

Department of Information Technology

- Department of Information Technology, General Fund. All staffing and operating support for the Department of Information Technology is found in Volume 1, Legislative-Executive/Central Services.
- Fund 60030, Technology Infrastructure Services. All staffing and operating support for the Infrastructure Services is found in Volume 2, Fund 60030.

Mission

To deliver and support an innovative technology environment to strengthen the public service commitment of Fairfax County.

| AGENCY DASHBOARD | | | |
|---|------------|------------|------------|
| Key Data | FY 2014 | FY 2015 | FY 2016 |
| 1. Fairfax County Web Site Use - Number of users visiting/conducting business | 19,252,748 | 19,105,379 | 19,253,378 |
| 2. GIS Mapping Public Use Transactions (includes GIS Data Warehouse queries, PDF maps served, and Virtual Fairfax 3-D map sessions) | 4,330,139 | 5,427,022 | 5,401,759 |
| 3. Public Mobile Applications | 17 | 24 | 35 |
| 4. Data Storage (By Terabytes) | 4,487 | 4,889 | 5,013 |
| 5. Mobile Devices (includes Blackberries, other smart phones, mobile computers used by Fire & Rescue EMTs, County Inspectors, etc.) | 8,790 | 12,266 | 14,777 |
| 6. IT Security (includes: blocked web transactions with malware, email with malware attachments, and malware on system end points) ¹ | 7,173,155 | 7,717,330 | 21,623,973 |

¹ The FY 2016 increase in IT Security is primarily due to significant growth in cyber security including malware detections, hacker attempts and the expansion of wireless telecommunications in County facilities.

Department of Information Technology

Focus

The Department of Information Technology (DIT) is a central technology provisioning agency that designs, manages, and implements all aspects of information technology solutions and supporting infrastructure that enable County agencies to deliver information and services. In that role, DIT is responsible for overall IT policy, governance, and enforcement for the deployment and use of Countywide IT assets and resources. DIT also performs application development and integration and provides IT project management oversight for technical execution of agencies' major/core business applications. Goals for County technology include that solutions leverage IT investments across the enterprise, ensure the integrity of the County's information systems and data, and enable secure access to County information and services. The DIT General Fund budget provides for staff and service resources based on technology specialty subject matter expertise, including systems analysts and software developers that support revenue systems (tax); corporate systems; human services agencies; land development, public works and zoning; public safety/judicial administration; Library; Park Authority; Facilities Management, and others. DIT is also responsible for the multi-channel e-Government program, a specialized courtroom technology group, countywide telecommunications, data networks and radio systems, and the countywide information security program. DIT fosters an environment that harnesses new information, communication and social technologies in order to empower the public services of tomorrow.

Despite staff, service, and resource reductions over the last several years, DIT continues to manage growth in demand for County agencies' needs through prudent resource planning, use of selected sourcing opportunities and investment in IT support automation tools. DIT strives to accommodate agencies' needs as they implement their strategic plans, automate business processes and introduce new technology capabilities. In addition, DIT implemented enterprise-wide programs such as mobile device management, enhanced internet capabilities such as social/new

media, enhanced wireless infrastructure, and Geographic Information Systems (GIS). DIT also supports major business transformation and cross agency initiatives such as the Tri-Court Courtroom Technology collaborative, land based system processes, inspections, code enforcement, FOCUS, public safety interoperability, Integrated Human Services and Diversion First.

DIT continues to strengthen the County's information security and disaster recovery posture which protect the County's technology assets, business operations, and data from rapidly advancing cyber-attacks and IT disaster events. DIT also has a major emergency support function in its role to support the County Emergency Operations Center during natural and other disaster situations. The demands of the regional collaborative work continue to grow, and with this expansion it is especially important to leverage IT resources and assets. Often times, Fairfax County is the lead jurisdiction for technical design and implementation of regional capabilities that support public safety and homeland security critical infrastructure and applications which are deemed best practices. The work of DIT is primarily performed by County staff in direct execution, project management and asset management roles. DIT utilizes

The Department of Information Technology supports the following County Vision Elements:

Maintaining Safe and Caring Communities

Connecting People and Places

Building Livable Spaces

Exercising Corporate Stewardship

Practicing Environmental Stewardship

Department of Information Technology

private sector expertise to augment the overall capacity to develop and implement projects, and to support operational activities, and competitive contracts are used for major project efforts and commercial solutions. In addition to the General Fund, other components of the IT enterprise functions are supported by funding in other DIT funds:

