Housing Unit, Household and Population Estimate and Forecast Methodology	A-1

FOREWORD

The *Demographic Reports* is a compilation of population, household and housing unit estimates and forecasts; market value estimates; residential development activity estimates; and industrial and commercial gross floor area estimates. Various geographic arrangements are used to present these data, such as supervisor districts, towns, planning districts, human services regions, ZIP Codes, sewersheds, and census tracts. These small area estimates and forecasts are produced on an annual basis. The methodology used to estimate and forecast housing units, households and population is contained in Appendix A. The methodology used to estimate market value, residential development, and gross floor area is contained in its respective sections. All data, except historical data, are as of January 1 of the given year.

The summary-level data for Fairfax County contained in the *Demographic Reports* is produced by the Economic, Demographic and Statistical Research unit (EDSR) within the Fairfax County Department of Management and Budget. The EDSR works on the small area estimates and forecasts, collection, and summarization of state and federal data for Fairfax County and performs special studies and quantitative research. The information produced by EDSR is used by many county departments, boards, authorities, and the Fairfax County Public Schools. It is also used for program and capital improvement planning, decision-making; strategic planning; grant writing; budgeting; and the development of policy initiatives.

Periodically, the EDSR unit provides data to the Metropolitan Washington Council of Governments (MWCOC) along with other jurisdictions for the purpose

of transportation planning, air quality modeling and other programs of regional significance. The unit also provides data and acts as a liaison to the Northern Virginia Regional Commission (NVRC) and the U.S. Census Bureau.

This report along with other reports produced by EDSR is available electronically at:

<https://www.fairfaxcounty.gov/demographics/>

The datasets presented in this report along with other datasets produced by EDSR are available in downloadable formats or accessible via APIs at:

<https://www.fairfaxcounty.gov/maps/open-geospatial-data>

Inquiries concerning the *Demographic Reports* should be directed to:

MAP NOTES

The information contained in the *Demographic Reports* is presented in a variety of geographic arrangements -- supervisor districts and towns, planning districts, human services regions, ZIP Codes, sanitary sewersheds, and census tracts. Small scale maps of these geographies, along with sewershed codes, are displayed on the following pages. Detailed views of these geographies can be obtained from the Fairfax County website map gallery at: www.fairfaxcounty.gov/maps/static-map-gallery.

DEMOGRAPHIC TREND NOTES

The following section provides an overview of the information about Fairfax County. This section presents tables and graphics on the following topics:

- Population, Housing Units and Households
 - Population Age Distribution
 - Racial and Ethnic Distribution
 - Average Household Size by Race
 - Measures of Income
- Housing Units by Type of Structure
- Rental Housing Complex Characteristics
- Market Value of Housing Units
- Unemployment Rates and Total Employment

Data presented cover historical, current and future time frames.

More detailed information about some of these topics can be found in other sections of the *Demographic Reports*.

TABLE 2.1

**Estimates and Forecasts of
Population, Housing Units and Households
Fairfax County, 1970 through 2050**

Year		Population			Total Housing Units	Households		
		Total	Average Annual Increase	Average Annual Growth Rate		Total	Average Annual Increase	Average Annual Growth Rate
1970	Estimates	454,300 ¹	--	--	130,800	126,500	--	--
1975		537,200	16,600	3.4%	173,000	166,400	8,000	5.6%

Note: Percentages may not sum to total due to rounding.

Household Income is defined as that income which is available to all residents of a housing unit, regardless of relationship. Income is from all sources, before taxes and deductions, and includes wages, business, retirement, SSI, alimony, child support, interest, etc.

Family Income is derived by including only those households containing two or more persons related by blood, marriage or adoption.

TABLE 2.8 Estimates of Median Household Income and Median Family Income Fairfax County, 1991 through 2021

Sources: U.S. Bureau of the Census, 2020 population from 2020 Decennial Census; 2020 median household and median family income from 2019 one-year American Community Survey; 2021 population, median household, and median family income from 2021 one-year American Community Survey.

*The 2020 one-year American Community Survey income data is not available due to COVID-19 introduced nonresponse bias.

