hazardous Investigation Section of the Fairfax County Department of Health. In that this section responded to residents' concerns about potential chemical, biological, and nuclear hazards such as mold, radon, asbestos, and indoor air quality, there are both air quality and hazardous materials implications associated with this budget decision. The Air Quality chapter should be consulted for further information.

**3. Hazardous Materials in the Waste Stream**

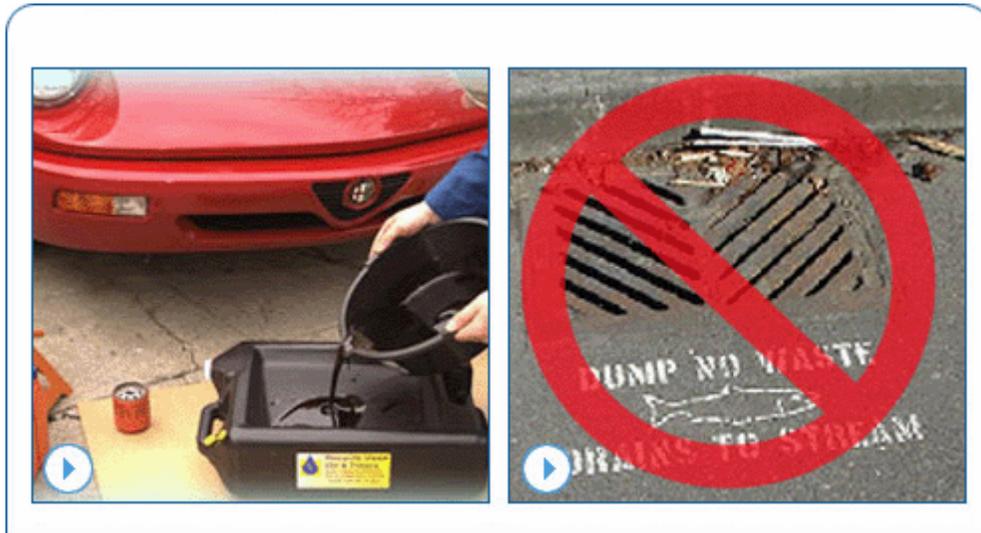

The disposal of household and small quantities of non-household hazardous materials into the waste stream continues to be a concern. Unlike hazardous materials incidents, the immediate impact is not as dangerous. However, the long-term impact can be just as severe. Sometimes hazardous materials are dumped illegally, which leads to stream and groundwater pollution and soil contamination. Household hazardous wastes are products used in and around the home that are flammable, corrosive, reactive or toxic. These hazardous materials potentially can cause a safety problem if various household chemicals become mixed when disposed of with the regular trash. By disposing of household hazardous wastes separately in the appropriate manner, these materials can be properly handled and packaged to minimize exposure to potentially harmful chemicals and decrease the likelihood that these chemicals will enter the environment.

### a. Used Automotive Oil and Fluids

Millions of do-it-yourselfer motorists change their own oil. Some of the oil is disposed of properly at a used-oil recycling center. But much used motor oil is being disposed of in garbage cans, sewers, storm drains and backyards – practices that can contaminate soil, local streams, rivers, bays and beaches. One gallon of used motor oil, if not disposed of properly, can contaminate one million gallons of water. (4)

As a part of its ongoing effort to educate all Americans on environmental responsibility, the U.S. Environmental Protection Agency launched “You Dump it, You Drink It” (“Si lo tira, se lo toma”), a new Spanish-language campaign. Despite the fact that about half of all automotive mechanics in the United States are Hispanic, little if any Spanish-language materials exists for the automotive repair industry and those consumers who change their own motor oil. EPA hopes to fill this void through a wide-scale distribution of these materials, which include posters, brochures and bumper stickers. These materials are available to download from the EPA website. (5)

Recycling of petroleum products is less well known than for other products. The recycled used motor oil is used for many purposes. The primary use is to refine it into a base stock for lubrication oil. The secondary use of used oil is to burn it for energy. If you recycle just two gallons of used oil, it can generate enough electricity to run an average household for almost 24 hours. (4)

*Many service stations, repair facilities and quick lubes will accept used oil and used oil filters.*

(The American Petroleum Institute-The Oil Recycling Process website: [www.recycleoil.org](http://www.recycleoil.org) [4])

### **b. Dumping into Storm Drains**

Storm drains carry stormwater runoff from streets (see the Water Resources chapter of this report). This water is not treated and goes directly into local streams. All streams in Fairfax County eventually flow into the Potomac River, which empties into the Chesapeake Bay. Anything dumped down a storm drain will follow the same path as the stormwater runoff. (6)

The cleaning up of animal wastes and the disposal of such wastes down storm drains, as well as the disposal of leaves down the storm drains, are attempts at doing a service that have the effect of introducing pollutants directly into county streams. There are deliberate disposals of chemicals, oils and other items into the storm drains as “out-of-site, out-of-mind.” In either situation, there is a misperception that the storm drains are part of the county sewage system and that the disposal of materials down these drains does not provide a direct impact to the environment.

## **4. Pipelines**

The following was reported by the Fairfax Joint Local Emergency Planning Committee:

“More than 3,000 companies operate some 1.9 million miles of natural gas and hazardous liquid pipelines in the United States. The pipeline network includes 302,000 miles of natural gas transmission pipelines operated by 1,220 firms, and 155,000 miles are hazardous liquid transmission pipelines operated by 220 outfits. In addition to transmission pipelines, 94 liquefied natural gas facilities operate in the United States.”

Pipelines traverse Fairfax County, carrying refined petroleum for two companies and natural gas for three companies. The Office of Pipeline Safety in the U.S. Department of Transportation regulates pipeline design and the construction, operation and maintenance of pipelines to ensure safe transportation of hazardous liquids and natural gas. (7)

## **5. Rail Transport of Hazardous Materials**

Chemicals and materials that are hazardous have regularly been transported by rail. While having chemicals and hazardous materials transported by rail keeps them off the highways, accidents or leaks have been, and continue to be, a cause for concern. Additional concerns have been introduced as a result of the September 11, 2001 terror attacks, new ethanol transfer stations and the future shipments of nuclear radioactive waste throughout the country.

The July 18, 2001 CSX Train fire in a Baltimore, Maryland tunnel was an unintended incident involving a train car with hazardous materials and had

wide-range, long-term consequences. Major sections of the downtown were closed, businesses were impacted, Orioles' games had to be rescheduled, and portions of a major street were closed for five weeks. (3)

The July 2001 Baltimore tunnel fire immediately got woven into debate of whether nuclear waste could be transported safely to Nevada. Studies in 2003 were performed to determine what would have happened had the train been carrying nuclear waste. Conclusions differed. A state analysis concluded that a cask carrying radioactive spent fuel would have been breached by temperatures inside the Howard Street Tunnel. Escaping radioactive particles would have contaminated 32 squares miles, increased the chances of cancer deaths for up to 28,000 people and cost \$13.7 billion to clean up. The Nuclear Regulatory Commission said the nuclear waste canister would have endured the fire "and the health and safety of the public would have been maintained." (3)

Rail through Fairfax County is in the eastern and southern portions of the county and does not include tunnels. Residents are generally not located as close to the rails in Fairfax County as in other jurisdictions. However, some hazardous materials, alone or in combination, when released can affect areas up to miles from the initial site of the incident. It is conceivable that Fairfax County residents could be impacted with hazardous materials from a rail incident in another jurisdiction.

## **B. PROGRAMS, PROJECTS AND ANALYSES**

### **1. Fairfax Joint Local Emergency Planning Committee**

Local Emergency Planning Committees are required by Section 301[c] of Title III of the Emergency Planning and Community Right-to-Know Act, a freestanding provision of the Superfund Amendments and Reauthorization Act of 1986. The main thrust of SARA is to identify and clean up waste sites that are potentially toxic. Title III has two important provisions: 1) it provides for emergency response planning to cope with the accidental release of toxic chemicals into the air, land and water; and 2) the community right-to-know provisions of Title III help to increase the public's knowledge and access to information on the presence of hazardous chemicals in their communities and releases of these chemicals into the environment. Under Title III, states are required to organize into planning areas and to establish local Emergency Planning Committees.

The FJLEPC is comprised of representatives of the city of Fairfax, the county of Fairfax, the town of Herndon and the town of Vienna. Committee members include local government officials, police, fire and rescue officials, environmental and governmental planners, public health professionals, hospital officials, public utility and transportation officials, representatives of business

organizations, professional societies, civic organizations and the media. These representatives meet six times per year. The FJLEPC: (1) collects information about hazardous materials; (2) develops and updates, on an annual basis, the Hazardous Materials Emergency Response Plan; and (3) provides information to the public about the use, storage and manufacture of hazardous materials. The Plan also contains notification procedures in the event of an incident, on site means of detecting incidents, evacuation routes, clean-up resources and identification of parties responsible for the site. The Annual Plan is exercised regularly.

FJLEPC provides education and outreach to the public. Information is disseminated through public meetings, brochures, newsletters and a website: [www.lepcfairfax.org](http://www.lepcfairfax.org). The newsletter, which is mailed to civic and homeowner associations, focuses on emergency preparedness, disaster planning and fireworks safety. FJLEPC produced a video about shelter in place. The video is available through any of the Fairfax County public libraries as well as online through the county's "video on demand" service at [www.fairfaxcounty.gov/cable/channel16/vod.htm](http://www.fairfaxcounty.gov/cable/channel16/vod.htm). (8) LEPC members are available to speak to businesses or residents' groups, as requested.

## **2. Railroad Transportation Plan**

The CSX Transportation has a hazardous material emergency response plan, "Community Awareness Emergency Planning Guide" dated October 2008. A written copy of that plan is on file with the Fairfax County Fire & Rescue Hazmat Station 40. (12)

At [www.csx.com](http://www.csx.com) CSX reports that each year it moves over 350,000 tons of hazardous materials and has a low number of incidents. For every billion ton-miles of hazardous materials transported, trucks (which operate over inherently more dangerous highways) are involved in 16 times as many accidents as the rails. CSX has achieved a 99.9 percent success rate for safe transportation of hazardous materials. CSX has been involved with years of hearings and legal proceedings concerning the safety with urban rail transportation of certain hazardous materials. Among these is the re-routing of trains around Washington D.C. (9).

## **3. Storm Drain Education Program**

The Northern Virginia Soil and Water Conservation District has coordinated storm drain education in Fairfax County for over a decade. As a member of the Clean Water Partners, Fairfax County participates in the annual storm water education campaign. Calendar year 2008 marked the fourth year of the campaign with "The Call" public service announcement that aired on nine radio stations. Complementing print, video and Web-based products ([www.onlyrain.org](http://www.onlyrain.org)) have been developed to aid in raising awareness of

Northern Virginia residents about behaviors leading to non-point source pollution and the actions residents can take to protect local and regional water quality. “The Call from the Sewer Guy” can be heard at [www.potomacroundtable.org](http://www.potomacroundtable.org). (6)

The goal of the expanded program continues to be educating the community about the water quality impacts of storm drain dumping. Pollution that enters our water resources through storm drains is called nonpoint source pollution because it comes from all our homes and communities. Nonpoint source pollution is the leading cause of water quality deterioration in the Chesapeake Bay. During 2008, 465 volunteers worked in their communities to carry out 30 projects. These volunteers included scout groups, middle and high school students and homeowner associations. As a result, more than 28,331 households in Fairfax County received nonpoint source pollution prevention education. This included information about how to properly dispose of pet waste, used motor oil, fertilizer, antifreeze and other hazardous materials. Following the education campaign, volunteers labeled 2,644 storm drains, thereby providing an on-going reminder to not dump anything in storm drains. Check NVSWCD’s website to learn more about the Storm Stenciling Program and how civic and community groups can have their local drains marked (<http://www.fairfaxcounty.gov/nvswcd/stormdrained.htm>). (6)

NVSWCD also publishes a bi-monthly newsletter, *Conservation Currents*, for Fairfax County residents. The June 2005 issue focused on hazardous waste reduction and included an article entitled “Healthy Homes, Healthy Communities: Household Hazardous Waste Reduction in Fairfax County.” The article included information on how to determine which home products are hazardous waste and provided information on safe disposal. (6)

*Pictures of storm drain marking by local volunteers (provided by NVSWCD (6))*

A relatively new group of local governments and utilities called the Northern Virginia Clean Water Partners has launched an effort to educate the public about how to prevent water pollution. The group includes the counties of

Fairfax, Arlington, Loudoun, Prince William and Stafford; the cities of Alexandria, Fairfax and Falls Church; and the towns of Dumfries, Herndon, Leesburg and Vienna. Other members of the partnership are Fairfax Water, Loudoun Water, the Northern Virginia Regional Commission and the Virginia Department of Environmental Quality Coastal Zone Management Program. (2)

*The logo, and theme, for the Northern Virginia Clean Water Partners (2)*

Each spring, NVCWP launches a campaign to remind residents that they can reduce the amount of polluted storm water reaching waterways. The group plans surveys to help quantify the effectiveness of the campaign. It also wants to determine how aware Virginians are of storm water pollution and the behaviors that cause it. Last year’s survey found that after hearing the radio spot, 12 percent of respondents would be more careful with fertilizer, nine percent would pick up after their pet more often and nine percent said they would recycle their motor oil. (2)

To learn more about NVCWP, check its website at: [www.onlyrain.org](http://www.onlyrain.org).

#### **4. Household Hazardous Waste Program**

As a part of the suite of recycling and disposal services offered to Fairfax County residents, the county’s Solid Waste Management Program operates two permanent Household Hazardous Waste collection facilities, one at the I-66 Transfer Station and the other at the I-95 Complex. Information on the locations, hours of operations and types of wastes accepted and how to dispose of the wastes can be found on the county’s website at [www.fairfaxcounty.gov/dpwes/trash/disphhw.htm](http://www.fairfaxcounty.gov/dpwes/trash/disphhw.htm) or by calling a recorded 24 hour information line at 703-324-5068.

##### **I-66 TRANSFER STATION**

Thursday/Friday/Saturday:

8:00 a.m. – 4:00 p.m.

Sunday: 9:00 a.m. – 4:00 p.m.

##### **I-95 LANDFILL**

Thursday/Friday/Saturday:

8:00 a.m. – 4:00 p.m.

The HHW program provides an overall community benefit, and therefore residents are not charged when they use the program. The program receives its funding through the Solid Waste Management Program tip fees. In FY 2010,

materials deposited by residents for disposal or recycling primarily consisted of antifreeze, motor oil, lead acid batteries and latex paint. It is germane to note that none of these materials is regulated as hazardous waste.

In FY 2010, 23,110 users participated in the HHW program, disposing of 350,815 pounds of HHW. Compared to FY 2009, this represents a 16 percent increase in the number of users but a 13 percent decrease in the weight of HHW disposed. Program details are provided in Table VI-1 below (11).

It is anticipated that the amount of HHW entering the county program will continue to increase; however, capacity is available at the existing facilities to meet county needs well into the future.

<b>Fiscal Year</b>	<b>Participation (# of users)</b>	<b>HHW (pounds)</b>	<b>Cost per household</b>
FY 2010	23,110 households	350,815	\$27.11
FY 2009	19,951 households	404,896	\$32.66
FY 2008	22,112 households	452,552	\$30.59
FY 2007	21,958 households	428,064	\$27.77
FY 2006	21,471 households	440,076	\$26.32
FY 2005	22,866 households	411,315	\$18.84
FY 2004	18,600 households	373,220	\$22.92
FY 2003	16,140 households	359,840	\$23.30
FY 2002	16,272 households	368,060	\$20.97
FY 2001	15,312 households	356,275	\$18.75
FY 2000	15,564 households	330,325	\$18.33

Source: Fairfax County Department of Public Works and Environmental Services, Division of Solid Waste Disposal and Resource Recovery, excludes remote HHW events.

## **5. Commercial Hazardous Wastes**

In FY 2010, the Solid Waste Management Program conducted three Conditionally Exempt Small Quantity Generator waste collection events at the I-66 Transfer Station Complex. A CESQG is, according to federal hazardous waste regulations, any business that generates less than 220 pounds or 27 gallons of hazardous material per month. The Solid Waste Management Program pays the contractor to hold the event and the CESQGs pay a disposal fee for the hazardous material they bring to these events. This fee is generally lower than what it would cost to have an appropriate contractor pickup the waste at an individual business location. This allows the CESQGs to be able to afford to participate in an environmentally responsible program. Commercial

hazardous waste generators that do not qualify as CESQGs must rely on commercial hazardous waste disposal companies for their disposal needs. In FY 2010, 71 companies participated in the three events. Information about the CESQG program and a list of commercial hazardous waste disposal companies are available on the county's website at [www.fairfaxcounty.gov/dpwes/trash/disphazcomm.htm](http://www.fairfaxcounty.gov/dpwes/trash/disphazcomm.htm).

The Solid Waste Management Program also spearheaded development of the Know Toxics program, managed regionally by the Northern Virginia Regional Commission staff and Waste Management Board, [www.KnowToxics.com](http://www.KnowToxics.com) (11).

## **6. Rechargeable Battery Recycling**

In addition to the Solid Waste Management Program's battery collection activities described in the Solid Waste chapter of this report, the Program collects mercury and lithium batteries for recycling at its household hazardous waste facilities. Non-rechargeable household batteries are not accepted by the program and can be safely thrown away. Nickel-Cadmium and other rechargeable batteries (commonly found in cordless tools and appliances, computers, camcorders, cameras and toys) are also accepted by the household hazardous waste program. The program has put rechargeable battery containers at the Fairfax County Government Center and each of the Board of Supervisors' offices, and program staff collects these batteries on a routine basis. A complete listing of collection locations is on the county website at: <http://www.fairfaxcounty.gov/dpwes/recycling/mat-bat.htm>.

As described in the Solid Waste section of this report, the Solid Waste Management Program also participates and actively supports the recycling service provided by the Rechargeable Battery Recycling Corporation (11).

## **7. Remote Household Hazardous Waste Events**

As an adjunct to the permanent household hazardous waste facilities, and as described in the Solid Waste chapter of this report, the Solid Waste Management Program had received special funding through the county's Environmental Improvement Program to conduct a series of remote household hazardous waste collection events at locations throughout the county. Funding for remote household hazardous waste collection events through the EIP (General Fund) is no longer available, and the last such event was held in September 2009. However, EQAC understands that the Solid Waste Management Program plans to hold three remote household hazardous waste events over the next year, funded from tipping fees. EQAC support the decision to reinstitute these events and urges the county to continue to schedule and publicize these events in the future.

In 2010, the eleven Electric Sundays held monthly (except December) collected 6,973 televisions and 6,709 computer monitors, along with the CPUs and peripherals that go along with computers. Over 8,800 customers were served during the eleven events. (17)

## 8. Fluorescent Lights

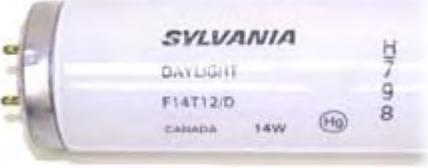

Americans bought 290 million compact fluorescent light bulbs in 2007. That's 20 percent of all light bulbs sold in the United States and almost double the sales from a year earlier. (13) Compact fluorescent light bulbs have become popular for residential use due their energy savings potential. The incandescent light bulbs are being phased out and will no longer be sold in 2012. (10) However, the compact fluorescent light bulbs contain minute quantities of mercury which classify them as household hazardous wastes when they are disposed. These types of lights are accepted from residents for proper disposal at both of the county's HHW facilities. Fluorescent lights are also collected during Electric Sunday events.

Small businesses that generate less than the regulated quantity of fluorescent lights may bring them to the business hazardous waste collection events. Other larger businesses that generate regulated quantities of these materials must comply with federal and state regulations regarding their proper disposal or recycling of the lights (11).

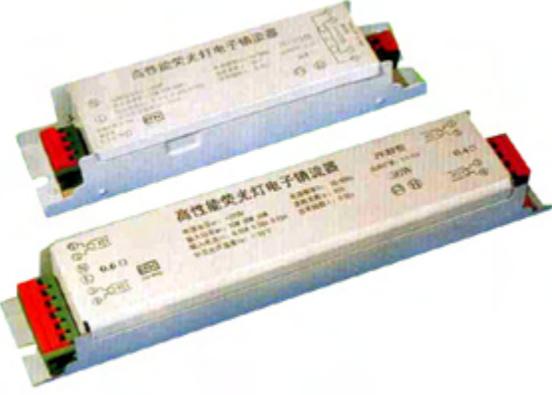

The following Fluorescent Bulb Reference Guide has been taken from a website from the Northern Virginia Regional Commission's and Northern Virginia Waste Management Board's "KnowToxics" campaign. (16)

### Fluorescent Bulb Reference Guide

- Any bulb with the  symbol **cannot** be disposed of in the trash
- These bulbs contain mercury and must be reclaimed or recycled through an appropriate facility
- The following table shows a sample of typical fluorescent and High Intensity Discharge bulbs that contain mercury and the names often used for them:

Type of Bulb	What it might look like...
Fluorescent tubes: This includes 4-footers, 8-footers, T-12s, and T-8s	

<p>Low mercury "green tips"</p>	
<p>High intensity discharge</p>	
<p>Compact fluorescents</p>	
<p>Neon</p>	
<p>U-tubes</p>	
<p>Circulars</p>	

Mercury vapor	
High pressure sodium	
Low pressure sodium	
Ultraviolet	
Electronic Ballasts	

A new brochure about the value of using fluorescent lights and how to recycle them is available on Fairfax County’s website. The brochure’s instructions on how to handle a broken compact fluorescent light bulb are consistent with the guidelines given by the Environmental Protection Agency including sealing the broken material in two plastic bags and placing outside with the regular trash collection. However, Maine’s Department of Environmental Protection did a study in 2008 comparing clean-up methods, and warned that the Environmental Protection Agency’s recommendation of plastic bags was the worst choice, as vapors well above safe levels continued to leach from the bags. Maine’s Department of Environmental Protection now recommends a sealed glass jar as the best repository for a broken bulb. Whether disposing in plastic bags or glass jars, if vapors above safe limits are still present when disposed of with regular trash, can this lead to potential problems in the future? Disposing of these light bulbs is also being looked at by other areas of the country, including crushing the light bulbs in a machine that uses negative pressure ventilation and a mercury-absorbing filter, and in the northwest part of the United States households have the option of disposing these light bulbs in the same way they dispose of other solid waste. (15)

### **C. REPORTING ENVIRONMENTAL CONCERNS AND ISSUES**

Environmental issues affect everyone living and working in the county. All environmental concerns and events negatively impacting the county should be reported. A list of contact information relating to environmental crimes is provided in Table VI-2 below.

### **D. LEGISLATIVE UPDATE**

1. The Fairfax County Board of Supervisors adopted amendments to Chapter 62 of the Fire Prevention Code effective July 1, 2009. The amendments that directly impact environmental stewardship primarily involve changes to Chapter 27 of the Statewide Fire Prevention Code. The amendment to Section 2703.3.1 requires that “Any person who witnesses, discovers, or otherwise has knowledge of a spill, leak or other release of a hazardous material or other material that may negatively impact the environment, regardless of quantity, shall immediately report such spill, leak or release to the Department of Public Safety Communications and to the Fire Marshall.” This requires that the release of any material that may cause an environmental impact, not just hazardous materials, be reported to investigation and follow up. (13)
  
2. On December 19, 2007, the Energy Independence and Security Act of 2007 was signed. Among other things, this will begin the phase out of the incandescent light bulb from the U.S. market in 2012. (10)

<b>Table VI-2</b>	
<b>HOW TO REPORT ENVIRONMENTAL CRIMES</b>	
<b><u>Type of Incident</u></b>	<b><u>Phone Number</u></b>
<p><b><u>ANY ACTIVE RELEASE OF MATERIALS INTO THE ENVIRONMENT</u></b></p> <p>If the dumping of any substance into a stream, into a manhole, into a storm sewer or onto the ground is witnessed, assumptions regarding the contents of the materials should not be made. 911 should be called immediately. When calling 911, be prepared to provide specific information regarding the location and nature of the incident. The local office of the U.S. Environmental Protection Agency (703-235-1113) can be called in addition to (but not instead of) 911.</p>	<b>911</b>
<p><b><u>HAZARDOUS MATERIALS-DANGEROUS</u></b></p> <p>If a suspected hazardous substance is being released, if lives are in danger or if property is threatened, 911 should be called immediately. It is also appropriate to call 911 anytime an active release is witnessed.</p>	<b>911</b>
<p><b><u>HAZARDOUS MATERIALS-NO IMMEDIATE DANGER</u></b></p> <p>If a known discharge of hazardous materials has occurred in the past and no lives or property are in immediate danger; this must be reported to the Fairfax County Fire and Rescue Department's Hazardous Materials and Investigative Services Section at this number (includes Towns of Clifton, Herndon and Vienna). If there is any question about whether a release may still be active or whether there may be any immediate danger, 911 should be called.</p>	<p>During working hours, call: <b>703-246-4386</b></p> <p>After hours, call: <b>703-691-2131</b></p>

<b>Table VI-2 (continued)</b>	
<b>HOW TO REPORT ENVIRONMENTAL CRIMES</b>	
<b>Type of Incident</b>	<b>Phone Number</b>
<p><b><u>RELEASE OF ANY MATERIAL INTO THE ENVIRONMENT</u></b></p> <p>Any release of materials into the environment, whether hazardous or not, should be reported to the Northern Regional Office of the Virginia Department of Environmental Quality at this number. If the release is an active one, call 911.</p>	<p><b>703-583-3800</b></p>
<p><b><u>EROSION AND SEDIMENTATION</u></b></p> <p>If the illegal removal of trees, the illegal clearing of land and/or the illegal dumping of fill is suspected, contact Fairfax County’s Code Enforcement Division at this number. This number should also be contacted if siltation and other harmful effects of construction activity are occurring or observed on neighboring lands and waterways. All calls received during non-working hours will be responded to during the next business day.</p>	<p><b>703-324-1937</b></p>
<p><b><u>HEALTH HAZARDS</u></b></p> <p>In addition to the above contacts, if a health hazard is suspected, contact the Environmental Health Administration at this number. The Health Department’s Community Health and Safety Section (703-246-2300) can also be called. Asbestos-specific releases should also be reported to the Health Department.</p>	<p><b>703-246-2205</b></p>

## **E. STEWARDSHIP**

What is considered hazardous materials has changed in recent decades. It use to be primarily industrial releases or transportation of chemicals used with industrial work. Hazardous material then came to include terrorist attacks, some household chemicals used for cleaning and chemicals used for yard work. Now hazardous material includes items that individuals use in everyday life such as rechargeable batteries for cell phones and power tools as well as the compact fluorescent light bulb. This year, many older televisions, some containing large amounts of lead, were disposed of with the transition from analog to digital. In response to the

anticipated demand for disposal of televisions, the county implemented the Electric Sunday program and diverted these and other electronics from disposal to recycling. Stewardship for the storage, use of, and disposal of hazardous materials is no longer solely an industry issue; it now belongs to individuals and with more than a million individuals in Fairfax County, household hazardous waste will continue to increase.

## **F. COMMENT**

1. A comment within the Air Quality chapter of this report noted that the FY 2010 budget reductions eliminated the Environmental Hazards Investigation Section of the Fairfax County Department of Health, which has provided valuable services by responding to complaints about mold, radon, asbestos, and indoor air quality and in assisting the Fire and Rescue Department with responses to hazardous materials incidents. EQAC feels that, in the future, when budgetary conditions allow, these functions should be restored. Until these functions are restored, these services will need to be provided by private contractors.

## **G. RECOMMENDATION**

1. EQAC recommends that the county continue to find ways to help people more easily recycle household hazardous waste. As examples of the need for such efforts, with the increased use of rechargeable batteries and compact fluorescent light bulbs, more households in the county will have these hazardous waste items to dispose of on regular basis. EQAC understands that the plan to stop remote hazardous waste collection events has recently been adjusted to have three events within the next year. We support this decision and urge the county to continue to schedule and publicize these events in the future.

ANNUAL REPORT ON THE ENVIRONMENT

**CHAPTER VII**

**ECOLOGICAL  
RESOURCES**

---

## **VII. ECOLOGICAL RESOURCES**

This chapter summarizes the status of ecological resources and the actions of public agencies and stakeholder groups in the management and preservation of these resources.

### **A. ISSUES AND OVERVIEW**

Open space and natural habitat continue to be reduced in Fairfax County, primarily because of development (both residential housing and commercial buildings) and road building. As this resource is reduced, increased emphasis must be placed on protecting, preserving and enhancing the remaining open space and natural habitat in Fairfax County.

Fairfax County contains a total of about 227,929 acres. Of this total, about 233,066 acres (14.5 percent) are in parks and recreation as of January 2009. Another approximately 16,595 acres (7.3 percent) are vacant or in natural uses. This compares to the about 26,700 acres (11.7 percent) that were vacant or in natural uses as of January 2003. However, not all this acreage can be considered as open space that is valuable for natural habitat. First, the park acreage consists of active recreation (ball fields, etc.) as well as passive recreation (stream valley parks, nature centers, etc.) Ball fields, while greatly needed in Fairfax County, do not do much for protecting natural habitat. In a like fashion, much private open space consists of mowed areas and isolated trees (not woodlands). Again, this does little for protecting natural habitat. Both active recreation areas and private open space, however, if properly designed can help the environment by reducing storm water runoff (by allowing storm water to infiltrate into the soil).

Second, while vacant land is often wooded, this land is subject to development. Considering the continuing rapid pace of development in Fairfax County, much of this land will soon become residential space, office space, retail space, etc., and not provide much in the way of protecting natural habitat. In 1980, vacant land accounted for 32.2 percent of the total land in Fairfax County. By 1990, this had dropped to 19.5 percent and the figure was 7.3 percent as of January 2009.

Therefore, Fairfax County needs to undertake stronger efforts in order to protect, preserve, and enhance the environmentally sensitive open space in the county. These efforts should include the establishment of a countywide Natural Resource Inventory, followed by a countywide Natural Resource Management Plan. Additionally, the county needs an aggressive program seeking easements on privately owned environmentally sensitive land and, as opportunities arise, to purchase environmentally sensitive land.

Recently, two significant efforts have occurred that should help in the county's preservation and protection of natural resources. First, as reported in the 2004 Annual Report on the Environment, the Fairfax County Board of Supervisors adopted an environmental vision for Fairfax County – *Environmental Excellence for Fairfax County: a 20-Year Vision*. This vision cuts across all activities in Fairfax County and outlines guidelines that hopefully will be followed in future planning and zoning activities in Fairfax County.

Second, as also reported in the 2004 Annual Report on the Environment, the Park Authority approved the Natural Resource Management Plan for park properties. Again, if this plan is implemented, improved preservation and protection of environmentally sensitive land should be the result.

EQAC continues to commend a number of organizations for their activities in protection, preservation, and enhancement of environmentally sensitive areas. These organizations include: the Northern Virginia Soil and Water Conservation District, the Virginia Department of Forestry, the Northern Virginia Conservation Trust, Fairfax ReLeaf, the Fairfax County Department of Public Works and Environmental Services, and the Fairfax County Park Authority and its staff. EQAC especially commends the Fairfax County Board of Supervisors for its vision and activities in environmental areas.

EQAC also commends those residents of Fairfax County who give donations and time to a number of county organizations involved in environmental activities. EQAC encourages such volunteer activity. The following paragraphs describing organizations' activities mention opportunities for such stewardship.

## **B. PROGRAMS, PROJECTS, AND ANALYSES**

### **1. The Fairfax County Board of Supervisors**

In past years, this chapter of the Annual Report mentioned various organizations and programs supporting environmental efforts in Fairfax County. However, the Fairfax County Board of Supervisors, while mentioned many times, did not have a section in this chapter. This changed in the 2005 Annual Report when a section was included on the board. The actions and decisions of the BOS do affect the county's natural resources. These actions and decisions include land use planning and zoning, transportation planning, allocation of staff resources, etc. The BOS has enacted a number of policies that do benefit the environment and many of these policies are embedded in county ordinances and the Policy Plan. However, there never had been an overarching vision dealing with the environment. This has now changed. As reported in the 2005 Annual Report

on the Environment, the BOS has now adopted such an overarching vision -- *Environmental Excellence for Fairfax County: a 20-Year Vision*.

This vision is organized into six sections that cut across all areas in the county:

- Growth and Land Use.
- Air Quality and Transportation.
- Water Quality.
- Solid Waste.
- Parks, Trails, and Open Space.
- Environmental Stewardship.

Some recommendations in this document that impact ecological resources include:

- Create more community parks for active and passive recreation – open spaces with native vegetation to sustain local wildlife and to create areas for walking, meditating or bird watching.
- Continue to acquire open space before it is too late through direct purchase or conservation easements to create more trails, connect trails and provide passive and active recreation areas.
- Provide adequate resources to maintain and appropriately develop our parks for passive and active recreation.
- Encourage conservation easements for open space and trails either to private organizations, such as the Northern Virginia Conservation Trust and The Potomac Conservancy, or to government agencies like the Fairfax County Park Authority or the Northern Virginia Regional Park Authority.
- Encourage organizations, for example, those that work on stream monitoring and stream valley restoration, to involve schools and residents of all ages in their work.
- Encourage community-based watershed stewardship groups and help them to work with all stakeholders to protect, enhance and improve the natural resources, and hence, the quality of life in their watersheds.
- Establish an aggressive program of community groups to adopt natural areas such as parks, trails, and stream valleys.

The document can be viewed at:

[http://www.fairfaxcounty.gov/living/environment/eip/bos\\_environmental\\_agenda.pdf](http://www.fairfaxcounty.gov/living/environment/eip/bos_environmental_agenda.pdf).

This document is very significant in its potential for protection, preservation, and restoration of the county's natural resources. EQAC continues to commend the Board of Supervisors for adopting this vision and for the steps it is taking to implement these recommendations.

## 2. Department of Public Works and Environmental Services

### a. Stream Restoration

Table VII-1. DPWES Stream Restoration Projects in 2009			
PROJECT NAME	PROBLEM	SOLUTION	PARTNERS
Poplar Springs (near Hatches Lake)	Eroded streambank	Restored 692 linear feet of streambank using bio-engineering techniques. Complete April 2009.	DPWES

Source: 2010 EQAC Report Stormwater Responses, Stormwater Management, Department of Public Works and Environmental Services, Fairfax County, Virginia, August 11, 2010

DPWES continues to be involved in a number of stream restoration projects. Bioengineering techniques are being used where possible. Table VII-1, above, shows projects that were completed in 2009.

### b. Low Impact Development Practices

Environmentally sensitive site design and low impact development (LID) practices serve to minimize impervious cover and replicate natural hydrologic conditions. The county is recommending and encouraging that “Better Site Design” development techniques and LID practices be used to the full extent allowed by the county’s Public Facilities Manual.

Six low impact development practices (bioretention basins and filters, vegetated swales, tree box filters, vegetated roofs, permeable paving and reforestation) were developed for inclusion in the Public Facilities Manual in 2006. In 2007, the Board of Supervisors adopted the amendments. The county is continuing its work with the Engineering Surveyors Institute, Northern Virginia Regional Commission and other local jurisdictions on developing a design and construction standards manual for LID applications. The manual will be recommended for adoption into the county’s PFM.

The county continues to implement a number of demonstration projects, including several vegetated roofs. The West Ox Operations Center green roof was substantially completed on October 16, 2008. The approximately 1,000 square-foot green roof is an extensive type of green roof located on the administration-building roof of the bus operation center facility. The construction of the green roof went smoothly, from the initial step of flooding the roof to ensure that there were no leaks, to the finished product of thriving sedums with very little maintenance requirements. The administration building provides stair access to the roof with pavers to and

around the green roof, for easy viewing access. The total cost of the green roof was \$34,194.

### 3. Fairfax County Park Authority

The Fairfax County Board of Supervisors created the Fairfax County Park Authority in 1950, authorizing the Park Authority Board to make decisions concerning land acquisition, park development, and operations. As a result, Fairfax County has a system of parks that serve a number of uses, including active recreation such as sports, historic sites and buildings, and preserving environmentally sensitive areas such as forests and stream valley lands. For current information on the county's parks, visit the FCPA website at <http://www.fairfaxcounty.gov/parks/>.

#### a. Acquisition of Park Land by FCPA

Between July 2009 and June 2010, the Park Authority added 40.05 acres to its parkland inventory. This brings the parkland inventory to a total of 24,302 acres as of June 2010.

FCPA purchased the following properties:

- On September 30, 2009, the Park Authority acquired the 0.05 acre Roysdon property within the Mount Vernon District. The property is within the boundaries of the colonial town of Colchester.
- On December 9, 2009, the Park Authority acquired two acres adjacent to the Dolley Madison Library and McLean Central Park (Dranesville District) from John Birge and Susan Fadoul. This acquisition will allow additional and expansion of the village green and improved park access.
- On December 16, 2009, the Park Authority acquired the 11 acre Taneja property located within the Sully District. The acquisition provides an interconnection between existing Park Authority holdings and will buffer the historic Lane's Mill.
- On April 20, 2010, the Park Authority acquired the 3.62 acre Turner Farm (house) property located within the Dranesville District. This acreage had been carved out of the original Turner Farm tract for development as three residential lots. The acquisition will add to the existing Turner Farm Park

FCPA acquired the following property through donations:

- On May 26, 2010, Marian Ferguson donated .366 acres to the Park Authority in the Mount Vernon District. The parcel is adjacent to another lot owned by the Park Authority and is located upstream from White Oaks Park.

FCCA acquired the following property through dedications:

- On August 20, 2009, Pulte dedicated 22.06 acres to the Park Authority for an addition to Arrowhead Park in the Sully District. Pulte proffered to construct four rectangular fields as part of the recreational amenities for the park.

FCCA acquired the following properties through transfers:

- On December 7, 2009, the Board of Supervisors transferred the 0.5 acre Odrick parcel to the Park Authority. The Dranesville District parcel contains the former homestead of the Odrick family, a prominent member of the African-American community in Dranesville.

FCCA acquired the following properties through land exchanges:

- On November 25, 2009, the Park Authority exchanged a 40 acre middle school parcel located at Laurel Hill for the 40 acre Nike Recreation Area and Resource Management Area. Located in the Mount Vernon District, the exchange will permit the Park Authority improved site access for the park and 118 shared parking spaces.

#### **b. Natural Resource Management Plan**

In past reports, EQAC recommended that the Fairfax County Board of Supervisors develop and implement a countywide Natural Resource Management Plan. EQAC noted that in order to do this, two tasks need to be accomplished first: complete a countywide Baseline Natural Resource Inventory and adopt a unified Natural Resource Conservation Policy.

EQAC's past recommendation on developing a countywide Natural Resource Management Plan has been partially fulfilled by FCCA. On January 14, 2004, the Park Authority Board approved the Natural Resource Management Plan for Park Authority property. The NRMP contains seven elements:

- Natural Resource Management Planning.
- Vegetation.
- Wildlife.
- Water Resources.
- Air Quality.
- Human Impact of Parklands.
- Education.

The complete NRMP can be viewed at <http://www.fairfaxcounty.gov/parks/nrmp.htm>.

Some of the highlights of FY 2010 included:

- Resource Management
  - Completed the fourth year of the Invasive Management Area (IMA) program in 2009. The program now has 41 sites and in calendar year 2009, nearly 1,300 volunteers donated 3,030 hours of work in support of habitat restoration at IMA sites.
  - Planted over 10,000 trees and shrubs on parkland in calendar year 2009.
  - The second annual statewide Invasive Plant Removal Day was held on May 1, 2010. 142 volunteers removed garlic mustard from 15 sites, logging 483 volunteer hours.
  - Completed construction on a bioswale at Greendale Golf Course; planted approximately 150 trees and prepared and planted meadow area at Mt. Vernon District Park; continued monitoring and maintenance of rain gardens and bioswales at six parks; worked with the Department of Public Works and Environmental Services (DPWES) on the construction of low impact development improvements at three parks.
  
- Policy and Best Practices
  - Revised Policy 301 (Protection of Lands and Facilities) and drafted new encroachment enforcement procedures.
  - Continued to develop best practices. Topics this year included native plant guidance, non-native invasive plant best management practices, site natural resource action plans and preservation of trees in county facility development.
  - FCPA began the Natural Capital project, which will result in a report with recommendations for the use of natural capital valuation for Fairfax County parklands as well as an analysis of the appropriateness of using bond funds for natural resource projects.
  - Finalized and distributed guidance and procedures for the use of native and non-native plants on parkland.
  - Established a project team which reviewed each of the best management practices (BMPs) recommended in the Non-Native Invasive Plant Assessment and Prioritization report. These BMPs address park planning, development and maintenance practices that will help prevent the spread of invasive plants.

- Partnerships
  - Worked with Department of Public Works and Environmental Services (DPWES) to: construct two stream stabilization projects; complete dam improvements at Royal Lake; coordinate numerous stormwater improvement and retrofit projects such as the rain garden at Pinecrest Golf Course; review major road improvement projects such as I-495 Hot Lanes and Telegraph Road widening near Huntley Meadows; provide input to county reports and plans; participate in TMDL coordination meetings; and participate in work sessions to review proposed changes to the county's MS4 permit.
  - FCPA worked with the Virginia Department of Agriculture and Consumer Services and Virginia Department of Forestry to collaborate on a test release of a biocontrol for the non-native, invasive plant, mile-a-minute.
  - Continued partnership with Earth Sangha, a local non-profit organization. In 2009, Earth Sangha completed the expansion of the Wild Plant Nursery to propagate additional species (including emergent wetland species). At the Marie Butler Leven Preserve, the organization started planting in the Restored Habitat Area and began work within the Berry Garden. In addition, Earth Sangha has expanded its role in follow-up work on previously planted stream buffers (removing invasives, adding plants and performing maintenance activities at Canterbury Woods Park, Flag Run park, Luria Park, Roundtree Park and Royal Lake Park). In the calendar year 2009, Earth Sangha donated over 11,700 volunteer hours and 5,700 staff hours to Fairfax County Park Authority projects and donated, or provided at reduced price, over 2,000 plants.
  
