Dear Reston Master Plan Committee Members,

With regards to rethinking the parking at the village/town/shopping centers consideration should be given to installing and operating charging stations for electric cars. Such stations for example exist at the Mosaic District in Merrifield and have attracted a large number of EV drivers, both local and from afar alike. The forethought of installing the charging stations have made the Mosaic District a huge success and has taken away EV drivers and their families from our local village centers. It has also made a difference in promoting sustainable, environmentally responsible, technologically advanced, and last but not least quiet transportation, all items that at the core of Reston as a community.

Thanks,

Vladi Ivanov