Note: Household Income is defined as that income which is available to all residents of a housing unit, regardless of relationship. Income is from all sources, before taxes and deductions, and includes wages, business income, retirement, SSI, alimony, child support, interest, etc. Family Income is derived by including only those households containing two or more persons related by birth, marriage or adoption.

Fairfax County population estimates differ from the American Community Survey population estimates due to a difference in methodologies.

**Average Annual Unemployment Rate and
Average Annual Total Employment
Fairfax County, 2010 through 2021**

Source: Virginia Employment Commission, Local Area Unemployment Statistics (LAUS), as of December 30, 2022.

Note: Total Employment refers to the number of employed Fairfax County residents, regardless of their place of employment.

CURRENT POPULATION, HOUSING UNITS AND HOUSEHOLDS

The population, housing unit and household estimates are as of January 1 of the respective year on the table. Housing units are obtained from the real estate tax assessment files for the same time period. Households are occupied housing units. Total population is a combination of household population (persons living in housing units) and group quarters population (persons living in facilities such as detention centers, nursing homes, military quarters, dormitories, etc.). The current estimates are summarized by supervisor district and town, planning district, human services region, ZIP Code, sewershed, and census tract.

Population density is based on the total land and water area in the county.

For detailed methodology, please refer to Appendix A.

Table 3.1
Average Household Size and Vacancy Rate by Planning District
Fairfax County, January 2022

Planning District	Average Household Size (Persons per Occupied Unit)				Overall Average Household Size	Vacancy Rate		Overall Vacancy Rate

Source: Fairfax County Department of Management and Budget 2022.

Note: Households are occupied housing units. Household and housing unit figures exclude group quarters (i.e. nursing homes, dormitories and other institutions). Area measurements (acres and square miles) include both land and water area. Countywide totals and population densities may vary by table depending on how well the geographic layer aligns with actual county boundaries.

Fairfax County	1,172,646	426,412	418,769	260,132	4.5	406.46	2,885

Source: Fairfax County Department of Management and Budget, 2022.

Note: Households are occupied housing units. Household and housing unit figures exclude group quarters (i.e. nursing homes, dormitories and other institutions). Area measurements (acres and square miles) include both land and water area. Countywide totals and population densities may vary by table depending on how well the geographic layer aligns with actual county boundaries.

(Continued)

POPULATION FORECASTS

The population forecasts reflect projections as of January 1 of the respective year on the table. The population forecasts include both household population (persons living in housing units) and group quarters population (persons living in facilities such as detention centers, nursing homes, military quarters, dormitories, etc.). The population forecasts are summarized by supervisor district and town, planning district, human services region, ZIP Code, sewershed, and census tract.

Population density is based on the total land and water area in the county.

For detailed methodology, please refer to Appendix A.

HOUSING UNIT INVENTORY

Housing units are summarized from the real estate tax assessment files as of January 1 of the current year. Building permit data, utility hook-up information, and pictometry three-dimensional aerial images are used to determine whether structures are habitable housing units. Housing unit type is determined based on the existing land use code. Specific codes are assigned to each type of housing unit (i.e., single-family detached, duplex, townhouse, multifamily, etc.). The housing unit estimates include both rental and owned units and housing units in Fort Belvoir but not George Mason University. The housing unit estimates also include continuing care and assisted living units but do not include nursing homes. Most of the housing unit information is available by supervisor district, town, planning district, human services region, ZIP Code, sewershed, and census tract. The age of housing unit data is available by supervisor district, town, and planning district.

Total Housing Units Fairfax County, 1985 through 2022			
Year	Housing Units	Average Annual Change	
		Number	Percent
1985	247,777	N/A	N/A
1990	302,464	10,937	4.07%
1995	328,151	5,137	1.64%
2000	358,960	6,162	1.81%
2005	385,634	5,335	1.85%
2010	396,386	1,830	0.46%
2015*	412,198	3,162	0.79%
2016	413,746	1,548	0.38%
2017	415,690	1,944	0.47%
2018	418,250	2,560	0.62%
2019	421,102	2,852	0.68%
2020	424,087	2,985	0.71%
2021	425,585	1,498	0.35%
2022**	426,412	827	0.19%

Source: Fairfax County Department of Management and Budget, 2022.