- Stewardship and Education
  - Continued working with volunteers and local media to educate residents about non-native invasive plant issues on and off park property.
  - Published the latest stewardship brochure "Pollen."
  - Developed a new portable exhibit on stewardship and volunteering.
  - The Stewardship Education Team continued its outreach efforts and launched a contest to reduce junk mail in the Park Authority.
  - Continued participation in Envirothon program for high school students and in the Master Naturalist programs in Fairfax and Arlington counties.

While the Park Authority has made a great step forward with the adoption of the NRMP, more resources (people and funds) need to be devoted to the implementation of the plan. Furthermore, inventories of all parks need to be accomplished. The inventory needs to be extended to cover all of Fairfax County so that future planning for acquisition of sensitive lands can take place.

Unfortunately, insufficient staffing and funding are limiting implementation of the NRMP. The Fairfax County Park Authority staff lacks a number of functions and capabilities in regard to the NRMP: natural land managers; ecologists; restoration specialists; water resource specialists; wildlife specialists; planners; and project managers. EQAC does support increased funding for this purpose, but also notes that obtaining some of the needed positions from within internal resources also can be done. EQAC recognizes that personnel cannot just be transferred from another job (and skill set) to this program, but increased staffing can be accomplished by hiring a new person with the right skills when normal attrition happens elsewhere on the FCPA staff. At present, the resources allocated by the FCPA between protection of sensitive environmental land and active recreation are out of balance. Resources devoted to the protection of the environment need to be increased.

**c. Natural Area Geospatial Analysis Model Feasibility Study**

The goal of this project is to develop a framework for modeling ecologically significant resources to support land use and development decisions in Fairfax County. This information will also be used as needed by FCPA to provide for informed land acquisition decisions as well as to support park planning processes. The successful achievement of this effort will satisfy a long-standing EQAC recommendation.

A demonstration model will be conducted for the Sully Woodlands region and the results used to refine the model protocol. The end product will be a detailed protocol including all analytical steps as well as data needed, sources and costs. Development of the model for the entire county will be considered based upon the results of this study and the availability of funding. The Park Authority is leading this project and collaborating with the Department of Information Technology, the Department of Planning and Zoning, the Department of Public Works and Environmental Services and others.

The project was awarded to PlanGraphics, Inc in fall 2007. PlanGraphics has teamed up with George Mason University as a sub-consultant. The project was completed in December 2009. The final product includes: an assessment of other green infrastructure and natural area models; an

evaluation of existing data; and recommendations for model options including costs of development and data acquisition. Development of the model for the entire county will be considered based upon results of this study and availability of funding. The ideal model would cost up to \$2 million and requires dedicated technical staff and funding for model and data maintenance.

**d. Invasive Plant Control Efforts**

Invasive plants are a problem because they can out compete and replace native species. This change in vegetation disrupts the life cycles of many flora and fauna that depend on native vegetation. The Park Authority's Strategic Plan includes a strategy to develop invasive plant guidelines for consideration by the Environmental Coordinating Committee as a countywide standard.

Invasive plant control projects occur at over 50 park sites throughout the county. Resource Management Division's nature centers such as Ellanor C. Lawrence Park, Huntley Meadows Park and Riverbend Park also work collaboratively with the Invasive Management Area program to remove the most highly invasive plant species from selected areas of parkland.

The partnership with Earth Sangha, a local non-profit organization, continues to be a highlight of invasive plant control efforts at both the Marie Butler Leven Preserve and Wilburdale Park. In 2009, Earth Sangha was able to replant many native shrubs and trees in areas previously controlled for invasive plants. Overall, Earth Sangha contributed thousands of volunteer hours to park projects in 2009, valued at over \$200,000. Earth Sangha's sites are supported with staff and contractor work when possible.

The Invasive Management Area (IMA) program completed the fourth year in 2009. The IMA program has successfully captured some of the enthusiasm of volunteers for unstaffed parks, establishing 42 sites with 42 active volunteer leaders. Nearly 15,000 volunteer hours were contributed to the project since its inception in 2005. From June 2008-July 2009, nearly 1,300 volunteers have donated 3,030 hours of work towards habitat restoration. The Invasive Management Area (IMA) program works on plots of parkland, typically ½ acre in size, to remove priority invasive species. Significant reductions of non-native invasive species have been documented within the sites, averaging a 24% reduction in cover. Extensive training of volunteer leaders, careful selection of sites and species and a coordinated plan of environmental monitoring will allow us to continue to learn from this project. At a minimum, invasives removal should be planned on three-year cycles, with the first three years including aggressive removal and pesticide use if necessary so that following years' management can be at a

maintenance level. A short summary is available at:

<http://www.fairfaxcounty.gov/parks/resources/IMA/IMA-annualrpt.htm>.

An outgrowth of the Invasive Management Area program has been the state-wide Invasive Plant Removal Day. On May 1st, the IMA program participated in the 2nd annual statewide event and 3rd annual countywide event. Over 480 hours of volunteer service were provided to remove 80 bags of invasive plants, mostly the biennial garlic mustard.

FCCA contracted with Invasive Plant Control, Inc. (IPC) to apply selected and careful herbicide treatments for the removal of invasive plants. Three hundred and fifty acres of parkland were treated by IPC in 2009. Many of these acres overlapped areas where volunteer and interns provided the manual removal of priority species.

The Non-native Invasive Plant Assessment and Prioritization project was completed in 2009. This project took a hands-on approach to the non-native invasive species issues as they occur here in Fairfax County. Products of the plan include an assessment and prioritization tool kit, 12 best management practice recommendations and an operations plan for how to continue to make progress with managing non-native invasive species. This plan is fully benchmarked and annotated, creating a defensible strategic plan which will allow us to prioritize where and what we need for invasive management in Fairfax County.

EQAC continues to commend the volunteers and the Park Authority staff who are cooperating in removing invasives; however, an increased effort should be established using dedicated funds for this purpose.

**e. Riparian and Bioengineering Projects**

The Fairfax County Park Authority, along with and in partnership with other agencies, continues to work on stream stabilization/bioengineering projects. See the Water Resources chapter of this report for descriptions of these projects. One stream restoration project was completed on park land during FY 2010: The Dead Run Stabilization in McLean Central Park stabilized approximately 1,000 linear feet of stream. Funding for the project was supplied by DPWES. Construction began in December 2009 and was completed in February 2010.

**f. Environmental Stewardship**

FCCA offers a number of opportunities for volunteers and EQAC encourages county residents to take advantage of these opportunities.

Information about these opportunities is available at <http://www.fairfaxcounty.gov/parks/volunteer.htm>.

More information about FCPA and its programs is available at these websites: <http://www.fairfaxcounty.gov/parks/resources/stewardship.htm> and <http://www.fairfaxcounty.gov/parks/resources>.

**g. Fairfax County Park Foundation**

Fairfax County residents can donate to the Fairfax County parks through the Fairfax County Park Foundation. The Fairfax County Park Foundation is a 501(c)(3) not-for-profit organization and donations are tax deductible to the fullest extent allowed by law. The Foundation's mission is to raise funds to support the parks and land under the stewardship of the Fairfax County Park Authority. Less than half of the Park Authority's annual operating funds come from tax support. The Foundation's goal is to bridge the gap between income from tax support and user fees, and the cost to operate, maintain and preserve the county's park system. Those interested in giving tax-deductible donations to the Foundation, can contact the Foundation at:

Fairfax County Park Foundation  
12055 Government Center Parkway  
Fairfax, VA 22035  
(703) 324-8581  
[SupportParks@aol.com](mailto:SupportParks@aol.com)  
<http://www.FairfaxCountyParkFoundation.com>

**4. Northern Virginia Regional Park Authority**

Three Northern Virginia counties (Fairfax, Loudoun and Arlington) and three cities (Alexandria, Fairfax and Falls Church) participate in the Northern Virginia Regional Park Authority. NVRPA was founded in 1959 and owns and operates 24 regional parks and owns 10,704 acres of land throughout the region. It also holds conservation easements on 114 parcels covering more than 650 acres.

NVRPA was the first park agency in the country to adopt the Cool Counties/Cool Cities pledge to reduce greenhouse gases and now has an energy conservation plan in place at each of its parks, tracking energy consumption and converting it to both BTU and carbon emissions. When the energy conservation policy was adopted by the Park Authority Board in 2006, an annual goal was set to reduce energy consumption by 5% agency wide. By signing on to the Cool Counties Initiative, the Park Authority agreed to stop increasing carbon emissions by 2010 and then reduce the output of carbon by 2% per year for every year after that until 2050 (resulting in an 80% reduction). In the first full

year of the effort, total carbon emissions were reduced well ahead of the Cool Counties goal. Between 2006 and 2007 NVRPA reduced its carbon emissions agency-wide by 2% in its operations. Efforts at Brambleton Regional Golf Course for example, saved enough energy last year to heat and cool 103 average homes for a year, a 27 percent reduction in the course's energy consumption. In 2007 Cameron Run Regional Park reduced its energy consumption by almost 21%. Between 2007 and 2008 energy use was up slightly due primarily to irrigation needs during drought conditions.

NVRPA also has implemented the following "green" tactics at various park facilities: high efficiency lighting including motion sensing switches, programmable thermostats, retrofitting buildings with more efficient windows and insulation, use of high efficiency pumps, geo-thermal heat pumps, active solar power generation, waterless urinals and low-flow water fixtures, and introduction of more electric utility, hybrid and natural gas vehicles in the parks.

In 2009, NVRPA also completed renovations to the Potomac Overlook Nature Center, which now features brand new exhibits on energy in living systems, including human systems, called the "Energerium." This exhibit offers visitors a fun and accessible way to learn energy basics and ways they can help create sustainable energy solutions. The displays blend lessons from ecology, Earth Science, physics, chemistry and other topics in clear, understandable ways. In a time when energy supplies, prices and security as well as global warming are all coming into sharp focus, the Energerium is an important learning experience for residents of northern Virginia and the Washington, D.C. area. It is NVRPA's most recent example of leadership on energy issues. Potomac Overlook has been conducting energy education programs for over 15 years and already has working solar electricity and solar hot water systems in place.

In the management of its natural and historic resources, NVRPA has completed resource inventories on 12 of the 15 parks planned to be done by 2012, and has done extensive resource inventory of White's Ford. It also has continued training its park managers, assistant managers and rangers in natural resource management and in the last two years has sent 55% of staff through such professional development.

Since 2008, NVRPA has ensured interpretive/educational offerings at every one of its parks. In the last year, it added interpretive signage at the W&OD Trail, Brambleton, Ball's Bluff, Aldie Mill and Algonkian Regional Parks. One of the most successful interpretive efforts in the history of the authority has been the addition of a seasonal roving naturalist. This naturalist organizes nature education programs targeted towards NVRPA's more recreationally focused parks. A portable nature center and scheduled nature programs are brought right to the water parks, campgrounds, light show and other events that see high public turnout, to bring nature education to where the park visitors are.

Environmental Stewardship opportunities for volunteers are available at Meadowlark Botanical Gardens, Potomac Overlook Regional Park, Upton Hill Regional Park, Pohick Bay Regional Park and various other parks on occasion. More information can be found at [http://www.nvrpa.org/park/main\\_site/content/volunteer](http://www.nvrpa.org/park/main_site/content/volunteer). NVRPA implemented a program that allows youth to access its fee-based park facilities through volunteer service. It has a wide variety of community partnerships in place that encourage groups to take advantage of the regional parks for environmental and historic education and service projects. NVRPA held a special volunteer recognition event in 2009 connected with its 50<sup>th</sup> anniversary.

For current information about the Northern Virginia Regional Park Authority and to obtain a copy of its 2009 Annual Report, visit its website, <http://www.NVRPA.org/>.

## **5. Fairfax ReLeaf**

Fairfax ReLeaf is a non-profit (501(c)(3)), non-governmental organization of private volunteers who plant and preserve trees in Northern Virginia, preserve native habitat and educate the public about the benefits of trees. These volunteers appreciate and support the county's goals to increase the tree cover in Fairfax County. Fairfax ReLeaf contributed to this goal by increasing the number of tree seedlings planted and distributed over the previous year.

Fairfax ReLeaf is very active in tree plantings and is always eager to sign up new volunteers. These tree plantings:

- Improve the appearance of roadways, parks, schools and private land in Fairfax County.
- Improve air quality.
- Reduce heat island effects.
- Reduce noise.
- Preserve human and wildlife habitats.
- Reduce energy use.
- Reduce surface runoff and improve water quality.

Fairfax ReLeaf planted and distributed 7,923 trees in calendar year 2009. Nearly 1,000 volunteers spent over 3,000 hours planting tree seedlings, removing invasive species and maintaining sites. Highlights of Fairfax ReLeaf's 2009 plantings are:

- The planting of over 1,400 trees in parks, including private, county, and national parks.
- The planting of nearly 1,000 trees at school sites.

- The planting of over 1,000 trees in riparian areas such as storm water ponds and streams.

Fairfax ReLeaf provided opportunities for community groups to serve Fairfax County, including eight school groups, five Eagle Scout plantings, and a home school co-op. ReLeaf led seven corporate workdays, where employees from workplaces such as Bearing Point, Level Three, Winchester Homes, Deloitte & Touche and The Cheesecake Factory gave their time to improve Fairfax County. Fairfax ReLeaf also conducted two workshops to prepare individuals to lead plantings.

ReLeaf's educational and outreach activities in 2009 included visiting classrooms, exhibiting at the Fairfax County Earth/Arbor Day celebration, Celebrate Fairfax and a 4-H Fair.

Fairfax ReLeaf offers a number of opportunities for stewardship. For further information on Fairfax ReLeaf, visit its website at <http://www.fairfaxreleaf.org>. The organization can be reached at:

Fairfax ReLeaf  
 12055 Government Center Parkway  
 Suite 703  
 Fairfax, VA 22035  
 Telephone: (703) 324-1409  
 Fax: (703) 631-2196  
 Email: [trees@fairfaxreleaf.org](mailto:trees@fairfaxreleaf.org)

## 6. Northern Virginia Conservation Trust

Past EQAC reports recommended that the Fairfax County Board of Supervisors form public-private partnerships for the purpose of obtaining easements on environmentally sensitive land. EQAC pointed out that entities such as The Nature Conservancy use easements very successfully as a way of protecting environmentally sensitive properties. With the signing of a Memorandum of Understanding on June 20, 2001 between the Fairfax County Board of Supervisors and the Northern Virginia Conservation Trust, such a public-private partnership now exists. The partnership is now in its eighth year.

NVCT was founded in 1994 as the Fairfax Land Preservation Trust. In 1999, the Trust changed its name to The Northern Virginia Conservation Trust to better reflect the regional scope of the service area. NVCT is a 501(c)(3) nonprofit land trust dedicated to preserving and enhancing the natural and historic resources of Northern Virginia. NVCT also has formed public-private partnership with Arlington County and the City of Alexandria, and owns

properties or easements in Arlington, Fairfax, Loudoun, Prince William and Stafford Counties and in the cities of Alexandria and Fairfax.

From the time NVCT accepted its first easement in 1999 through June 2010, NVCT has preserved about 656 acres of open space in Fairfax County through easements, fee simple ownership and partnerships. A major project started in FY 2010 and nearly completed is the transfer to the Fairfax County Park Authority of over seven acres owned by NVCT in the Providence District for use as a public park. NVCT prepared for the Park Authority a Land and Water Conservation Fund grant request to help fund this acquisition/transfer. The grant application was successful through the first phase, and it is expected the county will receive a \$125,000 LWCF grant around the beginning of the new year. NVCT continued work on numerous other projects, some of which are close to completion, including conservation easements, fee acquisitions and trail easements. Two are on the Potomac Gorge, and one a historic property on more than 20 acres.

Tables VII-2, VII-3 and VII-4 provide details on all these properties.

NVCT also has a public outreach program – *Explore and Restore* (formerly known as Adventures in Conservation) – to bring hands-on volunteerism and environmental education opportunities. These activities included the planting of native trees, the removal of invasive plants, birding trips and guided hikes. NVCT naturalist-led kayak tours, part of its innovative environmental and conservation education program, “floating classrooms,” continue to be a huge success.

NVCT was once again designated by the Catalogue of Philanthropy as one of the best small charities in Northern Virginia.

NVCT is also one of the very few accredited land trusts by the Land Trust Accreditation Commission, awarded full accreditation on September 1, 2008 (one of approximately 100 accredited out of over 1,700 land trusts nation-wide). NVCT is the only accredited land trust servicing Fairfax County.

<b>Table VII-2. Easements Obtained by the Northern Virginia Conservation Trust</b>			
<b>District</b>	<b>Location</b>	<b>Acreage</b>	<b>Recordation</b>

	<b>Total</b>	<b>175.2</b>	

EQAC AR, E-mail from Whit Field, Vice President and General Counsel, Northern Virginia Conservation Trust, Fairfax County, Virginia, to Noel Kaplan, Department of Planning and Zoning, Fairfax County, Virginia, August 12, 2010.

EQAC encourages all landowners whose property contains environmentally sensitive land such as wetlands, stream valleys and forests to consider contacting NVCT and learning more about easements. If these landowners grant easements, they will not only protect sensitive land, but can realize some financial benefits. A perpetual easement donation that provides public benefit by permanently protecting important natural, scenic and historic resources may qualify as a Federal tax-deductible charitable donation. Under the Virginia Land Conservation Act of 1999, qualifying perpetual easements donated after January 1, 2000 may enable the owner to use a portion of the value of that gift as a state income tax credit. Fairfax County real estate taxes could also be reduced if the easement lowers the market value of the property.

As can be seen by the paragraphs above, NVCT offers many opportunities in stewardship for Fairfax County residents. Additional information on NVCT can be found on its website, <http://www.nvct.org>.

## **7. The Nature Conservancy**

The Nature Conservancy has a very successful program of obtaining easements from property owners for conservation. Its program was the inspiration for EQAC's past recommendations for Fairfax County to seek conservation easements as a measure of protecting ecological valuable property. (This recommendation led to the public/private partnership with the Northern Virginia Conservation Trust mentioned above.) The Nature Conservancy does not hold any easements in Fairfax County at present; however, it owns one preserve (the Fraser Preserve) of approximately 233 acres on the Potomac River. For further information on The Nature Conservancy, see <http://www.nature.org>.

## **8. The Potomac Conservancy**

Other organizations also hold easements in Fairfax County. This and the following paragraphs report on these organizations. One of these is the Potomac Conservancy. This organization was formed in 1993 by individuals concerned about inappropriate development, clear cutting and other activities that were beginning to have a negative impact on the unspoiled character of the Potomac Gorge. This led to the formation of the nonprofit land trust now known as the Potomac Conservancy. The Conservancy was incorporated on August 24, 1993 in Maryland as a nonprofit corporation. The Conservancy is registered in Maryland, Virginia and West Virginia, and is an easement holder in Maryland's Conservation Reserve Enhancement Program.

The Potomac Conservancy currently holds easements of four properties in Fairfax County. These properties total 13.46 acres with 0.14 of that being river frontage. For further information on the Potomac Conservancy, see <http://www.potomac.org>.

## **9. The McLean Land Conservancy**

The McLean Land Conservancy was formed to promote and foster the preservation, protection, conservation and balanced use of the McLean area's unique natural, cultural, recreational and historic resources. The conservancy's main objective is to preserve open green space.

MLC has worked to raise awareness of the value of protecting natural resources. A healthy balance of land use will maintain and enhance the character and quality of life in McLean, as well as the economic sustainability of the region in the face of rapid build-out.

MLC is a 501(c)(3) land trust organization that was incorporated in the Commonwealth of Virginia in January 2000 and recently became a “full-fledged” land trust in Virginia, with the ability to hold conservation easements. As a result, the conservation easements MLC identified and negotiated before July 2004 were deeded to Fairfax County, but with MLC assigned as the easement monitor.

MLC has concentrated on the preservation of riparian buffers on privately owned land. Successful projects include the protection of one acre adjacent to the headwaters of Four Mile Run, important because the health of the headwaters is critical to the health of a stream, and 2.77 acres on Pimmit Run in a pristine wooded area. These two easements are held by Fairfax County but monitored by MLC.

MLC holds a 16-acre conservation easement on Scotts Run in McLean. This important property is vital for the health of Scotts Run, which provides stormwater drainage for Tysons Corner.

## **10. The National Park Service**

Another holder of conservation easements in Fairfax County is the National Park Service. NPS holds 38 easements covering 326.67 acres. A future Annual Report on the Environment will provide more details on these easements.

## **11. The Virginia Outdoors Foundation**

The Virginia Outdoors Foundation was created by an Act of the Virginia General Assembly (Chapter 18 of Title 10.1) in 1966 and is both a state agency and an independent instrumentality. VOF is also a public foundation and can “...accept, hold, and administer gifts and bequests of money, securities, or other property, absolutely or in trust, for the purposes for which the Foundation is created.” A good summation of the VOF legislative charge may be that it is steward of the natural and cultural heritage land resources of Virginia on behalf of present and future residents.

The primary mechanism for accomplishing VOF’s mission is the perpetual open space easement. As of July 2010, VOF held easements on over 580,000 acres in over 100 local jurisdictions across the Commonwealth. These easements protect a wide variety of natural resources, including farm and forest land, natural areas, watershed areas, rural historic districts and the settings for historic homes, scenic views, lands adjacent to public parks and game preserves.

The Virginia Outdoors Foundation currently holds six easements in Fairfax County as shown in Table VII-5.

Additional information about VOF can be seen at its website:  
<http://www.vofonline.org/>.

\* Note that the original donors listed may not be the current landowner of record as the eased property may have been sold since the deed of easement was recorded.

## 12. Northern Virginia Soil and Water Conservation District

The Northern Virginia Soil and Water Conservation District continues to provide leadership in the area of bioengineering techniques in streambank stabilization and in the general area of erosion and stormwater control. NVSWCD works in partnerships with other agencies and organizations. For example, it has partnered with the Fairfax County Park Authority, Virginia Department of Forestry, the Fairfax County Department of Public Works and the Reston Association.

NVSWCD is facilitating Phase II of the Kingstowne Restoration Project. A major factor in securing this project was the success of Phase I of the Kingstowne Stream Restoration Project, which was completed in 2000. The U.S. Army Corps of Engineers has approved a similar restoration of the next 2,500 feet of the stream, which will be funded by \$1 million from the Virginia Aquatic Resources Trust Fund. Construction will begin in late 2010-early 2011.

The Fairfax County Chesapeake Bay Preservation Ordinance and Agricultural and Forestal District Ordinance require land in agricultural use to have a soil and water quality conservation assessment. In 2009, soil and water quality

conservation plans were prepared for 39 parcels on 461.3 acres, which included 30,929 linear feet of Resource Protection Area, primarily stream buffers. All plans comply with the requirements of the Chesapeake Bay Program and allow landowners to comply with the county's Chesapeake Bay Preservation Ordinance. Several of the conservation plans also helped landowners meet the County's Agricultural and Forestal District Ordinance requirements for the establishment or renewal of an A&F District. Two seminars were held for the equine community on pasture management and on horse waste management. During 2009, three conservation plans were prepared and technical assistance provided to help the landowners successfully resolve pollution problems, which were identified in one complaint filed under the Virginia Agricultural Stewardship Act and two citations for County Code violations.

NVSWCD's annual seedling program emphasizes the role of vegetation in preventing erosion, conserving energy, and decreasing and filtering stormwater runoff. Those planted in riparian areas also help to protect stream channel stability and stream water quality, as well as improving the surrounding habitat. This seedling program offered residents a package of native tree and shrub seedlings for a small cost. In spring 2010, a variety of 6,500 native seedlings were bundled into 517 shrub packages and 152 tree packages and sold at a small cost to promote urban reforestation, habitat enhancement and water quality protection. The package, "Nature's Palette," contained a variety of six species that provide color and wildlife benefits throughout the year.

NVSWCD is the local sponsor of **Envirothon**, a hands-on competition among high school teams to demonstrate their knowledge of natural resources – forestry, soils, wildlife, aquatic ecology – and special issue topics, such as urban-rural interface and recreational stress on natural resources. Local and regional competitions are held in April, and the state competition is in May. In 2010, competitions were held at three local high schools to determine the team in each high school that would advance to the county competition. Five schools participated and two teams advanced to the area competition. The Madison High School team advanced to the state competition.

At the bi-monthly Saturday morning **Green Breakfasts**, interested residents, county officials and agency staff, state legislators, students, members of the business community, and representatives of local non-profits and environmental groups discuss environmental topics, share information and network. Each breakfast begins with a presentation. In 2009, topics included: the Huntley Meadows Restoration Project, the Role of Native Plants in the Landscape, Creating a Bird-Friendly Home Habitat, Reducing Your Carbon Footprint, Preserving Agriculture in Urbanizing Communities and Tree Initiatives in Fairfax County, including the new Tree Ordinance and the county's 30-Year Tree Canopy Goal. Also announcements about programs and events, including

county initiatives, and other topics of interest are sent to 545 recipients on the *Green Breakfast* email distribution list. Notices also are sent to approximately 900 recipients on the *Watershed Calendar* email list.

Conservation Currents, the NVSWCD quarterly newsletter, includes many articles related to ecological resources. In 2009, topics included: achieving a trash-free Potomac; emerging contaminants in water; Fairfax County's Land Conservation Awards; Grosbeaks for Dinner; stewardship opportunities; native seedlings; limiting Lyme disease naturally; the Fairfax County Restoration Project; the importance of native bees and other pollinators; the Rebuild effort to promote green building and green jobs; preserving habitat in winter landscapes; frost seeding for horse pastures; science fair projects; and bottled vs. tap water.

**Fairfax County Soil Survey and Soil Scientist.** The county provided funding to NVSWCD to continue the expertise of a soil scientist. During the past year, the soil scientist has continued to facilitate the transition from the old to the new Fairfax County Soil Survey. Descriptions of all 119 soils have been published in the Description and Interpretive Guide to NRCS Mapped Soils in Fairfax County. The new soil survey has been integrated into the county's GIS. Maps showing soil types layered over county property maps have been created for each tax grid in the county. These maps are available to the public through the Digital Map Viewer on the county website. The soil survey information is also available online at two USDA-NRCS websites; the soil map and tabular data are available at the Web Soil Survey website, and tabular data alone is available at the Soil Data Mart website. The tabular and map data available at the USDA-NRCS websites are much broader and more extensive than that found on the county website, but the data on the county website is more specific to the needs of Fairfax County residents and the maps include county property information.

A reformulation of the soil problem classes has been completed and applied to all soil types in the new survey. The new problem classes more closely resemble those used in Loudoun and Prince William Counties so as to cause less confusion for private industry. One major difference will be that disturbed soils, which are mapped only in Fairfax County, have their own separate problem class.

The soil scientist and staff from DPWES are collaborating on updating codes and procedures, notifying industry and ensuring a smooth transition to using the new survey. The soil scientist has made presentations to several groups, including the Engineering Standards Review Committee, and has assisted DPWES staff with updating the county regulations for determining the ground water table.

The soil scientist continues to assist with providing technical assistance to homeowners, homeowner associations, the development and construction community and county staff on soils-related matters and on infiltration practices. During 2009, soils information was provided to 129 consultants, engineers, realtors and homeowners. Special infiltration studies were conducted for four county and NVSWCD projects. Guidance on interpreting soils information continues. Also, technical assistance is provided to solve problems on both private and public lands.

**Potomac Watershed Roundtable.** Fairfax County and NVSWCD are members of the Potomac Watershed Roundtable, a regional government-resident forum founded in 2000 whose purpose is to enhance communication, collaboration and cooperation on environmental concerns, especially water quality issues and ecological resources, among the various local governments and stakeholder interest groups residing on the Virginia side of the middle and lower Potomac River watershed. Members include nine counties, five cities and towns, six soil and water conservation districts, two members of the General Assembly, Planning District Commissions, Water and Wastewater Utilities and representatives of several stakeholder interests – Environmental, Agriculture and Forestry, Fishing and Boating, Development, Construction and Real Estate, Waste Management and Recycling and Citizens of the Watershed. Fairfax County Supervisor Penny Gross serves as the current chair, and NVSWCD provides administrative support and financial administration. The Roundtable meets quarterly throughout the lower Potomac watershed to share technical information, strategies, programs and policies. Topics have included water quality and quantity, nonpoint source pollution, nutrients, stormwater regulations, land-use planning, best management practices, innovative techniques and land conservation. Recently the Roundtable focused on source water supply planning, drinking water, rainwater, graywater, water re-use, Potomac River flow, the new stormwater regulations, stream restorations and urban nutrient management. The Roundtable has sponsored five Potomac Forums, several tours and special programs on topics such as Low Impact Development and Rainwater Harvesting. Annually the Roundtable chooses several legislative positions, which it conveys to the 40 General Assembly members who represent the Roundtable’s area. Information about the Roundtable is available at [www.potomacroundtable.org](http://www.potomacroundtable.org).

### **13. Fairfax County Wetlands Board**

If you own property on the waterfront in Fairfax County, you may need a permit from the Fairfax County Wetlands Board before you build or make improvements on your property. These activities, known as land disturbing activities, often require a permit if done in an area that has been identified as a tidal wetland. Land disturbing activities that may require a permit from the Wetlands Board include the following:

- Any construction project on or adjacent to a tidal body of water.
- Any construction project in which fill material is placed in or near tidal wetlands.
- Projects designed to protect property adjacent to shorelines.

In support of the Virginia General Assembly's 2008 action to extend the Coastal Primary Sand Dune Protection Act to all Tidewater Virginia localities, the Fairfax County Board of Supervisors adopted the Coastal Primary Sand Dune Zoning Ordinance, Chapter 123 of the Fairfax County Code, on February 23, 2010. Administration of the new ordinance is designated to the Wetlands Board.

During fall 2009, the Virginia Institute of Marine Science (VIMS) began evaluating the Northern Virginia tidal shoreline. Prior to this current effort VIMS performed a Northern Virginia tidal shoreline inventory approximately 35 years ago. Thus, a current inventory and analysis of the Northern Virginia tidal shoreline will be most helpful. In addition, a future phase of VIMS tidal shoreline analysis will involve the impact of sea level rise on coastal Virginia. This analysis is contingent upon VIMS' success in securing grant funding to complete this additional analysis. VIMS provides Virginia localities with guidance to make good shoreline decisions based on an integrated approach to shoreline management techniques.

The Wetlands Board's staff liaison is in discussion with the Northern Virginia Regional Commission and VIMS regarding a fall 2010 training session for Northern Virginia Wetlands Board members in the use of VIMS' Coastal Management decision tree toolkit. The decision tree toolkit was developed by VIMS to assist decision makers to render good permitting choices based on an integrated shoreline management approach.

The Wetlands Board has not received a complete application request for tidal wetland permit during 2010. The reduction in permit requests may be due to the fact that shoreline property owners are heeding the long held guidance that hardened shoreline structures are not necessarily appropriate within the intertidal area. In addition, the slow economy may also be contributing to the absence of shoreline permit requests. No new known tidal wetlands violations exist at this time.

For further information, contact the Wetlands Board at:

Fairfax County Wetlands Board Staff  
Department of Planning and Zoning, Planning Division  
12055 Government Center Parkway, Suite 730  
Fairfax, VA 22035-5504  
(703) 324-1210  
<http://www.co.fairfax.va.us/dpz/environment/wetlands.htm>

## 14. Virginia Department of Forestry

The Virginia Department of Forestry (VDOF) has provided forestry related services in Fairfax County for over 55 years. VDOF is also participating in several efforts aimed at improving riparian zones. In these efforts, VDOF partnered with the Northern Virginia Soil and Water Conservation District, the Department of Public Works and Environmental Services, the Fairfax County Park Authority, and Fairfax ReLeaf.

The Department of Forestry, like all state agencies faced budget cuts in 2009. The State Forester determined that VDOF's most valuable asset was its personnel and was determined to not fire anyone in response to the cuts. He was successful in this and VDOF will continue to have a presence in Northern Virginia for the foreseeable future. VDOF will continue to be able to provide technical assistance to Fairfax County in its environmental initiatives, but little in the way of direct material or funding support. Reduced competitive funding will be available through Water Quality Improvement Fund grants to support riparian plantings and tree related storm water management projects. VDOF may also be able to support tree planting with donated seedlings.

The Virginia Department of Forestry is the lead state agency in meeting Virginia's riparian buffer commitments to the Chesapeake Bay Program. In 2006 Urban Tree Canopy goals were added to the Bay Program's buffer strategy, recognizing the diminished water quality value of riparian forests in urban areas where upland storm water is conveyed directly to streams and bypasses the riparian forest. One way to view it is that street gutters and storm drains are manmade extensions of the natural stream network, so all trees are effectively riparian trees. In 2009 the Virginia Department of Forestry provided project leadership and technical support to tree planting efforts in partnership with elementary school children, private landowners, Fairfax ReLeaf, and the Potomac Conservancy.

The Virginia Department of Forestry participates in the Fairfax County Arbor Day on the last Saturday in April each year. The county earned again, for the 27<sup>th</sup> year, the Tree City USA award. This award is given for having a planting plan, management plan, a Tree Board/Commission, and sponsoring an Arbor Day Celebration. The award is applied for by the Fairfax County Urban Forest Management Branch and given through the State Department of Forestry. Tree seedlings are distributed by VDOF to citizens attending the Arbor Day celebration. In 2009, 400 donated hardwood seedlings were distributed for planting by residents in their communities.

The Virginia Department of Forestry sponsored a drop-off site in Fairfax County for the Growing Native project. This project involves the collection of tree seeds (acorns, hickory nuts, black walnuts etc.), which are transported to VDOF

nurseries where the seeds are planted and seedlings are grown. In 2009, approximately 2,000 pounds of seeds, mostly acorns, were collected. Each year, 500-700 seedlings are given to residents for planting on public lands in Fairfax County.

The conservation of the forested land base in Fairfax County is a part of the VDOF plan. The Fairfax County office works closely with the Fairfax County Department of Planning and Zoning to review Agricultural and Forestal District applications. A&F District forest management plans are prepared by VDOF; these efforts support the management of forested land for conservation purposes. Six A&F plans covering 494.4 acres were prepared in 2009. VDOF also provides forestry management advice to homeowners associations and civic groups. In 2009, six community forestry plans were prepared covering 65 acres.

The Virginia Department of Forestry also helps protect water quality and forest resources in the county by reviewing and commenting on rezoning applications and development plans. VDOF reviewed 47 applications and plans in 2009. In addition VDOF annually inspects dry hydrants to make sure they are available to fight wildfire in the county.

The department maintains an active public education and out reach program. Audiences range from school groups to adults. Topics range from general discussion of the importance of urban forests for environmental quality to technical training in planning and installing rain gardens and forested riparian buffers. In 2009, VDOF conducted 49 talks on the general benefits of urban forests and riparian buffers.

Formed in 2006, the Fairfax Chapter of the Virginia Master Naturalist Program provides local residents with naturalist training and then connects them with volunteer stewardship, citizen science and outreach opportunities in parks and natural areas. The process for becoming a certified Virginia Master Naturalist takes from six to 12 months. Two times a year, approximately twenty candidates are selected for a class. They begin with a 60-hour basic training course, which is a combination of classes and field work that grounds them in natural history and forest and aquatic ecology. Subject matter experts from the Northern Virginia Regional Park Authority, Fairfax County Park Authority, Virginia Department of Forestry, Virginia Tech, Northern Virginia Soil and Water Conservation District, EPA and National Academy of Sciences make up the faculty. Master Naturalists are expected to provide much-needed support to the many environmental organizations striving to protect natural resources in Fairfax County. To be certified, graduates must provide 40 hours of volunteer service and receive eight hours of advanced training each year.

The Fairfax Master Naturalist chapter successfully ran two basic training classes in 2009, recruiting 40 new members. This brought membership to 109 at the end of 2009

The Virginia Department of Forestry website ([www.dof.virginia.gov](http://www.dof.virginia.gov)) contains many pages on forest management and urban forestry. Topics range from tree identification to proper planting under power lines. The pages contain information developed by VDOP and links to many other sources of information on urban forestry and tree care.

## **15. Virginia Department of Transportation**

The Virginia Department of Transportation mitigates unavoidable impacts to water resources within Fairfax County that occur during highway construction projects as required by federal and state laws and regulations. VDOT is currently monitoring the establishment of the following wetland mitigation sites in Fairfax County:

- Approximately 0.8 acres of tidal wetlands, 0.7 acres of riparian buffer and 0.3 acres of tidal wetland enhancement adjacent to Cameron Run at the I-95/Route 1 interchange improvement (Woodrow Wilson Bridge Project – Belle Haven sites).
- Approximately 0.5 acres of wetland creation, 1.17 acres of wetland restoration and 1.08 acres of submerged aquatic vegetation remediation at I-95/Route 1 interchange improvement (Woodrow Wilson Bridge Project – Route 1 sites).

These sites were created to mitigate unavoidable wetland impacts from replacing the Woodrow Wilson Bridge; several other mitigation sites for this project are located outside of the county. Federal and state regulatory agencies require created wetland mitigation sites to be monitored for a period of five years following completion of construction to assess their functionality. The fifth year of mitigation monitoring for tidal wetlands creation and riparian buffer at Belle Haven was recently completed and the tidal wetland enhancement site is in the fourth year of monitoring. Year one monitoring of the submerged aquatic vegetation remediation and wetlands restoration sites at Route 1 is finished and presently under the second year of monitoring. Ongoing maintenance activities during the five-year monitoring period include hydrology monitoring, plant diversity sampling, replacement of dead or damaged plants and invasive species control to ensure performance criteria are met. Recent monitoring reports indicate that these locations continue to provide a valuable water quality benefit in their respective watersheds as well as habitat for a host of aquatic organisms, waterfowl and other wildlife. A third mitigation site for the Woodrow Wilson Bridge Project will be constructed as part of the I-95/ Telegraph Road

interchange improvements. Approximately two acres of wetlands will be established at the confluence of Taylor Run and Cameron Run during 2011 and mitigation monitoring will begin the year following its completion.

VDOT has included landscaping aesthetics on several of its road construction projects to enhance context sensitive road design. Road improvement projects within Fairfax County that were landscaped include Route 1 widening (from Lorton Road to Telegraph Road), Ox Road widening (between Davis Drive and Occoquan River), the Backlick Road Park and Ride Lot and the Route 1 /Capital Beltway interchange. The Route 50/Arlington Boulevard Pedestrian Bridge at Seven Corners project included landscaping and aesthetic treatments to the bridge structure. The project received an award from the Community Appearance Alliance of Northern Virginia in February 2010. More recently, landscaping oak fencing was installed around the pond and in front of the Frying Pan Spring Meetinghouse as part of the Centreville Road widening project.

Other projects under way or soon under way with landscaping and/or architectural treatments include:

- Fairfax County Parkway extension through Fort Belvoir North Area.
- Telegraph Road/Capital Beltway interchange improvements associated with the Woodrow Wilson Bridge replacement.
- Decorative Stone Rubble Masonry signs at four locations on Georgetown Pike.
- Fair Lakes Parkway/Fairfax County Parkway interchange.

VDOT's Wildflower Program funding continues to shrink, primarily due to decreasing availability of state funding. The program is now funded through fees paid for wildflower license plates at the Department of Motor Vehicles. VDOT continues to use warm season, native grass species in roadside seed mix specifications on construction projects where opportunities exist since these species have low maintenance requirements. Invasive vegetation control work continues throughout the county. Bamboo, in particular, growing from adjacent properties into rights-of-way, continues to be a significant problem.

## **16. Virginia Department of Environmental Quality**

In 2009, the Virginia Water Protection Wetland Permitting Program (Northern Regional Office) received eight applications to impact surface waters in Fairfax County. A total of seven new permits were issued in 2009 to include six general permits and one individual permit. The permits authorized the total permanent impact of approximately 1.32 acre of surface waters, consisting of 0.8 acre of wetlands, 0.01 acre of open water and 0.51 acre (2,970 linear feet) of stream channel in Fairfax County. Included in these totals were the impacts associated with the Fort Belvoir Main Post Infrastructure Realignment and the Third Track

Rail project. Compensation for impacts to surface waters was proposed to be provided through the purchase of bank credits and on-site restoration and preservation of surface waters in the Potomac River watershed.

## 17. Urban Forestry

### a. Urban Forest Management Division activities

In addition to carrying out its core services relating to land development and forest pest management, in 2009, the Urban Forest Management Division (UFMD) focused on other projects that included:

- **National Association of Counties (NACo) award for Tree Conservation Ordinance:** On October 20, 2008, Fairfax County was the first jurisdiction in Virginia to adopt a local tree conservation ordinance with a focus on tree preservation during land development. In 2009, Fairfax County received a NACo *Best of Category Award* in the *Environmental Protection and Energy* Category. For more information on the NACo award:  
<http://www.naco.org/programs/recognition/Pages/2009AchievementAwardWinners.aspx>
- **Continued implementation of the Tree Action Plan:** In 2007, UFMD in conjunction with the Fairfax County Tree Commission developed, and the board endorsed, the Tree Action Plan. The Tree Action Plan is a 20-year strategic plan for the conservation and management of the county's tree and forest resources. In 2009, UFMD staff and the Tree Commission made substantial progress in executing implementation plans identified in the Tree Action Plan. UFMD is currently engaged in activities associated with six of the 12 core recommendations of the Tree Action Plan. UFMD anticipates that the first edition of an annual progress report on Tree Action Plan activities will be prepared and forwarded to the board in 2010, and that a summary of that report will be made available in future *Annual Reports on the Environment*.
- **Production of educational video:** In late 2009, UFMD worked with Fairfax County Cable and Consumer Services staff in the production of an educational video regarding the environmental contributions of trees entitled, "Remarkable Trees." This video, shown regularly on Channel 16, highlights the importance of preserving and planting trees and what residents can do in their own yards to help achieve the county's 30-year tree canopy goal. More information can be found at:  
[http://www.fairfaxcounty.gov/cable/channel16/remarkable\\_trees.htm](http://www.fairfaxcounty.gov/cable/channel16/remarkable_trees.htm)

- **County Receives Tree City USA:** For the 27th year, Fairfax County received the Tree City USA Award at the Earth Day/Arbor Day celebration held at the Northern Virginia Community College. UFMD prepares the application each year for this award and Fairfax County has one of the five longest running records in Virginia.
  