- Fund 60030, Technology Infrastructure Services, includes data center operations, enterprise automated productivity tools and email, the enterprise data communications network, the countywide desktop PC replacement program, servers, data storage, radio communications network and Radio Center services. The County has been recognized for successful IT infrastructure and power management projects that decreased the County's carbon footprint, achieved enterprise-wide IT efficiencies and cost savings. In FY 2017, the countywide telecommunications utility cost was transferred to Fund 60030 where all countywide shared IT utility costs are administered.
- Fund 60020, Document Services, which supports the Print Shop and the Multi-Functional Digital Device (MFDD) program. The MFDD solution incorporates copying, printing, faxing and scanning via the County's network throughout the County government, providing flexibility and document printing and digitizing efficiencies. The Print Shop provides digital printing, offset printing and bindery services to the County and Fairfax County Public Schools. Print Services are integrated with Data Center operations, improving overall print output options and efficiencies, coverage, utilization of staff and reduced cost. In addition, as part of the FY 2017 Adopted Budget Plan, the County Archives and Mail Room operation were consolidated within Fund 60020, Document Services. This consolidated several similar functions within a single organization and resulted in overall efficiencies for the County.
- Fund 10040, Information Technology, supports technology-related programs and projects that provide improvements, efficiencies and innovation for County agencies, citizens and employees and optimize enterprise-wide resources. Projects include e-Government and GIS initiatives; County agencies' business modernization and inter-agency applications in financial management, land development processes, Human Services and Public Safety business areas; enterprise technology infrastructure modernization projects in communications; and other areas such as document management, server platform consolidation/virtualization and 'cloud' technologies, and cyber-security.

DIT also manages significant technology programs in other funds, including supporting technology for Fund 40090, E-911; capital construction for technology infrastructure tasks in Fund 30010, General Construction and Contributions; the fiber institutional network (I-Net) in Fund 40030, Cable Communications, that interconnects over 400 County and school sites; and several Department of Homeland Security UASI grants supporting National Capital Region (NCR) interoperability and cyber security initiatives for which Fairfax is a major stakeholder. DIT conducts the technical work and program management for the related regional projects.

DIT continually seeks to find the appropriate balance between a stewardship role in leveraging County technology investments and a strategic role in pursuing and embracing opportunities to innovate and strengthen technology use that will result in high value County services and optimized cost. In fulfilling its mission, DIT builds partnerships with internal and external stakeholders. DIT uses a strategic planning process and a collaborative business and technical execution model to ultimately provide the County with the best available return on investment that facilitates the ability to meet County growth and demand for services economically. The results are manifested in modernizing processes for County

Department of Information Technology

operations, greater efficiencies and effectiveness in service delivery, improved opportunities for data sharing and decision making, embracing new internet based capabilities and mobile apps for public access to information and services, transparency, and improved utility and security of County technology and information assets.

Strategically, DIT employs a broad strategy that uses technology and policy to enable cohesive public access to information and services through the use of contemporary web-based and communication solutions. The e-Government program, recognized as a national model, is a multi-channel solution that includes the County's website, Interactive Voice Response (IVR) system, mobile access solutions, emergency alerts via text messaging, Customer Relationship Management (CRM) initiatives and broadcast cable television. The County embraced social media in its e-Government program, utilizing podcasts, RSS newsfeeds, moderated discussion sessions, and County presence on YouTube, Facebook, Twitter and other outlets as e-Government tools to interact with all audiences. Social media platforms are employed to expand and redefine interactive communication and information dissemination efforts. The e-Government program also delivers mobile apps for its '*Government in the Palm of Your Hands*' initiative. The County expanded government-to-citizen transparency through leadership and collaboration with the Office of Public Affairs in the adoption of capabilities and initiatives that enhance customer experience that will continue and evolve over time.

Another key technology platform is GIS. Over 25 County agencies, including Public Safety agencies, Land Development Services and the Health Department use GIS in their operations. The GIS portfolio includes "Virtual Fairfax", a 3D visualization tool, with zoom in capability for County buildings and terrains with links to County land information systems and the Northern Virginia Regional Routable Centerline Project, a collaboration with five other Northern Virginia jurisdictions, recognized by the Commonwealth as a best practice.

DIT also supports internal and regional interoperability for communications and secure data sharing. The County has a significant leadership role in developing the architecture and standards that are being adopted through the National Capital Region (NCR) in regional geospatial map views, situational awareness and data and communications interoperability. This architecture also is a key foundation for the County's technology strategy that ties together agency-based independent applications and enables them to share data.