*Growth in housing units is over-represented from 2010 to 2015 due to methodology changes. Since 2011 continuing care units are included in the housing unit inventory. Since 2012 units in Fort Belvoir are included in the housing unit inventory.

**Growth in housing units is under-represented in 2022 due to several assisted living facilities being excluded from the housing unit inventory.

3/ Includes the Town of Vienna.

HOUSING UNIT FORECASTS

The forecasts of housing units in Fairfax County are based on planned residential land uses and densities, vacant and underutilized residential planned land, and residential units at various stages in the process of being developed (in the “development pipeline”). Both short-term and long-term forecasts are produced, each with different methods. All housing unit forecasts reflect projections as of January 1 of the report year. The housing unit forecasts are summarized by supervisor district and town, planning district, human services region, ZIP Code, and census tract.

For detailed methodology, please refer to Appendix A.

TABLE 7.1

**Forecast Housing Unit Change
by Supervisor District
Fairfax County, 2022 through 2050**

Supervisor District	Difference 2022 to 2050	Percent of Total Change
Braddock	1,663	1.7%
Dranesville 1/	14,236	15.0%
Hunter Mill 2/	23,531	24.7%

MARKET VALUE

Market value refers to the estimated market value of owned housing units as of January 1 of the respective year on the table. Estimated market value for each dwelling unit represents a previous year sales price or is derived from the latest tax assessment value. For housing units without a previous year sales price, market value is derived by comparing the spread between current sales prices and assessments of properties that were sold during the previous year.

Median market value is a statistic calculated from individual market value information for a particular geography. The estimated median market value of individually owned housing units indicates that half of all owned housing units in the county had market values exceeding this value and half had values below this level.

Average market value is also a statistic calculated from individual market value information for a particular geography. Often called the mean, the average is a measure of central tendency. The estimated average market value of individually owned housing units is calculated by summing the individual market values of all owned housing units and dividing by the number of owned housing units.

Source: Fairfax County Department of Management and Budget, 2022.

Note: The single family attached category includes townhouses, duplexes and multiplex units. The multifamily category includes condominium and other units in structures with a common entryway. Excludes units in rental complexes, units in nonresidential structures, and units in certain ownership statuses such as cooperatives. Market value refers to the estimated value as of January 2022. Market value for each unit is derived from the 2022 tax assessment and is adjusted to reflect the unit market value, or sales price if the unit sold during the prior year. Countywide totals may vary by table depending on how well the geographic layer aligns with actual county boundaries.

Source: Fairfax County Department of Management and Budget, 2022.

Note: The single family attached category includes townhouses, duplexes and multiplex units. The multifamily category includes condominium and other units in structures with a common entryway. Excludes units in rental complexes, units in nonresidential structures, and units in certain ownership statuses such as cooperatives. Market value refers to the estimated value as of January 2022. Market value for each unit is derived from the 2022 tax assessment and is adjusted to reflect the unit's market value, or sales price if the unit sold during the prior year. All dollars are expressed in thousands of dollars. Countywide totals may vary by table depending on how well the geographic layer aligns with actual county boundaries.

1/ Includes the Town of Clifton.
2/ Includes the Town of Herndon.
3/ Includes the Town of Vienna.

1/ Includes the Town of Herndon & Vienna.

2/ Includes the Town of Clifton.

RESIDENTIAL DEVELOPMENT ACTIVITY

The residential development process encompasses the entire land development process from the rezoning of land, through the site plan and subdivision phases, the issuance of building permits, and the construction and completion of housing units. The development process reflects active residential projects occurring in Fairfax County at one specific point in time (i.e., January 1 of the current report year) and does not reflect cumulative activity occurring throughout the preceding year. Further, specific units are counted only within the stage of the development process in which they occur as of January 1 of the current report year.

Stages in the development process include the following:

- 1) Rezoning requests submitted (identified as “Rezoning Pending” in the tables).
- 2) Rezoning requests approved (identified as “Rezoning Granted” in the tables). Residential units counted in this stage typically are shown on development plans proffered with approved rezoning requests.
- 3) Development plans submitted.
- 4) Development plans approved.
- 5) The number of residential units for which building permits were issued but not started.
- 6) The number of residential units under construction.