- **Strengthened partnership with Fairfax ReLeaf:** Staff from UFMD is now an active liaison to the Fairfax ReLeaf Board. As such, UFMD involvement with Fairfax ReLeaf has increased. Additional involvement includes:
  - Acquisition of seedling storage area during spring planting season.
  - Tree planting at Shrevevood Elementary School.
  - Tree planting at Pine Ridge Park.
  - Invasive plant removal at Pine Ridge Park.
  - Assistance in preparing display and staffing the Fairfax ReLeaf exhibit at Celebrate Fairfax.
  - Support GIS analysis of homeowner association land for Fairfax ReLeaf planting activities.
  - Attendance at Fairfax ReLeaf Board Meetings.
  
- **Active participation in the Northern Virginia Urban Forestry Roundtable:** UFMD staff regularly participates in the quarterly meetings to discuss urban forest management issues of concern to all jurisdictions in Northern Virginia.
  
- **Tree Planting on government-owned sites continues:** UFMD staff prepared planting plans and planted over 138 native and desirable trees at 11 county-owned facilities, including schools, libraries, mental health centers, police and fire stations, Government Centers and more, to help meet the 30-Year Canopy Goal, adopted by the board in 2007. The trees were planted for the specific purposes of energy conservation and parking lot landscaping. UFMD staff continues to monitor and provide appropriate maintenance. UFMD has partnered with on-site facility personnel to assist with the care and maintenance of newly planted trees.
  
- **Continued upgrades and improvements to the DPWES ‘Trees’ Web page:**
  - UFMD staff continues to improve and upgrade the ‘Trees’ Web page. Some of the upgrades and improvements include:
  - Installation of the New Tree Conservation Ordinance.
  - Installation of the updated PFM.
  - Provision of information regarding the Emerald Ash Borer.
  - Inclusion of applications for designation of Heritage, Specimen, Memorial and Street trees.

- Addition of an enhance section on the county's the 30-Year Tree Canopy Goal.
- UFMD staff continues to respond to internal and external feedback regarding its website and to make upgrades and improvements in an effort to provide superior communication with its internal and external customers.
- **Tree Preservation and Planting Awards:** As part of the 2008 Land Conservation Award Program, UFMD staff prepared nominations to the Tree Commission of potential candidates for the Tree Preservation and Planting Awards. Awards for tree preservation are presented to recognize those developers and builders who have done an outstanding job of preserving trees on a project they have constructed. Tree planting and landscaping awards are presented to recognize developers and builders who have done an outstanding job of replacing trees that were unavoidably destroyed due to development. The Tree Commission awarded the 2007 Tree Preservation and Planting Awards to:
  - Thistle Hill/ Tree Preservation.
  - Talent House School/ Tree Preservation.
  - Cooke Inlet Sections 1&2/ Tree Preservation.
  - Green Spring Garden Park/ Tree Planting.
- **Continuing staff education and training:** All of the UFMD Forest Conservation staff has completed the Certified Arborists exam. Test results are pending for our final Urban Forester. The remaining staff members are Certified Arborists by the International Society of Arboriculture (industry certification). Staff from UFMD attended the Urban Forest Strike Team, Task Specialist training in Williamsburg, Virginia at the invitation of the Virginia Department of Forestry. This training is intended to provide disaster planning assistance to communities and initial estimates of debris volume following a disaster. Risk assessment helps communities identify trees that are an unacceptable risk, and trees suitable for retention and management during disaster recovery.
- **Increased public awareness and outreach:** UFMD staff continues to provide education and outreach to the public regarding the Urban Forest at several venues including:
  - Provision of informational talks to homeowners associations, scout groups and garden clubs.
  - Participation in "A Day of Arboriculture" for horticulture students at Virginia Tech.
  - Participation in the annual Earth Day/Arbor Day event with staff and an educational exhibit.
  - Continuation of updating of the county's Big Tree Registry.

- Participation in the Earth Day/Arbor Day planting celebration at the Woodrow Wilson Library in Mason District.
  - Organization and presentation of a class regarding urban forestry issues to the Engineers and Surveyors Institute members and participants for a Designated Plans Examiner class work/credit program.
  - Recording of a program from Dr. Kerwin entitled “Remarkable Trees in Fairfax County” for viewing on Channel 16.
  - Provision of GIS analysis for the Fairfax County Sheriff’s Office to identify areas of turf mowing and other landscape maintenance activities.
- **Natural landscape initiative:** UFMD staff continues to work cooperatively with many county agencies using GIS analysis to identify areas where turf mowing activities may be reduced and to identify potential tree planting sites for enhanced natural energy conservation and heat-island effect mitigation with parking lot landscaping.

**b. Forest Conservation Branch activities**

**Enhancements to the Tree Conservation Ordinance:** In 2009, after the first full year of administering the new Tree Conservation Ordinance, FCB staff prepared a set of proposed amendments to address feedback from the development community regarding the applicability of the ordinance to minor plans and to modify the new tree inventory and condition analysis requirements in a manner that is likely to reduce the time and expenses associated with preparing site plans. The proposed amendments were presented to the Board of Supervisors’ Environmental Committee in 2009. That committee directed FCB to prepare the proposed amendments for consideration for adoption in 2010 through the public hearing process.

**The 2009 FCB workload summary:** In 2009, FCB continued to serve its traditional customers: residents, builders, developers, planners, engineers, landscape architects, private arborists, and other county staff and agencies, including the Board of Supervisors, Planning Commission, Tree Commission, Environmental and Facilities Review Division, Environmental and Facilities Inspections Division, Department of Planning and Zoning, Office of Capital Facilities, Park Authority and the School Board. The following table summarizes the workload of FCB based on the requests for assistance that were completed for FY 2008, 2009 and 2010.

<b>Table VII-6. Forest Conservation Branch Workload, 2008 through 2010</b>			
<b>Type of Assignment</b>	<b>Number of Completed Requests</b>		
	<b>2008</b>	<b>2009</b>	<b>2010</b>
Waivers	29	53	28
Zoning Cases	352	354	310
LDS <sup>1</sup> Requests: Plan Review	586	436	437
LDS Requests: Site Inspections	978	868	467
Other (Bd of Supervisors, Park Auth., Other County Agencies, etc.)	399	289	241
Hazardous Tree Investigations	34	40	27
<b>Total Completed</b>	<b>2,378</b>	<b>2,040</b>	<b>1,510</b>

<sup>1</sup> LDS – Land Development Services. <sup>2</sup> Completed requests for Hazardous Trees do not include 9 requests referred to VDOT and other County agencies which were inspected by FCB staff, but for which no correspondence was generated.

Source: *Information Requested for the Environmental Quality Advisory Council's 2008 Annual Report on the Environment*, Memorandum from Michael Knapp, Director Urban Forest Management Division, Land Development Services Department of Public Works and Environmental Services, Fairfax County, Virginia to Noel Kaplan, Department of Planning and Zoning, Fairfax County, Virginia, October 5, 2009.

### c. Forest Pest Management Section activities

**Gypsy Moth Caterpillar:** The gypsy moth was first detected in Fairfax County in 1981. To avoid the environmental, economic and health hazards associated with this pest, the Board of Supervisors enacted an Integrated Pest Management Program to control the gypsy moth. The purpose of the program is to reduce gypsy moth populations below defoliating levels. The goal of the program is to minimize the environmental and economic impacts of the pest by limiting the amount of tree mortality and use of pesticides in the environment.

The control methods considered annually are:

- Mechanical: the gypsy moth egg mass Search, Scrape, and Destroy Campaign and Burlap Banding for Gypsy Moth Caterpillars. These are programs aimed at volunteer involvement.
- Biological: the release and monitoring of gypsy moth parasites and pathogens.
- Chemical: the aerial and ground applications of Diflubenzuron and Bacillus thuringiensis on high infestations.

- Educational: the self-help program and lectures to civic associations and other groups.

In calendar year 2009, gypsy moth caterpillar populations decreased somewhat compared to previous years. There was no measurable defoliation reported in Fairfax County. Minor defoliation was reported in the State of Virginia and other states in the north eastern United States. According to the Virginia Department Forestry, there were 25,000 acres of defoliated forest in the state. No defoliation numbers are currently available for the United States; however, it is expected that they will be less than the previous few years. Heavy rainfall in spring 2009 likely caused high mortality of gypsy moth larvae by a pathogenic fungus called Entomophaga maimaiga. The exact extent of caterpillar mortality will not be known until staff completes egg mass surveys. The gypsy moth staff will continue to monitor populations in fall 2009 and treatment is possible in 2010.

**Fall Cankerworm:** The fall cankerworm is native to the United States and feeds on a broader range of trees than the gypsy moth. Periodic outbreaks of this pest are common, especially in older declining forest stands. The area of the county that had the most severe infestations of fall cankerworm was in the Mount Vernon and Lee magisterial districts. Typically this insect will defoliate in the early spring when the trees are able to withstand the impacts and little long-term damage is expected; however, tree mortality is possible when combined with conditions that place stress on the trees, such as drought. Nuisance to homeowners occurs when large numbers of caterpillars hang from the trees and migrate to the ground.

The Forest Pest Program conducted an aerial treatment program during spring 2003. Staff has monitored for adult female moths throughout the Mount Vernon and Lee Districts in since January 2001. The result of the winter 2008– 2009 monitoring effort indicated that no aerial treatment was required in spring 2009.

The Forest Pest Program will monitor for fall cankerworm again this winter. It is expected that populations of this pest will be low in the near future.

**Emerald Ash Borer:** The emerald ash borer (Agrilus planipennis) is an exotic beetle from Asia and was discovered infesting ash trees in the state of Michigan in 2002. This beetle is known to attack only ash trees and can kill trees in as little as two years. After it was discovered, the United States Animal Plant Health Inspection Service quarantined the area infested. Unfortunately, a tree nursery owner inside of the quarantine area illegally shipped infested ash trees to a nursery in Maryland. During

summer 2003, 13 of the ash trees were planted at the Colvin Run Elementary School site (Dranesville District). These trees were removed by the Virginia Department of Agriculture and Consumer Services and incinerated.

The removed trees contained evidence that adult beetles had escaped into the environment. In order to prevent the beetles from becoming established in Fairfax County, the U.S. Animal Plant Health Inspection Service and the Virginia Department of Agriculture and Consumer Services conducted an Emerald Ash Borer Eradication Program. It was ordered that all ash trees within a one-half mile radius of the school site must be removed and incinerated. This area included a total of 278 ash trees, 90 of which were on 29 privately owned properties. All tree removals were conducted in March 2004. Subsequent monitoring has indicated that this eradication effort was successful.

In July 2008, two new infestations of emerald ash borer were discovered in Fairfax County in the Town of Herndon and in the Newington area. Staff believes that these infestations were not related to the one found at Colvin Run Elementary in 2004. The U.S. Department of Agriculture's Science Advisory Council has recommended that no eradication action be taken in Fairfax County. This decision was made due to the extent of the infestations and due to the fact that similar eradication attempts in other U.S. states have failed. On July 11, 2008, a federal order quarantined Fairfax County for Emerald Ash Borer. This means that all interstate movement of ash wood and wood products from Fairfax County is regulated, including all hardwood firewood, nursery stock, green lumber, waste, compost and chips from ash trees. The Virginia Department of Agriculture and Consumer Services has initiated similar quarantines for the counties of Fairfax, Arlington, Loudoun, Fauquier, Prince William and the cities of Falls Church, Fairfax City, Alexandria, Manassas and Manassas Park.

The Forest Pest Program has appointed an Urban Forester as its Emerald Ash Borer Outreach Coordinator. This staff member is responsible for educating the public on how to deal with the impending death of many thousands of ash trees. Education is concentrated on how to hire a private contractor to remove dead and dying trees and how to properly apply pesticides that might keep trees alive.

During spring 2009, staff assisted the Virginia Department of Agriculture and Consumer Services in implementing a large trapping (2,500 trap sites) campaign. The purpose of this campaign was to determine Emerald Ash Borer population levels in Fairfax County as well as other areas of Northern Virginia. Data collected from this survey will be used in

implementing future emerald ash borer control options, which are being studied by the Federal Government.

**Hemlock woolly Adelgid:** Hemlock woolly adelgid is a recent addition to the VDACS list of insects that can be controlled by the Forest Pest Program. This is an insect that infests and eventually kills hemlock trees. In fall 2008, staff, in cooperation with Virginia Tech, released a colony of parasitic beetles (Laricobius nigrinus) in a native stand of eastern hemlock trees in the Difficult Run stream valley. Surveys will be conducted in order to determine the effectiveness off the parasite release. Staff will continue to explore other methods of control for this pest.

## **18. Agricultural and Forestal Districts**

Landowners may apply to place their land in special Agricultural and Forestal Districts that are taxed at reduced rates. A&F Districts, which are created by the Commonwealth of Virginia, must have 200 or more acres. A&F Districts of local significance, governed by the Fairfax County A&F District ordinance, must have at least 20 acres and must be kept in this status for a minimum of eight years.

Fairfax County's policy is to conserve and protect and to encourage the development and improvement of its important agricultural and forestlands for the production of food and other agricultural and forest products. It is also Fairfax County policy to conserve and protect agricultural and forestlands as valued natural and ecological resources that provide essential open spaces for clean air sheds, watershed protection, wildlife habitat, aesthetic quality, and other environmental purposes. The purpose of the Local Agricultural and Forestal District program is to provide a means by which Fairfax County may protect and enhance agricultural and forest lands of local significance as a viable segment of the Fairfax County economy and as an important economic and environmental resource. All district owners agree to no intensification of the use of their land for the life of the district.

Since the 2008 EQAC Annual Report on the Environment, there has been some changes to the A&F Program as shown in Table VII-7.

<b>Table VII-7: Change in Local and Statewide A&amp;F Districts from January 1, 2008 to August 31, 2009</b>				
Magisterial District	No. of Local Districts		No. of Statewide Districts	
	2008	2009	2008	2009
Dranesville	17	14	1	1
Mt. Vernon	3	3	1	1
Springfield	19	21	0	0
Sully	4	4	0	0
<b>Total</b>	<b>43</b>	<b>42</b>	<b>2</b>	<b>2</b>

Source: *Fairfax County 2009 Agricultural & Forestal District Annual Statistical Report*, Zoning Evaluation Division, Department of Planning and Zoning, Fairfax County, Virginia, September 1, 2009

As can be seen in the above figure, while there were changes in Dranesville and Springfield, there was a net loss of one Local District during this reporting period.

- Dranesville: Loss of three districts through:
  - Withdrawal of Eagle II.
  - Withdrawal of McInturff-Stewart.
  - Expiration of Longacre Farm.
- Springfield: Loss of two districts through:
  - Withdrawal of Kincheloe.
  - Withdrawal of Kincheloe II.
- Springfield: Gain of four districts through:
  - Creation of a new, consolidated Kincheloe.
  - Creation of Hall.
  - Creation of Keener.
  - Creation Crawford.

Despite this loss of one Local District, there has been an increase in the acreage in Local Districts. The loss of three districts in Dranesville resulted in a decrease of 40.41 acres. However, the changes in Springfield resulted in the gain of 125.12 acres. The withdrawal of Kincheloe and Kincheloe was replaced by the creation of a consolidated Kincheloe district plus additional land for a gain of 60.5 acres. Other gains in Springfield came from the creation of Keener (22.73 acres), Hall (20.65 acres) and Crawford (21.24 acres). Therefore, there was a countywide gain of 84.21 acres. This increases the total acreage in all districts, local and statewide, to 2,988.78 acres.

## 19. Gunston Cove Ecological Study

Gunston Cove is a tidal freshwater embayment of the Potomac River located approximately 20 miles south of Washington, DC. The cove is formed by the juncture of Pohick Bay and Accotink Bay, through which the waters of Pohick Creek and Accotink Creek flow to the Potomac River.

An ecological study of Gunston Cove, conducted by the Department of Environmental Science and Policy at George Mason University, and supported by the Department of Public Works, continued during 2009. This study is a continuation of work originated in 1984 at the request of the county's Environmental Quality Advisory Council and the Department of Public Works (now the Department of Public Works and Environmental Services). This on-going monitoring program was established to determine impacts from local point sources and nonpoint sources and to evaluate the status of the Gunston Cove ecosystem. Information from this study is intended to form the basis for well-grounded management strategies for maintenance and improvement of water quality and biotic resources in the tidal Potomac.

The 2009 report by Jones and Kraus covers water quality, phytoplankton biomass, zooplankton, fish larvae and fish, and benthic organisms. The following is extracted from the executive summary for the report.

A significant change in water quality documented by the study has been the removal of chlorine and ammonia from the Norman M. Cole, Jr. Pollution Control Plant effluent. A decline of over an order of magnitude in ammonia nitrogen has been observed in the cove as compared to earlier years. The declines in ammonia and chlorine have allowed fish to recolonize tidal Pohick Creek. Monitoring of creek fish allowed us to observe recovery of this habitat which is very important for spawning species such as shad. The decreased ammonia has also lowered nitrogen loading from the plant contributing to overall Bay cleanup.

Another trend of significance to managers is changes in the relative abundance of fish species. While it is still the dominant species in trawls, white perch has gradually been displaced in seines by banded killifish. Blue catfish have entered the area recently and brown bullhead has decreased greatly in the cove. The introduction of snakeheads of recent years (not sampled very well by trawl and seine but found in the cove using drop ring sampling) may have some pronounced effects on the other fish species. The causes and significance of these changes are still being studied as are similar patterns throughout the Chesapeake Bay. Clearly, recent increases in SAV provide refuge and additional spawning substrate for the adhesive eggs of banded killifish. Data from drop ring studies reported above show that SAV harbors high densities of banded killifish. While the seine does not sample these SAV areas directly, the

enhanced growth of SAV provides a large bank of banded killifish that spread out into the adjacent unvegetated shoreline areas and are sampled in the seines. Combined with the short generation time and high intrinsic rate of population growth of banded killifish, SAV appears to be direct cause of the recent high catch rates. In addition, the invasive blue catfish may also have both direct (predation) and indirect (competition) effects on brown bullhead, but details on these interactions require additional study. Declines in white perch probably have little direct connection to increases in banded killifish, and instead may be due to a combination of reduction in gear efficiency due to SAV and population-wide changes that result from environmental factors and/or fishing mortality. Overall, the fish assemblage in Gunston Cove is dynamic and supports a diversity of commercial and recreational fishing activities.

In short, due to the strong management efforts of the county and the robust monitoring program, Gunston Cove has proven an extremely valuable case study in eutrophication recovery for the Bay region and even internationally. The onset of larger areas of SAV coverage in Gunston Cove will have further effects on the biological resources and water quality of this part of the tidal Potomac River. It is important to continue the data record that has been established to allow assessment how the continuing increases in volume and improved efforts at wastewater treatment interact with the ecosystem as SAV increases and plankton and fish communities change in response. Furthermore, changes in the fish communities from the standpoint of habitat alteration by SAV, introductions of exotics like snakeheads, and possible contaminant effects such as those from hormone pollution need to be followed.

Global climate change is becoming a major concern worldwide. In the past five years a slight, but consistent increase in summer water temperature has been observed in the cove which may reflect the higher summer air temperatures documented globally. Other potential effects of directional climate change remain very subtle and not clearly differentiated given seasonal and cyclic variability.

The 25+-year record of data from Gunston Cove and the nearby Potomac River has revealed many important long-term trends that validate the effectiveness of county initiatives to improve treatment and will aid in the continued management of the watershed and point source inputs. The Gunston Cove study is a model for long term monitoring which is necessary to document the effectiveness of management actions. EQAC supports the continuation of these studies.

## 20. Fairfax County Restoration Project

The Fairfax County Restoration Project formed in 2009 to help protect the county's remaining undeveloped areas and, where feasible, restore natural communities on land that is already developed. The driving issue that led to the founding of FCRP is the loss of forested land due to the ongoing HOT Lanes construction project adjacent to the Beltway, but FCRP sees its mission continuing long after HOT Lanes construction ends. Its mission is to serve as an organizing body that can bring together stakeholders from local and state government, private industry, non-profits, universities and citizens associations to address common concerns about protecting Fairfax County's environment and increasing quality of life for its citizens.

Since its inception, FCRP moved rapidly to bring stakeholders and experts together to assemble a habitat restoration plan for the HOT Lanes corridor. As a result of the collaboration, a landscape architect hired by the Virginia Department of Transportation (VDOT) will coordinate work on reforestation along the 14-mile HOT Lanes construction site. The reforestation will incorporate areas both inside and outside the HOT Lanes sound walls. Plantings will be made up of native plants that are adapted to the local conditions, require little maintenance and can provide food and shelter for wildlife. A special emphasis will be placed on plants that can attract native pollinators such as bees and butterflies. Plantings within the walls will be maintained by VDOT. Outside the HOT Lanes sound walls, FCRP will recruit landowners and community and homeowner associations with property adjacent to the construction sites to help establish and maintain new plant cover.

Additional activities have included hosting a Greening Fairfax County series, "Restoring Land Restoring Water" conference, and creating a community produce garden on the George Mason Fairfax Campus with the George Mason University Office of Sustainability and the Transurban-Fluor Capital Beltway Project Community Grant Program.

Information about the Fairfax County Restoration Project is available at <http://www.fcrpp3.org/>.

## C. STEWARDSHIP OPPORTUNITIES

The Fairfax County Park Authority offers a number of opportunities for volunteers and EQAC encourages county residents to take advantage of these opportunities. Information about these opportunities is available at <http://www.fairfaxcounty.gov/parks/volunteer.htm>. More information about FCPA and its programs is available at these websites: <http://www.fairfaxcounty.gov/parks/resources/stewardship.htm> and <http://www.fairfaxcounty.gov/parks/resources>.

Fairfax County residents and other interested parties can donate to the Fairfax County parks through the Fairfax County Park Foundation. The Fairfax County Park Foundation is a 501(c)(3) not-for-profit organization and donations are tax deductible to the fullest extent allowed by law. The foundation's mission is to raise funds to support the parks and land under the stewardship of the Fairfax County Park Authority. Those interested in giving tax-deductible donations to the foundation can contact the foundation at:

Fairfax County Park Foundation  
12055 Government Center Parkway  
Fairfax, VA 22035  
(703) 324-8581  
[SupportParks@aol.com](mailto:SupportParks@aol.com)  
<http://www.FairfaxCountyParkFoundation.com>

Environmental stewardship opportunities for volunteers are available at Meadowlark Botanical Gardens, Potomac Overlook Regional Park, Upton Hill Regional Park, Pohick Bay Regional Park and various other parks on occasion. More information can be found at [http://www.nvrpa.org/park/main\\_site/content/volunteer](http://www.nvrpa.org/park/main_site/content/volunteer).

Fairfax ReLeaf offers a number of opportunities for stewardship. For further information on Fairfax ReLeaf, visit its website at <http://www.fairfaxreleaf.org>. The organization can be reached at:

Fairfax ReLeaf  
12055 Government Center Parkway  
Suite 703  
Fairfax, VA 22035  
Telephone: (703) 324-1409  
Fax: (703) 631-2196  
Email: [trees@fairfaxreleaf.org](mailto:trees@fairfaxreleaf.org)

The Northern Virginia Conservation Trust offers many stewardship opportunities for Fairfax County residents. Additional information on NVCT can be found on its website, <http://www.nvct.org>. Landowners whose property contains environmentally sensitive land such as wetlands, stream valleys and forests can also participate in environmental stewardship. If these landowners grant easements to NVCT, they will not only protect sensitive land, but can realize some financial benefits. A perpetual easement donation that provides public benefit by permanently protecting important natural, scenic and historic resources may qualify as a federal tax-deductible charitable donation. Under the Virginia Land Conservation Act of 1999, qualifying perpetual easements donated after January 1, 2000 may enable the owner to use a portion of the value of that gift as a state income tax credit. Fairfax County real estate taxes could also be reduced if the easement lowers the market value of the property.

For stewardship information on the Potomac Conservancy, see <http://www.potomac.org>.

## D. COMMENTS

1. EQAC commends the Board of Supervisors for its endorsement and continuing support of the Tree Action Plan, its tree canopy cover goal for the county of 45 percent coverage by the year 2037 and the Tree Conservation Ordinance, which strengthened tree preservation policies and procedures. The Urban Forestry Management Division, Virginia Department of Forestry and the Tree Commission continue to make exemplary progress in 2010 as evidenced by:
  - Issuing the “2009 State of the Tree Action Plan Report,” the first annual report prepared in response to a 2010 board directive to the Tree Commission for such reports.
  - Developing the Celebrated Trees of Fairfax County project to renew or inspire appreciation of the county’s trees and urban forest.
  - Developing a Tree Stewards Program of knowledgeable tree volunteers to help engage and educate citizens.
  - Convening a cross-agency committee to address tree preservation on county property including a review of existing capital improvement project planning and implementation to make recommendations to enhance tree protection and planting in this process.
  - Advocating that the urban forest be managed as “Green Infrastructure” and viewed as a capital facility, requiring both capital account funding to establish or renovate parts of the facility and current account funding for maintenance.

- Conducting a transformative i-Tree Eco analysis of the county's urban forest resources. This analysis, based on software developed by the U.S. Forest Service and its partners, provides a statistically valid sample of Fairfax County's existing urban forest and an estimate of the value of the urban forest to the county.

EQAC recommends that the Board of Supervisors continue its active support in order to enhance internal communications and bolster the effort to change organizational perceptions or cultures within county agencies with regard to recognizing the total value of trees, preserving trees on county property and incorporating the urban forest as county infrastructure.

2. In past Annual Reports, EQAC recommended that the Board of Supervisors emphasize public-private partnerships that use private actions such as purchase of land and easements by existing or new land trusts to protect forests and other natural resources, including champion/historic trees. With the signing of a Memorandum of Understanding between the Board of Supervisors and the Northern Virginia Conservation Trust, such a public-private partnership came into being. Thus, EQAC's recommendation has been satisfied. EQAC continues to commend the Board of Supervisors for this action and recommends continued support for this partnership.
3. In past Annual Reports, EQAC recommended that the Board of Supervisors develop and implement a countywide Natural Resource Management Plan – an ecological resources management plan that can be implemented through the policy and administrative branches of the county government structure. Two necessary tasks should be accomplished first -- prepare and adopt a unified Natural Resource Conservation Policy, and complete a countywide Baseline Natural Resource Inventory. EQAC notes that slow progress is being made in this area due to efforts by the Fairfax County Park Authority staff in its efforts to establish a natural resources baseline inventory. The FCPA has developed a countywide green infrastructure map that appears to be a basis for a Natural Resource Inventory. Additionally, the Urban Forest Management Division is continuing efforts to devise a countywide map for use as a layer on the county's GIS that will delineate the distribution of naturally occurring and landscaped vegetation. However, these efforts must be supplemented by an inventory of the county that accounts for flora and fauna. The Park Authority has now prepared a Natural Resources Plan for management of the county's parks. EQAC also notes the accomplishment of the Park Authority in preparing and publishing a Natural Resources Plan for management of the county's parks and urges the Park Authority to fully implement this plan. EQAC fully supports these efforts, urging that they culminate in a countywide Resource Management Plan. EQAC's intent is that Fairfax County should have all the tools in place (the policy and the data) to create a plan that will support the active management and conservation of the county's natural resources.

## E. RECOMMENDATION

1. The Fairfax County Park Authority approved a Natural Resource Management Plan in 2004. This partially fulfills a long-standing EQAC recommendation to develop and implement a countywide Natural Resource Management Plan. However, most of this plan cannot be implemented without additional staff and funding for the FCPA. The FCPA staff estimates that implementation will require \$3 million plus per year. A more phased approach will allow FCPA to begin to manage 10 percent of parklands and set up the program to be phased in over time. Phase 1 with this approach would require \$650,000 and six positions. EQAC strongly feels that the plan needs to be implemented. Therefore, EQAC recommends that the Board of Supervisors provide sufficient funding to implement Phase 1. EQAC recognizes that in today's budget climate, such increased funding may be difficult to achieve. However, once the county's budget problems are eased, EQAC does recommend that the Board of Supervisors provide this funding as a high priority. In the meantime, EQAC recommends that some of the six staff positions and supporting funding should be found from internal FCPA staff assets.

For example, the Invasive Management Area Project is the most highly leveraged program in the Park Authority system. From June 2008 to July 2009, nearly 1,300 volunteers donated 3,030 hours of work towards habitat restoration. This program has been funded for the past several years with project based Environmental Improvement Program funding. In FY 2012 this project will not have any new funds to support it. Without such funding, this program will end. Park Authority staff has been working to reallocate other project balances to cover the program needs for FY 2012, but an additional \$70,000 is needed. Without this funding, the program must be scaled back and necessary follow up treatments of previously treated sites will not occur. In addition, the Early Detection Rapid Response component of the IMA program may be reduced or eliminated. The lack of follow up work would result in waste of funding already expended (sites require multiple years of follow up to be successful). The cancellation of EDRR would result in additional long term costs, as the point of the program is to manage new invasions while they are easy and inexpensive to control. At a minimum, sufficient funding to maintain the existing program should be provided. Even better would be additional funding to expand the program.

CHAPTER VIII

**WILDLIFE  
AND THE  
ENVIRONMENT  
IN FAIRFAX  
COUNTY**

---

# VIII-1. IMPACTS OF DEER IN FAIRFAX COUNTY

## A. OVERVIEW

The adverse impacts of white-tailed deer in Fairfax County are readily recognized as a problem by many of its residents. While the "problem" is seen from a variety of perspectives, there is a general consensus that the root cause is "overabundance" of deer in many local areas. There is also a general public perception that a deer management program is needed to address the "problem".

The road to an acceptable deer management solution, however, is not so easily determined. Some of the factors essential to a solution are subject to strenuous debate and attract a wide spectrum of opinion. For example, what is the optimum population level, and if population reduction is required, what means shall be used? The sport hunting community, recreational nature lovers, residential property owners, environmental preservationists and animal rights/welfare groups have widely differing viewpoints on these issues.

## B. BACKGROUND

### 1. Are Deer Overabundant in Fairfax County?

Caughly (1981) defined four contexts in which the term "overabundance" can be understood when referring to an animal species population. These definitions have since been widely used by most serious scholars in the wildlife management field and by public administrators responsible for wildlife management programs.

1. When the animals threaten human life or livelihood.
2. When the animals depress the density of, or destroy, particular favored species.
3. When the animals are too numerous for their own good.
4. When their numbers cause ecosystem dysfunction.

Where does Fairfax County stand vis-a-vis these four criteria? The available data strongly (even overwhelmingly) suggest that:

1. We experience an unacceptable number of deer-vehicle collisions resulting in deaths, injuries and major property damage. Owners of commercial agricultural and nursery enterprises suffer substantial damage.
2. In many areas of the county, deer routinely leave their enclaves of "natural" habitat to forage in nearby gardens and yards, causing widespread damage to

landscaping and thus major economic loss to property owners. Through voracious browsing, deer are rapidly eradicating numerous threatened and endangered botanical species from the "natural" habitat. In addition, this loss of plant habitat is adversely affecting numerous vertebrate and invertebrate species of smaller physical size, such as many bird species, that are unable to compete with large herbivores for plant-based food sources.

3. Data for Fairfax County, based on Virginia Department of Game and Inland Fisheries assessments spanning ten years, indicate that its various deer herds showed a single individual in excellent condition, a very few in good condition, most about evenly split between fair and poor condition and a few emaciated individuals. This shows quite clearly that no longer can the available habitats meet the minimum nutritional requirements that would maintain the deer population in sound health. A 125-pound deer requires approximately 6.5 pounds of forage per day, or some 2,370 pounds of vegetation per year.
4. Many of our parklands and stream valleys show severe browse lines, nearly total eradication of understory and loss of numerous botanical species upon which the continuous process of woodland regeneration is dependent. These changes in turn lead to the inevitable loss of a wide variety of animal species. Thus, our remaining natural ecosystem is being severely deformed through the eruption of a single species that has become overdominant in the food chain.

According to each of Caughly's four criteria, it is apparent that Fairfax County has a serious overabundance of deer. In recognition of the public perception of a significant problem, the Board of Supervisors directed county staff to develop a plan for deer management. In October of 1997, county staff contracted with a consulting firm to "study and review existing data on deer, deer-habitat interactions, deer-human conflicts, and deer management proposals within the county." Staff also asked the consultants to recommend suitable methods for addressing the various problem areas. These studies and recommendations were presented in the Consultants Report (Natural Resource Consultants, December 1997). In 1998, the county created a new position and appointed a Wildlife Biologist who had broad experience with Fairfax County parks and parkland issues. In the summer of 1999, the county executive convened an ad hoc Deer Management Committee of experts and stakeholders to discuss and evaluate the plan drawn up by the staff and the early implementation efforts. The report of this committee and its recommendations were forwarded to the Board of Supervisors in September, 1999 in advance of the season of peak deer problems, which occurs in the fall. The Board of Supervisors approved recommended measures to reduce the deer population to more sustainable and less destructive levels. Since then, the deer management program has made substantial progress in achieving significant population reductions in some of our most threatened parklands.

## 2. A Description of the Problem

### a. Data on Deer Abundance in Fairfax County

To begin this discussion, the terms overabundance and overpopulation should be distinguished. Overabundance refers to population levels that have adverse impacts on the community and other species, while overpopulation refers to population levels of the species that are an imminent danger to itself through disease and starvation. This latter phenomenon is responsible for the population eruption and subsequent collapse of deer herds that has been a topic of scientific study for the past 70 years. While the following information supports a conclusion that deer are overabundant in Fairfax County, neither the data nor experts from a variety of sources have indicated that a level of overpopulation exists, though the relatively poor health of much of the county's deer herds suggest that we may be approaching overpopulation.

Data from the Virginia Department of Game and Inland Fisheries deer density surveys in Fairfax County parks prior to the county's deer management program showed deer densities from 90-419 deer/sq. mile (Table VIII-1-1).

<b>Table VIII-1-1 Deer Density Baseline Surveys</b>	
<b>Location</b>	<b>Est. Deer/Square Mile</b>
Huntley Meadow Park	90-114
Riverbend Park	213
Meadowlark Gardens Park	90-115
Bull Run Regional Park	419
Fort Belvoir	90
Mason Neck NWR	-

(Source: W. Dan Lovelace, Wildlife Biologist, Virginia Department of Game and Inland Fisheries.)

While many of the data are limited, taken collectively, the observations of professional park staff, poor health of evaluated deer and high deer densities indicate that deer are overabundant and are negatively impacting the ecology of sizeable areas of Fairfax County. More recent, but fragmentary, data for a number of parks show deer population densities several times larger than maximum carrying capacities. Unfortunately, there are few reliable data available for densities and extent of damage on private lands and the adjacent small islands and corridors of natural habitat. Even though the information available is primarily anecdotal, it is voluminous, and there is a general public perception of a significant and growing problem of deer overabundance.

**b. Causes of Overabundance in Urban/Suburban Areas**

**i. Urbanization/Changes in Habitat**

Over recent decades, Fairfax County has transformed from a largely agrarian and woodland area to a multifaceted employment, residential and retail area. Over 1,000,000 people reside in the 395 square miles of the county. Of these 395 square miles, about 140 square miles are wooded and open land and some three square miles are remaining agricultural land. This change from an agrarian area to a developed one has markedly decreased the amount of land usually regarded as suitable for deer habitat and has changed their food sources and movement patterns. This urban/suburban habitat of the county provides a fairly good nutritional base for deer, including manicured lawns, athletic fields, college campuses, golf courses and landscaped residential communities.

Overabundance is particularly common where the course of development has left protected "islands" or "corridors" of deer habitat in or near urban and suburban areas. As the development process reduces the area of natural habitat, deer are forced into these remaining islands and corridors at very high population densities. Because the deer then deplete the forage plants in these enclaves, they venture out into the surrounding developed community in search of food. In such situations, conflicts with humans frequently arise in the form of deer-vehicle collisions and depredations on gardens and ornamental plantings (Flyger et al, 1983; Cypher & Cypher, 1988). Moreover, in such situations, natural predators (e.g., wolves, bobcats, mountain lions) have normally long since been eliminated and hunting is usually prohibited.

**ii. Loss of Predators**

The precolonial levels of deer in Virginia could be attributed to predation by bobcats, black bears, eastern gray wolves and eastern mountain lions, in addition to the number taken by Native American hunters. While none of these predators depended solely on deer, the deer/predator interactions and the added

effects of hunters kept the population levels low and well within the carrying capacity of the land. Increasing human populations and land development has virtually eliminated wildlife predators from the county. In the first half of this century, hunting had reduced the deer population to very low levels. However in the latter half of this century, with growing human population and reduction of huntable habitats, recreational hunting has almost disappeared in the county. While the number of deer harvested through “Out of Season Kill Permits” has increased in recent years (Table VIII-1-2), the combination of seasonal hunting and out-of-season kill permits does not affect the deer population at sufficient levels to prevent significant deer/human conflicts or ecological damage.

**Table VIII-1-2  
Out of Season Kill Permits Issued For Deer Damage in Fairfax County  
Virginia Department of Game and Inland Fisheries**

Year	Permits	Number Taken
1989	5	25
1990	3	4
1991	19	41
1992	18	43
1993	42	222
1994	31	131
1995	65	193
1996	165	244
1997	147	310
1998	157	297
1999	216	377
2000	197	263
2001	148	398
2002	187	249
2003	173	311
2004	217	279
2005	191	219
2006	168	258
2007	152	245

(Source: Susan Alger, Matt Knox, Mark Pritt and Jerry Sims, Virginia Department of Game and Inland Fisheries.)

It should be noted that, while the number of out-of-season permits declined markedly in 2001, the number of deer taken increased even more dramatically. A similar pattern occurred in 2003. This is quite consistent with intensification of problems in a smaller number of areas as land clearing for development squeezes the deer population into smaller and more isolated patches of habitat.

**c. Problems Created by Overabundance**

**i. Ecological Impact**

Effects of a persistent and overabundant deer population include the loss of biodiversity and a negative effect on ecological and biotic systems. These can be seen in a declining understory (lower height plants and shrubs that serve as a food source for birds) and the appearance of browse lines, which occur when deer eat almost all the vegetation within their reach and the woods develop a “line” at the top of their reach. While few detailed deer/forest impact studies have been performed in the county, in a report to the Animal Services Division, Fairfax County Police Department, the Superintendent of Administration of the Northern Virginia Regional Park Authority noted that “the ever present browse line had now become a common sight in most of our parks. The deer have eaten all of the herbaceous and woody plant growth within their reach. This has eliminated an entire stratum of habitat from the parks.”

The browse line and loss of understory are not the only indications of this ecological impact. There is an abundance of technical literature reporting the effects of a high deer population on plant communities when the lower ecosystem carrying capacity (see page 286) is exceeded. However, the apparent poor health of the county’s deer indicates a level of deer density that reportedly exceeds even the higher biological carrying capacity. There are also numerous studies documenting the negative effects of overabundant deer on wildlife species. For other vertebrates, this may occur through direct competition for food sources or more often by altering the habitat. For example, in some areas of the county, the number of species of birds has markedly diminished through loss of the necessary habitat due to excessive browsing by deer.

As noted in the 1997 Consultant Report and throughout the scientific literature, “the consequences of a persistent, overabundant deer problem can be long-term loss of biodiversity and negative impact to functioning ecological and biotic processes.” We have already begun to see a loss of biodiversity that is beginning to lead to a loss of ecosystem stability, with far more widespread and serious effects than just the shorter-term effects of overabundant deer.

ii. Property Loss and Damage (Vehicular, Plantings)

Nationally there are 1.5 million deer-vehicle collisions annually that cause more than \$1 billion in damage and kill several hundred people. The Insurance Institute for Highway Safety (IIHS) ranks Virginia as the state with the seventh largest number of such collisions. The IIHS data shows the average insurance claim for vehicular damage is \$2,600 but with injuries the total average claim rises to \$11,000. The Fairfax County Police Department does an excellent job of analysis of the data on deer-vehicle collisions that require a police presence in their aftermath or that are otherwise reported. The numbers appear to have increased, but the data (Table VIII-1-3) do not show a consistent trend. For those accidents tabulated from January 1998 through 2002, the average damage per vehicle was about \$2,300. Over this same period, the Virginia Department of Transportation picked up 4,507 carcasses of deer killed in vehicular collisions from rights-of-way in the county. In 2002, VDOT picked up 1,057 deer carcasses from the roadway and immediately adjacent right-of-way in Fairfax County, which represents a small increase from earlier years. This increase most likely represents normal variation from year to year.

Police and highway experts estimate that only 20-25 percent of deer impacting vehicles die at the scene (i.e., on the road itself or in the right-of-way); many receive injuries that are soon fatal, but die in the woods or in a nearby yard. Thus, a reasonable estimate would indicate some 18,000-22,500 deer-vehicle collisions in the county during the 1998-2002 period. One can reasonably infer that many, if not most, of these collisions result in property damage to the vehicle. In addition to these crashes which required a police presence, in 2002 there were 1,057 reported deer-vehicle collisions, and in 2003 the number increased to 1,371 reported collisions.

