

Riverbend Park is located in the Potomac Gorge, an ecologically significant landscape along the Potomac River. For neo-tropical songbirds, raptors, waterfowl and other birds Riverbend is an important migratory corridor and nesting place. The park's 418 acres provide diverse habitats including floodplain forest along the Potomac River, upland forest, woodland ponds, and meadows. Spring and fall are especially rewarding times to observe birds in migration.

The checklist includes 191 species of birds which have been observed from the park. An additional 19 birds are listed which have been recorded historically.

The list was compiled from staff, volunteers, and local birders. Special thanks to park volunteers Jack Wright, Dave Young, and Larry Cartwright for their years of observations, knowledge, and contributions to this brochure.

Seasons:

Sp	Spring	March - May
S	Summer	June - August
F	Fall	September - November
W	Winter	December - February

Relative Abundance:

- a** abundant a species likely to be seen in substantial numbers
- c** common a species likely to be seen or heard in suitable habitat
- u** uncommon usually present, not always seen
- r** rare seen occasionally

The following species have been historically recorded in the past ten years but are not to be expected.

Common Loon
 Neotropical Cormorant
 Eurasian Wigeon
 Greater Scaup
 White-winged Scoter
 Black Scoter
 Peregrine Falcon
 Northern Bobwhite
 Black Tern
 Sooty Tern
 Western Kingbird
 Bewick's Wren
 Orange-crowned Warbler
 Swainson's Warbler
 Blue Grosbeak
 Grasshopper Sparrow
 Vesper Sparrow
 Evening Grosbeak
 Pine Siskin

On Cover:

The Connecticut Warbler is seen primarily in fall migration. It nests in the northern Great Lakes region and Canada. It is usually found walking or feeding on the ground. This warbler is thrush-like, with a short tail, long wings, and a characteristic "hood." Connecticut Warblers have large eyes with a complete, bold white eye-ring. Spring migration patterns usually take the warbler west of the Appalachians. Fall migration brings some birds farther east to the meadows of Riverbend Park.