The number of units in the development process is categorized by general housing unit type. The categories include single-family detached units, single-family attached units (townhouses, duplexes and multiplexes), and multifamily units (condominium and rental units, which may be garden/low-rise, medium-rise, or high-rise structure types).

INDUSTRIAL AND COMMERCIAL GROSS FLOOR AREA

Industrial and commercial gross floor area are summarized as of January 1 of the report year. Totals of gross floor area are categorized by year built and general activity type – retail, office and industrial. It should be noted that the data presented are continuously updated and represent the latest information available on the gross floor area by year built. Previous years' totals may change due to newly available information, structure demolitions or use modifications.

This table lists the individual land use categories included in each of the general activity types that are presented in the data tables in this chapter.

Retail

Apparel & Accessories
Building Material-Hardware
Community Shopping Center
Condominium Center
Condominium Retail
Department and Variety Store
Drug Store
Food Store
Furniture Store
Gas Station
Motels, Hotels, Tourist Homes
Motor Vehicle Sales

APPENDIX A

Housing Unit, Household and Population Estimate and Forecast Methodology

Housing Unit Estimates

The real estate tax assessment files as of January 1 of the reporting year provide the foundation from which the current counts of housing units are estimated. In addition to the number of units located on a property, housing attributes, such as the type of unit, age of the structure, percent of completion, condition of the structure, assessed value, sales value, existing land use and zoning, and access to utilities, are obtained from the real estate tax assessment files for each property. Because only habitable housing units are included, certain conditions must be met for a housing unit to be included in the current inventory.

Conditions for inclusion in the Housing Unit inventory include the following:

- Existing land use designates that the property contains a housing unit with residential use.
- Number of housing units on a property is consistent with its designated land use.
- Housing unit has sufficient assessed value to indicate an adequate structure on the property.
- Housing unit is hooked up to utilities (i.e., water, sewer, gas, electric) and/or access to well and/or septic tank.
- Building permits and inspections data indicate sufficient completeness of construction of housing units.

In some cases, a property has an existing land use designation of vacant land with a dilapidated residential structure. Many of these housing units are old structures in very poor condition but some are still used. The criteria used to determine if a dilapidated structure is a habitable housing unit are 1) the owner's mailing address is the same as the property address and/or 2) the housing unit is hooked up to utilities (i.e., water, sewer, electric, gas). Units meeting these criteria are brought into the current inventory. There are very few housing units in this category.

Furthermore, pictometry three-dimensional aerial images are used to visually determine the condition of questionable housing units.

Based on the current land use, housing units are categorized as one of the following eight categories:

- Single Family Detached Units (single-family and mobile homes)
- Single Family Attached Units (duplexes, townhouses, and multiplexes)
- Multifamily Units (garden/low-rise, mid-rise, and high-rise)

The multifamily units of 1 to 4 stories are usually considered garden style or low-rise structures, 5 to 8 stories are mid-rise structures, and 9 or more stories are high-rise structures. The housing unit estimates include both rental and owned housing units in Fairfax County's real estate assessment database. The housing units on Fort Belvoir and George Mason University are not part of this database. However, Fort Belvoir has provided us the information that allows us to capture the type and location of their units. Therefore, the estimates include housing units on Fort Belvoir but not George Mason University. Similar information will be incorporated in the future years. Also, continuing care and assisted living units with a complete kitchen are part of the housing unit inventory. They are classified in a similar manner to multifamily units.

Household Estimates

Current household estimates are derived as of January 1 of the reporting year. A household is an occupied housing unit. It includes all the people who occupy that unit as their usual place of residence. The information used to determine housing occupancy rates by housing type and geography comes from water utility accounts serving Fairfax County residents, Fairfax County survey of rental housing complexes, U.S. Postal Service (USPS) vacant address data, and U.S. Census Bureau survey data. Water consumption and sewer usage are analyzed using water accounts information for housing units with individual meters. Occupancy is determined when water/sewer consumption is above a certain level. The unit is deemed vacant if there is very low consumption, zero consumption or no utilities connected. The occupancy rates are applied and calculated based on unit type and sub-geographies of the county. For homes that use both septic tanks and well water, occupancy rates cannot be determined using the data from water utility accounts. These housing units are assumed to have the same occupancy rates as other similar units within the same geographical area.