County personnel report an increasing number of complaints of damage to native and ornamental plants in Fairfax County. Referring again to the "Out of Season Kill Permits Issued for Deer Damage" (Table VIII-1-2), an indication is given of homeowner attempts to address property loss primarily thought to be ornamental in nature. Further, although numerous deer management programs are available, such as planting less preferred species and fencing, the effectiveness of these methods declines dramatically with increased deer densities, leading to declining food sources and willingness of deer to eat even undesirable plants. These activities may also tend to increase vehicular incidents, as deer must look farther afield for food sources.

<b>Table VIII-1-3 Deer-Vehicle Collisions in Fairfax County</b>				
<b>Year</b>	<b>Non Injury</b>	<b>Injury Crashes</b>	<b>Fatal Crashes</b>	<b>Total</b>
1993	154	6	0	160
1994	149	10	0	159
1995	127	6	0	133
1996	157	20	0	177
1997	168	17	1	186
1998	144	23	0	167
1999	177	18	1	196
2000	144	17	0	161
2001	143	22	0	165
2002	122	10	0	132
2003	160	19	0	179
2004	122	14	1	137
2005	151	13	1	165
2006	115	14	0	129*
2007	133	19	0	152*

\* 41 and 43 percent of these crashes occurred in October and November

iii. Disease

Another problem associated with deer overabundance is the prevalence of Lyme Disease. See Section VIII-3 below in this chapter for a discussion of Lyme Disease.

**C. ISSUES IN ADDRESSING THE PROBLEM**

To effectively manage the deer population, the implications and interrelationships of population dynamics, carrying capacity, public opinion and methods for management must be understood and incorporated into the program.

## 1. Understanding Population Dynamics

The concept of population dynamics is crucial to understanding the current problem and the development of a workable solution. There are no simple mathematical models that can be applied to determining the growth of the population of a species in a particular area, and the least complex deer management models and programs based on solely on nutritional deer carrying capacity (see section on carrying capacity below) consider neither the deer population's interactions with the human population nor its interactions with a biodiverse ecosystem.

One important concept to understand is that of home range. Deer show a strong attachment to a home range, and it has been shown that deer forcibly relocated often die of malnutrition even if food is accessible in their new habitats. When natural dispersal from the home range occurs, it is usually the younger males that migrate. This has four implications for Fairfax County deer management:

1. Deer often occupy a home range that can include both a park and the surrounding community or islands and corridors of "natural" habitat plus the yards and gardens of adjacent residential communities.
2. A dramatic decrease of the deer in one area will not necessarily result, in the short term, in an increased dispersal of deer from other areas into the depleted area, with a consequent lessening of population density in those other areas.
3. Deer cannot be eliminated from the county under today's conditions, because the deer surviving in surrounding home ranges will, in the long term, undergo natural dispersal and repopulate the depleted areas. This implies that parks and the surrounding areas must be managed as a unit and that solving the problem in one area does not automatically translate to another area.
4. The recent emergence of epizootic hemorrhagic disease, a viral disease fatal to deer but posing no threat to humans, may be a significant factor in natural reduction of the deer population over the next several years. EHD has sometimes been implicated as a significant factor in the boom-bust cycle observed within deer populations that have been the subject of long-term study. Within the past year, 53 deer fatalities due to EHD have been diagnosed in the southeastern portion of the county, and these diagnosed cases probably represent only a small fraction of those succumbing to the disease. Weather, the size and compactness of deer herds and the overall health of the deer play a major role in EHD transmission. Thus, it is not possible to predict the future course of this disease within the county, except to note that it usually takes several years to run its course within a deer population and we appear to be in the early stages of an outbreak.

Other concepts that affect population dynamics include compensatory reproductive responses, survival and predation. Again, it must be noted that deer management is not a simple mathematical equation; it must take into account many biological and behavioral factors, many of which are not fully understood, especially in an environment such as Fairfax County. For example, in many cases, as the size of an animal population decreases, the number of offspring increases, despite the fact that food is becoming less adequate. This phenomenon leads to the population eruption-crash cycles that are widely discussed in the scientific literature. More complete data and an improved understanding of the unique characteristics of Fairfax County must be collected and considered as the management program evolves.

## **2. Determining Carrying Capacity Goals**

Carrying capacity is the level of a population that can be supported by an ecosystem or tolerated by the community. To determine the appropriate population level as a goal for a management plan, it is essential to distinguish among the following:

1. Biological carrying capacity, i.e., a species specific level that is primarily concerned with the population that can be supported with the available nutritional resources
2. Cultural carrying capacity, i.e., a level that is driven by human concerns (the population that can be tolerated by the community at large)
3. Ecosystem carrying capacity, i.e., the population level that can be supported by an ecosystem without disturbance of its stability or reduction of its biodiversity.

The biological carrying capacity is a traditional view that has been widely used by fish and game departments where a primary concern is to maintain adequate stocks of deer for sport hunting, but it does not adequately account for the effects of relatively high population levels on the ecosystem in which the species resides. The cultural carrying capacity is defined by Ellingwood and Spingnesti (1986) as the maximum number of deer that can coexist compatibly with local human communities before conflicting with some human interest. This level is driven by human values, economics and desires independent of ecological considerations. DeCalesta (1998) used the term diversity carrying capacity in a more restrictive sense than ecosystem carrying capacity, but both concepts consider the maximum species population density that does not negatively impact diversity of fauna or flora, including diversity of habitat structure as well as species richness. He contends that deer impacts on biodiversity occur at population densities well below traditional definitions of ecosystem carrying capacity.

Thus, biological carrying capacity is the highest population density and is considerably in excess of cultural carrying capacity (human societal tolerance), which in turn accepts

notably higher densities than ecosystem carrying capacity. Finally, diversity carrying capacity has the smallest maximum population density.

### **3. Considering Public Opinion**

Goals for management and methods to use to reach those goals are very different issues; consensus or conflict among groups of constituencies may occur at either or both levels. Goals may vary from a biological carrying capacity level that meets hunting concerns to a much lower carrying capacity level based on an ecological or biodiversity perspective. Cultural carrying capacity may run the gamut of levels, depending on the varying values and tolerances of different constituencies within the community. Even where there is agreement on the level of deer density desired, the methods to reach those goals may be in dispute. Some groups may have a zero-tolerance for lethal means, whereas others may readily support managed hunts or sharpshooters.

As indicated in the 1997 Consultant Report, deer control action by the county should not be undertaken until it is determined that there is sufficient community and political support for it. Again, the need for data, this time in the form of public opinion surveys, is stressed. Additionally, the need to adequately educate the public about the issues is needed to ensure well-informed constituent responses. This is one of the purposes of the extensive tutorial that forms the beginning of this section ---- to give the general public sufficient information on deer population biology that they can make a well-informed judgment.

## **D. METHODS FOR DEER POPULATION MANAGEMENT**

### **1. Population Reduction Approaches**

#### **a. Let Nature Take its Course - Eruption/Collapse**

This approach is based on using no human intervention to affect the deer population one way or the other. This has been studied by wildlife biologists for more than half a century. The findings are that the population goes through an eruptive phase with explosive population growth until it is far above biological carrying capacity. This is followed by eruptions of parasitic and infectious diseases (such as EHD) and by large-scale starvation, which causes the population to crash to perhaps 15-25 percent of its peak level. Thereupon, the herd recovers to begin the cycle anew. Some populations have been followed through five or six successive cycles. Although the deer population of Fairfax County can be considered to be in the early

stages of the eruptive phase, it is well short of a peak. Public concerns about the current and expected future impacts on the community rule this out as an option.

**b. Lethal Methods**

i. Managed Hunting

Experiences with managed hunts over the past several years indicate they have been highly cost effective, in that revenue has exceeded costs for personnel and materials. This is in sharp contrast to their initial use in 1998, when costs were high and relatively few deer were taken. The dramatic upturn in the learning curve is very encouraging. Necessarily, managed hunts are conducted primarily in parkland, and while the amount of deer population reduction in these local areas is no doubt ecologically beneficial, in terms of absolute numbers it has been insufficient to make an immediate noticeable difference in the overall problem.

ii. Archery Hunting

Archery hunting has proven an effective and acceptable means of deer control in residential areas where use of firearms is deemed too hazardous. Archery is a quiet and short-range method, with most deer being taken within less than 100 feet. During the 1998 public hunting season, 789 deer were taken in Fairfax County, of which 597 were taken by archery and the remainder by shotgun. In 1999, archery accounted for 686 of the total of 1,046 deer, and in 2000 accounted for 626 of 1,028 deer. With out-of-season kill permits, archery can be used year-round, even in residential neighborhoods. In 2003, the organized Urban Archery Program harvested 119 deer and an additional 854 were taken with archery equipment by individuals.

iii. Traditional Public Hunting

Under current restrictions outlined by VDGIF, the above figures show that traditional public hunting is not sufficient to address the problem, based on hunters' limited access to deer habitat and preference for antlered deer. Moreover, the habitat that is accessible is not where the major problem areas are located.

iv. Trap and Kill

This method has usually been conducted by darting with anesthetics and dispatching the animal by gunshot or a lethal drug. The former is less effective than sharpshooters while the latter leaves the meat unfit for human consumption. The use of drop nets and stun guns is explained in the 1997

Consultant Report as a possible lethal method. This method allows for release of non-targeted males and results in meat uncontaminated by drugs but is very cost inefficient.

v. Sharpshooters

The use of professional animal control personnel, police experts, or qualified and experienced volunteers has been proved to be a safe, cost-effective and successful means of management if lethal methods are employed. Earlier experience with this method in Fairfax County has led to significant refinements and greatly improved cost-effectiveness, with a cost per deer taken ranging from \$4.15 to \$22.97. The most recent data indicate a cost of \$29.58 per deer taken. In the 2007-2008 season, 76 does and 43 bucks were taken by sharpshooters, for a total of 119 deer. Once again, the number of deer removed from the population by this method is not sufficient to have more than a modest local effect. However, the sharpshooter program has been so effective in our larger parks that vegetation has begun to recover and the focus can now shift to some of our smaller parks.

vi. Reintroduce Predators

The reintroduction of the usual species of deer predators into an urbanized setting such as Fairfax County is biologically unworkable and publicly unacceptable.

**c. Nonlethal Methods**

i. Trap and Relocate

Experiments with this approach have been largely unsuccessful due to high initial mortality (up to 85 percent) of the relocated deer. Moreover, there are few locations within a reasonable distance of this area that would accept relocated deer, since most nearby areas have similar problems. The use of drop nets and stun guns is suggested in the 1997 Consultant Report as a possible method for deer capture. More traditional methods use anesthetic darts. This method is considered infeasible for Fairfax County.

ii. Contraception

Steroidal/hormonal contraception has proved very costly and difficult to implement and only very marginally effective. Immunocontraception (where the female's immune system is stimulated so as to prevent fertilization of eggs), on the other hand, holds some promise for deer management, but it is currently

in an experimental stage. The Humane Society of the United States has conducted field studies at the enclosed National Institute of Standards and Technology site in Montgomery County, but due to difficulty with marking deer, the Humane Society is not yet conducting studies for free-ranging deer such as those in Fairfax County. The recent technical literature discusses requirements for sites chosen for pilot tests. All indications are that this is not a near term solution for the county but might hold promise for limiting populations in the future, once populations have been reduced to desired levels.

## **2. Conflict Mitigation Approaches**

Conflict mitigation is directed toward reducing the direct impacts of deer on the human population and thereby increasing the tolerance of the community for the existing deer population.

### **a. Supplemental Feeding**

Conceptually, this approach is supposed to divert deer from the landscape plantings in gardens and yards. Supplemental feeding might somewhat improve the health of the existing deer population but would almost certainly drive it to even higher levels. Thus, consideration of this approach would be counterproductive for Fairfax County, since it does nothing to reduce the excess deer population.

### **b. Fencing**

Fencing is only rarely effective, since deer are noted for leaping even eight foot fences. Thus, fencing is a costly and ineffective solution, especially when deer are seeking out preferred plant species.

### **c. Repellants**

In the past repellants have had limited success and are generally costly and most require frequent replenishment. Also, many of them have odors that are no more acceptable to humans than they are to deer. However, repellants containing denatonium benzoate have been used very successfully by commercial tree farms and are now available through retail nurseries. Denatonium benzoate is the bitterest-tasting substance known to science and is usually compounded in a polymer latex emulsion (such as Tree Guard™) which is sprayed on plants and will last for approximately three months and will not wash away in rains. Because it is simply bitter-tasting and not poisonous, it may be safely used on any vegetation not destined for human consumption.

**d. Roadside Reflectors**

Roadside reflectors divert light from vehicle headlights toward the sides of the roadway and are intended to frighten the deer away from the road, thereby reducing the likelihood of vehicle collisions. The method is potentially most useful in the evening and early morning hours when the majority of deer-vehicle collisions occur. While expensive, this technique has shown some promise in tests. The Virginia Department of Motor Vehicles gave the county a \$40,000 grant to conduct studies of the effectiveness of roadside reflectors. The first test site was a section of Telegraph Road that has had a high incidence of deer-vehicle collisions. The initial results show limited promise but are confounded by three other factors: (1) construction activity in the area may have driven many deer away; (2) a high incidence of epizootic hemorrhagic disease that may have naturally reduced the population; and (3) an archery hunting program at Fort Belvoir that definitely reduced the population in that area. The county staff identified and began testing at additional test sites, but these also had problems that rendered data interpretation extremely difficult.

**e. Underpasses**

Construction of underpasses has been suggested as a way of providing deer with a safe means of getting to the other side of busy roads. Not only is it exceedingly costly, but there are no data available now or expected in the future that would pinpoint likely sites. Consequently, this approach is regarded as wholly impractical.

**f. Use of Less-Favored Plants**

Landscaping with plant species that are less favored by deer has been advocated as a way of reducing depredation of yards and gardens. However, as Cypher & Cypher (1988) and numerous other wildlife biologists have shown, when deer populations exhaust the preferred plant species, they readily turn to those less-preferred. Thus, in the short term this approach might seem to work, but longer term experience indicates that it is relatively ineffective.

**E. PUBLIC EDUCATION PROGRAM NEEDS**

As noted above, an educated public that has an understanding of the population dynamics of deer, the concepts of carrying capacity, the different management options and an understanding of the various values of the community in addressing ongoing management is essential to the successful implementation of a deer management program. The recommended public education program should encompass the following:

- The county Deer Management website already serves as a primary vehicle for making much of the information mentioned below more readily available and updatable. See: <http://www.fairfaxcounty.gov/living/animals/wildlife/management/deer-management.htm>
- Develop pamphlets that are easily read, easily mailed, available through various county offices and through the local Supervisors' offices. These should include information on:
  - Deer and deer biology
  - Ecosystem and population dynamics in general, and as they relate to the interaction between deer and other species of both plants and animals
  - Methods of population management, including their relative feasibility and cost-effectiveness for achieving both short-term and long-term goals
  - The deer management program
  - Permits required for implementation of private control measures
  - Fencing and repellents
  - Safe driving and how to avoid deer on the road
  - Lyme disease and its prevention (See Section VIII-3 of this report)
  - Who to contact for additional information.

However, given the continuing shift from print material to website availability of information, much of the above may be more efficiently made available by the latter means.

- Establish networking among the following agencies for provision of consistent public information:
  - Fairfax County Government offices
  - Fairfax County Supervisors district offices
  - Fairfax County Wildlife Biologist
  - Fairfax County Animal Services Division
  - Nature Centers
  - Health Departments
  - State agencies, particularly Virginia Department of Game and Inland Fisheries and the Virginia Department of Transportation
  - The Humane Society.
- Compile and make available a comprehensive bibliography of literature on deer management in urban environments. (The references attached to this section provide a limited example.) Make this information available to schools, civic and technical groups and interested individuals.

- Establish an archive of evidence documenting how deer can change the characteristics of a landscape. This should show:
  - Habitat characteristics before deer damage
  - Habitat characteristics during and after deer damage
  - Habitat characteristics during regeneration after deer population is reduced
  - Statistics and trends for vehicle/deer collisions, number of injuries/fatalities and types of damage.
  
- Create a visual display of the above for use at schools, fairs, libraries, etc., and develop presentations for use at public meetings and meetings of civic groups.
  
- Establish a county self service telephone number for wildlife problems and public information. This could be a menu-driven hotline that would direct people to the proper location on the information network or to the appropriate county office.

## **F. PUBLIC AGENCY RESPONSIBILITY**

The Animal Services Division of the Fairfax County Police Department has been assigned primary responsibility for deer management by the Board of Supervisors. However, due to the legal concept that ownership and disposition of wildlife is vested in the Commonwealth, the Virginia Department of Game and Inland Fisheries exercises significant regulatory and permitting functions that affect Fairfax County's deer management activities. The county Wildlife Biologist and the Animal Services Division, in coordination with applicable land-holding agencies (e.g., Northern Virginia Regional Park Authority, Fairfax County Park Authority) and other public authorities, implements the Integrated Deer Management Plan on public lands. In addition, the county Wildlife Biologist and the Animal Services Division advise private business and residents in addressing deer management on privately owned parcels in Fairfax County. Deer management on federally owned tracts of land within Fairfax County (e.g., Mason Neck National Wildlife Refuge, Fort Belvoir, etc.) is the responsibility of the respective federal agencies and is subject to the applicable federal policies and regulations.

## **G. PROGRAM IMPLEMENTATION ACTIVITIES**

An Integrated Deer Management Plan was developed by county staff subsequent to the Consultant Report received in December, 1997. The Board of Supervisors in November, 1998 directed that program implementation activities commence. Subsequently, in the summer of 1999, the county executive convened a Deer Management Committee comprised of experts and various stakeholders to evaluate the plan and initial implementation efforts and to prepare recommendations for the Board of Supervisors for further implementation of the plan during the fall and winter of 1999-2000. This

committee meets annually to review progress in program implementation and to make recommendations on additional approaches. The county Wildlife Biologist and the Animal Services Division of the Police Department prepare the annual Fairfax County Deer Management Report to the Board of Supervisors that contains extensive data on the program. Additional material is provided on the county website <http://www.fairfaxcounty.gov/living/animals/wildlife/management/deer-management.htm>.

On December 8, 1997, the Fairfax County Board of Supervisors approved managed hunts for Riverbend Park and the Upper Potomac Regional Park, both in the Dranesville District. Plans by the county Wildlife Biologist and the Animal Services Division were approved by the Northern Virginia Regional Park Authority and the Fairfax County Park Authority for four managed hunts for each of the two locations. The hunts were planned for January and February of 1998. The managed hunts conducted in 1998 were largely unsuccessful in achieving planned program objectives and had associated costs that were difficult to justify. However, some of these costs could be attributed to greater-than-necessary safety measures that experience now indicates would not be needed in the future. In contrast, four managed hunts, involving 132 hunters, conducted in the fall and winter of 1999-2000 were very cost effective, with 195 deer taken at a cost per animal of \$9.51. The seven managed hunts conducted in the fall and winter of 2000-2001 involved 223 hunters, who took a total of 351 deer at a cost per animal of \$17.94. Of the 351 deer taken, 222 were donated to a program that feeds needy families. For 2001-2002 hunt season, the program returned a profit of \$7.28 per animal because the permit fees collected exceeded program costs. This was also true in the 2002-2003 season, with a profit of \$79.60 per animal taken.

The sharpshooter program, which utilizes Police Department Special Operations Division tactical teams, has been cost-efficient from the outset. These teams must engage in extensive marksmanship training on a regular basis in order to maintain the required proficiency. Instead of practicing on a target range, they are utilizing this required training time in a field setting with the deer more closely resembling operational targets. The harvested deer are collected by a charitable organization that provides meals to the needy. Even in the early part of the learning curve, this program has shown satisfactory harvest rates. Whereas, similar programs in most mid-Atlantic jurisdictions have harvests listed in hours per deer taken, Fairfax County in 2000 had a harvest rate of 1.54 deer per hour. From late December, 1999 through late January, 2000, fourteen sharpshooting sessions over a total of 41 hours were conducted, with a total harvest of 89 deer at a cost of \$4.15 per animal. In the same period of 2000-2001, there were 23 sharpshooter sessions, totaling 94.75 man-hours, which took 146 deer, at a cost per deer taken of \$22.97. In the 2002-2003 season, the sharpshooter program took 248 deer. In 2001, the cost per animal rose to \$44.99 if all costs were attributed solely to the Deer Management Program, but this would be fallacious due to the fact that this activity represents proficiency training for the police tactical units which must be conducted anyway. A major reason for this increase in cost per animal is that most of the sites this year represented repeat visits to locations first addressed last year and the year before. As the herd population density decreases, the time expended on each animal increases, and this is further increased by the increased wariness

of the surviving members of the herd. The most recent data indicate a cost of \$29.58 per deer taken. In the 2007-2008 season, 76 does and 43 bucks were taken by sharpshooters, for a total of 119 deer. Thus, the costs are very much in line with expectations and will drop once again as more new sites are brought into future years' mix of new and old locations.

Clearly, the managed hunt and sharpshooter programs must be conducted largely in parkland due to safety considerations, but this is also where some of the most substantial benefits are to be achieved. From the outset, the Northern Virginia Regional Park Authority has taken a position of active involvement and has reaped corresponding benefits. It is very important that the Northern Virginia Regional Park system continue to be a full participant in these efforts, otherwise the regional parks will act as a reservoir for deer herds that will emerge to adversely impact nearby residential communities and Fairfax County parks.

The Fairfax County Park Authority has been actively involved and availed itself of the clear benefits offered by the program to the ecology of its parks. The FCPA reported in June, 2003 significant regeneration of the vegetative understory in two of our parks that were among the most overgrazed and have had herd reduction measures used for two successive years. This degree of success is very encouraging, and it is hoped that the FCPA will continue its active involvement in the program and thereby exercise the ecological stewardship that is so necessary to the biotic health of our parks and parkland. By mid-year 2004, the thinning of the herd in several of our larger parks had led to significant regeneration of vegetation so that the emphasis will now shift to smaller parks and those that have not yet had program activities implemented.

Out-of-season kill permits have, for some years, been one of the few legal avenues open to private property owners to permanently remove deer that are causing serious damage to their properties. Such permits are issued by the Virginia Department of Game and Inland Fisheries after verification of the damage. Generally, however, permits are only issued for holders of larger property parcels because of safety considerations. Fairfax County should work in coordination with the VDGIF to make these permits available on a wider basis to qualified residents.

Archery hunting is quite effective in suburban areas since it is much safer than the use of firearms due to the short range of the projectiles. In addition to those residents who have the necessary skills and equipment, there are several commercial firms that offer specialized deer removal services. Last year, 1,085 deer (up from 854 deer during the previous year) were harvested using archery equipment. Another 158 (up from 119) deer were taken under the county's Urban Archery Program. This reduction of the county's deer herd by 1,243 individuals demonstrates the effectiveness of archery as a tool in meeting program goals and as a method that can be safely employed in even heavily populated areas. Under the guidance of the county Wildlife Biologist, a countywide

archery program has just been implemented that will make permitted archery services more readily available to residents in neighborhoods and to smaller commercial parcels where firearms are not permitted or are not practical.

The use of roadside reflectors (strieter-lite technology) that reflect automobile headlights into wooded areas bordering the roadside has been suggested as a method of discouraging deer from crossing roadways in the evening and early morning hours, when most deer-vehicle collisions occur. In mid-November, 1999, the Board of Supervisors approved \$10,000 for a pilot program to test strieter-lite reflectors in selected locations. In addition, a grant of \$40,000 was received from the Virginia Department of Motor Vehicles for testing and evaluation of this technology at several locations in Fairfax County.

Unfortunately, all of the test locations experienced confounding factors such as roadway modification, adjacent development, deer herd reduction through hunting and disease, etc, that made it difficult to draw reliable inferences from the collected data. In addition, the manufacturer of the reflectors has apparently discovered that the initial design was reflecting light in a part of the spectrum to which deer's eyes are relatively insensitive, and the design is now being changed. Such inferences as can be drawn from the data suggest that there is only a slight reduction in deer-vehicle collisions due to the use of reflectors. This conclusion appears to be borne out by tests in other eastern areas where there was an absence of confounding factors. The tests in Fairfax County have shown this technology to have so little promise that it cannot be recommended for continuance.

Even though Fairfax County has not conducted a pilot project to test the feasibility of immunocontraception, this technology has shown a limited potential for the future. A program being conducted by the Humane Society of the United States on the fenced campus of the National Institute of Standards and Technology in Montgomery County is being carefully monitored for possible applicability to Fairfax County. After the deer population has been reduced to generally acceptable levels, this methodology might provide a feasible method of sustaining these levels in some local herds for the long term, but with the important caveat that it appears workable primarily on closed, fenced parcels. In mid-November, 2000, the Board of Supervisors approved \$10,000 to develop a pilot demonstration program on deer contraception, but results of this technology have shown almost no promise for long term applicability.

## **H. CONCLUSIONS**

The need for a comprehensive deer management program for Fairfax County is not in serious dispute. However, there is perhaps a somewhat wider array of opinion about the appropriate context for determining carrying capacity level for the management program and the particular methodologies to employ in reaching program goals.

As noted in much of the reference literature, deer have traditionally been viewed as livestock and woodlands and meadows as pasture. Deer management models and

programs have been based largely upon nutritional deer carrying capacity that does not consider issues of biodiversity, altered natural processes, natural herd demographics and behavior, or adverse impacts on mankind. The discrepancy of views can be seen in comparing a report by the Virginia Department of Game and Inland Fisheries with the Consultant's Report. The VDGIF report states that deer densities ranging from 90-419 deer per square mile have been reported in various county parks and that ideal deer densities are 15-20 deer/sq. mile of suitable habitat. However, the 1997 Consultant Report and much of the scientific literature argues that a deer density of no more than 8-15 deer/sq. mile is required to meet a biodiversity goal of deer management. Many of the assumptions upon which the Integrated Deer Management Plan for Fairfax County is based require adjustment based on continued environmental assessment of the county and to meet more precisely defined ecological goals.

It is evident that, while deer in Fairfax County have not reached a state of overpopulation (as earlier defined), they are near biological carrying capacity as shown by their poor physical condition and their relentless foraging outside their "natural" habitat. It is equally evident that, for the majority of residents, deer have greatly exceeded cultural carrying capacity in terms of representing a serious vehicular hazard and their depredations on both private landscaping and our public parklands. There is now substantial evidence documenting the fact that ecological and biodiversity carrying capacities have long since been exceeded.

In light of the Environmental Quality Advisory Council's role as an advocate for protection of environmental quality, it is EQAC's view that a biodiversity approach is needed in Fairfax County. However, as cautioned in the 1997 Consultant Report, EQAC too cautions against attempts to move responses forward without adequate data, clearly articulated plans and education and consensus building of major stakeholders. While moving quickly may assuage the concerns of some vocal groups, a true solution must address the problem with a long-term approach, considering the needs of all major stakeholders. The overall management approach must address an ecological goal that is based on sound science and also considers the value system of an educated community.

All of these caveats having been noted, the problem is of such proportions that every feasible approach must be employed not only to keep the burgeoning deer population in check, but more important, to systematically reduce it to sustainable levels. It is evident that the current managed hunt and sharpshooter programs have reached an admirable level of cost-effectiveness but are not reducing the countywide deer population at a rate sufficient to achieve the recommended biodiversity carrying capacity. The newly enhanced archery program should be of significant help but must be evaluated for effectiveness, especially over the first 2-3 years. Thus, it is incumbent upon the Board of Supervisors to continue to take increased and decisive action to address this problem over the long term, while recognizing that it is not going to be possible to please all of the people all of the time. It is likewise essential that the Fairfax County Park Authority

continue its active participation in the deer management program in order to exercise the necessary stewardship of the ecological well-being of the county's parklands, which now constitute over nine percent of the land area of the county. The regeneration of parkland where the program has been implemented for several years shows clearly the benefits to be derived and makes it possible to schedule other parks for program activities.

## **I. COMMENTS**

The comments provided below address only the first section of this chapter (deer management issues). A comment and a recommendation addressing geese issues and comments addressing wildlife borne disease issues are found beginning on pages 309 and 321, respectively.

1. The county Wildlife Biologist position became vacant in 2008, and there was a considerable lapse in deer management activity until a suitable replacement could be identified and hired. Even so, there was one managed hunt conducted with 32 deer taken, and five sharpshooter events with 27 deer taken for a total reduction in the deer herd of 59 animals.
2. Due to the current recessionary environment in which the county has been operating, it was necessary to cancel the Assistant Wildlife Biologist position that had been authorized but not yet filled. It is hoped that eventually economic recovery will make it possible to reactivate this position.

## **J. RECOMMENDATIONS**

There are three recommendations for continuance of activity in the deer management program:

1. Managed hunts should be continued as they have become both cost-effective and efficient in reducing excesses in the deer herd.
2. The sharpshooter events should be continued because they are both humane and cost effective.
3. The newly begun archery program should be continued as a means of controlling deer depredation of vegetation on residential properties where firearms cannot be used.

## ACKNOWLEDGMENTS

EQAC gratefully acknowledges the following individuals and organizations who have generously provided a variety of data and information included in this report and numerous helpful suggestions and recommendations:

Victoria Monroe, Wildlife Biologist, Animal Services Division, Fairfax County Police Department.

Lt. Michael Lucas, Director, Animal Services, Fairfax County Police Department.

Earl Hodnett, former Wildlife Biologist, Animal Services Division, Fairfax County Police Department.

Todd Bolton, (now retired) Natural Resources Manager, Fairfax County Park Authority.

Lee Stephenson, (now retired) Director, Resources Management, Fairfax County Park Authority.

W. Dan Lovelace, Wildlife Biologist, Virginia Department of Game and Inland Fisheries.

## VIII-2. IMPACTS OF GEESE IN FAIRFAX COUNTY

### A. OVERVIEW

Canada geese, once almost exclusively migratory, have to an increasing extent become year-round residents in Fairfax County. Although these resident populations are not evenly distributed throughout the county, many of our ponds and lakes, both large and small, and their adjacent shore areas have been occupied as permanent habitat. Geese have also become an increasing problem on parkland, golf courses and similar facilities. The problem is not so much the animals *per se* but rather the fecal contamination they bring to our water bodies and watercourses and their fouling of grassy open areas. Geese wastes are a well-documented source of fecal coliform bacterial contamination, which has reached alarming levels in many ponds, lakes and reservoirs, even those forming part of our domestic water supply. An additional problem is the damage resident geese cause to our marshes, where they feed on sprouting plants so voraciously that some once plentiful botanical species have all but disappeared. Addressing these problems inevitably requires reducing the goose population, but this is complicated, because geese are protected by federal migratory waterfowl laws.

### B. BACKGROUND

#### 1. Origins of the Goose Problem in Fairfax County

In earlier times, the Canada goose was a strictly migratory bird with its nesting range in wilderness areas of Canada and its winter range well to the south of our area. Geese passed through our area twice a year on their migrations. By the late 1960s, some Canada geese had begun to establish resident populations in this region. This is thought to have begun with birds that were propagated to stock local hunting preserves. Since that time, local Canada goose populations have undergone a dramatic upsurge. This increase now includes numerous populations of geese that have become permanent residents in the mid-Atlantic region rather than migrating. These permanent populations have become quite obvious in many parts of Fairfax County. Wildlife biologists estimate that the Canada goose population is increasing at about 15 percent annually, which indicates that problems associated with resident goose populations soon will increase to critical levels unless remedial actions are undertaken.

## 2. Environmental Impact of Geese

A primary impact of geese is environmental pollution, particularly pollution of streams, ponds and lakes with fecal coliform bacteria from their wastes. The magnitude of the problem is illustrated in two examples below.

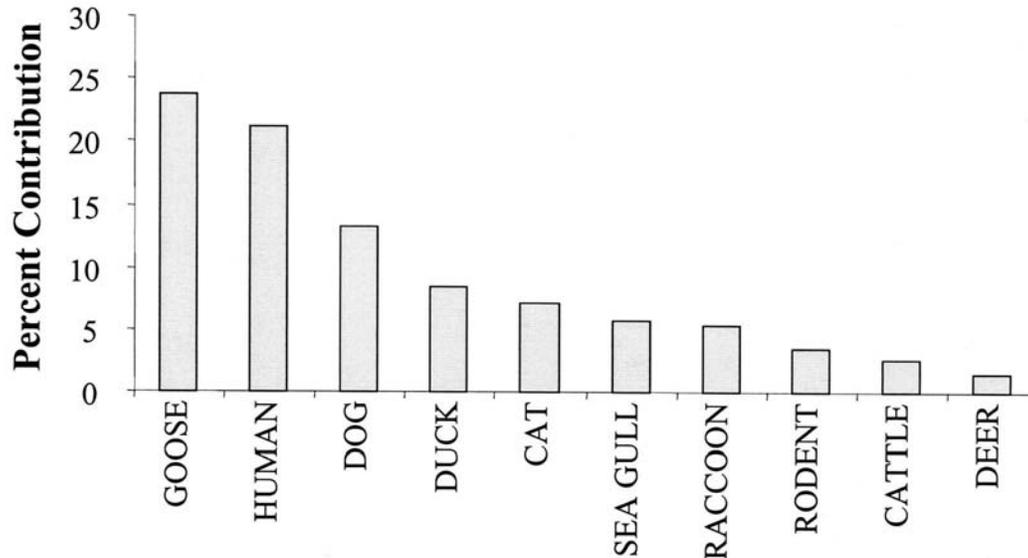

Several years ago, when the Evans Farm property in McLean was in the process of being rezoned for residential development, the farm pond, which was a prominent feature of the site, was extensively sampled to determine if it contained significant levels of pollution. It was known that a resident population of Canada geese was a major contributor to any pollution of the pond. Depending on where the water samples were taken in the pond, the levels of fecal coliform bacteria were found to be from 21 to 27 times those allowable in surface waters in the Commonwealth of Virginia. Drainage from this pond passed through an under-the-road culvert to a much larger pond on the other side of the highway that had two families of resident geese. This pond had fecal coliform counts about three times the allowable level.

More recently, an environmental pollution study was conducted to determine the total maximum daily load of fecal coliform contamination that should be permitted in a portion of Accotink Creek that feeds Lake Accotink. Federal Environmental Protection Agency standards indicated that 98 percent of current levels of pollution should be eliminated, a truly draconian expectation. DNA tests to determine the sources of the extant fecal coliform bacteria pollution revealed that anseriform waterfowl (i.e., geese and ducks) accounted for 32 percent and other wildlife for about 17 percent of the total (see Figure VIII-2-1). With waterfowl being federally protected species and other wildlife largely beyond our control, half of the current pollution load is effectively beyond the power of the county to eliminate in the near term.

Another major impact of resident geese is significant alteration of the ecology of our marshlands. While migratory geese visited marshes on their twice-yearly trips through our region, the stopovers were brief and were timed so that plants had either not yet sprouted or had matured sufficiently that they were not destroyed by feeding activity. However, populations of resident geese are permanent voracious foragers that feed on newly sprouting plants to the point that some plant species are nearly eliminated from the habitat. This is particularly true of plants such as wild rice, which reseed themselves annually and provide food to many animal species. When all of the sprouting plants are consumed before they can mature and produce seeds, there will be no new plants the following year. For example, where wild rice was once an abundant species, many of our marshes are now nearly devoid of it. Thus, because of the ways in which geese change the ecology of marshes they have caused loss not only of key plant species but also of the animal species that are dependent on those plants.

Figure VIII-2-1

**Sources of Fecal Coliform Pollution  
in Accotink Creek**

**C. ISSUES IN ADDRESSING THE PROBLEM**

**1. Goose Population Biology**

Canada geese are large birds weighing 20-25 pounds, with a life expectancy of some 20 years. Geese mate for life and remain together as pairs year-round. If one of the pair dies or is killed, the other will find a new mate. Mating season is from early February through early April, with nesting season from late March through mid May. Geese begin to nest at three years of age. Eggs are laid approximately one per day until there is an average of five eggs per nest. Incubation (sitting the eggs) does not begin until all eggs have been laid. Eggs not being incubated are cool to the touch. Incubation time is 28-30 days. Normally, all eggs hatch on the same day. Maturation of goslings occurs from early May to early July.

Geese prefer isolated sites near water to nest, with small islands being a favored location. Nests usually are built on the ground in the open, but occasionally are located in brushy or marshy areas if flooding is not a problem. If chased from their accustomed area or if the nesting area has too many pairs, they will find alternative sites, sometimes

farther away from water, sometimes near other ponds in the vicinity, and occasionally on rooftops or other unlikely locations.

Migration is a learned process with which resident geese have not become familiar. Geese return to the general area of their birth to nest, sometimes to the exact site and at least to a nearby pond or lake. Migratory geese nest in Canada while geese nesting in our area are resident geese that were born here. Whereas migratory geese have a flight range of 2,000-3,000 miles, resident geese rarely venture more than 100-200 miles and then only in search of food, water, or safety. Migratory geese do not become resident unless they are injured and can no longer fly for long distances.

Molting season runs from early June to late July. Flight feathers are lost in June and the birds are unable to fly for several weeks, but by early August new flight feathers are fully developed and all birds (except for those injured) are able to fly again. During the molting period, geese need to be near water so they can escape from predators by swimming. They also need an easily accessible food supply during this time.

Natural predators of geese include foxes, raccoons, large owls, snapping turtles and, more recently, coyotes.

## **2. Considerations of Public Opinion**

Many residents find considerable aesthetic reward in having a few geese in areas where they can be observed and feel that the presence of such attractive wildlife creates a pleasant ambience. While this may be true, many others find the fouling of yards, open space and water bodies to be unacceptable, especially where geese congregate in appreciable numbers. Moreover, most of the public is unaware, or at best only dimly aware, of the extent to which geese are major polluters of our ponds, lakes and reservoirs, including some of our water supply sources. As the general public becomes better informed about the pollution aspects of goose populations, greater consensus on remedial approaches should result.

## **3. Federal Limitations on Remedial Action**

Geese, as migratory waterfowl, are protected by federal laws administered by the U.S. Fish and Wildlife Service. Therefore, population reduction by lethal measures applied to adult or juvenile geese is generally not an option. The Fairfax County Park Authority has its own egg addling permit applicable to its parklands. In situations where adult birds are creating an extreme nuisance, the Department of Agriculture Wildlife Service can send staff to round up and relocate them. However, the Fish and Wildlife Service does issue permits for egg addling (including egg oiling) programs as a means of population stabilization. Fairfax County holds such a permit for programs anywhere in the county under supervision and/or monitoring by the county Wildlife

Biologist. Use of trained Border Collies to harass geese into leaving an area is not regulated so long as they do not directly attack or kill the geese.

## **D. METHODS FOR POPULATION MANAGEMENT**

Population management methods that utilize immediate population reduction are not an option due to stringent federal regulations against killing geese once they are hatched. However, the methods outlined below are permissible and accepted approaches to controlling goose populations. Population stabilization coupled with measures that discourage geese from future nesting in an area has proved effective in longer term reductions of population.

### **1. Population Stabilization**

Egg addling and egg oiling are quite effective in preventing eggs from hatching. Strictly speaking, egg addling is vigorous shaking of the egg at a fairly early stage in order to homogenize the contents. This will prevent further development of the egg. Egg oiling coats the surface of the shell with a vegetable oil such as corn oil, which will prevent oxygen from getting to the interior of the egg. This also is effective in halting further development of the egg. Sometimes both methods are referred to as "egg addling." When a clutch of eggs is thus treated, the goose will continue to attempt to incubate them for the normal period, but they will fail to hatch, thus limiting the population to the adult geese already present.

### **2. Population Exclusion**

Most nuisance abatement measures are based on population exclusion. For example, trained Border Collies have been successfully employed to herd geese away from areas where they constitute a nuisance. The geese soon learn to avoid areas patrolled by the dogs, regarding them as unsafe, and they move to other areas where they do not feel threatened. This method of control has been particularly effective in large, relatively open areas such as golf courses. The major negative aspect of this method is the impact on adjacent properties. When the dogs herd the geese off of one property, they necessarily go to the one next door or in the near vicinity. Thus, while one locale is benefited, adjacent locales are afflicted through transference of the problem.

### **3. Special Foraging Areas**

In some cases, an area can be set aside where a small population of geese can be resident without creating an undue nuisance. However, in such cases the aesthetic

appeal of having the geese nearby must be balanced by adequate consideration of the water pollution and other waste problems created.

#### **4. Landscaping Modifications**

Altering landscaping can sometimes be an effective tool in discouraging geese from congregating near ponds. Bushy plantings, reeds and tall grasses, strategically placed around a pond, will be perceived by geese as a hiding place for predators, thus discouraging them from using that area.

#### **5. Repellents**

There are commercially available, nontoxic chemical repellents that discourage geese from eating grass. The disadvantage to this approach is the necessity for frequent reapplications, since each time the grass is mowed most of the repellent is removed along with the clippings.

#### **6. Prohibition of Feeding**

Feeding geese encourages them to become resident and to congregate in areas where a "free lunch" is provided. This exacerbates the very nuisance that one is attempting reduce. Also, feeding bread and various kitchen scraps is harmful to the geese's health even though they will avidly feed on such items.

#### **7. Combined Approaches**

Clearly, combinations of several of the above approaches can be far more effective than their use individually. For example, the use of trained Border Collies together with landscaping modifications can be quite effective in creating an "undesirable" habitat. If egg oiling is added to this for the few nests that may be established, significant reductions in usage of this area in following years can be achieved.

#### **8. Immuno-contraception**

Immuno-contraception has been proposed for controlling Canada goose populations. However, it is inherently fraught with even greater limitations and disadvantages than is this technique with respect to deer populations. Therefore, it is not a subject for serious consideration for Fairfax County.