In ensuring the integrity and viability of the County's technology assets, DIT executes the County's security policy through strategies that build a secure technology infrastructure with security architecture and processes. The objectives of the information security program are to ensure confidentiality of information, integrity of data, systems and operations, technical compliance for the Federal Health Insurance Portability and Accountability Act (HIPAA), Payment Card Industry (PCI), other privacy mandates, and to ensure the availability and security of the County's networks, systems and data. Security architecture uses 'defense-in-depth' designed to provide protection for all levels of County information processing resources and includes application of industry best practices for overall risk reduction. Over the years, the County's security program has been nationally recognized as a best practice and based on vigilant enforcement and implementation of modern security tools, breaches or wide-scale vulnerabilities have been kept below appreciable levels.

The County's overall technology programs continue to be recognized with many honors for innovation and contribution to excellence in public service, and are routinely referenced in the industry as best practice examples, to include WEB, mobile apps, IT Security, government cloud, green initiatives and 'cloud'. The center for Digital Government's 2016 Digital Counties Survey ranked Fairfax County as

Department of Information Technology

second place in the nation in 2016 for using information and communications technology for jurisdictions with populations of 500,000 or greater. Fairfax County has been ranked in the top five for twelve consecutive years, earning first place three times during this span. Fairfax County is recognized as a perennially high-achieving county which relies on agile development, flexible technology infrastructure and strong governance to align IT strategies with overall County business objectives - and this alignment is critical as the County is challenged with limited resource growth. The County was also acknowledged for giving citizen communication and engagement top priority with the launch of MyFairfax portal along with Fairfax County's leading role in the National Capital Region Interoperable Communications Infrastructure program. Winners were chosen based on their work to innovate, improve transparency and proactively address citizen demands and expectations. Fairfax County received a 2016 Virginia Association of Counties Achievement Award for the "Courtroom Interpreting Control System." The award recognizes local government programs that include innovation, cooperation and model practices. Fairfax County received a PTI (Public Technology Institute) Award for Solutions Excellence. In addition, the Fairfax County IT Security Program was named a CSO50 Award for 2016 for "Next Generation Security Program for Fairfax County Government and National Capital Region (NCR)."

FY 2018 Funding Adjustments

The following funding adjustments from the FY 2017 Adopted Budget Plan are necessary to support the FY 2018 program. Included are all adjustments recommended by the County Executive that were approved by the Board of Supervisors, as well as any additional Board of Supervisors' actions, as approved in the adoption of the budget on May 2, 2017.

- ◆ **Employee Compensation** **\$295,680**
An increase of \$295,680 in Personnel Services includes \$294,300 for performance-based and longevity increases for non-uniformed merit employees effective July 2017, and \$1,380 for employee pay increases for specific job classes identified in the County's benchmark class survey of comparator jurisdictions.

Department of Information Technology

- ◆ **Compensation Related Chargebacks** **\$138,723**
An increase of \$138,723 in Operating Expenses covers compensation-related adjustments for information technology staff supporting Fund 60020, Document Services and Fund 60030, Technology Infrastructure Services that are being charged through this agency.

- ◆ **Freedom of Information Act (FOIA) Related Staffing** **\$88,646**
An increase of \$83,646 in Personnel Services and \$5,000 in Operating Expenses is included to support full-year funding for 1/1.0 FTE position associated with Freedom of Information Act (FOIA) requirements, as discussed below. It should be noted that an increase of \$38,946 in Fringe Benefits funding is included in Agency 89, Employee Benefits, for a total cost of \$127,592 in FY 2018. For further information on Fringe Benefits, please refer to the Agency 89, Employee Benefits, narrative in the Nondepartmental program area section in Volume 1.

- ◆ **Reductions** **(\$200,000)**
A decrease of \$200,000 and 2/2.0 FTE positions reflects reductions utilized to balance the FY 2018 budget. The following table provides details on the specific reduction:

| Title | Impact | Posn | FTE | Reduction |
|---------------------------------------|---|------|-----|-----------|
| Restructure Administrative Processing | A decrease of \$200,000 results from the elimination of 2/2.0 FTE vacant administrative positions and other associated personnel-related savings based on the agency streamlining the administrative activities for processing financial documents. As the volume of financial transactions increased in recent years, the agency reallocated several positions to manage the increased workload; however, upgrades to the County's financial system that are now in place have allowed the Department to automate a portion of this work. Despite these changes, the time required to process certain financial documents may increase slightly during peak periods; however, this should have a manageable impact on the agency's operations. | 2 | 2.0 | \$200,000 |

Changes to FY 2017 Adopted Budget Plan

The following funding adjustments reflect all approved changes in the FY 2017 Revised Budget Plan since passage of the FY 2017 Adopted Budget Plan. Included are all adjustments made as part of the FY 2016 Carryover Review, FY 2017 Third Quarter Review, and all other approved changes through April 30, 2017.