Many multifamily housing structures do not have units with individual water/sewer meters. The occupancy rates for these multifamily units are derived from the annual Fairfax County surveys of rental housing complexes containing five or more units. These surveys include information for both privately owned rental complexes and subsidized

rental complexes. The occupancy rates derived from the rental complexes are applied to unmetered rental and non-rental multifamily units by sub-geographies of the county. In areas where water utility data or rental complex survey data are deficient, U.S. Postal Service vacant address data are used to fill in the gap. Occupancy data from U.S. Census Bureau survey results for Fairfax County are analyzed and compared to the occupancy rates derived from the water accounts and rental housing complexes to help validate the resulting occupancy rate assumptions.

Population Estimates

Total population estimates are derived as of January 1 of each year. The total population estimate is a combination of household population (persons living in housing units) and group quarters population. Household population estimates are developed by applying household size factors and variances to occupied housing units (households). Household sizes differ by the type of housing unit and where the housing unit is located. The household size assumptions are based on the most recent U.S. Census Bureau survey data. Historical and current data and their variances are analyzed to discern developing patterns and trends.

Group quarter population are those persons who reside in institutions (correctional facilities, nursing homes) and non-institutional facilities (college dormitories, military barracks and adult group homes). Group quarters population for each land parcel where these facilities are located is added to the household population to obtain the total population estimate. The group quarter population for Fort Belvoir, Fairfax County adult and juvenile detention centers, pre-release centers, nursing homes, assistant living units without a full kitchen, George Mason University dormitories, and other group facilities, are obtained directly from these institutions. Institutional and group quarters population are included in all geographies.

Housing Unit Forecasts

The forecasts of housing units in Fairfax County are based on planned residential land uses and densities, vacant and underutilized residential planned land, and residential units at various stages in the process of being developed (in the “development pipeline”). Both short-term (5-year) and long-term (6 to 30-year) forecasts are produced, each with different methods, with long-term forecasts building upon the short-term figures. All housing unit forecasts reflect projections as of January 1 of each year.

Short-Term Forecasts

The short-term housing unit forecast horizon is five years into the future. Active residential development pipeline is the primary determinant on short-term forecasts. Fairfax County's short-term forecasting method assumes that housing units in the "development pipeline" are expected to be built before units that may be planned at some future time that are not present in that process. Furthermore, housing units in the process of being developed are expected to be completed according to their stage within the process as of January 1 of the current report year. The general stages considered are:

- 1) units under construction;
- 2) units with building permits issued but not started;
- 3) units shown on an approved development plan;
- 4) units shown on a development plan under review;
- 5) units shown on a development plan proffered as a condition to a rezoning approval; and
- 6) units shown on a proposed development plan submitted with a rezoning application under review.

The past five years of "development pipeline" data along with assumption data on how likely and quickly housing units will be built are used to forecast short-term housing unit growth. The "development pipeline" data is analyzed and linked by parcel (location) across the records contained in the three "development pipeline" databases to ensure that housing units are not double counted or missed. The complexities of connecting the "development pipeline" data by parcel include:

- Housing units can enter the "development pipeline" at any stage – rezoning, development plan or building permit.
- Rezoning and/or development plan housing units may move to the next stage of the "development pipeline" in sections when they are part of a larger submission.
- Rezoning applications can be associated with multiple development plans and a development plan can be associated with multiple rezoning applications.
- Some housing units in the "development pipeline" may be replacement units for already existing units, thus, not adding to additional future units.

To address the complexities of tracking and linking housing units through the "development pipeline," several decision tree methodologies are incorporated into the short-term forecasting model.