## **E. PUBLIC EDUCATION PROGRAM NEEDS**

Public awareness of both the pollution problems caused by geese and of the mating and nesting cycle of geese is the key to being able to effectively address the "goose problem." At present, insufficient attention has been given by the public media to the pollution aspects of the problem. Since this pollution creates significant public health risks, the problem needs coverage on the county website and through informative bulletins to local homeowners associations.

## **F. PUBLIC AGENCY RESPONSIBILITY**

The office of the county Wildlife Biologist within the Animal Services Division of the Fairfax County Police Department has been assigned primary responsibility for management of geese by the Board of Supervisors. However, due to the fact that Canada geese are federally protected waterfowl, the U.S. Fish and Wildlife Service exercises significant regulatory and permitting functions that govern Fairfax County's geese management activities. Fairfax County was the first local jurisdiction in the nation to be granted a master permit for egg addling programs and is thereby authorized to train residents, as individuals or groups, to conduct egg addling under its monitoring and control. Except for federally issued hunting permits, intentional killing of hatched geese by humans is prohibited by federal law. In cases where it is necessary for adult geese or hatchlings to be removed from an area, this activity is conducted by the staff of the U.S. Department of Agriculture - Wildlife Services under permit from the U.S. Fish and Wildlife Service.

The population stabilization (egg oiling) program is highly cost effective since, once trained, all labor intensive activities are performed by local citizen volunteers. The only staff activities required are training, monitoring and reporting under the terms of the federal permit.

## **G. PROGRAM IMPLEMENTATION ACTIVITIES**

Goose management programs have been implemented at a number of locations in Fairfax County. Among the locations and the measures implemented under the Fairfax County permit and monitoring are:

1. Annandale
  - a. Northern Virginia Community College - population stabilization and nuisance abatement, nine years
  - b. Pinecrest Community - population stabilization and nuisance abatement, eight years

- c. Pinecrest Golf Course - population stabilization and nuisance abatement, eight years
- 2. Centreville
  - a. Franklin Farms - population stabilization, nine years
  - b. Westfields - population stabilization, eight years
- 3. Fairfax County
  - a. Lake Barcroft - population stabilization and nuisance abatement, 10 years
  - b. Fairfax County Parks - population stabilization, 10 years
  - c. Copeland Pond - population stabilization and nuisance abatement, nine years
  - d. Brook Hills - population stabilization and nuisance abatement, nine years
  - e. Waters Edge - population stabilization and nuisance abatement, eight years
- 4. Oakton
  - a. Fox Lake - population stabilization, eight years
- 5. Reston
  - a. Reston Community - population stabilization, nine years
- 6. Vienna
  - a. Trinity School - population stabilization, nine years
  - b. Champion Lake - population stabilization, eight years

All of these programs have demonstrated reasonable degrees of success in stabilizing populations. In some cases, populations have actually declined over time due to efforts to discourage geese from further attempts to nest there.

In 2002, there were 275 eggs added under the county permit and approximately 1,200 under the separate Fairfax County Park Authority permit. In 2003, there were 255 eggs added at 61 nest sites under the county permit and 674 eggs at 123 nest sites under the FCPA permit. In 2004, due to staffing limitations, there were ten eggs from two nests added under the county permit and 1,403 eggs from 243 nests under the Park Authority Permit. In 2005 there were 1,403 eggs added from 243 nests under the FCPA, but none under the county permit, again due to staff limitations. In 2006, the FCPA program added 509 eggs in 109 nests and the county program added 299 eggs. In 2007, the FCPA program added 451 eggs in 115 nests. In 2008, the FCPA program added 522 eggs in 123 nests. The smaller numbers in the last two years are attributable to the dispersal of geese as the result of prior years' activities.

## **H. CONCLUSIONS**

While geese in small numbers are regarded by many as a pleasant addition to the local ambience, large resident goose populations in many areas of the county constitute a major environmental nuisance and public health risk. Resident goose populations tend to congregate near ponds, lakes and slow-flowing streams, which leads to contamination of these water bodies with high levels of fecal coliform bacteria. In addition, they foul the grassy open areas in the vicinity with their feces. The high growth rate of the resident goose population and the limitations on methods of control have raised pollution to levels that are not only environmentally unacceptable but that now constitute a significant public health concern.

While the programs currently in place to address these problems are good, they need to be replicated much more widely in additional areas of the county. Moreover, more intensive public information campaigns and community outreach efforts are badly needed to actively involve a larger number of individuals and community organizations in population control programs. The office of the county Wildlife Biologist is not adequately staffed to conduct and/or supervise these critical functions. This staffing limitation is very unfortunate, since geese are a major contributor to pollution of the streams and water bodies that are sources of drinking water and are used for recreational purposes and the county is facing increased restrictions in the Total Maximum Daily Load of pollutants that may be present in our surface waters.

## **I. COMMENT**

1. The Park Authority has recently held exploratory discussions to examine the feasibility of using managed shotgun hunts for reduction of resident goose populations. This approach has considerable promise for efficiently meeting program goals and a site has been identified for testing a pilot program. It is strongly suggested that a pilot program be implemented in the coming year.

## **J. RECOMMENDATION**

The recommendation provided below address only the second section of this chapter (geese management issues). Comments and recommendations addressing deer management and comments addressing wildlife borne disease issues are found beginning on pages 298 and 321, respectively.

1. EQAC strongly recommends that the goose management program be continued, particularly the public outreach and training activities so that a cadre of volunteers can be created to provide the labor to do the actual egg-oiling that is the principal control measure.

## **ACKNOWLEDGMENTS**

EQAC gratefully acknowledges the following individuals who have provided data and information included in this report:

Earl Hodnett, former Wildlife Biologist, Animal Services Division, Fairfax County Police Department.

Charles Smith, Resources Management Division, Fairfax County Park Authority.

## **VIII-3. COYOTES IN FAIRFAX COUNTY**

### **A. OVERVIEW**

There have recently been a growing number of reports of coyotes in the Washington metropolitan area, particularly in the western portions. They have begun to invade habitats such as Rock Creek Park, and there have been sightings in Falls Church. Contrary to some public perceptions of coyotes as vicious predators without redeeming features, there are distinct pluses as well as minuses to having them around.

### **B. BACKGROUND**

Biologically, the coyote, *Canis latrans*, is another member of the dog and wolf family. The historical range of the coyote was from the western foothills of the Rocky Mountains to the Mississippi River. In the 1880s they began to spread west and today are endemic all the way to the Pacific shores. In the early 1900s they began to spread eastward and during the last 15 years or so have become established in the mid-Atlantic region. They adapt quite readily to urban and suburban environments as long as there are small semi-secluded habitats from which they can venture forth to hunt and forage. Once they enter an area that meets their habitat requirements they rapidly become endemic and are not easily dislodged.

Coyotes most often hunt and forage as solitary individuals or sometimes as pairs, rarely as packs of several adult animals together. An exception occurs in the case of a female with young pups who are being taught to forage or are led on treks to obtain food from human sources such as improperly stored trash and garbage.

The usual food of coyotes is rodents and other small varmints. Adult coyotes will sometimes prey on small deer fawns but do not attack adult deer because of their size. Occasionally coyotes will opportunistically attack small domestic pets, but this most often occurs when they are foraging for improperly stored garbage and outdoor pet feed dishes around human habitations.

### **C. ADDRESSING THE PROBLEM**

The only action required at this time is monitoring the spread of the coyote population and any adverse incidents that may occur.

## **D. PUBLIC EDUCATION PROGRAM NEEDS**

The public should be kept informed about when and where to expect to see coyotes. While coyotes will sometimes prey on small pets, e.g., cats and small dogs and the public needs to be kept informed on measures to prevent this, the public also needs to develop awareness of the beneficial aspects of coyotes in controlling populations of small rodents and excessive numbers of small deer fawns. Coyotes can also play a beneficial role in controlling populations of Canada geese.

## **E. PUBLIC AGENCY RESPONSIBILITY**

The county Wildlife Biologist has the primary responsibility for monitoring the coyote population and addressing public education needs. The Animal Control Division of the Fairfax County Police Department is responsible for impounding animals that are behaving strangely and may be infected with rabies. The Health Department monitors cases where humans have been bitten or scratched.

## **F. PROGRAM IMPLEMENTATION ACTIVITIES**

No program activities are envisioned at this time except for monitoring and public education activities by the county Wildlife Biologist.

## **G. CONCLUSIONS**

Coyotes have become established in parts of Fairfax County and will spread and become endemic over time. The public needs to develop an understanding of the occasional risks to small pets but also needs to be educated about the beneficial control of a variety of rodents and other varmints that coyotes provide. They may be of particular benefit in controlling the goose population since they are a natural predator not subject to the restrictions of the Federal Migratory Waterfowl Act.

## **H. COMMENT**

There are no recommendations at this time except that the county Wildlife Biologist should monitor the situation and keep the relevant county agencies and the public informed.

## VIII-4. WILDLIFE BORNE DISEASES OF CONCERN IN FAIRFAX COUNTY

### A. OVERVIEW

There are a number of zoonotic diseases (those in which wildlife serves as a reservoir) that affect humans. Four such diseases of greatest concern in Fairfax County are West Nile Virus, Lyme Disease, Rabies and the complex of diseases caused by fecal coliform bacteria. The causative agents, modes of transmission and means of prevention are briefly discussed below. A new initiative, the Disease Carrying Insects Program, has been undertaken by the Fairfax County Health Department. The reader is referred to their report on West Nile Virus and the Pilot Tick Surveillance Program for additional details in these areas.

### B. BACKGROUND

#### 1. West Nile Virus

West Nile Virus is transmitted to humans and other warm-blooded animals by mosquitoes that have fed on birds infected with the virus. Crows have been particularly implicated as a reservoir species, but it is known that many other bird species are also involved. Mosquitoes are intermediate carriers that convey the virus from birds to humans. There have also been several cases in Fairfax County of horses being infected. The principal intermediate carrier is *Culex pipiens*, the common house mosquito. There is currently no evidence for person-to-person transmission (except in the unusual situation of organ transplants or blood transfusions from infected donors). Some people infected with West Nile Virus apparently experience few, if any, symptoms. Others have mild flu-like symptoms such as low-grade fever, head and body aches, skin rash or swollen lymph nodes. In a few cases such as the elderly, children and those with weakened immune systems, the infection may cause encephalitis (inflammation of the brain), meningitis (inflammation of the brain covering) or, occasionally, death. Encephalitis and meningitis symptoms include rapid onset of high fever, severe headache, stiff neck, muscle weakness and coma. The virus is of recent occurrence in this country, having been first identified in New York in 1999. However, it has now spread to every state in the lower 48. The Centers for Disease Control and Prevention of the U.S. Public Health Service predicts that the west coast will be particularly hard hit next year because the disease has recently appeared there, and the usual pattern is an eruption of cases the year or two following first appearance. By the end of 2002, CDC had confirmed 161 cases, including 18 deaths,

since 1999. For the year 2003, these figures had jumped to 4,156 reported cases and 284 deaths. This major outbreaks in early 2003 resulted in 2,000 cases in Colorado, 1,000 in Nebraska and 800 in South Dakota. The CDC figures on reported cases show a rapidly increasing incidence. There is almost certainly major underreporting of incidence, since most of those infected apparently have mild symptoms that do not require a visit to the doctor, and even for those actually infected and seeing a physician, the symptoms may be insufficient to trigger a report without confirmation by serologic tests.

**a. Preventive Measures**

**i. Mosquito Habitat Elimination**

An important preventive measure to reduce the chance of infection with West Nile Virus is to eliminate, wherever possible, standing water that provides a breeding habitat for mosquitoes. Any containers such as cans, pails, wheelbarrows, etc., should be emptied and stored in such fashion that water will not collect in them. Bird baths and similar containers should have the water changed every two or three days. Ponds can be stocked with the small fish *Gambusia* that feed on mosquito larvae. There are two species: *Gambusia affinis* and *G. holbrooki*. Both are highly effective in keeping ponds and lakes free of mosquito larvae. *Gambusia holbrooki*, the most common species in the eastern United States, has become endemic in many areas of eastern Virginia and can be readily transplanted from one pond to another.

**ii. Insect Repellents**

Since it is nearly impossible to completely eliminate the presence of mosquitoes, some of the most effective preventive measures available for mosquito-borne infections such as West Nile Virus and tick-borne Lyme disease are sprays or lotions containing DEET (N,N-diethyl-meta-toluamide). The active ingredient, DEET, was developed by the U.S. Department of Agriculture in 1946, originally for use by the military. The most convenient method of application to the exposed skin is as an aerosol spray. A recent study reported in the *New England Journal of Medicine* showed that the higher the concentration of DEET in the spray, the longer lasting the protection. In the case of mosquitoes, products containing 20 percent DEET were effective for four hours, those with 25 percent DEET were effective for five hours, and those with 35 percent DEET were effective overnight. It is estimated that there have been more than eight billion applications of DEET over the past 50 years with an excellent safety record. However, a study of DEET by pharmacologists at Duke University, reported in the November 2001 issue of the *Journal of Experimental Neurology*, indicated that frequent and prolonged DEET exposure might cause adverse neurological effects. It was recommended that use be

limited to preparations containing no more than 30 percent DEET for adults and lower concentrations for children.

## 2. Lyme Disease

Lyme Disease, caused by the bacterial spirochete *Borrelia burgdorferi*, is transmitted to humans primarily, if not exclusively, by *Ixodes scapularis*, the common deer tick. Deer ticks are dark brown to black and about the size and shape of a sesame seed. The white-tailed deer appears to be the primary reservoir, but rodents are also implicated. Lyme Disease was first identified in Lyme, Connecticut, in the mid-1970s when a group of children developed arthritis-like symptoms. Within a few days to several weeks of receiving an infected tick bite, most victims will have a red, slowly expanding "bull's-eye" rash (red in the center, pink at the periphery) and such symptoms as malaise, fever, headache and muscle and joint aches. The longer a case of Lyme Disease persists without treatment, the more severe, debilitating and long lasting the symptoms are likely to be, such as arthritis and neurologic abnormalities. Many of the physicians treating Lyme Disease have found three or four week courses of doxycycline or amoxicillin to be effective treatments for early stages of the disease, but later stages may require intravenous antibiotics for a month or more.

Confirmed cases of Lyme Disease underwent a sharp increase through June, 1997 (Table VIII-4-1). The decrease of the next two years may be attributable to greater public awareness of the threat represented by deer ticks and greater use of proper preventive measures when hiking and working in wooded areas. It is unclear, however, whether a decrease in deer population will lead to a corresponding decrease in Lyme Disease cases, since other animals can act as reservoir species and may inhabit areas within which deer populations decline. However, it is interesting to note that neighboring, semi-rural Loudoun County, which has a large deer population, has the highest per capita incidence of Lyme Disease cases reported in the commonwealth. In 2001, there were 65 cases compared with 29 cases in 1999, according to the Loudoun County Health Department. This suggests a strong upward trend in incidence where there are large populations of white-tailed deer.

### a. Preventive Measures

#### i. Vaccine

In our Annual Report for 1999, we noted that a new vaccine (Lymrix) for the prevention of Lyme Disease had just been released. In our Annual Report for 2000, we noted that there had been adverse reactions to the vaccine and advised consultation with your personal physician about the advisability of being vaccinated. As a result of an increasing number of adverse reactions, this vaccine was subsequently withdrawn from the market. While it is true that

vaccination of those persons intensively exposed to deer ticks might have been helpful, for the vast majority of the population, consistent use of ordinary preventive measures should be entirely adequate. When engaged in activities that might result in exposure to deer ticks, proper clothing is a must, preferably long pants tucked into boot tops or spraying the lower legs, trouser bottoms and sock tops with insect repellent, since most ticks are encountered close to the ground.

<b>Table VIII-4-1                      Reported Lyme Disease Cases Meeting                      Centers for Disease Control Case Definition Program                      Fairfax County</b>

ii. Insect repellent

The same DEET-containing repellents recommended for mosquitoes (see West Nile Virus above) are also highly effective for ticks. See the discussion of DEET-containing insect repellents in the West Nile Virus section above.

**3. Rabies**

Rabies is a viral disease that affects the nervous system and may have a post-infection latent period from a number of days to several weeks. During the latent period, between the time of an animal bite and the onset of overt symptoms, the virus is propagated along the nerve fiber sheaths until it reaches critical areas of the brain. While rabies has been present in this area for many years, it exists at a low level with the incidence appearing to cycle over a period of several years. This is attributed to the fact that infection, when it reaches the symptomatic stage, is uniformly fatal. Thus, an infected animal may infect several others and there will appear to be a relatively high incidence, but when those animals die there are fewer carriers for a period of time during which the incidence appears to be lower. We are currently experiencing a periodic upturn in the rabies cycle, particularly among foxes and raccoons. Rabies is transmitted to humans and other mammals through the saliva of an infected animal almost always in the overtly symptomatic stage, which usually only lasts about ten days. During this time, an infected animal usually exhibits aberrant behavior, such as a nocturnal animal being around during the day, exhibiting signs of confusion, showing an unsteady gait, desperately seeking water but unable to drink, often aggressively approaching dogs and humans, etc. The main wildlife reservoirs in this area (and the number of cases in 2002) are raccoons (52), foxes (9), skunks (9) and, to a lesser extent, some bats. Cases from July 1, 2004, to June 30, 2005, were raccoons (29), foxes (13), skunks (5), bats (6) and groundhogs (1). Domestic animals, e.g., dogs and occasionally cats, may act as secondary transmitters of the disease after having contracted it from a wildlife source. The incidence of rabies in animals fluctuates; for example, Fairfax County had 80 cases in 2002, 47 cases in 2003 and has had 52 cases by the end of July in 2004 and 54 cases by the end June in 2005. In CY 2004 612 animals were tested with 69 testing positive, and through October 2005 35 of the 480 animals tested were positive.

**a. Preventive measures**

The most important measure for prevention of rabies is to avoid being bitten by or direct contact with an animal that might be infected. If you encounter an animal that is behaving strangely or exhibiting symptoms such as excessive drooling, contact Fairfax County Animal Services Division at **703-830-3310** without delay. This also applies if you find a dead animal that you suspect may have died of rabies. Animal Services will send a professionally trained officer to impound the

animal (or carcass) for quarantine and testing. If you are bitten or scratched or come in contact with the animal's saliva, seek immediate medical attention so a determination can be made as to whether you may require a course of preventive inoculations. The protective serum used for such inoculations has been substantially improved in recent years so that fewer doses are required, and those have fewer unpleasant side effects.

#### **4. Fecal Coliform Bacterial Diseases**

Fecal coliform bacterial diseases in humans are caused primarily through ingesting or wading or swimming in contaminated water. There are a number of bacteria that can be responsible, but the thing they share in common is being present in the gut and intestinal wastes of a variety of wildlife and domestic animals. The relatively new science of molecular genetic DNA testing has made it possible to reliably identify the particular animals responsible for the pollution of a given water sample. Studies carried out at several sites in Fairfax County indicate that Canada geese living in and about ponds and streams are principal contributors, while ducks, deer, raccoons, foxes and domestic dogs and cats are also significant sources (see Figure VIII-2-1 on page 271). When the wastes from these animal sources are deposited directly into, or washed into, streams and ponds, the pollution can build up to hazardous levels. For example, one pond in the McLean area, inhabited by Canada geese that had become resident, was extensively tested several years ago and was found to have levels of fecal coliform bacterial contamination that ranged from 21 to 27 times the level allowable in surface waters in the Commonwealth of Virginia. Another occasional source of such contamination is from leaks, overflows, or ruptures in the public sanitary sewer system or private septic systems. While illness from such bacteria is usually not life threatening and is readily treated with antibiotics, exposure to waters that one has reason to believe may be polluted should be scrupulously avoided.

Several years ago, budgetary limitations led to consideration of eliminating the county's Stream Monitoring Program. EQAC intervened in the discussion, pointing out that this monitoring was environmentally critical and not duplicated in any other county programs. As a result, the Board of Supervisors directed that the program be continued. Recently, an agreement has been reached in which the Stream Monitoring Program for bacterial contamination is being reorganized. The collection of samples will now be handled by staff of the Department of Public Works and Environmental Services responsible for the watershed management program, since they are in the field on a regular basis and it is efficient for them to perform this function. Analysis of the samples will continue to be performed by the Department of Health laboratories. It is felt that this arrangement will provide for better and more efficient monitoring of the health and safety of our streams, lakes and ponds.

**a. Preventive measures**

There is a general solution to this problem in which pollution of our surface waters is prevented in the first place. The main individual solution to the problem is to avoid disease caused by fecal coliform bacteria by not drinking water from sources whose pollution status is unknown and by not wading or swimming in water that is known to be, or suspected of being, polluted.

**C. PUBLIC EDUCATION PROGRAM NEEDS**

The Fairfax County Department of Health has available an excellent booklet entitled *Preventing Tick-borne Diseases in Virginia*. They also have a brochure entitled *Rabies and Animal Bites: What you should know and what you should do*. Additional information is available through the Health Department section of the county website <http://fairfaxcounty.gov/living/healthhuman/health.htm#environmental>

With the recent nearly epidemic explosion of West Nile Virus, there is near certainty of it becoming endemic in our area for the long term. Public education materials, comparable to those noted above, are available from our own county Health Department, especially at <http://www.fairfaxcounty.gov/fightthebite>. In addition, the Centers for Disease Control and Prevention of the U.S. Public Health Service has some recently-developed materials that are quite good. A new initiative, the Disease Carrying Insects Program, has been undertaken by the Fairfax County Health Department. The reader is referred to their report on West Nile Virus and the Pilot Tick Surveillance Program for additional details in these areas.

Because of the frequently changing levels of pollution in our surface waters, it is not practical to create printed materials identifying those streams and ponds that are affected by fecal coliform bacterial pollution. However, our excellent county website is an ideal way for the public to receive frequent updates on results of the Stream Monitoring Program and notices about waters that should be avoided due to pollution.

The public media generally do a fairly good job of reporting the finding of rabid animals. Such incidents could also be posted on the county website as advisories.

**D. PUBLIC AGENCY RESPONSIBILITIES**

The primary public agency responsibilities lie in the following areas:

1. Public education.
2. Monitoring of disease incidence.

3. Monitoring of pollution and exposure hazards.
4. Providing animal control services.
5. Providing mosquito abatement, where needed.

The Animal Services Division of the Fairfax County Police Department is responsible for animal control activities, such as impounding animals suspected of being rabid and similar wildlife-related activities. The Stormwater Planning Division of the Department of Public Works and Environmental Services will have responsibility for collection of water samples from streams, lakes and ponds. The Health Department has responsibility for most prevention and public education activities, water sample testing and various monitoring and information gathering programs.

## **E. HEALTH DEPARTMENT REFERENCE MATERIALS**

The Fairfax County Health Department has prepared several excellent brochures to provide information to the public on various animal and insect borne diseases and means for their prevention.

- Ticks and tick-borne diseases in Fairfax County
- Understanding mosquitos and West Nile Virus
- The Asian Tiger Mosquito
- Choosing the right repellent
- Rabies and Animal Bites: What you should know and what you should do

The Health Department website, [www.fairfaxcounty.gov/living/healthhuman/](http://www.fairfaxcounty.gov/living/healthhuman/), has additional information in the section entitled Health.

- Lyme Disease
- Mosquitos
- Rabies
- Environmental health contains information sections on
  - Malaria
  - Mosquitos
  - Rabies
  - The Stream Protection Strategy Program contains information on fecal coliform pollution

## **F. CONCLUSIONS**

The upsurge of West Nile Virus and Lyme Disease require continual monitoring and public education and are rapidly becoming serious public health issues. Rabies is a continuing low level, more or less steady-state, problem. Waters polluted by excessive levels of fecal coliform bacteria require mitigation, where possible, and monitoring and posting to warn the public against exposure. Malaria, of which a very few scattered cases have been reported, will require careful monitoring and epidemiologic tracking as well as mosquito abatement.

## **G. COMMENTS**

The comments provided below address only the fourth section of this chapter (Wildlife Borne Diseases of Concern in Fairfax County). Comments and recommendations addressing deer management and geese issues are found beginning on pages 298 and 309, respectively.

1. EQAC commends the Board of Supervisors for providing continued active support to the following ongoing programs:
  - The Stream Monitoring Program in which the Stream Protection Strategies Program of the DPWES performs sample collection and field testing and the Health Department performs laboratory testing and analysis functions.
  - Enhanced public education programs and initiatives in key areas, such as control of rabies and of wildlife contributing to pollution of surface waters, epidemiology and abatement of insect borne diseases such as West Nile Virus and Lyme Disease.
  - EQAC commends the Health Department for its excellent public education programs and advocates posting of advisories on the county website when polluted waters are identified.
2. EQAC feels that the Board of Supervisors should monitor these programs by scheduling periodic reports to its Environment Committee by county staff.

## **ACKNOWLEDGMENTS**

EQAC gratefully acknowledges the following individuals and organizations who have generously provided a variety of data and information included in this report and numerous helpful suggestions and recommendations:

Earl Hodnett, former Wildlife Biologist, Animal Services Division, Fairfax County Police Department.

Victoria Monroe, Wildlife Biologist, Animal Services Division, Fairfax County Police Department.

David Lawlor, former Assistant Wildlife Biologist, Animal Services Division, Fairfax County Police Department.

Harriet Calloway, R.N., (now retired) Epidemiologist, Fairfax County Health Department.

Laura Suzuki, R.N., MPH, Fairfax County Health Department.

John Ruthinoski, Fairfax County Health Department.

Jorge Arias, PhD., Fairfax County Health Department.

## **WILDLIFE AND THE ENVIRONMENT IN FAIRFAX COUNTY: SUMMARY OF RECOMMENDATIONS**

### **Impacts of Deer in Fairfax County**

There are three recommendations for continuance of activity in the deer management program:

1. Managed hunts should be continued as they have become both cost-effective and efficient in reducing excesses in the deer herd.
2. The sharpshooter events should be continued because they are both humane and cost effective.
3. The newly begun archery program should be continued as a means of controlling deer depredation of vegetation on residential properties where firearms cannot be used.

### **Impacts of Geese in Fairfax County**

1. EQAC strongly recommends that the goose management program be continued, particularly the public outreach and training activities so that a cadre of volunteers can be created to provide the labor to do the actual egg-oiling that is the principal control measure.

### **Coyotes in Fairfax County**

There are no recommendations at this time except to have the county Wildlife Biologist monitor the situation and keep the relevant county agencies and the public informed.

### **Wildlife Borne Diseases of Concern in Fairfax County**

There are no recommendations at this time, although EQAC has provided comments in this section recommending active support to a number of ongoing programs and to the monitoring of these programs and reporting to the Board of Supervisors' Environmental Committee.

---

ANNUAL REPORT ON THE ENVIRONMENT

CHAPTER IX

**NOISE, LIGHT  
POLLUTION AND  
VISUAL BLIGHT**

---

# IX-1. NOISE

## A. OVERVIEW

Noise is a byproduct of our everyday lives, and noise that one group finds tolerable may be considered noise pollution to another. To some, sounds coming from an airport are the sounds of the economy working and growing, while others feel that this noise deprives them of their privacy and quiet.

Recent studies suggest a growing intolerance among residents and communities for noise associated with airports, traffic, construction and athletic events, etc. The impacts of noise on a community include:

- Diminished privacy and quiet at home or at an outdoor recreation event, vacation or rest site (private cabin at the lake, river or beach).
- Interrupted sleep.
- Interrupted entertainment and conversation.
- Interruptions at work or school.
- Property damage such as broken windows.

Any regulation of noise pollution must be based on scientific findings and not solely on human perception. Noise is measured by scientific instruments that receive the sound and determine its location and intensity as it radiates from the source. The resulting intensity levels and locations allow for noise levels to be regulated when society calls for abatement. For an explanation of how sound is measured and perceived, see the county website at <http://www.fairfaxcounty.gov/dpz/environment/noise/>.

In response to an EQAC recommendation for the development and distribution of educational materials to the public regarding noise issues, county staff has established a website containing information and links addressing noise issues. The site is available at <http://www.fairfaxcounty.gov/dpz/environment/noise/>.

In the next sections of this report some key noise pollution concerns will be addressed, followed by recommendations to alleviate their impacts.

## **B. AIRPORT NOISE**

### **1. Operations and Associated Noise Impacts at Ronald Reagan Washington National Airport and Washington Dulles International Airport**

Fairfax County is served by Ronald Reagan Washington National Airport (Reagan National) and Washington Dulles International Airport (Dulles). Reagan National and Dulles are vital to the region's overall economy, connecting the Washington area with 140 domestic and international destinations. At Reagan National, most flights are short to mid-range jet aircraft flights operated by major airlines, but at Dulles, all types and sizes of aircraft are found. On a typical day, about 4,000 airplanes will fly in the skies over the Washington region. Most of these flights are to and from Reagan National, Dulles, Baltimore-Washington International Airport or Andrews Air Force Base. Many additional flight operations also occur at the many general aviation airfields in the region. In addition, it is EQAC's perception that low-flying helicopter traffic has markedly increased over Fairfax County's residential neighborhoods in the last several years.

According to the Metropolitan Washington Airport Authority's website, in 2009, 40.8 million passengers traveled through Reagan National and Dulles Airport on 612,513 flights. This represents a drop in both the number of passengers and the number of flights from last year for both airports. At Dulles, the number of passengers dropped 2.8% and the number of flights dropped 5.5%, for 19,925 fewer flights. At National, the number of passengers dropped 2.5% and the number of flights 1.9%, for 5,152 fewer flights. This decline first began in 2008 with the economic downturn and has continued because of the lackluster economy, marking the first significant decrease in traffic since the terrorist attacks in 2001.

The number of daily operations at Dulles varies significantly, with weekday operations typically exceeding weekend day operations by several hundred flights. Most flights operate between 7:00 A.M. and 10:00 P.M., with many flights in some hours and a relatively small number in other hours. Peaks are typically at 7 A.M., 12 P.M., 5 P.M. and 8 P.M., with low times at 10 A.M., 2 P.M., 6 P.M. and between 10 P.M. and 6A.M.

Reagan National has about half as many flights as Dulles, with more than 700 flights on a typical day. Weekday operations are typically greater than weekend day operations. Most flights occur between 7 A.M. and 10 P.M., with a fairly consistent number of scheduled operations for each hour within this period.

Because Reagan National is located near centers of political power and residential areas, aircraft at National are subject to several restrictions. There

are four No Fly zones, which are the U.S. Capital, the National Mall, the White House and the Vice President's house at the Naval Observatory. Under the Federal Aviation Administration's High Density Rule, carriers are limited, with some exceptions, to 37 scheduled operations per hour and the commuter carriers to 13 scheduled operations per hour. In addition, Reagan National has one of the strictest noise regulations in place at any major airport in the United States. All aircraft operating between 10:00 P.M. and 7:00 A.M. (with a half hour grace period) must satisfy the airport's nighttime noise limits or face monetary fines of \$5,000 maximum per violation. There are approximately 5-10 noise violations each year.

The Metropolitan Washington Airports Authority, which operates both Reagan National and Dulles Airports, has historically monitored aircraft and community noise around the clock at 32 locations in the Washington, D.C. Metropolitan Area. The monitoring equipment has evaluated different sound events and has separated those events likely to have been caused by aircraft from the remaining events, which have been attributed to the community. The Metropolitan Washington Council of Governments' Aviation Policy Committee (formerly known as the Committee on Noise Abatement and Aviation at National and Dulles Airports) and the Airports Authority selected the monitoring sites from recommendations offered by the local governments. Due to the age of the monitoring system, the system had become unreliable, and the Metropolitan Washington Airports Authority has discontinued publication of quarterly monitoring reports.

A new monitoring system has been acquired and became operational at the end of 2008. While the new equipment is more reliable than the old, it monitors noise at the same sensitivity level. Noise is monitored at 40 locations throughout the metropolitan Washington area, with 20 sites for Reagan National and 20 for Dulles, including 15 locations in Fairfax County. The Fairfax County locations are listed below:

Monitor locations serving primarily Reagan National:

- Great Falls Elementary School
- Langley Forest
- Marlan Forest
- Sandburg Middle School
- Springfield

Monitor locations serving primarily Dulles:

- Armstrong Elementary School
- Chantilly Post Office
- Crossfield Elementary School
- Cub Run Elementary School
- Floris Elementary School
- London Towne Elementary School
- Pleasant Valley Golf Course

- Union Mill Elementary School
- Virginia Run Elementary
- Westfield High School

The Metropolitan Washington Airports Authority is working with the Metropolitan Washington Council of Governments to determine the reporting format. Although neither the official reporting frequency nor the reporting format have yet to be determined, general noise information for specific flights is publicly available on the Metropolitan Washington Airports Authority’s new online flight tracking and noise monitoring system, Airscene (see below).

The new flight-tracking system, Airscene, also allows on-line reporting of noise complaints with noise complaint response feedback. It can be found on the Metropolitan Washington Airports Authority’s website, [www.metwashairports.com](http://www.metwashairports.com), on both the Dulles and Reagan National home pages. Each airport home page has a section in the middle titled “What’s New.” Scroll down to find “Online Noise and Flight Tracking Tool” and a link.

Complaints can also be registered at the Airport Authority’s noise complaint centers at Reagan National and Dulles (see below for phone numbers). In 2009, the center at Reagan National received 99 complaints compared to 83 in 2008. At the Dulles center there were 287 complaints, a significant increase from 166 in 2008, due to temporary changes in flight patterns caused by the renovation of the central north-south oriented runway.

## **2. Additions to Washington Dulles International Airport**

On October 14, 2005, the Federal Aviation Administration published a Record of Decision for the construction of new runways, terminal facilities and related facilities at Dulles Airport. The publication of this document completed the lengthy Environmental Impact Statement process for this project, providing the Metropolitan Washington Airports Authority with the approval needed to proceed. Two new runways have been authorized: a north-south oriented runway to be constructed parallel to and 4,300 feet west of the westernmost of two existing north-south runways and a runway roughly oriented east-west that

will be constructed parallel to and 4,300 feet south of the existing east-west runway.

The new north-south runway, 9,400 feet long, 150 feet wide and made of concrete, was opened for use in November 2008. The entire project includes the new runway, a parallel taxiway, connector taxiways and cross-field taxiways that connect to the terminal and existing airfield areas. With this new runway available to handle traffic, the middle north-south runway was taken out of operation for maintenance purposes beginning in July 2009 and was available for use by late fall.

Noise from the new runway has been monitored since September 2008 from a station at Pleasant Valley Golf Course in Fairfax County and four additional stations in Chantilly. EQAC strongly believes that evaluation of noise impact (to include both 24-hour noise monitoring and analysis to identify operational approaches that can be pursued to reduce noise) should be reported quarterly and provided to a number of stakeholders including the Fairfax County Board of Supervisors, EQAC and relevant county staff. The Metropolitan Washington Airports Authority staff has suggested that at least one year of data from the new runway configuration is needed to be able to evaluate operations on the new runways as they relate to community noise impacts and whether or not such impacts would suggest the need for consideration of operational changes.

Construction dates for the fifth runway will be set in the future.

There are many other construction projects underway at Dulles Airport, including:

- Improvements to the airport roadway system and connections to Route 28 and the Dulles Access Road.
- Expansion of the International Arrivals Building.
- Rail to Dulles.

Construction projects at Reagan National Airport include

- Consolidated communication center.
- Runway and taxiway area improvements.

### **3. Part 150 Noise Compatibility Planning for Ronald Reagan Washington National Airport**

Portions of the following discussion have been excerpted and modified slightly from the website of the Metropolitan Washington Council of Governments.

The Metropolitan Washington Airports Authority has prepared a major update of the Noise Compatibility Study for Reagan National. This study, conducted in accordance with the provisions of the Federal Aviation Administration's "Part

150” process, has been designed to forecast future noise contours at Reagan National and to propose abatement and mitigation actions to reduce community noise impacts. A study report containing a series of recommended noise abatement and mitigation measures was released in September 2004. Noise abatement recommendations include, among other things, the application of improved technology to keep arriving and departing aircraft over the Potomac River up to their designated turning points, an improved distribution of turning points from the Potomac River between five and ten miles south of the River and the improvement of the airport’s noise monitoring and flight tracking system. In October 2004, the Fairfax County Board of Supervisors endorsed staff comments concerning these recommendations; the comments were generally supportive of the noise abatement recommendations but recommended a follow-up assessment of the effectiveness of these measures.

Because of the importance of this issue to the community, the Metropolitan Washington Council of Government’s Committee on Noise Abatement and Aviation at National and Dulles Airports (now known as the Aviation Policy Committee) partnered with the Metropolitan Washington Airports Authority throughout the process of development of the noise abatement and mitigation recommendations. A Part 150 Study Advisory Committee was established to assist and advise the Airport Authority in this study; indeed, the Advisory Committee’s recommendations were incorporated into the Part 150 Study document. In all, the Part 150 Study recommended eight noise abatement measures (measures designed to reduce noise impacts) and six noise mitigation measures (measures taken to promote compatibility with and awareness of noise impacts). The recommended noise abatement measures were:

- Efforts supporting the use of advanced navigation technology.
- Two measures addressing the dispersal of flight paths in the area between five and ten miles south of the airport.
- Revision to the Airport Facility Directory reflecting current noise abatement procedures.
- Phasing out of “hushkitted” Stage 3 aircraft.
- Updating the airports’ noise monitoring and flight tracking system.
- Establishing a system to report airline compliance with noise abatement measures
- Enhancement of the noise complaint system.

Five of the six mitigation measures were directed toward neighboring localities (e.g., disclosure of noise impacts; building code modifications; noise overlay zoning) and the sixth recommended an expanded Metropolitan Washington Airports Authority airport noise information program.

The Metropolitan Washington Airports Authority submitted the Part 150 study to the Federal Aviation Administration, which completed its review of, and issued a Record of Approval for, the Noise Compatibility Program in early

2008. Four of the eight proposed noise abatement measures were approved, and all six of the mitigation measures were approved with the acknowledgment that these measures were beyond the authority of the Federal Aviation Administration. Four noise abatement measures were disapproved for the purposes of Part 150—in disapproving these measures, the Federal Aviation Administration noted that the noise exposure model and noise compatibility program for the airport showed “no present or forecasted incompatible land uses within the DNL 65 dB” contour. Effectively, the Federal Aviation Administration is supporting the use of agency funds only for noise abatement projects that support actions that would be applied in areas inside the DNL 65 dBA contour, with the recognition that the Metropolitan Washington Airports Authority or Air Traffic Control could pursue similar or supportive actions at their discretion (and in the case of noise monitoring and flight tracking, at the Airport Authority’s expense). As noted in the Federal Aviation Administration’s Record of Approval, a working group has been formed to develop advanced navigation procedures for arrivals and departures and to encourage the use of this technology.

Nevertheless, EQAC continues to share the concerns of communities both north and south of Reagan National regarding noise impacts associated with airport operations and holds that noise impacts do not stop at the DNL 65 dBA model contour shown in the Part 150 study. The DNL 65 dBA contour for Reagan National encompasses a relatively small area that is located largely on airport property and within the Potomac River; some commercial, industrial and governmental areas are also located within this area, as is park land. No residences are located in areas that are currently exposed to, or that are projected to be exposed to, noise impacts of DNL 65 dBA or above. However, there have been significant concerns about airport noise impacts well outside this area, and operational noise abatement procedures have been established to minimize such impacts both north and south of the airport. Deviations to noise abatement procedures north of the airport have been documented by the McLean Citizens Association in collaboration with Congressman Wolf’s office. While these impacts have occurred well beyond the DNL 65 dBA contour, they have had a significant and adverse impact to residents of the area.

#### **4. The Aviation Policy Committee**

The Aviation Policy Committee is a committee of the Metropolitan Washington Council of Governments that provides guidance to the council’s Board of Directors on airport and aviation policy-related matters and that has been delegated by the council’s Board of Directors to speak on its behalf on noise policy matters. The Aviation Policy Committee, which changed its name in 2006 from the Committee on Noise Abatement and Aviation at National and Dulles Airports, provides a broad, balanced and integrated perspective on matters relating to airport and aircraft policies.

The Aviation Policy Committee has collaborated and will continue to collaborate with the Metropolitan Washington Airports Authority in implementing major recommendations resulting from the Part 150 Noise Compatibility Study for Ronald Reagan Washington National Airport. The committee will also continue to focus on noise abatement strategies for implementation at Reagan National and Dulles, with emphasis on review of emerging national legislation and studies on their impact on local noise strategies. Toward this end, the committee drafted a resolution that was adopted by the Metropolitan Washington Council of Governments' Board in June 2008 opposing efforts to usurp regional and local authority over the region's airports and to weaken the slot and perimeter rules affecting operations at Reagan National. The committee will also focus on the growing role general aviation plays in economic development and quality of life in the region. To that end, the Aviation Policy Committee will continue work on developing implementation strategies for the recently completed Regional Helicopter System Plan.

In 2009, the Metropolitan Washington Council of Governments Board of Directors made another enhancement to the Aviation Policy Committee by approving the following actions:

1. Retain the Aviation Policy Committee as currently constituted as a standing policy advisory committee to the Metropolitan Washington Council of Governments Board of Directors through the end of calendar year 2009.
2. At the outset of FY 2010 (July 1, 2009), the focus of the committee would be ensuring a vibrant exchange of information with the regional community through conducting regular forums on important aviation policy issues. In addition, in cooperation with the Metropolitan Washington Airports Authority, implement improvements to the Metropolitan Washington Council of Governments' aviation policy website and maintain this enhanced Web presence on an ongoing basis.
3. Beginning in January 2010, to the extent that aviation policy matters require action by the Metropolitan Washington Council of Governments, these would be advanced through the agency's staff or board members for consideration by the board acting as a "committee of the whole" on aviation policy matters.
4. Allocate Metropolitan Washington Council of Governments local funds at half the level being provided during FY 2009 for FY 2010 to provide ongoing support for this initiative. Staff believes this funding level (\$43,368) will be adequate to carry out the revised aviation policy program.