- ◆ **Carryover Adjustments** **\$1,016,837**
As part of the FY 2016 Carryover Review, the Board of Supervisors approved funding of \$931,074 in encumbered funding in Operating Expenses primarily associated with maintaining and operating the County's technology programs, telecommunications services, consultant support and office supplies. In addition, the Board approved partial-year funding of \$85,763 and 1/1.0 FTE position associated with Freedom of Information Act (FOIA) requirements, including searches of the County's electronic

Department of Information Technology

records when requested. In addition to the growing volume, FOIA requests are also increasing in complexity and are complicated by the tremendous growth in email circulation. The nature of FOIA requests received by DIT generally relate to emails sent or received. The response requires a multi-step process to ensure complete and accurate information is provided. This funding total also included to funds to help support the development of a web-based application to assist in streamlining the County's FOIA processes.

Cost Centers

The General Fund supports three Department of Information Technology cost centers; IT Strategic Programs and Management, Application Services, and Technical Support and Infrastructure Services.

IT Strategic Programs and Management

The IT Strategic Programs and Management cost center provides for policy, administrative and programmatic management, and compliance functions supporting the entire DIT department, and strategic innovation centers for certain specialized IT programs and initiatives. There are four sections within this cost center.

Technical Support and Infrastructure Services

The Technical Support and Infrastructure Services cost center functions include management of the County's local area network (LAN) environments, server and data storage platforms, database administration, telephony services and end-user desk-top support. It also includes the Technical Support Center (IT Service Desk). This cost center also provides operational and contingency services for the McConnell Public Safety and Transportation Operations Center (MPSTOC).

A complete list of performance measures can be viewed at www.fairfaxcounty.gov/dmb/fy2018/adopted/pm/70.pdf

Performance Measurement Results

A key program within the IT Strategic Programs and Management cost center is IT/Cyber Security. All County IT systems are connected and accessed through the enterprise-wide network, with strict policies and controls to safeguard County IT systems and data from threats and unauthorized access. As with all major organizations, the County IT systems receive millions of security threats per week. Fairfax County's Cyber Security profile and technical architecture has protections against unauthorized intrusions in the technology infrastructure, and threats reported on a daily basis have increased as new technology is better able to identify and isolate these threats. Of note, the County enterprise network experienced 99.99 percent uptime, a sustained achievement due to the resilient network design and cyber security program.

The landscape of cyber security is dramatically changing with growth in the consumer markets for mobile devices, such as smart phones and tablets, to network-enabled industrial control systems (HVAC, Physical Access Control, lighting systems, supervisory control and data acquisition systems etc.) referred to as the "Internet-of-Things." "Clouds" present more complex risk and challenges as these solutions are adopted. As product development transforms the enterprise-enabled landscape, the Information Security

Department of Information Technology

Office (ISO) will need to adapt to evolving threats targeting untraditional endpoints and data repositories. ISO anticipates a five percent increase in malicious code detections in FY 2017 and FY 2018 and a continued increase in the collection of electronic records related to agency personnel investigations, legal requests, and Freedom of Information Act (FOIA) requests. DIT successfully identified and stopped all material security threats during FY 2016.

The County is a leader in the use of GIS technologies with the most gigabytes in the GIS database among large jurisdictions and other Virginia localities according to International City/County Management Association (ICMA) benchmarks. The introduction of additional GIS applications and tools as well as changes to the calculation methodology to fully capture service encounters resulted in significant increases during FY 2012 through FY 2015. However, the methodology for service encounters will be changing, as additional GIS data tools can more closely track these encounters and enhanced applications such as the Virtual Fairfax tool are now available. Service encounters consist of counter sales, internal work requests, GIS projects, zoning cases, right of way projects, parcel related work, server connections, and spatial database usage.

It is anticipated that requests for services at the Technical Support Center Help Desk (IT Service Desk) will only slightly increase in FY 2018, mostly attributed to assisting end-users versus hardware faults. Strengthened enterprise-wide management and image control processes have allowed resolution of end-user desktop requests more quickly. Customer satisfaction generally continues to be strong due to internal quality control measures and remote resolution capabilities. Efforts in FY 2018 will focus on enhanced remote resolution, new mobile devices/apps, and IT Service desk system-workflow services to streamline routine processes.