Rezoning: Parcel identification numbers and the rezoning application numbers are used as the primary means of tracking information through the rezoning processes. Land use and zoning district information contained in a zoning application allow a determination of housing unit type to be made. If a land parcel is involved in more than one rezoning over the past five years, only the most recent rezoning application is included in the analysis. No housing unit numbers are typically associated with proposed rezoning applications, but the number of housing units associated with the rezoning is usually included in the data for an approved rezoning. For rezoning applications without housing unit numbers, an estimate is developed based on the proposed zoning and the land area associated with the application. Housing units are counted in the rezoning stage of the pipeline only if there are no development plans associated with the rezoning. If a development plan(s) is associated with the rezoning, the number of housing units in the development plan(s) are removed from the number of housing units associated with the approved rezoning. Most linkages between rezoning applications and development plans can be made through tracking IDs in the relational databases for these two applications. The relationship between rezonings and development plans is many to many; that is, a single or multiple rezonings may be associated with one or several development plans.

Development Plans: Parcel identification numbers and the development plan application numbers are used as the primary means of tracking information through the development plan stage. However, parcel identification numbers associated with development plans may or may not be the same as the parcel identification numbers listed for associated rezonings or building permits. This occurs because land parcels are often consolidated and/or subdivided during the development plan stage of the “development pipeline” process. The development plan status information is used to assign whether the plan is submitted or approved, and land use and zoning information is used to assign housing unit type. Housing units are counted in the development plan stage only if there are no building permits associated with the parcels in the development plan. If building permits are associated with the development plan, those housing units are assumed to have moved to the next stage of the “development pipeline” and are no longer reflected in the development plan stage. Unfortunately, connecting building permits to development plans is not always a straightforward process because sometimes the parcel identification numbers reflected in the development plans are different than those associated with the permits. To make the association between development plans and building permits, historical parcel information tracking parent-child relationships and spatial location information are used. The relationship between development plans and building permits is one to many.

Building Permits: Parcel identification numbers and building permit application numbers are used as the primary fields for tracking housing units through the building permit stage. The permit application number is used to link building permits to its inspections. The parcel identification number associated with a building permit may or may not be a current parcel identification number and may or may not match the parcel identification numbers in the associated development plan. This makes linking development plans and building permits difficult. Therefore if a link is not found between a building permit and a development plan, historical parcel identification numbers linked by parent-child relationships are used to find associations. Housing units in the building permit stage of development also are checked against housing units in the current inventory to determine if the units are already captured in the current inventory. This occurs when the housing units under construction are replacement units or are complete enough to already be captured in the current inventory (80 percent complete). A housing unit in the building permit stage is considered “under construction” if any inspections are associated with the building permit.

Likelihood of Development Assumptions: Not every prospective housing unit in the “development pipeline” will be built and actually become a housing unit. Thus, assumptions are made about the likelihood of housing units in each development stage becoming future housing units. These likelihood assumptions are developed using statistical analyses of the historical proportions of “development pipeline” housing units that are eventually built.

Timing of Development Assumptions: Housing units in the “development pipeline” may take less than a year to more than 10 years to be completed. Therefore, assumptions about how quickly housing units will progress through the “development pipeline” are made. These timing assumptions are based on statistical analyses that track how quickly housing units move to completion from each stage of the “development pipeline.” The statistical analyses provide average lengths of time, medians and deciles.

Long-Term Forecasts

The long-term housing unit forecast horizon is beyond five years in the future. Several types of assumptions are developed to produce long-term housing unit forecasts – planned land capacity assumptions, density range assumptions, site characteristics assumptions, and timing of development assumptions. The long-range housing unit forecasts are developed for a 30-year forecast period. For each land parcel, three housing unit forecast scenarios are produced – low, most likely and high. These scenarios are based on the range of density allowed in the Fairfax County Department of Planning and Development’s *Comprehensive Plan for Fairfax County, Virginia*, the proximity of the property to business and transportation hubs or other features, and parcel characteristics that would make it more or less attractive for development. Only the most likely forecast scenarios are published in the annual

Demographic Reports. Starting 2022, the range of density allowed in the Herndon Department of Community Development's *Town of Herndon, Virginia, 2030 Comprehensive Plan* has been incorporated into the long-term forecasts.