These actions will maintain the appropriate presence within the Metropolitan Washington Council of Governments for addressing aviation policy issues. This conclusion is based on discussions with and concurrence by the agency's staff including the Executive Director, Environmental Director and Principal Environmental Planner who is lead staff for the aviation policy program. It

further reflects the results of a recent survey with members of the Aviation Policy Committee and conversations with senior staff of the Metropolitan Washington Airports Authority.

## **C. HIGHWAY NOISE**

### **1. Background**

As the Washington metropolitan area continues to grow, so does traffic and traffic-related noise, degrading quality of life especially in residential areas adjacent to these roadways.

Noise has become an important environmental consideration for highway planners and designers. The U.S. Department of Transportation and state transportation agencies are charged with the responsibility of optimizing compatibility of highway operations with environmental concerns. Highway noise has been addressed by numerous investigations, including distinguishing among different sources of noise at receptor locations, studying noise perception by the human ear, and calculating highway noise reference energy mean emission levels. In addition, the effects of site geometry, meteorology, ground surface conditions and barriers on noise propagation are estimated and considered. While the study of noise and its perception has become more sophisticated, there is still a need for precise, uniform noise measurement procedures for assessing impacts of traffic noise in the vicinity of roadways, as well as a need for effective cost-efficient noise barriers.

When measurements indicate that noise abatement is required, the following procedures are options:

- The construction of barriers/walls or raised berms.
- The provision of landscaping/vegetation.
- The provision of acoustical design techniques.

In densely populated areas such as Fairfax County, noise barrier walls remain one of the most reasonable and feasible measures to abate traffic noise upon adjacent residential properties.

### **2. State Policy**

Virginia adopted its original noise abatement policy in 1989. The policy established criteria for providing noise protection in conjunction with proposed highway projects in the state. Implementation of the policy has aided in the construction, or construction approval, of more than 100 federally-funded sound barriers. Experience with this policy created considerable feedback from residents and elected officials. As a result, the Commonwealth Transportation Board decided to evaluate the policy for possible changes. The major source of

information used was a survey of 15 state departments of transportation in the eastern U.S. The culmination of this process was the adoption of changes to the state policy in November 1996, which became effective in January 1997.

The key changes to the policy were to:

- Raise the cost-effectiveness ceiling from \$20,000 per protected receptor to \$30,000 per protected residential property based on other state practices.
- Clarify that Virginia will not participate in any retrofit project along an existing highway when not in conjunction with an improvement for that highway.
- Add the possibility for third party funding of the amount above the Virginia Department of Transportation's \$30,000 ceiling if the abatement measure otherwise satisfies the criteria.

### **3. State Projects in Fairfax County**

The largest of several highway projects under way in FY 10-11 is the I-495 Capital Beltway High Occupancy Toll/Bus/High Occupancy Vehicle Lanes Project, which will add a total of four new lanes for a 14-mile stretch between the Springfield interchange and the American Legion Bridge.

The potential noise impact of the I-495 HOT Lanes Project was assessed in accordance with Federal Highway Administration and the Virginia Department of Transportation guidelines. To determine the degree of impact of highway traffic noise, traffic noise levels during the loudest hour of the day were determined for the existing (1998) conditions and the design-year (2020) no-build and build conditions. Noise levels for the design-year no-build scenario are expected to increase on average by approximately 1 dB because of an increase in projected traffic volumes and the mix of heavy trucks during the loudest hour. In comparison, noise levels for the build scenario were estimated to increase an average of approximately 4 dB, with noise impacts in some areas increasing up to 19 dB and in others actually decreasing. The majority of impacted residences would be exposed to design-year traffic noise levels that approach or exceed an average of 67 dBA during the loudest hour of the day, a level that qualifies them for noise barriers if the following conditions for feasibility and reasonableness are also met:

- Noise barriers must be physically feasible and capable of providing at least 5 decibels of noise reduction.
- The noise barriers must meet the Virginia Department of Transportation's cost-effectiveness criterion of a maximum of \$30,000 per protected or benefited dwelling unit, unless additional funding is provided by a third party.

Recommendations from the study led to subsequent approval of 13 new sound barrier systems, as well as the replacement/enhancement/extension of eight existing sound walls which will need to be removed in order to widen the highway. Sound walls, therefore, will protect almost all residential areas on both sides of the highway adjacent to the 14-mile stretch of the project, with gaps where walls could not be built because of terrain or access issues, or, in a few cases, where a proposed barrier was not approved because it did not meet the criterion of either sound reduction or cost-effectiveness.

The study also estimated the impact of highway traffic noise on non-residential areas such as parks, schools, places of worship and recreation areas. Reasonableness for these areas was determined during final design on a case-by-case basis with respect to the type and duration of activity, size of the affected area, severity of impact, total cost and the amount of noise reduction.

Barriers constructed by the Virginia Department of Transportation since the early 1990s in Fairfax County have consisted of a solid wall of absorptive concrete that breaks the line of sight between vehicles and homes. Although noise barriers can have a maximum decibel reduction of 20 dBA, most only provide a reduction of 10-12 dBA. Walls for the I-495 HOT Lanes Project will look similar to those sound walls built in the past in Fairfax County and will range in height from about seven to 39 feet.

The following noise barriers have been approved for the following highway construction projects in Fairfax County currently underway during FY10-11:

- One replacement and enhanced noise barrier system and two new sound barrier systems associated with the I-95/Telegraph Road interchange improvements associated with the Woodrow Wilson Bridge Project.
- One replacement and five new noise barrier systems associated with the I-95 4<sup>th</sup> Lane Widening Project.
- Two new noise barrier systems associated with Phase I plus two new noise barrier systems associated with Phase III construction of the Fairfax County Parkway Extension through Fort Belvoir Engineer Proving Grounds Project.
- One new noise barrier system along Dulles Connector Road at the Route 123 interchange.
- Replacement/enhancement/extension of eight existing sound barrier systems plus construction of an additional 13 new sound barrier systems associated with the I-495 HOT Lanes Project.

Noise barriers have been approved for the following highway construction projects in Fairfax County scheduled to begin construction in FY10-11:

- Six new noise barrier systems associated with the construction of the new Fairfax County Parkway/Fair Lakes Parkway Interchange Project.
- Two new noise barrier systems on I-495 at the Georgetown Pike/Route 193 interchange.

#### **4. Other Noise Barriers**

Barrier heights for other noise walls constructed in the county (e.g., walls constructed in conjunction with development projects) had been restricted, but in 2000, the Board of Supervisors adopted Zoning Ordinance Amendment ZO 00-330, which permits noise barriers in excess of the Zoning Ordinance fence/wall height limitations where needed to reduce adverse impacts of highway noise on properties adjacent to major thoroughfares, or to reduce adverse noise impacts of commercial and industrial uses on adjacent properties. A noise impact study is required to demonstrate the need for the noise barrier and the proposed height and level of mitigation to be achieved by the noise barrier.

### **D. METRO YARD NOISE**

The Metro Service and Inspection Yard, located near the West Falls Church Metro station, services trains using a short-radius loop track. As the trains move along the track, “wheel squeal” is generated, which is extremely irritating to residents in nearby neighborhoods. An expansion of this yard has been proposed by the Washington Metropolitan Area Transit Authority in order to provide support for the coming Silver Line, and as part of the expansion, the Federal Transit Authority is requiring a sound box to be built over the noisiest portion of the loop track. The sound box must meet a development condition of DNL 55 dBA as well as requirements of the county’s noise ordinance (Chapter 108.1 of the Fairfax County Code)--a requirement of a maximum noise level of 55 dBA. The sound box is still in the design phase but is expected to meet all of the conditions. It will cover approximately 1,000 linear feet of track and should be completed by 2013.

### **E. STEWARDSHIP**

The Fairfax County Restoration Project, a public-private partnership, launched in spring of 2010 with its initial focus on restoration of areas negatively impacted by the I-495 HOT Lanes Project. FCRP is working with the Virginia Department of

Transportation on landscape plans to restore cloverleaf areas and areas inside and outside the sound walls. Vegetation planted inside and outside the sound walls will provide many benefits, including reduction in stormwater runoff, habitat for pollinators, birds and small mammals and visual relief for both motorists and residents. Current projects include a community produce garden at George Mason University's Fairfax campus and the Chesterbrook Living Classroom at Chesterbrook Elementary School in McLean. Anyone interested in joining the efforts should contact the FCRP at [www.fcrpp3.org](http://www.fcrpp3.org).

## **F. COMMENTS AND ONGOING CONCERNS**

1. Continue to support airport noise-compatible land use planning near airports in the county through the implementation of policies and regulations that reference the most current airport noise contour projections for the airports and that are at least as stringent as federal noise compatibility guidelines.
2. Continue to encourage the use of opportunities provided by the Virginia Department of Transportation that allow for third party contributions to noise barrier construction when the Virginia Department of Transportation cost criteria preclude the Virginia Department of Transportation's construction of such barriers. Through this the Virginia Department of Transportation policy, neighborhoods affected by high levels of highway noise can participate in the funding of barriers that would not otherwise be constructed.
3. Staff should continue to review all airport and highway studies that require Environmental Assessments or Environmental Impact Statements under the National Environmental Policy Act for consistency with county policies addressing transportation-related noise and mitigation and report its findings to the board. In turn, the Board of Supervisors should, when appropriate, adopt resolutions with specific requests and/or recommendations and transmit these to the Metropolitan Washington Airports Authority, Federal Aviation Administration, Commonwealth Transportation Board, Virginia Department of Transportation and other state and federal agencies as applicable.
4. Encourage the retention and planting of noninvasive vegetation to provide visual shielding of residents from highways. Where possible, support the provision of vegetated areas adjacent to highways that are wide enough and dense enough to provide noise reduction benefits to residential areas near the highways. Where feasible and appropriate, pursue such approaches in lieu of noise walls.
5. EQAC is pleased that a series of Web pages have been established on the county's website addressing noise issues. The county should ensure that this page is kept current through regular updates.

6. EQAC would like to discuss with the Airports Advisory Committee and staff the Federal Aviation Administration's views on the scope of Part 150 studies to determine what, if anything, the county can and should do in response to limits on noise abatement measures that are accepted by the Federal Aviation Administration. EQAC may recommend further action subsequent to this coordination.

## **G. RECOMMENDATION**

1. Request the Metropolitan Washington Airports Authority and Metropolitan Washington Council of Governments to collect input from stakeholders and develop a noise report format and frequency for Dulles and Reagan National Airports. Reports should be sent on a quarterly basis to the Fairfax County Board of Supervisors, relevant county staff, EQAC and other stakeholders.

## **IX-2. LIGHT POLLUTION**

### **A. OVERVIEW**

Light pollution is a general term used to describe light output, primarily from exterior (outdoor) sources, in commercial, residential and roadway settings that is excessive in amount and/or that causes harmful glare to be directed into the path of travel or into residential neighborhoods. Light pollution is thus both a safety issue and a quality of life issue. With the increasing urbanization of Fairfax County, exterior (outdoor) lighting and light pollution in its many forms have become pressing issues to our communities. In the past, Fairfax County had some regulations regarding exterior lighting, but they were minimal and out of date. A major effort was undertaken in 2002 to write a totally new and modern Outdoor Lighting Ordinance that took into account the numerous advances that have been made in lighting technology in recent years. This highly successful effort utilized several workshops, in which EQAC and a number of local experts participated, and came to fruition in the early summer of 2003 with the adoption of the new Outdoor Lighting Ordinance. It is regarded by experts in the outdoor lighting community as being one of the best such ordinances in the mid-Atlantic region and has been cited and largely copied by localities in Connecticut, Illinois and California. However, there are a few areas that could not be adequately addressed by the new ordinance, since suitable standards and convenient measurement technology were not available. This report will focus on these areas.

### **B. RESPONSE OF THE HUMAN EYE TO LIGHT**

To put the following sections in proper context it is helpful to briefly review how the human eye perceives and reacts to light. The various cells of retina of the eye contain what are called visual pigments. These pigments, in the fully dark-adapted condition, are complex proteins consisting of two linked components. The pigments respond to light by “bleaching” (actually the dissociation of the two protein moieties). The brighter the light, the greater is the bleaching and the longer the regeneration time. The greater the bleaching, the lower is the sensitivity of the retinal cell. The retina contains three types of sensory cells:

- The rods which are most numerous toward the periphery of the retina and contain the visual pigment rhodopsin. They are useful primarily in low light and provide monochromatic images.
- Three types of cones, mostly concentrated in the central portion of the retina and which provide color vision. They contain respectively photopsin I (erythrolabe), photopsin II (chlorolabe), and photopsin III (cyanolabe). Their peak sensitivities are in the red, green, and blue portions of the spectrum just

like the sensor chip in a digital camera. (George Wald received the 1967 Nobel Prize in Medicine for his work on the three kinds of cone photopsins.)

- The spidery retinal ganglion cells, containing the visual pigment melanopsin. These cells perform two different functions: control of the size of the pupil of the eye in response to light and as the control that resets the body's day-night cycle clock. Prolonged exposure of melanopsin to bright lights during normally dark periods of the evening and night can result in significant disturbances of the sleep-wake cycle.

## C. ISSUES AND PROBLEMS

The main issues and problems of exterior lighting and light pollution may be summarized as follows:

### 1. Glare

Glare, as defined by the Illuminating Engineering Society of North America, falls into three main categories:

- Disability glare – Disability glare (sometimes less accurately referred to as veiling luminance) is caused by overly bright light sources that shine directly into one's eyes and is dangerous because it is blinding (i.e., it totally overloads the eye's light sensor cells).
- Discomfort glare – Discomfort glare may not necessarily reduce the ability to see an object, but it produces a sensation of discomfort due to high contrast or non-uniform distribution of light in the field of view.
- Nuisance or annoyance glare – Nuisance glare is that which causes complaints such as, "The light is shining in my window."

Glare is a significant and pervasive problem that seriously impairs both safety and quality of life. Glare demands attention in that one's eyes are naturally attracted to bright light, and at night this destroys the eye's dark adaptation (the eye's sensitivity to lower light levels), which is a serious hazard for both drivers and pedestrians. Obtrusive lighting by commercial establishments to attract attention is a serious problem as is selection of inappropriate fixtures for exterior residential lighting. A major problem is the high intensity lighting of sports facilities, such as ball fields and tennis courts, adjacent to residential neighborhoods. Glare and excessive illumination (which are two separate problems) cast into surrounding residential neighborhoods not only detracts from the quality of life but can make it difficult for pedestrians and homeowners to see their surroundings.

## 2. Light Trespass

Light trespass is the poor control of outdoor lighting such that it crosses property lines and detracts from the property value and quality of life of those whose property is so invaded. It is particularly common when obtrusive commercial or recreational lighting is immediately adjacent to residential neighborhoods or when a homeowner uses inappropriate fixtures, light levels and lighting duration, often in the interest of “security.” It is generally categorized in two forms:

- Adjacent property is illuminated by unwanted light.
- Excessive brightness (often called “glare”) occurs in the normal field of view.

Both of these forms may be present in a given situation. Illumination, that is, the amount of light energy falling on a surface, is readily measured by simple hand held instruments and is expressed in foot candles. The new ordinance establishes 0.5 foot candles as the limit of illumination at the property line of the property producing the illumination. Illumination levels above that are regarded as prohibited light trespass onto adjacent properties.

Glare or excessive brightness is a more complex and difficult-to-measure phenomenon. It is experienced when the light producing source (the bulb) is directly visible, but also depends on the luminance of the source and on the contrast between that source and the surrounding background. For example, even a very bright light source viewed against a noonday sky doesn't seem particularly glaring or objectionable, but the same source viewed against a night sky is very objectionable and seems so bright as to be almost painful. One of the problems in addressing this kind of light trespass, or more properly glare trespass, is that there have not been good standards for acceptable limits, and instruments to measure this kind of glare are necessarily complex and difficult to operate.

## 3. Security

Much outdoor lighting is used in the interest of providing security. These safety concerns often result in bad lighting rather than real security. One reason often cited for today's bright lights is that high wattage is needed to deter crime. However, studies have shown that if light is overly bright with excessive glare it makes it easier for a person to hide in the deep shadows created by objects in the harsh glaring light. This might actually encourage crime rather than discourage it. The debate as to whether or not additional light provides more safety has been emotional rather than factual. The few rigorous studies that have been done reveal no connection between higher lighting levels and lower crime rates. This may be due to people with nefarious intent taking more risks in

better lit areas. For example, the National Institute of Law Enforcement and Criminal Justice found no statistically significant evidence that lighting impacts the level of crime (Upgren, 1996). Thus, the supposed correlation between a high level of security lighting and reduced crime appears to be nothing more than a popular myth.

#### **4. Urban Sky Glow**

Urban sky glow is brightening of the night sky due to manmade lighting that passes upward with the light rays reflected off of submicroscopic dust and water particles in the atmosphere. Although urban sky glow was first noted as a problem by the astronomical community, it is by no means any longer solely an astronomical issue. With the increasing urbanization of many areas of the U.S., all residents in those areas are now being affected. In Fairfax County, which is now a mostly urban county, improper lighting has seriously degraded the darkness of our local night skies into a pallid luminescence that many of our residents find objectionable.

#### **5. Energy Usage**

Smart lighting techniques, which direct all of the light generated onto the target area, reduce energy consumption and hence the use of fossil fuels. Several engineering estimates suggest that at least 30 percent of outdoor lighting is being wasted through light energy spilling upward and outward rather than being directed downward onto the target area. Also, many installations are greatly over-illuminated as well as being lighted for unnecessary durations, further compounding the energy wastage. Inefficient lighting incurs both direct financial costs and hidden environmental costs. It has been estimated by national organizations studying light pollution that in excess of \$8 billion of electricity is being wasted annually on obtrusive and inefficient outdoor lighting (see data from Virginia Outdoor Lighting Task Force and the International Dark-Sky Association). Since electricity generation in the eastern part of this country is mostly from fossil fuels, every unnecessary kilowatt of electrical energy generated also produces air pollution, unnecessary greenhouse gases and acid rain.

### **D. CURRENT COUNTY STANDARDS AND REGULATIONS**

In EQAC's view, Fairfax County now has a generally excellent ordinance that prescribes limits for the maximum wattage of light sources and for the amount of illumination and glare in commercial and residential districts. However, existing installations that were noncompliant under the new ordinance are allowed under state law to continue until such time as the fixture requires replacement. Also, these

standards do not cover roadways that are under the jurisdiction of the Virginia Department of Transportation, and a number of these roadway fixtures represent a continuing source of glare and light pollution.

Fairfax County's Policy Plan: The Countywide Policy Element of the Comprehensive Plan (2007 Edition) recognizes the nuisance of light emissions arising from increasing urbanization and recommends that efforts be made to avoid creating sources of glare that interfere with residents' and/or travelers' visual acuity. To put this into practice, the county's Zoning Ordinance contains standards for illumination limits. **However, the issue of glare, as opposed to illumination level, has not yet been addressed adequately. EQAC has recently collaborated with the Park Authority in conducting a study of glare in athletic field lighting and the scientific limitations on its control. That will provide a basis for addressing glare from all sources.**

## **E. ADDRESSING THE PROBLEM**

While the 2003 ordinance very adequately addresses new and replacement installations of outdoor lighting and fixtures in commercial and residential districts, much roadway lighting remains a problem because it is prescribed by VDOT, which is not subject to local control. A recently passed Virginia law and policy to use henceforth only fully shielded fixtures will eventually mitigate these problems as older fixtures are replaced. Ensuring that new residential installations meet code requirements represents a potentially significant compliance problem and will require that both review and inspection personnel be fully aware of the new code requirements and diligent in the application and enforcement of them. In addition, the 2003 ordinance is currently under review to include some modifications that will further reduce adverse effects of improper lighting.

One of the most common street lights in use, the drop-lens, cobra-head fixture, draws 150 watts. A fixture with reflective backing and shielding can direct all light below the horizontal plane with the same illumination of streets and homes and use only 100 watts. The same possibility exists with the popular 175 watt unshielded mercury vapor lamp. Both the 150-watt cobra-head fixture and the 175-watt mercury vapor lamp cast light laterally as well as down. As a result, substantial glare is often cast directly into the eyes of drivers. This glare destroys drivers' dark adaptation, creating potential safety hazards. In many cases the driver is not able to see the roadway as well as he or she would with lower-wattage properly shielded lights, and in many cases his or her vision is made much worse. Because they cut down on glare, shielded fixtures not only are safer for drivers, but, according to experts (see references), actually make it easier for pedestrians and home owners to see their surroundings.

By redirecting this wasted energy, lower wattage lights provide the same amount of illumination in the areas where it is needed. These fixtures have reflective backing

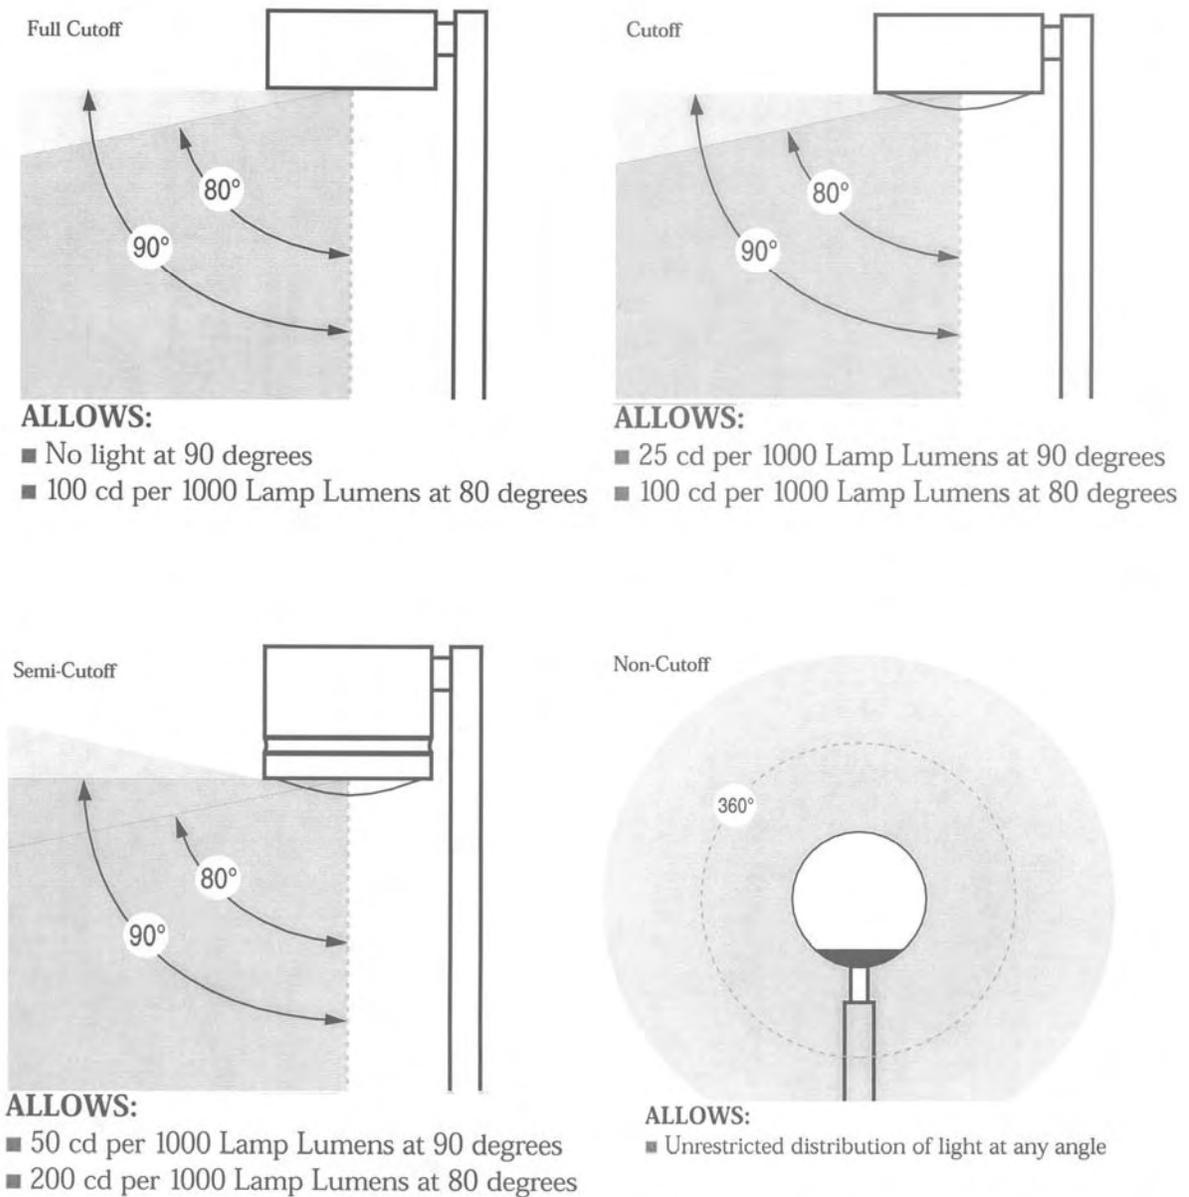

and full cut-off shielding to direct all light below the horizontal plane, with 90 percent of the light directed below an angle of 20 degrees from the horizontal. For example, a 50-watt metal halide lamp with a reflective shield will provide as much illumination below the horizontal plane as the 150-watt cobra-head fixture or the 175-watt unshielded mercury vapor lamp. These newer types of fixtures, which are recommended by the Illuminating Engineering Society of North America, are widely available and direct all light below the horizontal plane, thereby eliminating lateral glare (see Figure IX-2-1). It is estimated that it takes only three years of energy savings to recoup the initial investment in these fixtures. The lower wattage fixtures provide energy savings, improved driver safety, better visibility for pedestrians and an improved ambiance and security for neighborhoods. Several municipalities, such as Tucson, Arizona, San Diego, California and Sanibel Island, Florida, have adopted street lighting ordinances requiring these newer fixtures.

Most security lighting is overdone, with high wattage lights burning from dusk to dawn. As noted earlier, constant levels of illumination tend to be largely ignored because they are commonplace, and they waste a huge amount of energy. The large amount of glare produced by high intensity sources creates shadows that provide hiding places for intruders. Moreover, the constant glare and light trespass onto adjacent properties is a major source of annoyance to their occupants. On the other hand, lights that are activated by motion within a controlled area attract immediate attention and, at the same time, use very little energy and create intrusion on adjacent properties only when such attention is desired. For example, if one is using 300 watts of security lighting for an average of 10 hours each night and converts to an infrared motion sensor control that turns on the lights only when there is motion in the controlled area, energy cost is reduced to almost nil. In addition, the cost of the added sensor-control hardware can be recovered in as little as two to four months due to the energy saving. At the same time, security is increased rather than decreased and glare and light trespass onto adjacent properties is largely eliminated.

Glare is a significant and pervasive problem, but in some cases can be solved by installing "full cut-off" (i.e., light fixtures fully enclosed on their sides) or in some cases using supplementary shielding panels, to prevent light trespass onto adjacent residential properties. Where it is not possible to completely eliminate glare through the use of shielded fixtures, inexpensive motion detector controls can limit the harsh light to only a few minutes when it is really needed. However, glare like that experienced from high-intensity sources, like those used to light athletic fields, is a result of the background contrast ratio which is not subject to human control. A light seen against a very dark sky seems very intense and intrusive, but if seen against a day time sky seems hardly noticeable. One can readily prove this by viewing a full moon at, say, 2 or 3 o'clock in the morning when it appears as an intense disc so bright that it shows no features. However, the same moon viewed at, say, 9 or 10 o'clock the next morning is a very pale appearing disc with only slight contrast against the day light sky and shows an extensive array of features. This effect is due to the great difference in contrast with the background against

Figure IX-2-1

Effects of Cut-off and Non Cut-off Luminaires

(Sources: Paulin, Douglas, *Full Cutoff Lighting: The Benefits*, IESNA website, and Shaflik, Carl, *Environmental Effects of Roadway Lighting*, Information Sheet Number 125, International Dark-Sky Association, Tucson, Arizona, August 1997.)

which it is viewed. The mathematical difference between the source and the background is known as the source to background contrast ratio.

Light trespass is a term of relatively recent origin and denotes (1) glare that is generated by sources on one property that lie within the normal field of view of the occupants of another property and (2) light that spills over the boundaries of one property onto another, thereby producing unwanted illumination of it. Increasingly, such light intrusions are being regarded as trespass violations every bit as serious as physical trespass of a person onto the property of another. Such problems can now be readily avoided by the selection of proper fixtures, intensity levels and the use of timers and sensors/controllers.

Sky glow is also readily addressed by the selection of properly designed modern fixtures for new installations and phased retrofit of current inadequate installations. The cost of such retrofits is normally recoverable within a reasonable time period (usually estimated at about three years) through efficiently placing all of the light onto the desired area and the resulting lower energy usage.

Adherence to the following four principles will do much to mitigate or eliminate light pollution.

- Always illuminate with properly shielded fixtures that prevent the light source itself, and the resultant glare, from being directly visible. This is done by using cutoff fixtures or supplementary shielding that keeps all of the illumination below the horizontal plane and directed onto the target area.
- Do not over-illuminate. Never use more illumination than needed for the task at hand. Using a 400 watt floodlight to illuminate a small parking area or a flag at night is overkill and wastes a great deal of energy. A properly shielded and adjusted 250 watt luminaire (light source + fixture) can illuminate an area just as effectively as an older style 1,000 watt light source.
- Always aim lighting downward, keeping all of its distribution within the property lines and below the horizontal plane so that it is not a source of glare. Light trespass onto adjacent properties is unnecessary, inconsiderate and potentially illegal.
- Do not burn lighting all night long with the intention of improving security. Using infrared motion sensor-controlled lighting that comes on instantly when there is motion in the designated area is far more effective as a security measure. That rapid change from dark to light draws the immediate attention of everyone in the surrounding area, including security and law enforcement personnel on patrol, and may well be unsettling enough to cause illicit intruders to immediately flee. Lighting that stays on all night draws no special attention and is an enormous waste of energy.

## F. PUBLIC AGENCY RESPONSIBILITIES

Ensuring compliance with glare standards for residences and other private property is the responsibility of the county's Zoning Enforcement Branch. The county has 18 Zoning Inspectors (two per magisterial district) to oversee all Zoning Ordinance enforcement. Any enforcement activity dealing with light is complaint-driven. Typically, light-related complaints represent about 0.5 percent of total complaints. The county does not respond to anonymous complaints. Complaints are either filed directly with the Zoning Enforcement Branch or are forwarded by the staff of a member of the Board of Supervisors. The causes of the complaints have usually been fast food establishments, security lighting for residences, athletic facilities (e.g., ball fields, driving ranges), or churches. The Zoning Inspectors typically resolve violations with informal enforcement such as a verbal warning that there is a violation and how it may be remedied. A written notice of violation or civil action can be used if needed. Beyond the general glare standards, the county frequently is able to impose additional "before-the-fact" restrictions through development conditions when rezoning, special permit and special exception processes come into play.

The Fairfax County Park Authority and the Fairfax County Public Schools are the two largest users of recreational and sports field lighting in the county. Parks and schools by their very nature are usually located in the midst of residential communities where their outdoor lighting, if inadequately designed, can seriously impact the surrounding residents. Schools, particularly high schools, often have sports practice sessions extending into the early evening hours and games that begin after the dinner hour and run into the later evening hours. In addition, schools of all categories often have "security" lights that burn from dusk to dawn, although they could perhaps be better served by motion-detector activated lights. Our park system, faced with increasing demand for team athletic facilities, will necessarily have to turn to synthetic turf and lighting during the evening to enable greater utilization of its existing fields. It is the responsibility of both organizations to utilize the best designs and equipment in addressing these needs. To do less would unnecessarily and unfairly impact the surrounding neighborhoods and diminish both property values and quality of life.

One of the most onerous sources of light pollution is the obtrusive lighting of commercial and industrial facilities, particularly commercial retail and service establishments. While their desire to attract attention to themselves is understandable, abusive excesses degrade the overall ambience of our commercial areas and materially degrade the quality of life in adjacent residential neighborhoods. This is of particular concern in the case of "by-right" development, where there are no public hearings (e.g., Planning Commission, Board of Zoning Appeals, Board of Supervisors) at which adjacent property owners and neighborhoods can register their concerns and see approval conditioned on appropriate restrictions. In such "by-right" cases, the initial responsibility would

necessarily fall almost entirely upon the Land Development Services function of the Department of Public Works and Environmental Services, which reviews all proposed plans before a building permit is issued and subsequently conducts inspections to ensure that the work is in compliance with regulations. Evaluation of plans for compliance would add a small amount of effort to the review process but would add only a negligible amount to the inspection process.

At this time, the county has no formal policies regarding street lighting. Some neighborhoods within the county prefer to have local streets lighted, while others do not. Whether or not the county provides street lighting is often driven by budget priorities, and, unless there is a demonstrable public safety need, the priority for retrofitting an established community is usually low. More often, street lighting is addressed in the overall planning of new subdivisions. In these cases, the Land Development Services function of DPWES would have responsibilities for both reviewing the plan and inspecting the implementation of it.

Responsibility for the lighting of main roadways is under the jurisdiction of the Virginia Department of Transportation. Historically, local communities and neighborhoods have had to deal directly with VDOT or through their local Supervisor's office over roadway lighting issues. It has proven very difficult to influence VDOT's choice of fixtures and technical standards, even when it can be demonstrated that their proposed implementation will result in unacceptable levels of glare and light trespass in adjacent residential neighborhoods. However, quite recently, encouraging headway has been made in getting VDOT to recognize the severity of the problem and to take some limited first steps to address it.

## **G. PUBLIC EDUCATION AND AWARENESS NEEDS**

The general public needs awareness of the sources and problems of light pollution and of the methods by which these can be best addressed. The county staff has prepared an excellent and very informative 16 page booklet to explain the new Outdoor Lighting Ordinance (available at [www.fairfaxcounty.gov/DPZ/Zoning/lightingbrochure.PDF](http://www.fairfaxcounty.gov/DPZ/Zoning/lightingbrochure.PDF)). It can also be made available in printed version to individuals, homeowners groups and community associations directly through appropriate county offices and through the district offices of the members of the Board of Supervisors. The complete ordinance in convenient form is available on the Fairfax County website at [www.fairfaxcounty.gov/DPZ/Zoningordinance/articles/Art14.PDF](http://www.fairfaxcounty.gov/DPZ/Zoningordinance/articles/Art14.PDF). In addition, the International Dark Sky Association and the Illuminating Engineering Society of North America maintain websites with a variety of technical information on lighting issues and technology.

Our county's 16 page booklet provides much of the information that architects, contractors and electricians need to familiarize themselves with our lighting codes and specifically what is not permitted (e.g., unshielded security lights, angle-

directed post or building mounted fixtures, wall packs without shielding or baffling, excessive wattage or unshielded floodlights, light-trespass onto other properties, etc.) and what practices are recommended. Our county review and inspection personnel should make sure that members of the development, contractor and building management communities with whom they deal will be fully aware from the outset of the revised standards in the new ordinance and how best to address them.

There is an excellent website ([www.qualityoutdoorlighting.com](http://www.qualityoutdoorlighting.com)) that illustrates many examples of good, bad and ill-conceived lighting practices right here in our local area. It can play a central role in education of the public.

## H. CONCLUSIONS

The principal means to prevent poor exterior lighting practices is a comprehensive code or ordinance, because this provides well thought out standards for, and enforceable legal restrictions on, specific lighting practices that affect the community and its quality of life. Numerous jurisdictions have adopted codes and ordinances that have proven very effective in reducing light pollution and preventing light trespass. A properly conceived and well written code permits all forms of necessary illumination at reasonable intensities, but requires shielding and other measures to prevent light pollution and light trespass. A good code applies to all forms of outdoor lighting, including streets, highways and exterior signs, as well as lighting on dwellings, parks, schools, commercial and industrial buildings, parking areas and construction sites. A good code also provides for reasonable exceptions for special uses within acceptable time periods and subject to effective standards. In EQAC's opinion, Fairfax County's recently adopted Outdoor Lighting Ordinance is an outstanding example of such a code. As the county has gained experience with application of the new ordinance, some areas have been identified where adjustments and fine-tuning are needed,. A task force, under the leadership of the Department of Planning and Zoning, is currently developing specifications for the revisions needed.

The Fairfax County Park Authority has had an urgent need to increase the hours of utilization of its existing sports fields by installing lights to illuminate them. Aware of its special responsibility to ensure that such lighting systems minimize adverse impacts on adjacent residential properties, it has prepared extensive specifications for lighting of athletic fields designed to reduce spill light and glare to an absolute minimum. The results with a test rectangular field that was outfitted with lights and artificial turf have been very informative. While the illumination of the field surface is excellent and the illumination at the property line with respect to light spillover meets the Park Authority's stringent standards, the glare from the fully exposed, 1,500 watt lamps on 70 foot poles facing a residential neighborhood is intense (in the range of 12,000 lumens at 200 feet). A second field outfitted with an advanced model of fixtures of the same type shows no improvement in glare. The

Park Authority has conducted a recent special study that reveals the glare problem is primarily governed by fundamental laws of nature over which man has no real control. However, the Park Authority's carefully worked out specifications minimize adverse impacts to the extent humanly possible. This same concern applies equally to the Fairfax County Public Schools, which also use lighted sports fields.

The county needs to work closely with VDOT to achieve better lighting practices on roadways within Fairfax County that are under VDOT jurisdiction. Current VDOT lighting and proposed new installations are regarded as being very intrusive by adjacent neighborhoods. However, it should be noted that a newly enacted law requiring the commonwealth to acquire only shielded fixtures should materially improve VDOT practices in this regard on new installations and as old fixtures are replaced.

Much of the security lighting, both residential and commercial, in Fairfax County is poorly conceived, excessive in intensity and improperly directed and controlled. These deficiencies could be corrected at relatively low initial costs that would be rapidly recovered through the energy savings realized. This will require considerable public education to familiarize the using public with the issues and the available technology.

Much lighting in residential neighborhoods uses old style fixtures (or new but poorly designed ones) that cause excessive glare and light trespass onto adjacent properties. The new comprehensive ordinance and an intensive public awareness campaign should be used to address correction of these problems. Single family dwellings especially need to be brought into compliance with the spirit and provisions of the revised ordinance, for that is where the majority of us live and where our quality of life is most affected by intrusive lighting.

Poor lighting design, particularly in commercial areas, is contributing to excessive and highly objectionable sky glow. The new ordinance and retrofitting or adjustment of fixtures can eliminate the worst of this effect.

## **I. COMMENTS**

1. In response to a recommendation in earlier EQAC Annual Reports on the Environment, the Fairfax County Park Authority commissioned several studies of sports field lighting design and technology. The Park Authority issued a set of specifications, dated November 2006, for new athletic field lighting installations that addressed all of the issues adequately except for glare. The Park Authority then commissioned a special study of the glare problem. The Park Authority Director of Planning and Development requested EQAC to collaborate with his staff to develop this study. The final document, based on the underlying science, reveals that much of the glare problem is dependent on source-to-background

contrast ratio, which is a fundamental law of nature and not under the control of man.

2. The earlier EQAC Annual Report recommendation that the Department of Planning and Zoning undertake some modest but needed revisions of the Outdoor Lighting Ordinance has come to fruition in the form of current meetings of a task force of stakeholders to develop specifications for such revisions. The revisions should be in final form before the end of the current year.
3. EQAC continues to support that the Board of Supervisors work with VDOT and Virginia elected officials to eliminate unnecessary roadway lighting and whenever possible to accelerate replacement of existing poorly designed fixtures under the control of VDOT with full cut-off fixtures.

## **IX-3. VISUAL BLIGHT**

### **A. OVERVIEW**

Visual blight is considered, by almost everyone who has studied it, to exist mainly in the subjective realm. In other words, one person's definition of visual blight may not be the same as someone else's. An example might be a building that is out of place in local architecture, but considered beautiful by at least a minority of observers. Meanwhile, people with a different perspective would define the same building as garishly ugly.

While people can disagree about what constitutes visual blight, there are some examples that the vast majority of people would classify as such. This short treatise deals with two of these – cigarette butts and illegal roadside signs.

### **B. CIGARETTE BUTTS**

Cigarette butts are a ubiquitous problem in Fairfax County. While many cigarette smokers are often otherwise stellar citizens, it is a peculiarity of this habit that smokers often stamp them out on the ground or toss them out of car windows.

Cigarette butts tossed out of cars are excellent examples of visual blight. In April 2009, the author of this section of the report picked up 952 cigarette butts in a 100-foot stretch of a left turn lane on US 29. In addition, over the years, millions and millions of cigarette butts have been washed into local streams and rivers. This behavior constitutes an environmental problem with known consequences, not to mention the undeniable visual blight they create.

The Fairfax County website<sup>1</sup> points out that “Section 33.3-346 of the Code of Virginia makes littering or dumping trash a Class 1 misdemeanor, punishable by up to 12 months in jail and/or a fine up to \$2,500.”

On April 14, 2010, EQAC discussed with staff from the Fairfax County Police Department whether there are any impediments to the issuance of citations for littering and in whether a public education program can be established to support responsible cigarette butt disposal. FCPD staff noted the difficulties associated with enforcement, and no further action was taken.

## C. ILLEGAL SIGNS

*“Here in the United States we turn our rivers and streams into sewers and dumping grounds, we pollute the air, we destroy forests, exterminate fishes, birds, and mammals -- not to speak of vulgarizing charming landscapes with hideous advertisements.” - Theodore Roosevelt (Theodore Roosevelt, “Our Vanishing Wildlife,” Literary Essays (vol. 12 of The Works of Theodore Roosevelt, national ed.), chapter 46, p. 420 (1926). Originally appeared in The Outlook, January 25, 1913.)*

The struggle to regulate advertising on public highways and their rights-of-way has been under way for over a century. The first attempt by Virginia to regulate this practice was in 1938 via §2154 (247). Since then the law has been modified several times.

The result is that the Commonwealth of Virginia has one of the most progressive and no-nonsense laws in the United States. Under this law, no one can put a sign in the right-of-way of state-maintained highways without a permit. The cogent parts of this law say: “§ 33.1-373.... any advertisement within the limits of any highway shall be assessed a civil penalty of \$100. Each occurrence shall be subject to a separate penalty...Advertisements placed within the limits of the highway are hereby declared a public and private nuisance and may be forthwith removed, obliterated, or abated by the Commonwealth Transportation Commissioner or his representatives without notice.”

Subsequently, it also appears that a bill exempting Fairfax County from complying with that law has been passed. Specifically, § 33.1-375.1, sponsored by Delegate Orrock and approved in 1998, appears to allow signs in the right-of-way. It also appears that Fairfax County would be required to negotiate with VDOT to take over responsibility for the right-of-way and a subsequent public hearing would need to be held.

On April 14, 2010, EQAC met with county staff and with VDOT staff to clarify the rules governing signs in the VDOT rights-of-way; EQAC subsequently developed a series of recommendations regarding sign enforcement issues to the Board of Supervisors; so far there is no movement on the part of the county to deal aggressively with illegal signs.

## D. COMMENTS AND RECOMMENDATIONS

In regard to visual blight issues, EQAC has no comments or recommendations this year.

**ATTACHMENT IX-3.1 - § 33.1-373**

§ 33.1-373. Advertising on rocks, poles, etc., within limits of highway; civil penalty. Any person who in any manner (i) paints, prints, places, puts or affixes any advertisement upon or to any rock, stone, tree, fence, stump, pole, mile-board, milestone, danger-sign, guide-sign, guidepost, highway sign, historical marker, building or other object lawfully within the limits of any highway or (ii) erects, paints, prints, places, puts, or affixes any advertisement within the limits of any highway shall be assessed a civil penalty of \$100. Each occurrence shall be subject to a separate penalty. All civil penalties collected under this section shall be paid into the Highway Maintenance and Operating Fund.

Advertisements placed within the limits of the highway are hereby declared a public and private nuisance and may be forthwith removed, obliterated, or abated by the Commonwealth Transportation Commissioner or his representatives without notice. The Commonwealth Transportation Commissioner may collect the cost of such removal, obliteration, or abatement from the person erecting, painting, printing, placing, putting, affixing or using such advertisement. When no one is observed erecting, painting, printing, placing, putting, or affixing such sign or advertisement, the person, firm or corporation being advertised shall be presumed to have placed the sign or advertisement and shall be punished accordingly. Such presumption, however, shall be rebuttable by competent evidence. In addition, the Commissioner or his representative may seek to enjoin any recurring violator of this section.

The provisions of this section shall not apply to signs or other outdoor advertising regulated under Chapter 7 (§ 33.1-351 et seq.) of this title or to a public transit bus shelter that is owned by a city, town, or county. The prohibition in subdivision (8) of § 33.1-369 against placing signs within 15 feet of the nearest edge of pavement of any highway shall not apply to such sign. However, the message shall not be visible to traffic in either direction on the main-traveled way of any highway. Signs on bus shelters visible from federal-aid highways shall conform with provisions of 24 VAC 30-120-80.

**ATTACHMENT IX-3.2 - § 33.1-375.1**

§ [33.1-375.1](#). Commissioner may enter into certain agreements; penalties.

A. The Commonwealth Transportation Commissioner may enter into agreements with the local governing body of Fairfax County authorizing local law-enforcement agencies or other local governmental entities to act as agents of the Commissioner for the purpose of (i) enforcing the provisions of § [33.1-373](#) and (ii) collecting the penalties and costs provided for in that section. However, no local governing body shall enter into any such agreement until it has held a public hearing thereon.

B. Notwithstanding the provisions of § [33.1-373](#), one-half of the penalties and costs collected under this section shall be paid to the affected locality, and the remainder shall be remitted to the Commissioner and paid into the Highway Maintenance and Operating Fund.

C. Notwithstanding the foregoing provisions of this section, the following signs and advertising shall not be subject to the agreements provided for in subsection A of this section:

1. Signs and advertising supporting an individual's candidacy for elected public office or other ballot issues, provided this exception shall not include signs and advertising in place more than three days after the election to which they apply.
2. Signs and advertising promoting and/or providing directions to a special event to be held at a specified date stated on the sign or advertising, provided this exception shall not include special event signs in place more than three days after the conclusion of the special event.
3. Other signs and advertising erected for no more than three days.

D. Notwithstanding the foregoing provisions of this section, the Commissioner may enter into agreements with the local governing bodies of localities to which the foregoing provisions of this section do not apply to authorize those governing bodies to act as agents of the Commissioner and the Department in enforcing the provisions of § [33.1-373](#). The limitations applicable to agreements entered into under subsections A through C of this section shall not apply to agreements entered into under this subsection.

(1998, c. 835; 1999, c. 195; 2003, c. 311.)

**ATTACHMENT IX.3-3  
Evolution of §33.1-373**

Year	Statute
<b>1938</b>	<b>§2154 (247) Outdoor Advertising on Highways</b>
	Misdemeanor for placing an advertisement on "any sign rock stone...pole, highway sign, et. al....within the limits of a highway." Originally passed in 1938 but not "codified" until 1942.
<b>1950</b>	<b>§33-319. Advertising on rocks, poles, etc., within limits of highway</b>
	Same as §2154 (247). No affixing of signs to a variety of objects.
<b>1970</b>	<b>§33.1-373. Advertising on rocks, poles, etc., within limits of highway</b>
	Same as §2154 (247) and §33-319. No affixing of signs to a variety of objects. Renumbered in a major overhaul of Virginia code.
<b>1993</b>	<b>§33.1-373. Advertising on rocks, poles, etc., within limits of highway</b>
	Drastic overhaul which includes language of previous renditions of this law but adds significant definition. Now it is illegal to place, put or affix "any advertisement within the limits of a highway". It is now a Class 1 misdemeanor to do so and a \$2,500.00 fine. Declares such advertisements "a public and private nuisance which may be removed by the Commonwealth Transportation Commissioner or his representatives without notice. Likewise the Commissioner can recover the cost of this removal from whoever put the sign up.
<b>1994</b>	<b>§33.1-373. Advertising on rocks, poles, etc., within limits of highway</b>
	Reduces the Class 1 misdemeanor charge to a "civil penalty of \$100. Each occurrence shall be subject to a separate penalty. All civil penalties collected under this section shall be paid in the Highway Maintenance and Operating Fund." Also adds that the provisions of §33.1-373 do not "apply to signs or other outdoor advertising regulated under Chapter 7 (§33.1-351 et seq) of this title.

**ATTACHMENT IX.3-4**  
**Modifications & Changes to §33.1-373 beginning in 1994**  
**(Items in bold are of particular note)**

<b>Year</b>	<b>Bill ID</b>	<b>Patron</b>	<b>Summary</b>	<b>Final Status</b>
1994	SB572	Saslaw, others	§33.1-373 - Sought to exempt political campaign signs and real estate directional signs plus other categories. Wanted to make these types of signs subject to local jurisdiction. (See 1 below)	
1994	SB572ER	Saslaw, others	§33.1-373 - Dropped Class 1 misdemeanor penalty for a \$100 civil penalty for each occurrence, dropped exemption for political and real estate signs, etc.	
1994	SB572S1	Saslaw, others	§33.1-373 - Dropped Class 1 misdemeanor penalty for a \$100 civil penalty, dropped exemption for political and real estate signs	
1994	CHAP0696	Saslaw, others	§33.1-373 - Dropped Class 1 misdemeanor penalty for a \$100 civil penalty (See 2 below)	Approved 4/10/1994
1997	HB2065	Orrock	§33.1-373 - Sought to divide fine revenue equally between state and county, town, city	
1998	HB603	Orrock, others	§33.1-375.1 - Introduced §33.1-375 which would allow local governments to enforce §33.1-373 and §33.1-375. Splits collection of revenue. Sought to exempt political signs and special event signs	
1998	HB603EH1	Orrock, others	§33.1-375.1 - Added 3 day take-down rule to campaign signs and also added "other signs and advertising erected for no more than 3 days" (See 3 below)	
1998	HB603ER	Orrock, others	§33.1-375.1 - Added "other signs and advertising erected for no more than 3 days	
1998	CHAP0835	Orrock, others	§33.1-375.1 - Added "other signs and advertising erected for no more than 3 days	§33.1-375 approved 4/22/1998
1999	HB1994	Rollison	§33.1-375.1 - Added clause to Orrock allowing local governing bodies to enter into agreements with the Commissioner to enforce 33.1-373	
1999	HB199RER	Rollison	§33.1-375.1 - Added clause to Orrock allowing local governing bodies to enter into agreements with the Commissioner to enforce 33.1-373	

<b>Year</b>	<b>Bill ID</b>	<b>Patron</b>	<b>Summary</b>	<b>Final Status</b>
1999	CHAP0195	Rollison	§33.1-375.1 - Added clause to Orrock allowing local governing bodies to enter into agreements with the Commissioner to enforce 33.1-373. Local governing body must hold a public hearing first.	Approved 3/17/1999
2000	HB642	Sen Comm on Trans/ Rollison	§33.1-375.1 - Added in a clause allowing local governments to enforce 33.1-373 and collect all the revenue. Repealed Repeals July 1, 2000, "sunset" on authorization for the Commonwealth Transportation Commissioner to enter into agreements with local government authorities for removal of illegal signs and other illegal advertising from highway rights-of-way.	
2000	HB642S1	Sen Comm on Trans	§33.1-375.1 - Added in a clause allowing local governments to enforce 33.1-373 and collect all the revenue. Repealed July 1, 2000, "sunset" on authorization for the Commonwealth Transportation Commissioner to enter into agreements with local government authorities for removal of illegal signs and other illegal advertising from highway rights-of-way.	Approved 4/26/2000
<b>2002</b>	<b>SB166</b>	<b>Byrne</b>	<b>§33.1-373 - Increased fine to \$1,000.00 per sign for Planning District 8 only. (See 4 below)</b>	
2002	HB764	Watts, others	§33.1-375.1 - Sought to exempt political signs and allow other "signs and advertising for more than 3 days. Would allow localities to prohibit campaign sign erection more than 45 days before an election or larger than six square feet - if they had entered into an agreement with the Commissioner in enforcing 33.1-373	
2002	HB264	McQuigg	§33.1-375.1 - Same as HB764 except struck political sign clause and allowed "the placement of temporary directional signs through the use of permits".	
2003	HB2152E	Rust	§33.1-355 - Not relevant since affects 33.1-355 except when it applies to signs authorized by counties that are affixed to county-owned public transit passenger shelters	

Year	Bill ID	Patron	Summary	Final Status
2003	HB2152ER	Rust	§33.1-355 - Not relevant since affects 33.1-355 except when it applies to signs authorized by counties that are affixed to county-owned public transit passenger shelters	
2003	CHAP0321	Rust	§33.1-355 Not relevant since affects 33.1-355 except when it applies to signs authorized by counties that are affixed to county-owned public transit passenger shelters	Approved 3/16/2003
2003	HB1857	House - Scott, etc. Senate - Byrne , etc.	§33.1-375.1 - Similar to HB 764 and 264 but adds that "...limitations applicable to agreements entered into under subsections A through C of this section <b>need</b> not apply to agreements entered into under this subsection.	
2003	HB1857E	House - Scott, etc. Senate - Byrne , etc.	§33.1-375.1 - Deletes weird population requirement in HB1857 and replaces <b>need</b> with <b>shall</b> .	
2003	HB1857ER	House - Scott, etc. Senate - Byrne , etc.	§33.1-375.1 - Amends and allows localities to enter into agreements with the Commissioner to "act as his agent in removing illegal signs from highway rights-of-way	
2003	CHAP0311	House - Scott, etc. Senate - Byrne , etc.	§33.1-375.1 - Amends 33.1-375.1 and allows localities to enter into agreements with the Commissioner to "act as his agent in removing illegal signs from highway rights-of-way"	Approved 3/16/2009
2003	HB264	McQuigg	§33.1-375.1 - same as HB 264 2002 version	
2004	HB941	Pollard	§33.1-355 - Not relevant since affects §33.1-355 except when it applies to signs authorized by counties that are affixed to county-owned public transit passenger shelters	
2004	HB941	Petersen	<b>§33.1-355 and §33.1-375.1 - Contains numerous definitions of "advertising" and includes political signs as advertising. It also allows political signs but only for 3 days prior and 3 days after elections.</b>	
2005	HB804	Petersen	§33.1-355 and §33.1-375.1 - Slightly modified version of HB941	
2005	SB845	Deeds	§33.1-375.1 - Similar to HB 264, allows Charlottesville to enforce ROW.	

DETAILED REPORT--NOISE, LIGHT POLLUTION AND VISUAL BLIGHT

<b>Year</b>	<b>Bill ID</b>	<b>Patron</b>	<b>Summary</b>	<b>Final Status</b>
2005	HB1632	Van Yahres	§33.1-375.1 - Similar to HB 264, allows Charlottesville to enforce ROW.	
2008	HB692	Armstrong	§33.1-355 - Not relevant since affects §33.1-355 except when it applies to signs authorized by counties that are affixed to county-owned public transit passenger shelters	
2008	HB373	Carrico	§33.1-355 - Not relevant since affects §33.1-355 except when it applies to signs authorized by counties that are affixed to county-owned public transit passenger shelters	
2009	SB830S1	Sen Comm on Trans	§33.1-373 and §33.1-375.1 - Modifies §33.1-375.1 includes 3 day rule for political signs, etc. Re civil penalties, changes "shall" to "may".	
2009	SB530ES1	Cuccinelli	§33.1-373 and §33.1-375.1 - Substitutes "may" for "shall" regarding \$100 civil penalty. Substitutes "may" for "shall" regarding fine for each occurrence. Modifies enforcement so that each locality has same authority as Commissioner to enforce 33.1-373	
2009	SB830	Cuccinelli	§33.1-375.1 - "any county, city, or town" may act as agents to enforce §33.1-373.	
2009	HB1992	Bulova	§33.1-375.1 - all penalties and costs go to the "affected locality". Commercial signs and advertising OK Saturday thru following Monday.	
			1 - Precursor of §33.1-375?	
			2 - A black day for §33.1-373	
			3 - This might be the first example of rule that political signs must be taken down 3 days after election	
			4 - Planning district 8 = Arlington, Loudoun, Prince William, Fairfax, and City of Alexandria	

# APPENDIX A

## SUMMARY OF ENVIRONMENTAL BILLS OF INTEREST 2010 VIRGINIA GENERAL ASSEMBLY

Each year, the Virginia General Assembly considers scores of bills that could impact the environment and conservation efforts in the commonwealth. This appendix identifies and summarizes several such bills that were considered by the General Assembly in 2010 and indicates whether they “Passed”, “Failed” or were “Carried Over”. Note that the General Assembly sometimes incorporates provisions from several bills in one substitute bill. Thus a bill may have failed, but all or some of its provisions have been “incorporated” in another bill. The summary for the bill will so note when this occurs.

The major substantive provisions of each measure are listed as summaries prepared by Virginia legislative staff. The appropriate bill number and patron are noted so that one can obtain further information, if needed. A researcher should refer to the enrolled bill, the appropriate chapter of the 2010 Acts of Assembly, or the Legislative Information System on the Internet (<http://leg1.state.va.us/lis.htm>) for detailed information on legislation.

These summaries reflect actions of the regular session of the 2010 General Assembly through adjournment *sine die* on March 14, 2010. Many of the measures are subject to gubernatorial review and veto. Therefore, some measures may be amended and some may not become law.

### Highlights

**Stormwater management regulations.** The measure delays the regulation that establishes local program criteria and delegation procedures and the water quality and water quantity criteria. The measure provides for the regulation to be adopted within 280 days after the establishment of the U.S. Environmental Protection Agency’s Chesapeake Bay-wide total maximum daily load, but no later than December 1, 2011. The measure also directs the Virginia Soil and Water Conservation Board to establish an advisory panel to review the regulation and make recommendations on possible revisions to the regulation. **PASSED**

**Wastewater discharge permits.** The measure requires the owner or operator of a wastewater treatment facility with a discharge greater than 1,000 gallons per day up to 39,999 gallons per day that has not begun the discharge of pollutants prior to January 1, 2011, to demonstrate to the Department of Environmental Quality acquisition of waste load allocations sufficient to offset nitrogen and phosphorus discharges. **PASSED**

**Urban development areas.** The measure sets certain densities in urban development areas according to the population of the locality. The law requires that, to the extent possible, certain federal funding and state water and sewer facility and public infrastructure funding be directed to urban development areas or other designated growth areas. **PASSED**

**Green jobs tax credit.** The measure allows a \$500 income tax credit for the creation of each “green” job with a salary of at least \$50,000 for taxable years beginning on and after January 1, 2010. **PASSED**

**Regulation of signs in highway rights-of-way.** The measure allows county employees and volunteers who are acting as agents of the Commonwealth Transportation Commissioner to remove and confiscate signs from the public right-of-way. If a sign is confiscated, the sign owner has the right to reclaim the sign within 10 business days. Signs installed on private property without the use of equipment do not require Miss Utility notification before installing the sign. **PASSED**

**Coal surface mining.** The measure would prohibit the issuing of a permit for coal surface mining operations unless certain conditions relating to the disposal of waste materials are met. **FAILED**

### **Senate Bills**

**SB272 Biodiesel and green diesel; procurement by state public bodies.** Requires the Department of General Services to establish the conditions under which state public bodies may procure diesel fuel containing, at a minimum, two percent, by volume, biodiesel fuel or green diesel fuel, for use in on-road internal combustion engines. The bill also permits any state public body to establish a pilot program to procure and use such biodiesel fuel or green diesel fuel. *Patron – Whipple.* **PASSED**

**SB346 Land conservation practices; information management.** Requires the Secretary of Natural Resources, with assistance from the Secretary of Agriculture and Forestry, to establish and maintain a database of the critical data attributes for onsite best management practices that limit the amount of nutrients and sediment entering state waters. The database is intended to document voluntary actions taken by the agricultural and silvicultural sectors and should enable the application of the collected data towards projections of progress towards Virginia’s water quality goals. The bill declares that an emergency exists and that the bill is effective upon passage. *Patron – Hanger.* **PASSED**

**SB109 Green Public Buildings Act.** Requires executive branch agencies and institutions entering the design phase for construction of a new building greater than 5,000 gross square feet in size, or renovating such a building where the cost of renovation exceeds 50 percent of the value of the building, to meet standards at least as stringent as the LEED or Green Globes standards. Exemptions from the requirement may be granted by the Director of the Department of General Services upon a finding of special circumstances that make construction or renovation to the standards impracticable. *Patron – Petersen.* **FAILED**

**SB128 Air Pollution Control Board; regulations under the Clean Air Interstate Rule.**

Retains the authority of the Air Pollution Control Board to provide for participation in the EPA-administered cap and trade system for NO<sub>x</sub> and SO<sub>2</sub> to the fullest extent permitted by federal law, but prohibits the board from requiring that electric generating facilities located in a nonattainment area meet NO<sub>x</sub> and SO<sub>2</sub> compliance obligations without the purchase of allowances from in-state or out-of-state facilities unless such nonattainment area was designated as such prior to January 1, 2010. *Patron – McDougle. PASSED*

**SB395 Stormwater management regulations; effective date.** Delays the regulation that establishes local program criteria and delegation procedures and the water quality and water quantity criteria. The regulation, however, shall be adopted within 280 days after the establishment of the U.S. Environmental Protection Agency's Chesapeake Bay-wide Total Maximum Daily Load, but no later than December 1, 2011. The bill also directs the Virginia Soil and Water Conservation Board to establish an advisory panel to review the regulation and make recommendations on possible revisions to the regulation. This bill incorporates SB 677, SB 245, and SB 681. This bill is identical to HB 1220. *Patron – Wagner. PASSED;*

**SB627 Nutrient reduction credits.** Clarifies who receives credit for the nutrient reductions associated with a stormwater nonpoint nutrient offset. Offsets are used to achieve compliance with construction site stormwater nutrient discharge requirements. The nonpoint nutrient offsets system works very similar to wetland banks. These offsets are only available when capturing all nutrients is too difficult on a development site. If the land disturbing activity using a non-point nutrient offset discharges to an MS4, the locality receives credit toward its nutrient allocation. If the discharge is not to a MS4 then the reductions are applied toward compliance with the nutrient allocation applicable to that area. *Patron – Wagner. PASSED*

**SB659 Outer Continental Shelf; air pollution control regulations.** Requires the State Air Pollution Control Board, by January 1, 2011, to adopt any regulations necessary to implement and enforce the requirements of § 328 of the Clean Air Act relating to requirements to control air pollution from Outer Continental Shelf sources. The regulations shall not differ materially from the regulations promulgated by the U.S. Environmental Protection Agency in implementing such provision of the Act. The measure also directs the Department of Environmental Quality to request the Administrator of the U.S. Environmental Protection Agency to delegate to the Commonwealth any authority the Administrator has under the Clean Air Act to implement and enforce § 328 of the Clean Air Act. *Patron – Wagner. PASSED*

**SB686 Uniform environmental covenants.** Authorizes the Department of Environmental Quality to enter into environmental covenants with interest holders in real property that restrict the use of the real property. The covenants are intended to survive transfers of ownership interests in the land or operations of law that may otherwise terminate the covenant. The bill spells out the recordation process and notice to subsequent holders of interest. Prior held interests are not affected by the covenant. The bill authorizes the Department of Environmental Quality to establish fees to be paid by the fee simple owner of the real estate subject to the covenant in order to fund the program. *Patron – Reynolds. PASSED*

**SB235 Solid waste management fees.** Requires the Waste Management Board to periodically review the permit fees and the annual fees paid by sanitary landfills or other facilities that dispose, treat or store nonhazardous solid waste. This review is to be done to ensure that the fees collected are sufficient to cover at least 75 percent, but no more than 100 percent, of the direct costs of processing an application, performing inspections and taking enforcement actions.

*Patron – Watkins. FAILED*

**SB245 Stormwater management programs.** Delays the effective date of regulations that establish local program criteria and delegation procedures and the water quality and water quantity criteria for stormwater management from July 1, 2010, to July 1, 2011. Any regulation adopted prior to this date shall be considered outside the scope of authority granted by the General Assembly. This bill was incorporated into SB 395. *Patron – Watkins. FAILED*

**SB583 Application of pesticides and fertilizers; civil penalty.** Prohibits commercial providers of lawn care and landscaping services from broadly applying pesticides and fertilizers onto impervious surfaces such as streets and driveways. *Patron – Marsden. FAILED*

**SB677 Stormwater regulations.** Delays the effective date of stormwater regulations establishing local program criteria and delegation procedures and the water quality and water quantity criteria until July 1, 2011. The bill also requires the Department of Conservation and Recreation, in consultation with the Department of Environmental Quality, to determine the effect the total maximum daily load (TMDL) allocation for the Chesapeake Bay may have on these regulations. If the agency finds that the TMDL implementation plan approved by the Environmental Protection Agency requires a change in the criteria, the Virginia Soil and Water Conservation Board is to adopt a new regulation that is consistent with the source allocations made in the approved TMDL plan. This bill was incorporated into SB 395. *Patron – Hanger. FAILED*

**SB681 Stormwater regulations.** Delays the effective date of regulation that establishes local program criteria and delegation procedures and the water quality and water quantity criteria for stormwater to no later than September 1, 2011. The bill also requires the Virginia Soil and Water Conservation Board to conform the regulation to be consistent with this effective date. This bill was incorporated into SB 395. *Patron – Whipple. FAILED*

**SB708 Water Quality Improvement Fund; nutrient offsets.** Creates the Nutrient Offset Fund as a subfund of the Virginia Water Quality Improvement Fund to be administered by the Director of the Department of Environmental Quality for the purchase of nutrient reductions certified under the Chesapeake Bay Watershed Nutrient Credit Exchange Program. Using moneys from the subfund, the Director of the Department of Environmental Quality may enter into long-term contracts with producers of nutrient offsets to purchase such offsets. Priority shall be given to nutrient offsets produced from facilities that generate electricity from animal waste. The nutrient offsets purchased with moneys from the subfund will be available for sale to owners or operators of new or expanded facilities required to offset nutrient loads through the watershed general permit. *Patron – Hanger. FAILED*

**SB393 Virginia Offshore Wind Project Development Commission.** Creates the Virginia Offshore Wind Project Development Commission to facilitate the development of wind-powered

electric energy facilities located off the coast of the commonwealth beyond the commonwealth's three-mile jurisdictional limit. The commission is charged, among other tasks, with applying to the U.S. Minerals Management Service for leases or easements for sites for such projects and applying to the U.S. Department of Energy for up to \$4 billion in loan guarantees for such projects. This bill was incorporated into SB 577. *Patron – Wagner.* **FAILED**

**SB623 Income tax; corporate and individual; green jobs tax credit.** Allows a \$500 income tax credit for the creation of “green” jobs paying an annual salary in excess of \$50,000 for taxable years beginning on and after January 1, 2010 but before January 1, 2015. Each taxpayer is allowed a credit for up to 350 new green jobs. This bill is identical to HB 803. *Patron – Hanger.* **PASSED**

**SB143 Income tax; Renewable Energy Job Creation tax credit.** Provides for a grant to be paid from newly created Green Jobs Grant Program Fund to corporations for each “Renewable Energy Job” created and filled. The amount of the grant for each such job is \$500 for each salary of \$50,000 and more a year and may be taken for four years. A Renewable Energy Job is employment in an industry related to renewable alternative energies. The credit is available for taxable years beginning on or after January 1, 2010, but before January 1, 2015. All grants under this section shall be subject to the appropriation of moneys by the General Assembly to the Fund for payment of the grants. *Patron – Miller, J.C.* **FAILED**

**SB39 Renewable portfolio standards; forest products.** Removes the requirement that utilities participating in a renewable portfolio standard (RPS) program collectively use no more than 1.5 million tons of forest products such as wood chips, bark, and sawdust each year towards meeting RPS goals. *Patron – Stuart.* **FAILED**

**SB71 Energy efficiency resource standard.** Requires each electric utility to implement a portfolio of cost-effective electric utility energy efficiency programs that will reduce the consumption of electric energy by its retail customers by 0.3 percent of the forecast consumption for 2011, 3.9 percent of the forecast consumption for 2015, and 12.2 percent of the forecast consumption for 2022. An electric utility may seek rate adjustment clauses to recover the costs of its cost-effective electric utility energy efficiency programs with an enhanced rate of return on such costs of 100 basis points, if the electric utility achieves consumption reductions of not less than 100 percent of the amounts scheduled or 150 basis points if it achieves reductions of 125 percent or more of the amounts scheduled. An electric utility that fails to achieve the scheduled consumption reductions shall make alternative compliance payments of \$0.075 for every kilowatt hour by which the utility failed to meet the scheduled consumption reductions. Utilities are not entitled to recover alternative compliance payments from customers. Alternative compliance payments are to be deposited in a Virginia Energy Efficiency and Conservation Fund and used to provide financial incentives for the implementation of energy efficiency and conservation programs. *Patron – McEachin.* **FAILED**

**SB150 Energy efficiency programs; rate recovery options for utilities.** Eliminates the ability of an investor-owned utility to recover revenue reductions that result from implementation of energy efficiency programs. The bill also requires the State Corporation Commission to only approve such a petition for a rate increase if it finds that the energy efficiency program will result

in a net cost savings to customers after a reasonable period of time and the program is in the public interest. *Patron – Stuart. FAILED*

**SB450 Mandatory renewable energy portfolio standard program.** Provides for a mandatory renewable energy portfolio standard program. Under current law, the renewable energy portfolio standard program is a voluntary program to which investor-owned utilities apply to receive certain incentives. The bill creates a mandatory RPS program that retains the existing RPS goals and positive incentives and authorizes the SCC to charge a noncompliance fee to utilities that do not meet the RPS goals. The bill also creates the Virginia Sustainable Energy Fund into which utilities that fail to meet the program goals pay noncompliance fees. *Patron – Whipple. FAILED*

**SB729 Electric utilities; alternative energy research and demonstration projects.** Establishes a procedure for an investor-owned public utility to obtain approval of the State Corporation Commission for alternative energy research and demonstration projects. Such projects are research projects implemented primarily to collect information regarding the feasibility and cost effectiveness of alternative energy technologies, including offshore wind energy, solar energy, energy storage other than pump storage, distributed renewable power programs and tariffs and customer-based metering energy management and efficiency projects. The utility may recover the costs of an approved project, with a fair return thereon, through an adjustment to rates. A utility is limited to annual investment in such projects of the lesser of (i) 1.5 percent of the electric utility's revenues from operations in Virginia for the preceding year or (ii) \$100 million. A project may be approved if the utility demonstrates that the project will satisfy one or more of the following: (a) enhance the electric utility's understanding of the effect of emerging energy technologies on the utility's systems and customers; (b) promote economic development; (c) provide environmental benefits; and (d) supplement any of the electric utility's other renewable energy or energy efficiency initiatives. This measure expires on July 1, 2015. *Patron – McEachin. FAILED*

**SB404 High Occupancy Vehicle lanes; clean special fuel vehicles; government use.** Removes requirement that the Commissioner of the Department of Motor Vehicles provide written regulations before the Department of Motor Vehicles may issue government-use license plates for clean special fuel vehicles. *Patron – Petersen. PASSED*

**SB552 HOV lanes.** Extends the "sunset" on use of HOV lanes by clean special fuel vehicles, regardless of the number of their occupants, until July 1, 2011, but only if they are not traveling on I-66, I-95, or I-395. *Patron – Barker. PASSED*

**SB267 Virginia Commission on Energy and Environment.** Requires the Division of Energy to present drafts of updates to the Virginia Energy Plan to the Commission on Energy and Environment; ensures the commission's responsibility to review and consider the direct and indirect impacts of energy production and use on the commonwealth's environment and natural resources; and allows the commission to review and consider the impact of environmental laws, regulations, and initiatives on the commonwealth's energy supplies. *Patron – Whipple. FAILED*

**SB123 Single lot development; stormwater management.** Requires the developer of a single lot to provide stormwater management where substantial redevelopment of the lot is proposed. Defines “substantial redevelopment” as land-disturbing activities that occur on more than 15 percent of the square footage of any single lot. *Patron – Petersen.* **FAILED**

**SB198 Aboveground liquid fertilizer storage tanks.** Requires localities in which an aboveground liquid fertilizer storage tank (ALFST) with a capacity of 100,000 gallons or more is located to adopt an ordinance that regulates the installation, operation, retrofitting, maintenance, repair, abandonment and removal of such tanks. The locality is authorized to establish a fee schedule for registration of these tanks. The ordinance would require the owner or operator of the tank to develop a discharge contingency plan that ensures a discharge from any regulated tank will be properly contained, mitigated and cleaned up. While the bill provides a framework for the ordinance, it allows the locality to enact an ordinance that is more restrictive or more extensive in scope than is required by the Code. *Patron – Blevins.* **FAILED**

**SB551 Local rezoning actions.** Provides for more limited review by VDOT when a property being considered for rezoning has already been subject to a VDOT review in connection with development of a local comprehensive plan. *Patron – Barker.* **CARRIED OVER**

**SB650 Regulation of stormwater.** Amends current law by removing the requirement that waivers given to federal, state or local government agencies that develop, redevelop or retrofit outfalls, discharges or property so that there is a permanent reduction in post-development stormwater flow and pollutant loading be full waivers. The amount of the waiver to such agencies shall be equal to the product of the fee that would be charged to the agency multiplied by the percentage of the stormwater runoff captured by the agency’s storm drainage or stormwater control facilities. *Patron – Quayle.* **CARRIED OVER**

**SB64 Local government authority to regulate signs.** Provides that a zoning ordinance may include provisions for the regulations of signs in the highway rights of way. Localities may also adopt an ordinance in order to control signs within any highway rights of way and to control local enforcement of such signage. If a locality enacts an ordinance to regulate signs and also authorizes volunteers to enforce the provisions of such an ordinance, the volunteer, and any local government employee, will be personally liable to the owner of the signs for any damage that may result from such enforcement. Additionally, the Commonwealth Transportation Commissioner may enter into agreements with any locality, instead of just Fairfax County, authorizing local law-enforcement agencies to act as agents of the commissioner for purposes of this legislation. Finally, this legislation limits the definition of excavation to not include installation of a sign that is installed by pushing metal, plastic or wooden poles in the ground. This bill is identical to HB 553. *Patron – Lucas.* **PASSED**

**SB110 Clean energy financing.** Gives localities the authority to, in order to secure loans for the initial acquisition and installation of clean energy improvements, place liens equal in value to the loan against any property where such clean energy systems are being installed. Further allows the locality to bundle the loans for transfer to private lenders in such a manner that would allow the liens to remain in full force to secure the loans. *Patron – Petersen.* **PASSED**

**SB222 Department of Transportation land use review.** Exempts localities, public agencies and citizens' groups from payment of certain department fees for review of land use proposals. *Patron – Puller. PASSED*

**SB246 Civil penalties for violations of noise ordinance.** Authorizes the governing body of a locality to adopt civil penalties for violations of noise ordinances. The penalty for an initial violation shall not exceed \$250 and penalties for subsequent violations shall not exceed \$500. This bill incorporates SB 120. *Patron – Watkins. PASSED*

**SB291 Donations by localities; energy efficiency.** Provides that a locality may make gifts and donations to any nonprofit tax-exempt organization that is engaged in providing energy efficiency services or promoting energy efficiency within or without the boundaries of the locality. This bill is identical to HB 436. *Patron – Deeds. PASSED*

**SB420 Urban development areas.** Sets certain densities in urban development areas according to the population of the locality that designated the urban development area. The bill also requires that, to the extent possible, certain federal funding and state water and sewer facility and public infrastructure funding be directed to urban development areas or other designated growth areas. The bill mandates that the Commission on Local Government report on localities' compliance with the statute requiring the designation of urban development areas. This bill is identical to HB 1071. *Patron – Vogel. PASSED*

### **House Bills**

**HB970 Designation of annual surplus to the Transportation Trust Fund.** Increases from two-thirds to 75 percent the amount of the general fund surplus designated to the Transportation Trust Fund within the comptroller's annual report following the close of each fiscal year. The governor would include in his budget bill an amount for deposit into the Transportation Trust Fund equivalent to the amount designated by the comptroller. *Patron – Rust. FAILED*

**HB1264 Department of General Services; Green Public Buildings Act.** Requires public bodies entering the design phase for construction of a new building greater than 5,000 gross square feet in size, or renovating such a building where the cost of renovation exceeds 50 percent of the value of the building, to build to either the LEED Silver or Green Globes two globe standards. The buildings shall be designed, constructed, verified and operated to achieve energy savings that exceed the American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE) Standard 90.1-2004 (Energy Standard for Buildings Except Low-Rise Residential Buildings) by at least 15 percent for new construction and 10 percent for major renovation. In addition, water systems designed for such buildings shall be required to provide water use savings of at least 25 percent over the baseline standard established in the federal Energy Policy Act of 1992. Exemptions from the requirement may be granted by the Director of the Department of General Services for state construction projects or by the governing body of a locality or school board for local projects. *Patron – Hope. FAILED*

**HB1144 State employee telecommuting and alternative work schedule goals.** Increases the target for eligible state employee participation in telecommuting and alternative work schedules

to 40 percent in each respective program by January 1, 2012. *Patron – Scott, J.M.* **CARRIED OVER**

**HB1088 Coyote control.** Requires the Commissioner of Agriculture and Consumer Services to join in a cooperative agreement with the federal government to reestablish the Virginia Cooperative Coyote Damage Control Program to control coyotes that pose a danger to agricultural animals. *Patron – Crockett-Stark.* **PASSED**

**HB326 Mercury thermostats recycling program.** Requires the Virginia Waste Management Board to adopt regulations to encourage the recycling of thermostats containing mercury. The bill also authorizes localities to prohibit the disposal of mercury thermostats in any privately operated landfill within its jurisdiction, so long as the locality has implemented a recycling program that is capable of handling all of the mercury thermostats within the jurisdiction. Currently, a similar program exists for the recycling of cathode ray tubes. *Patron – Plum.* **PASSED**

**HB438 Dam safety.** Requires the Soil and Water Conservation Board to establish an incremental damage analysis procedure that provides for a new standard for the spillway design requirement. The bill requires the board to adopt regulations that consider the impact of downstream limited-use or private roadways with low traffic volume and low public safety risk in the determination of the hazard potential classification of an impounding structure. The bill also allows an owner of a dam who has received a report from the board containing recommendations for the correction of deficiencies in the dam to submit his own plan for such corrections. One of the two criteria for designating a dam as unsafe is changed. Currently, if there are serious deficiencies in the design or construction of the dam that, if left unaddressed, could result in a failure that may result in loss of life or damage to downstream property, the dam is cited as being unsafe. The new criterion would be that such deficiencies may result in the loss of life or “significant” damage to downstream property. *Patron – Toscano.* **PASSED**

**HB501 Scenic river.** Designates a seven-mile portion of the Jordan River as a component of the Virginia Scenic Rivers System. *Patron – Gilbert.* **PASSED**

**HB503 Scenic river.** Designates a 10-mile portion of the Hughes River as a component of the Virginia Scenic Rivers System. *Patron – Gilbert.* **PASSED**

**HB619 Erosion and sediment control; penalty.** Removes the specific authority of a locality to impose a \$1,000 civil penalty on a person who engages in a land-disturbing activity without having an approved plan. Instead, any violation of any erosion and sediment control regulation or order of the Virginia Soil and Water Conservation Board, any provision of a local program, or any condition of a permit will be subject to a civil penalty of \$100 to \$1,000. *Patron – Orrock.* **PASSED**

**HB1100 Stormwater management facilities; liability.** Provides that a common interest community shall enjoy limited liability protection relating to a stormwater management facility located on property owned by that community if: (i) the common interest community cedes the responsibility for the maintenance, repair and replacement of a stormwater management facility

to the commonwealth or a political subdivision thereof, (ii) the action has been memorialized by contract or other instrument executed by both parties, and (iii) the commonwealth or the governing body of the political subdivision accepted the responsibility ceded by the common interest community in writing or by resolution. Maintenance, repair and replacement responsibilities may include the cleaning of the facility, maintenance of adjacent grounds which are part of the facility, maintenance and replacement of fencing where the facility is fenced and posting of signage indicating the identity of the governmental entity which maintains the facility. The immunity granted by this provision does not extend to actions or omissions by the landowner constituting intentional or willful misconduct or gross negligence. *Patron – Sickles.* **PASSED**

**HB1220 Stormwater management regulations; effective date.** Delays the regulation that establishes local program criteria and delegation procedures and the water quality and water quantity criteria. The regulation, however, shall be adopted within 280 days after the establishment of the U.S. Environmental Protection Agency's Chesapeake Bay-wide Total Maximum Daily Load, but no later than December 1, 2011. The bill also directs the Virginia Soil and Water Conservation Board to establish an advisory panel to review the regulation and make recommendations on possible revisions to the regulation. This bill incorporates HB 1311 and HB 155. This bill is identical to SB 395. *Patron – Hugo.* **PASSED**

**HB1300 Air Pollution Control Board; regulations under the Clean Air Interstate Rule.** Retains the authority of the Air Pollution Control Board to provide for participation in the EPA-administered cap and trade system for NO<sub>x</sub> and SO<sub>2</sub> to the fullest extent permitted by federal law, but prohibits the board from requiring that electric generating facilities located in a nonattainment area meet NO<sub>x</sub> and SO<sub>2</sub> compliance obligations without the purchase of allowances from in-state or out-of-state facilities unless such nonattainment area was designated as such prior to January 1, 2010. *Patron – Kilgore.* **PASSED**

**HB1320 Dam safety.** Authorizes the Director of the Department of Conservation and Recreation, with the approval of the Virginia Soil and Water Conservation Board, to award grants from the Dam Safety, Flood Prevention and Protection Assistance Fund to local governments and private entities for dam break analysis, the mapping and digitization of dam break inundation zones and incremental damage analysis. Currently, only local governments are eligible to receive grants. The bill also establishes the Dam Safety Administrative Fund, which is capitalized with moneys from the dam application permit fees. The moneys in the fund are to be used for administration of the dam safety program. *Patron – Sherwood.* **PASSED**

**HB129 Erosion and sediment control.** Exempts certain activities from the Erosion and Sediment Control Law (E&S) as land-disturbing activities if certain practices are followed. Under the bill the harvesting of forest crops would not be considered a land-disturbing activity and therefore would not be regulated under the E&S law if the area on which the harvesting occurs is: (i) reforested artificially or naturally in accordance with a forest management plan developed by a professional forester or (ii) converted to agricultural or improved pasture use by following a conservation plan approved by the soil and water conservation district. Currently, such harvested areas can be exempted from the E&S law if other types of restoration procedures are implemented. *Patron – Pollard.* **FAILED**

**HB136 Scenic river.** Designates a portion of the Blackwater River as a component of the Virginia Scenic Rivers System. This bill was incorporated into HB 951. *Patron – Tyler.*  
**FAILED**

**HB155 Stormwater management regulations.** Delays for two years the Department of Conservation and Recreation's regulations governing the stormwater management program that were to be implemented on July 1, 2010. This bill was incorporated into HB 1220. *Patron – Dance.* **FAILED**

**HB375 Removal of mercury switches from scrap and recycled vehicles.** Requires manufactures to submit mercury minimization plans to the Department of Environmental Quality that include information on mercury switch removal from motor vehicles. Vehicle manufacturers are required to pay specified costs associated with mercury switch removal. Recyclers must remove all switches before transferring ownership of a vehicle to a scrap processing facility and within 180 days after the receipt of a vehicle. *Patron – Cosgrove.*  
**FAILED**

**HB521 Plastic bags; use by retailers.** Bans the use of plastic carryout bags by retailers at the point of sale unless such bags are (i) durable plastic bags with handles; (ii) at least 2.25 mils thick; and (iii) specifically designed and manufactured for multiple reuse. *Patron – Morrissey.*  
**FAILED**

**HB890 Scenic river.** Designates a portion of the Blackwater River as a component of the Virginia Scenic Rivers System. This bill was incorporated into HB 951. *Patron – Barlow.*  
**FAILED**

**HB1311 Stormwater regulations.** Delays the effective date of regulation that establishes local program criteria and delegation procedures and the water quality and water quantity criteria for stormwater to no later than September 1, 2011. The bill also requires the Virginia Soil and Water Conservation Board to conform the regulation to be consistent with this effective date. This bill was incorporated into HB 1220. *Patron – Bulova.* **FAILED**

**HB329 Lawn fertilizers; penalty.** Prohibits the application of fertilizers that contain phosphorus for use on lawns, golf courses, parks and cemeteries. The prohibition does not apply to fertilizer products primarily intended for gardening, trees, shrubs or indoor plants. The bill prohibits the application of fertilizer that contains phosphorus when the ground is frozen. Any fertilizer that runs onto impervious surfaces has to be immediately contained and collected. New lawns or lawns that have had soil tests in the last three years showing phosphorus levels are deficit based upon Department of Conservation and Recreation's nutrient management standards and criteria can use fertilizers that contain phosphorus. Beginning January 1, 2011, no person can display for sale lawn fertilizer that is labeled as containing phosphorus; however, such products can be stored off the sales floor and may be sold upon request. Also beginning on this date, a business selling fertilizers has to provide signage that informs the public of the new law and noting the effects of phosphorus on state waters. Any person who violates provisions of the new law may be assessed a civil penalty by the Department of Conservation and Recreation of

up to \$250. The moneys collected will be deposited in the Water Quality Improvement Fund.

*Patron – Plum. CARRIED OVER*

**HB1319 Air pollution emissions.** Defers to the U.S. Environmental Protection Agency (USEPA) the enforcement of any carbon dioxide standards or cap and trade provisions that are included in the federal Clean Air Act. The bill requires the governor, in consultation with the attorney general, to examine these provisions and determine whether Congress has the authority to enact mandates upon the states. The governor is to report his findings to the General Assembly. The bill authorizes the attorney general to bring an action against the USEPA if he or she finds that the mandated standards are based on a finding that is not scientifically demonstrated. *Patron – Marshall, R.G. CARRIED OVER*

**HB1357 Department of Environmental Quality; carbon dioxide.** Prohibits the Air Pollution Control Board and the Department of Environmental Quality from taking any action to restrict the emission of carbon dioxide. Any federal law or regulation that purports to prohibit, limit or control in any way the emission of carbon dioxide shall be without authority, void and of no force within the boundaries of the commonwealth. *Patron – Morefield. CARRIED OVER*

**HB82 Civil penalties for violation of sewage usage ordinances.** Allows any locality under an order of the Virginia Department of Environmental Quality issued pursuant to the authority of subdivision (8a) of § 62.1-44.15 to adopt an ordinance establishing a uniform schedule of civil penalties for violations of ordinances governing the introduction of pollutants and wastes into the locality's public sewer system. Such civil penalties may not be more than \$100 for the initial summons and not more than \$150 for each additional summons. *Patron – Knight. PASSED*

**HB436 Donations by localities; energy efficiency.** Provides that a locality may make gifts and donations to any nonprofit organization that is engaged in providing energy efficiency services or promoting energy efficiency within or without the boundaries of the locality. This bill is identical to SB 291. *Patron – Toscano. PASSED*

**HB553 Regulation of signage in highway rights of way.** Allows county employees and volunteers who are acting as agents of the Commonwealth Transportation Commissioner to remove and confiscate signs from the public right-of-way. If a sign is confiscated by an employee or volunteer, the sign owner shall have the right to reclaim the sign within 10 business days of the date of such confiscation. Finally, the legislation clarifies that a sign installed (on private property) that does not require use of tools or equipment does not trigger the requirement to call Miss Utility before installing the sign. This bill is identical to SB 64. *Patron – Marshall, D. W. PASSED*

**HB1071 Urban development areas.** Sets certain densities in urban development areas according to the population of the locality that designated the urban development area. The bill also requires that, to the extent possible, certain federal funding and state water and sewer facility and public infrastructure funding be directed to urban development areas or other designated growth areas. The bill mandates that the Commission on Local Government report on localities' compliance with the statute requiring the designation of urban development areas. This bill is identical to SB 420. *Patron – Athey. PASSED*

**HB186 Smoking in cars with minor present; civil penalty.** Makes it unlawful for a person to smoke in a motor vehicle, whether in motion or at rest, in which a child under the age of 13 is present, punishable by a civil penalty of \$100. *Patron – Morrissey.* **FAILED**

**HB206 Aboveground liquid fertilizer storage tanks.** Requires localities in which an above-ground liquid fertilizer storage tank (ALFST) with a capacity of 100,000 gallons or more is located to adopt an ordinance that regulates the installation, operation, retrofitting, maintenance, repair, abandonment and removal of such tanks. The locality is authorized to establish a fee schedule for registration of these tanks. The ordinance would require the owner or operator of the tank to develop a discharge contingency plan that ensures a discharge from any regulated tank will be properly contained, mitigated and cleaned up. While the bill provides a framework for the ordinance, it allows the locality to enact an ordinance that is more restrictive or more extensive in scope than is required by the Code. This bill was incorporated into HB 1211. *Patron – Alexander.* **FAILED**

**HB1351 Virginia Indoor Clean Air Act; smoking in public buildings prohibited; penalty.** Prohibits smoking in any building owned or leased by the commonwealth or any agency thereof or any locality. The bill contains numerous technical amendments. *Patron – Hope.* **FAILED**

**HB987 Regulation of stormwater.** Amends current law by removing the requirement that waivers given to federal, state or local government agencies that develop, redevelop or retrofit outfalls, discharges or property so that there is a permanent reduction in post-development stormwater flow and pollutant loading be full waivers. The amount of the waiver to such agencies shall be equal to the product of the fee that would be charged to the agency multiplied by the percentage of the stormwater runoff captured by the agency's storm drainage or stormwater control facilities. *Patron – Jones.* **CARRIED OVER**

**HB928 Virginia Universities Clean Energy Development and Economic Stimulus Foundation.** Creates the Virginia Universities Clean Energy Development and Economic Stimulus Foundation as a body corporate and a political subdivision of the commonwealth. The foundation shall identify, obtain, disburse and administer funding for (i) research and development of alternative fuels, clean energy production and related technologies; (ii) support of economic development projects in disadvantaged rural areas; and (iii) the provision of assistance in the commercialization of alternative fuels and clean energy technologies. Funding shall be awarded only to those proposed projects that best meet the established criteria and purposes of this act. *Patron – Bell, Robert B.* **PASSED**

**HB1023 Telecommuting; employees of agencies within the legislative branch of state government.** Requires the head of each agency within the legislative branch of state government to adopt a telecommuting and alternative work schedule policy for eligible employees. The policy shall authorize voluntary participation in telecommuting and alternative work schedule programs for up to eight days per month, provided such participation does not diminish employee performance or service delivery. The head of each legislative agency may authorize participation for more than eight days per month. No policy adopted pursuant to this act shall authorize participation in either program during any session or special session of the

General Assembly. The Capitol Police are exempt from the requirements of this act. *Patron – Hugo. FAILED*

**HB209 Outdoor signs and advertising.** Provides that all penalties and costs collected for violations of advertising provisions when the locality has entered into an agreement with the Commonwealth Transportation Commissioner shall be paid to the affected locality. Excludes signs and advertising erected only from Saturday through the following Monday from those agreements with the commissioner. *Patron – Bulova. PASSED*

**HB214 HOV lanes; use by vehicle with clean special fuel license plates.** Extends until July 1, 2011, the sunset on use of HOV lanes by clean special fuel vehicles, regardless of the number of occupants. This bill incorporates HB 320 and HB 980. *Patron – Greason. PASSED*

**HB25 Statewide Transportation Plan.** Requires that the Statewide Transportation Plan include quantifiable measures and achievable goals for greenhouse gas emissions. *Patron – Herring. FAILED*

**HB320 HOV lanes; use by vehicle with clean special fuel license plates.** Extends until July 1, 2011, the sunset on use of HOV lanes by clean special fuel vehicles, regardless of the number of occupants. This bill was incorporated into HB 214. *Patron – Plum. PASSED*

**HB1334 Littering; cigarette butts.** Prohibits disposal of cigarettes or any portion thereof on public property. Any person convicted of violation shall be subject to a civil penalty of \$75. However, in lieu of appearing in court, the violator may mail or personally deliver payment of \$75 to the clerk of the court. *Patron – Morgan. PASSED*

**HB1037 Clean Energy Manufacturing Incentive Grant Program.** Repeals the Solar Photovoltaic Manufacturing Incentive Grant Program and creates a program to provide financial incentives to companies that manufacture or assemble equipment, systems or products used to produce renewable energy, nuclear energy or energy efficiency products. To be eligible for a grant, the manufacturer must make a capital investment greater than \$50 million and create at least 200 full-time jobs. The program would be managed by the Director of the Department of Mines, Minerals and Energy. *Patron – Byron. CARRIED OVER*

**Clean Energy Manufacturing Incentive Grant Program.** Repeals the Solar Photovoltaic Manufacturing Incentive Grant Program and creates a program to provide financial incentives to companies that manufacture or assemble equipment, systems or products used to produce renewable or nuclear energy, or products used for energy conservation, storage or grid efficiency purposes. To be eligible for a grant, the manufacturer must make a capital investment greater than \$50 million and create at least 200 full-time jobs that pay at least the prevailing wage. The program would be managed by the Director of the Department of Mines, Minerals and Energy. This bill incorporates SB 129. *Patron – Stosch. CARRIED OVER*

**HB442 Electric utilities; renewable energy.** Authorizes an electric utility customer to continue purchasing renewable energy pursuant to the terms of a power purchase agreement that was in effect on the date there is filed with the State Corporation Commission a tariff for the incumbent

electric utility that serves the exclusive service territory in which the customer is located to offer electric energy provided 100 percent from renewable energy for the duration of the power purchase agreement. *Patron – Toscano. PASSED*

**HB1022 Renewable energy portfolio standard program.** Provides that an investor-owned electric utility will receive triple credit toward meeting the goals of the renewable energy portfolio standard program for energy derived from offshore wind. *Patron – Hugo. PASSED*

**HB1380 Renewable portfolio standards; forest products.** Removes the requirement that utilities participating in a renewable portfolio standard (RPS) program collectively use no more than 1.5 million tons of forest products such as wood chips, bark and sawdust each year towards meeting RPS goals. *Patron – Pollard. FAILED*

**HB327 Electric energy efficiency standard.** Establishes an energy efficiency standard under which investor-owned electric utilities are required to reduce the consumption by their retail customers in the commonwealth, through implementation of energy efficiency and conservation programs, by 2026 by 19 percent less than the consumption level currently projected for such year. Between 2011 and 2026, utilities are required to meet interim benchmarks established by the State Corporation Commission. The measure authorizes investor-owned electric utilities to earn the same enhanced rate of return on costs of energy efficiency programs that is currently provided for renewable powered generation facilities to recover the costs of designing and operating energy efficiency programs. A utility's energy efficiency programs shall be reported in its integrated resource plans. *Patron – Plum. CARRIED OVER*

**HB1236 Information on energy conservation.** Requires investor-owned electric utilities and natural gas distribution companies to provide information to customers to support and encourage conservation actions. The bill requires the State Corporation Commission to determine the type of information and issue guidelines indicating what information is to be (i) included with customers' periodic bills, (ii) sent annually to customers in reports and (iii) made accessible to customers on the Internet. *Patron – Toscano. CARRIED OVER*

**HB1342 Renewable energy portfolio standard program.** Provides that an investor-owned electric utility will receive quintuple credit toward meeting the goals of the renewable energy portfolio standard program for energy from poultry litter or other animal waste. *Patron – Gilbert. CARRIED OVER*

**HB803 Income tax; corporate and individual; green jobs tax credit.** Allows a \$500 income tax credit for the creation of "green" jobs paying an annual salary in excess of \$50,000 for taxable years beginning on and after January 1, 2010 but before January 1, 2015. Each taxpayer is allowed a credit for up to 350 new green jobs. This bill incorporates HB 268 and HB 1132 and is identical to SB 623. *Patron – Poindexter. PASSED*

**HB389 Virginia Offshore Wind Project Development Authority.** Creates the Virginia Offshore Wind Development Authority to facilitate and support the development of the offshore wind industry and wind-powered electric energy facilities located off the coast of the commonwealth beyond the commonwealth's three-mile jurisdictional limit. The authority is

charged with, among other tasks, (i) identifying existing state and regulatory or administrative barriers to the development of the offshore wind industry, (ii) collecting metocean and environmental data, (iii) upgrading port facilities to accommodate the manufacturing and assembly of project components and vessels that will support such projects and (iv) applying to the U.S. Department of Energy for loan guarantees for such projects. SB 577 is identical.

*Patron – Janis. PASSED*

**HB1222 Voluntary Solar Resource Development Fund; grant program.** Requires electric utilities to provide customers with the option to make voluntary contributions to the Voluntary Solar Resource Development Fund, which is established by this measure. Moneys in the fund will be allocated by the State Corporation Commission as grants for projects that involve the acquisition, installation or operation of photovoltaic devices, solar water heating devices or solar space heating devices at a residence, structure occupied by a nonprofit organization or commercial establishment. *Patron – Ebbin. FAILED*

**HB881 Restrictive covenants regarding solar energy collection devices.** Invalidates any new or existing restrictive covenant adopted by a community association that prohibits or restricts the installation or use of any solar energy collection device. Community associations may establish reasonable restrictions as to the size, place and manner regarding the placement of such devices on private property and community areas. *Patron – BaCote. CARRIED OVER*

## MEMORANDUM

DATE: April 7, 2010

**TO:** Board of Supervisors

**FROM:** Stella Koch, Chairman *Stella M. Koch*  
Environmental Quality Advisory Council

**SUBJECT:** EQAC budget testimony

EQAC has only one budget request this year. We ask the Board of Supervisors to increase the rate funding the stormwater program to a penny and a half.

The funding of the stormwater penny in FY 2006 by the Board of Supervisors was both an acknowledgment and a down payment on significant program needs within the stormwater program of the Department of Public Works and Environmental Services. This additional funding was used to begin addressing the huge backlog of infrastructure replacement needs and to begin the enormous task of implementation of watershed plans.

However in the declining economy of recent years, we have seen the complete transfer of funding for the stormwater program moved from the General Fund to the monies generated by the stormwater penny. This, once again, significantly reduced the total money available for infrastructure replacement and watershed project implementation.

The present proposal of funding the stormwater program by the rate of a penny and a half would result in the restoration of some funding for modest watershed improvement programs and some funds for infrastructure replacement. In terms of infrastructure replacement, the present level of funding is simply not acceptable. We also realize that there will likely be a need for additional increases for water quality projects to meet future permit conditions, and for replacement of aging infrastructure.

Therefore, EQAC recommends that the stormwater program continue to be funded by the Service District, and that the rate be increased to a penny and a half.

We thank you for this opportunity to comment.

# **ENVIRONMENTAL QUALITY ADVISORY COUNCIL**

## **Recommendation Regarding Air Quality Monitoring in Fairfax County**

**April 14, 2010**

### **BACKGROUND:**

The Virginia Department of Environmental Quality (DEQ) has proposed to cease operation of the four air quality monitors that have historically been operated by Fairfax County and to continue to operate the DEQ monitor that is located at Lee District Park (within Fairfax County). In furtherance of ensuring protection of public health and the environment, it is EQAC's view that those monitors that report the highest ozone levels should be retained. Because the Mount Vernon monitor has reported the highest repeated ozone levels for more years than any other monitor in Fairfax County within the past 10 years, EQAC concludes that the Mount Vernon monitor should be used to assess whether we are or are not meeting the atmospheric ozone standard.

DEQ has posted its recommended changes to the air quality monitoring network on its Web site (<http://www.deq.state.va.us/air/permitting/monitoring.htm>) as part of its Annual Air Monitoring Network review. The review documents are available for public comment through April 30, 2010.

### **RECOMMENDATION:**

EQAC recommends that the Fairfax County Board of Supervisors provide comments to DEQ regarding its Annual Air Monitoring Network review. Specifically, EQAC recommends that the Board of Supervisors request that DEQ include one or more of the existing Fairfax County monitors in its future monitoring plans. Given the historically higher level of ozone concentrations at the Mount Vernon station, as compared to the other stations in the county, EQAC recommends that the Board of Supervisors request that DEQ include the Mount Vernon station in the regional monitoring plans.

# County of Fairfax, Virginia

## MEMORANDUM

**DATE:** April 21, 2010

**TO:** Board of Supervisors

**FROM:** Stella Koch, Chairman *Stella M. Koch*  
Environmental Quality Advisory Council

**SUBJECT:** EQAC recommendation regarding the draft Plan Amendment for the Tysons Corner Urban Center

As an advisory group that has been appointed by the Fairfax County Board of Supervisors to advise the board on environmental matters, the Environmental Quality Advisory Council (EQAC) has consistently advocated for better land use and transportation integration, which includes a complete multimodal transportation system with complimentary rail, bus, car, and pedestrian facilities that is greatly facilitated by a street grid and safe connecting pedestrian walkways. EQAC recommends that the planned development intensities in Tysons Corner be sufficient to achieve and sustain the essential elements envisioned by the Tysons Corner Land Use Task Force.

The Tysons Corner vision document presented by the Tysons Corner Land Use Task Force outlines the transformation of Tysons Corner from a predominantly work and retail center into a balanced mixed-use urban center. The transportation and environmental amenities that are included in the vision document are essential elements of a transformation from the existing conditions into an urban center. These essential elements include:

1. A grid of streets
2. A circulator bus system
3. Multi-modal transportation including safe and convenient walking and biking connectivity
4. Energy efficient buildings to LEED Silver and better standards
5. Stormwater management practices that improve the quality of Tysons Corner and protect the downstream watersheds
6. Open and public spaces that form the basis of a high quality urban park system
7. Affordable housing that enables people to both live and work in the urban center.

The realization of the transportation and environmental elements requires expenses that will be paid for by the public, future citizens living and working in Tysons Corner, and developers building the new urban center. The Tysons Task Force proposed an overall development intensity level that would enable the development community to build the transportation and

Fax 703-324-3056  
[www.fairfaxcounty.gov/eqac/](http://www.fairfaxcounty.gov/eqac/)

environmental amenities as part of the construction process. That level was ambitious but kept the focus on enabling the full urban vision.

The demonstration project being pursued by the Georgelas Group will be a confirmation of the feasibility of the Tysons Corner plan to support the transportation and environmental amenities at a particular development intensity.

EQAC recommends that the planned development intensities in Tysons Corner be sufficient to maintain the essential transportation and environmental amenities envisioned by the Tysons Corner Land Use Task Force. This may be as high as that proposed by the Tysons Land Use Task Force or lower as verified by the demonstration plan. But the key element is that the levels be sufficient to provide the elements that enable a transformation into the vision of Tysons Corner as the urban center for Fairfax County.

This EQAC recommendation was supported by the following members at the Council's April 14 meeting: Stella Koch (Chairman, At-Large); George Lamb (Vice Chairman, At-Large); Linda Burchfiel (At-Large); Frank Divita (Braddock); Marie Flanigan (Providence); Ned Foster (Springfield); Johna Gagnon (Lee); Robert McLaren (At-Large); David Ouderkirk (Hunter Mill); Glen White (Mason); and Larry Zaragoza (Mount Vernon). The recommendation was opposed by Frank Crandall (Dranesville) as he is already on public record as supporting the alternative proposed by Planning Commissioner Walter Alcorn. Ben Swanson (Student Member) and Richard Weisman (Sully) were absent from the meeting.

We thank you for this opportunity to comment.

## **Recommendations/Questions Regarding Illegal Highway Signs and Cigarette Butt Litter in Fairfax County**

**July 12, 2010**

### **BACKGROUND:**

The twin litter plagues of illegal highway signs and cigarette litter have vexed Fairfax County for decades. Illegal highway signs, despite recommendations for controlling them from a county task force in 2001, continue to be a source of annoyance for the vast majority of county citizens. Meanwhile, no serious effort has ever been made to crack down on cigarette litter. However, while neither of these can ever be completely eliminated, there are things that the county can do that would substantially ameliorate both signs and cigarette butts, and at little or no cost to the county.

EQAC has identified two legislative changes that the Board of Supervisors could recommend to the General Assembly in regard to the illegal sign issue. We also feel that there are several goals that should be pursued to address both the sign and cigarette litter concerns, and we are seeking the Board's endorsement of these goals and assistance in developing approaches to meeting them.

### **LEGISLATIVE RECOMMENDATIONS:**

EQAC has two legislative recommendations; we will be pursuing these ideas as proposals that will be submitted for consideration through the County Executive's standard submission process. In brief, these ideas are as follows:

1. Remove Fairfax County's participation in state law §33.1-375.1. In EQAC's view, this law actually hinders Fairfax County from doing anything about illegal signs. This law also confuses uninformed people into thinking that it is legal to place signs in the VDOT Right-of-Way.
2. Modify state law §33.1-373 and return it to its 1993 provisions. Specifically, restore the penalty for illegal signs to a Class 1 misdemeanor. Also modify the law to allow equitable fine sharing between the state and the county.

### **LITTER REDUCTION GOALS:**

In addition to the above legislative ideas, we feel that a series of litter reduction goals should be established. We seek the Board's support in endorsing these goals and in developing approaches to meeting them. Our suggested goals, and possible actions that can be taken in support of them, are as follows:

**Goal 1: The county should set an example by limiting its own sign placements to the minimum extent necessary.**

We recognize that some county government signs serve important, and in some cases legally mandated, purposes. Signs advertising zoning hearings, for example, are essential to keeping the public informed of important land use processes and opportunities for participation in these processes. We seek the Board's support, however, in ensuring that signs that are more discretionary in nature (e.g., advertisements for Celebrate Fairfax) are limited to county property or private property with the permission of the land owner.

**Goal 2: The county should better publicize information pertaining to sign restrictions.**

The following are a couple of approaches that could be taken:

- Put stronger language on the county's Web site regarding illegal signs in the VDOT rights-of-way.<sup>1</sup>
- Provide clear information to applicants for permits to erect temporary political signs, within the permit application form, that these permits do not apply to the VDOT ROW and that these permits only pertain to signs placed on private property with the permission of the land owner<sup>2</sup>.

**Goal 3: Political signs should only be placed in a manner that adheres to state law; they should not be placed in VDOT rights-of-way.**

In EQAC's view, this is the single worst source of illegal signs, and we are concerned that the chronic and willful violation of state law may breed cynicism among voters. We ask that Board members consider limiting their signs to private property with the permission of land owners and that alternatives to littering local highways with signs be sought. For example, might more effective approaches to advertisement be available through the use of computers and/or mass communication tools?

**Goal 4: Participation in VDOT's Adopt-A-Highway program should be encouraged.**

The Adopt-A-Highway program is an effective mechanism through which illegal signs in highway rights-of-way can be removed. Fairfax County should consider the adoption of highway segments and should encourage its residents and employees to participate in this program.

---

<sup>1</sup> <http://www.fairfaxcounty.gov/dpz/faqs/signsfaq.htm>

<sup>2</sup> [http://www.fairfaxcounty.gov/eb/sign\\_permit.pdf](http://www.fairfaxcounty.gov/eb/sign_permit.pdf)

**Goal 5: Fairfax County Public Schools should take an active role in supporting reductions in the illegal posting of signs.**

It is EQAC's view that public school groups are frequent violators of state sign laws but that these groups may not be aware of what the rules are. The Board could encourage the Superintendent of FCPS to:

- Develop and disseminate information to remind faculty, students and booster organizations that it is illegal to place signs in the VDOT Right-of-Way and to stress to our students, both by example and through guidance, the need to obey the law;
- Establish in-house penalties for violators; and
- Ensure that signs for school-sponsored events are restricted to school property or to private properties (with the permission of the land owners).

**Goal 6: Enforcement efforts regarding cigarette litter should be strengthened.**

County police could increase enforcement efforts for persons who violate the County's litter laws by improperly disposing of cigarette butts. EQAC recognizes that enhanced enforcement efforts would require resource dedication and that additional resources may not be available for this purpose. However, we are also aware that improper disposal of cigarette butts is a Class 1 misdemeanor and any fines imposed on violators charged with a violation of the County's litter laws would be sent to the County.

# County of Fairfax, Virginia

## MEMORANDUM

**DATE:** August 11, 2010

**TO:** Board of Supervisors

**FROM:** Stella Koch, Chairman *Stella M. Koch*  
Environmental Quality Advisory Council

**SUBJECT:** EQAC perspectives on the Virginia Department of Transportation's 527 review process

Per the request of the Fairfax County Board of Supervisors, EQAC reviewed impacts on Fairfax County operations and citizens from the passage of Chapter 527 of the 2006 Acts of Assembly, Traffic Impact Analysis Regulations, effective June 30, 2008. We invited the Virginia Department of Transportation (VDOT) to participate along with County staff. Unfortunately the VDOT representative was not able to attend so the briefing was presented by staff.

We were primarily interested in any burdens imposed or values gained from the VDOT 527 process based on the first-hand experiences of our staff. The general consensus is that, after working out initial start-up issues and adapting county procedures, the regulations have not added a significant burden and have provided a value to the County by improving the quality and consistency of proposals submitted for consideration by the development community.

County staff addressed concerns that the process could be burdensome, time consuming and intrusive. Fairfax had processes in place that were already performing the substance of the studies through various practices and timeframes that 527 would supplant. Through the startup phase, staff adapted their procedures to comply with the regulations while gaining value from the process. In practice, only very substantial changes to the Comprehensive Plan trigger the 527 review process, and a much lower threshold triggers it for rezonings and site plans. Furthermore, Fairfax County DOT and VDOT make the determination as to which specific activities trigger 527. VDOT reviews the study for technical compliance and makes advisory recommendations. According to VDOT's LandTrack system, the state has received 104 traffic impact analyses from Fairfax County to date.

The issue of adding time to county actions was addressed in part by adapting county processes to sequence them to 527 time frames. VDOT has a 90-day time-limit to approve or reject a package and staff noted that VDOT has been fairly good about meeting that limit. VDOT's view is that the 527 review does not lengthen the process, but in practice it does so in an

Fax 703-324-3056  
[www.fairfaxcounty.gov/eqac/](http://www.fairfaxcounty.gov/eqac/)

indirect way. According to staff it adds about 6 months to the Area Plans Review (APR) process because the information that comes from the 527 traffic study is the best available. The increase in time is not from the process itself, but due to the fact that the Planning Commission, task forces, etc. want to see the information from the 527 studies before they make their decisions.

The general view is that the county has gotten through the bugs of implementation and now there is added value in the standardization of submissions. In addition, staff cited some examples where they were able to leverage the 527 process to improve the level of developer commitment.

The 527 process encourages developers to provide more rigorous transportation studies in a standardized system. Prior to the 527 process, staff requested such information but received studies that were inconsistent or incomplete. By having studies done up front, the county gets good information for the rezoning process, that is used to enhance the decision and negotiating process.

Thank you for your inquiry and please feel free to contact us with any follow-up questions or concerns that you may have.

# LEGISLATIVE INITIATIVE

(Completed form to be provided to the Board's Legislative Committee)

## **GENERAL SUBJECT AREA -- TITLE OF PROPOSAL:**

Sign enforcement in highway rights-of-way.

## **PROPOSAL:** *(Provide a brief description of the proposal)*

Strengthen § 33.1-373 by strengthening penalties and allowing local communities to share in fine revenue.

## **SOURCE:** *(Provide the name of the agency, board, or commission generating the proposal and the date of the proposal)*

Environmental Quality Advisory Council, August 11, 2010.

## **BACKGROUND:**

*(Succinctly summarize the current law and explain why the law needs to be changed; identify the issues involved; note the impact of the proposal or why the proposal is important to Fairfax County; include any other information that might be helpful to the Board in making a decision as to the merits of the proposal; note any previous Board of Supervisors' action or previous General Assembly study or action on this issue. **This section should provide a synthesis of the proposal and should be no more than one paragraph, two if necessary; the Board wants concise information in the Legislative Program. Please use "Additional Background Information" on the next page to more fully explain the proposal.**)*

Through independent research and communications with county and state staffs, EQAC has determined that § 33.1-373 is completely ineffective in helping to enforce penalties in regard to the placement of illegal signs in the highway rights-of-way. Penalties are now set by the Code of Virginia as \$100 civil penalties; EQAC proposes that any violation instead be classified as a Class 1 misdemeanor, as was the case prior to 1994.

## **RECOMMENDATION:**

*(Do not fill out-- This will be indicated by the Legislative Director and County Executive)*

# LEGISLATIVE INITIATIVE INFORMATION SHEET

(Supplemental background information to be used by staff to pursue actual legislation)

## GENERAL SUBJECT AREA -- TITLE OF PROPOSAL:

Sign enforcement in highway rights-of-way.

## PROPOSED NEW OR REVISED STATUTORY LANGUAGE:

*(Indicate actual wording change to Va. Code; use Code citation and please indicate whether you have had the County Attorney's office review the proposed new or revised statutory language; specific Code language can be copied from the web by typing the specific Section number at: <http://leg1.state.va.us/000/src.htm>)*

§ 33.1-373. Advertising on rocks, poles, etc., within limits of highway; ~~civil penalty.~~

Any person who in any manner (i) paints, prints, places, puts or affixes any advertisement upon or to any rock, stone, tree, fence, stump, pole, mile-board, milestone, danger-sign, guide-sign, guidepost, highway sign, historical marker, building or other object lawfully within the limits of any highway or (ii) erects, paints, prints, places, puts, or affixes any advertisement within the limits of any highway shall be charged with a Class 1 misdemeanor. Unless the local governing body has entered into an agreement with the Commonwealth Transportation Commissioner pursuant to § 33.1-375.1, half of all criminal penalties collected under this section shall be paid into the Highway Maintenance and Operating Fund, and half shall be paid to the affected locality. ~~assessed a civil penalty of \$100. Each occurrence shall be subject to a separate penalty. All civil penalties collected under this section shall be paid into the Highway Maintenance and Operating Fund.~~ Advertisements placed within the limits of the highway are hereby declared a public and private nuisance and may be forthwith removed, obliterated, or abated by the Commonwealth Transportation Commissioner or his representatives without notice. The Commonwealth Transportation Commissioner may collect the cost of such removal, obliteration, or abatement from the person erecting, painting, printing, placing, putting, affixing or using such advertisement. When no one is observed erecting, painting, printing, placing, putting, or affixing such sign or advertisement, the person, firm or corporation being advertised shall be presumed to have placed the sign or advertisement and shall be punished accordingly. Such presumption, however, shall be rebuttable by competent evidence. In addition, the Commissioner or his representative may seek to enjoin any recurring violator of this section.

The provisions of this section shall not apply to signs or other outdoor advertising regulated under Chapter 7 (§ [33.1-351](#) et seq.) of this title.

(Code 1950, § 33-319; 1970, c. 322; 1993, c. 538; 1994, c. [696](#).)

# LEGISLATIVE INITIATIVE

(Completed form to be provided to the Board's Legislative Committee)

## **GENERAL SUBJECT AREA -- TITLE OF PROPOSAL:**

Sign enforcement in highway rights-of-way.

## **PROPOSAL:** *(Provide a brief description of the proposal)*

Delete a provision in § 33.1-375.1 of the Code of Virginia establishing specific authorities, and associated limitations, allowing Fairfax County to assume responsibility for sign enforcement within highway rights-of-way. By doing so, Fairfax County would assume the same authorities all other localities have in this regard and would not be encumbered by limitations that are currently applicable only to Fairfax County.

## **SOURCE:** *(Provide the name of the agency, board, or commission generating the proposal and the date of the proposal)*

Environmental Quality Advisory Council, August 11, 2010.

## **BACKGROUND:**

*(Succinctly summarize the current law and explain why the law needs to be changed; identify the issues involved; note the impact of the proposal or why the proposal is important to Fairfax County; include any other information that might be helpful to the Board in making a decision as to the merits of the proposal; note any previous Board of Supervisors' action or previous General Assembly study or action on this issue. **This section should provide a synthesis of the proposal and should be no more than one paragraph, two if necessary; the Board wants concise information in the Legislative Program. Please use "Additional Background Information" on the next page to more fully explain the proposal.**)*

Through independent research and communications with county and state staffs, EQAC has determined that the authority granted in § 33.1-375.1 of the Code of Virginia actually hinders the county from enforcing prohibitions on the placement of signs in highway rights-of-way. Worse, it is EQAC's view that this authority confuses citizens because it makes it appear that broad categories of such signs are legal. By removing the language specifically related to Fairfax County's authority, Fairfax County would retain the authority that has been granted to all other Virginia localities to enter into an agreement with the Commonwealth Transportation Commissioner to enforce sign restrictions, without the specific limitations that currently apply only to Fairfax County.

EQAC would also retain text establishing that penalties and costs collected through these enforcement efforts would be paid to the affected locality. This text currently applies only to Fairfax County; the retention of this text and the

deletion of the Fairfax County-specific text would have the effect of expanding its applicability state-wide.

**RECOMMENDATION:**

*(Do not fill out-- This will be indicated by the Legislative Director and County Executive)*

# LEGISLATIVE INITIATIVE INFORMATION SHEET

## GENERAL SUBJECT AREA -- TITLE OF PROPOSAL:

Sign enforcement in highway rights-of-way.

## PROPOSED NEW OR REVISED STATUTORY LANGUAGE:

*(Indicate actual wording change to Va. Code; use Code citation and please indicate whether you have had the County Attorney's office review the proposed new or revised statutory language; specific Code language can be copied from the web by typing the specific Section number at: <http://leg1.state.va.us/000/src.htm>)*

§ 33.1-375.1. Commissioner may enter into certain agreements; penalties.

A. ~~The Commonwealth Transportation Commissioner may enter into agreements with the local governing body of Fairfax County authorizing local law enforcement agencies or other local governmental entities to act as agents of the Commissioner for the purpose of (i) enforcing the provisions of § [33.1-373](#) and (ii) collecting the penalties and costs provided for in that section. However, no local governing body shall enter into any such agreement until it has held a public hearing thereon.~~

B. ~~Notwithstanding the provisions of § [33.1-373](#), the penalties and costs collected under this section shall be paid to the affected locality.~~

C. ~~Notwithstanding the foregoing provisions of this section, the following signs and advertising shall not be subject to the agreements provided for in subsection A:~~

~~1. Signs and advertising supporting an individual's candidacy for elected public office or other ballot issues, provided this exception shall not include signs and advertising in place more than three days after the election to which they apply.~~

~~2. Signs and advertising promoting and/or providing directions to a special event to be held at a specified date stated on the sign or advertising, provided this exception shall not include special event signs in place more than three days after the conclusion of the special event.~~

~~3. Other signs and advertising erected from Saturday through the following Monday.~~

D. ~~Notwithstanding the foregoing provisions of this section, the Commissioner may enter into agreements with the local governing bodies of localities to which~~

~~the foregoing provisions of this section do not apply to authorize those governing bodies to act as agents of the Commissioner and the Department in enforcing the provisions of § [33.1-373](#). The limitations applicable to agreements entered into under subsections A through C shall not apply to agreements entered into under this subsection.~~

B. Notwithstanding the provisions of § [33.1-373](#), the penalties and costs collected under this section shall be paid to the affected locality.

~~C. E.~~ If a county acts as an agent of the Commissioner under this section, the county shall require each of its employees and any volunteers who are authorized to act on behalf of the county to comply with the provisions of this section and any other applicable law. If a lawfully placed sign is confiscated by an employee or volunteer authorized to act for the county in violation of the authority granted under this section, the sign owner shall have the right to reclaim the sign within five business days of the date of such confiscation.

(1998, c. [835](#); 1999, c. [195](#); 2003, c. [311](#); 2010, cc. [497](#), [777](#), [832](#).)

# APPENDIX C

## FAIRFAX COUNTY

### ENVIRONMENTAL EXCELLENCE AWARDS

The Fairfax County Environmental Excellence Awards have been established to recognize county residents, organizations, businesses and county employees who unselfishly dedicate time, energy and expertise for the betterment of the environment in support of countywide environmental goals and initiatives. Award recipients are selected by the Environmental Quality Advisory Council, and the awards are presented each fall during a meeting of the Fairfax County Board of Supervisors.

The recipients of the 2010 Environmental Excellence Awards were:

County Resident Award:	Maureen Goble
Business Award:	Project Performance Corporation
County Employee Award:	Meghan Fellows

Maureen Goble has been recognized for her critical assistance in the recruitment of student volunteers for riparian buffer restoration projects and her success in establishing a strong environmental stewardship and volunteer ethic among her secondary school students. The nomination that was submitted in support of the award notes her critical role in ensuring the success of a riparian buffer restoration initiative of Earth Sangha, the Fairfax County Park Authority and the Fairfax County Department of Public Works and Environmental Services. Ms. Goble is a teacher and Director of the Advanced Placement Environmental Science Program at Lake Braddock Secondary School, and the following excerpt from her nomination highlights why EQAC has selected her to receive this award:

*“I began to communicate with Maureen regularly as she wanted to hear the feedback about her students’ performance in the field. I quickly realized that she was no ordinary teacher. She wanted to make sure that her students’ field experiences would provide real and important connections with what they learned in class. . . . Every season, Maureen organized and accompanied her class to work on our fieldwork sites. When she’s present, you can feel the energy, the loving and trusting kind, which is hard to explain if you’re not there to witness it, surround the students. I could not help but notice just how much her students admired her. I met some very bright and enlightened students of hers who moved on to attend some great colleges, declaring that they will study Environmental Science. Maureen has proved to her students that protecting the environment is something desirable and cool.”*

Project Performance Corporation is a management consulting firm that is headquartered in the Tysons Corner area. It has been recognized for its environmental stewardship ethic and business practices, its efforts to encourage and assist its employees to adopt environmentally-friendly behaviors, and its environmental outreach efforts in the community. The supporting nomination states: *“PPC demonstrates a strong commitment to being a model of sustainability in the professional services industry in Fairfax County. PPC not only demonstrates awareness of its environmental footprint, it continually seeks new opportunities to refine business operations in order to advance PPC as an environmentally-friendly company.”* As detailed in the nomination, its environmental efforts include: measurement and management of the company’s carbon dioxide emissions; education of employees on resource and energy conservation in the home and office; green purchasing guidelines leading to a 30% reduction in office paper consumption; energy savings through elimination of computer servers and virtualization technology; support to the Newton Marasco Foundation on numerous environmental initiatives; adoption of a two-mile stretch of Chain Bridge Road through the Virginia Department of Transportation’s Adopt-a-Highway program; and sponsorship, support and development of environmental outreach and awareness programs.

Meghan Fellows, a Natural Resource Specialist and Invasive Management Coordinator for the Fairfax County Park Authority, has received an Environmental Excellence Award for her dedication, leadership, vision and outreach efforts in the development and implementation of the Fairfax County Park Authority’s Invasives Management Area program. As detailed in her nomination, this program is designed to: (1) educate the public about the threat of alien invasive plant species; (2) train volunteers to remove invasives; and (3) direct these volunteers to park sites that have been infested by invasive plant species, where they lead teams of other volunteers in the removal of the invasive plants. The nomination details how Ms. Fellows has obtained critical grant funding to ensure the continued success of the program, her recruitment and training of volunteers who have, in turn, become community environmental leaders, her development of an award-winning photo identification guide to local invasive plants, her development of an outreach component for the program, and her dedication of large amounts of non-work hours to the effort. The nomination stresses Ms. Fellows’ vision, collaboration skills, ability to obtain independent funding, effective program management and commitment, concluding that, *“thanks in large measure to Meghan’s efforts, IMA is becoming a major force for local conservation.”*

EQAC congratulates all award recipients.

In past years, Environmental Excellence Awards have been awarded to the following people and organizations:

2009

Organization Award:	Earth Sangha
Business Award:	Allen Wayne, Ltd.
County Employee Award:	Carl Sivertsen

2008

County Resident Awards:	Chet McLaren
Organization Award:	Katherine K. Hanley Family Shelter Project Management Team
Business Award:	“Jack-the-Ripper” Certified Arborists, Inc.

2007

County Resident Awards:	Scott Birdwell
Organization Awards:	Eleanor Quigley and Penelope Firth Great Falls Citizens Association Invasive Management Area Volunteers
County Employee Award:	Judy Fincham

2006

County Resident Award:	Ken Andrews
Organization Award:	Northern Virginia Soil and Water Conservation District
Business Award:	Wetland Studies and Solutions, Inc.

2005

County Employee Award:	Janet Rahman
------------------------	--------------

2004

County Resident Award:	Ned Foster
Organization Award:	Reston Association

2003

County Resident Award:	Joseph Chudzik
Organization Award:	Students Against Global Abuse
County Employee Award:	Noel Kaplan

2002

County Resident Award:	Charlie Creighton
Organization Award:	Hickory Farms Community Association

2001

County Resident Award:	Chris Koerner
Organization Award:	Bailey's Beautification Alliance

2000

County Resident Award:	Norma Hoffman
Organization Award:	Friends of Sugarland Run
County Employee Award:	Gary Roisum

The nomination period for the Environmental Excellence Awards occurs during the spring of each year. EQAC encourages interested individuals, organizations, county employees and businesses to submit nominations.