Planned Land Capacity Assumptions: After units in the development process are forecast to be completed, areas either reach buildout (no additional capacity exists for residential development according to planned land uses and exercising of plan option densities in the currently adopted *Comprehensive Plan*) or have additional capacity for residential development remaining on vacant or underutilized land. Land parcels located in plan option areas are treated differently than land parcels not contained in plan option areas. The additional capacity of land parcels not contained in plan option areas is analyzed individually. The additional capacity of land parcels contained in plan option areas are analyzed as a group across all parcels comprising the plan option area.

Density Range Assumptions: Unlike the other long-range forecast assumption categories, the density range assumptions only affect the most likely forecast scenarios and do not apply to parcels contained in plan option areas. Planned land uses associated with parcels provide a density range (i.e., 5 to 8 housing units per acre) rather than a specific density. Thus for the most likely forecast scenario, assumptions must be made about whether the parcel will be developed at the low, mid or high end of the planned land use density. These density range assumptions are developed by analyzing the proximity of the parcel to factors such as business and transportation hubs, sensitive watersheds, and sewers. Parcels near business and transportation hubs are most likely to be developed at the high end of the planned land use density; parcels in watersheds and that lack access to sewers are most likely to be developed at the low end of the planned land use density; whereas, other parcels are likely to be developed at the middle of the planned land use density range.

Site Characteristics Assumptions: Site-specific characteristics are used to modify the likelihood and capacity of development as indicated by the *Comprehensive Plan*. The site characteristics considered include recent sales of vacant property; recent development activity; the age of existing structures; resource protection areas; tax-exempt status; small additional potential; and buildability factors such as flood plains, steepness of slope, accessibility, and lack of sewers on land that does not percolate. Within the model, separate and unique assumptions can be developed for each of these site factors.

Timing of Development Assumptions: Long-range forecast 'timing of development assumptions' are based on past trends and housing absorption rates. In addition, external events such as economic growth cycles are taken into

account when developing these long-range ‘timing of development assumptions.’ Different ‘timing of development assumptions’ is applied to land parcels based on the site characteristics of the parcel.

Household Forecasts

Households are occupied housing units. Thus, household forecasts are derived from the housing unit forecasts and reflect projections as of January 1 of each year. Forecast households are calculated as the forecast number of housing units by type multiplied by a forecast occupancy rate. Occupancy rates are derived as the inverse of housing vacancy rates (i.e., occupancy rate = 1 – vacancy rate). Vacancy/occupancy rates are applied based on estimates by housing type and geographical area.

Vacancy and Occupancy Rate Assumptions: Current vacancy rate assumptions are developed using information from several sources. Estimated vacancy rates by housing type and geography are derived using data from an analysis of inactive water accounts, survey data collected on the county’s rental housing complexes, U.S. Postal Service (USPS) vacant address data, and the U.S. Census Bureau’s American Community Surveys. In the forecast years, vacancy/occupancy rates by type of housing unit are assumed to remain constant in Fairfax County. This is based on past trends in vacancy/occupancy rates, which have remained stable by housing unit type for the last 20 years. However as multifamily housing becomes a larger proportion of the total housing stock in the future, overall vacancy rates are expected to trend higher because multifamily housing typically has higher vacancy rates than single family detached and attached housing.

Population Forecasts

Total population is the sum of two components – household population and group quarters population. Two different methodologies are used to estimate and forecast household population and group quarters population. Household population is comprised of those persons who live in housing units. Group quarters population are those persons who live in institutions such as nursing homes, dormitories, military facilities, etc. The Fairfax County total population forecasts reflect projections as of January 1 of each year.

Household Population Methodology

Household population forecasts are derived from housing unit and household forecasts by housing unit type and geographic area. Forecasts of household population are calculated using the following methodology. The forecasts of the number of housing units by type are multiplied by occupancy rates and average household sizes. Both occupancy rates and average household sizes are assigned to these housing unit counts by housing type and geographic area.

Average Household Size Assumptions: Household size assumptions are based primarily on the most recent U.S. Census Bureau data and Fairfax County surveys. Historical, current and forecast average household sizes and variances produced by the U.S. Census Bureau and Fairfax County surveys are analyzed to develop current and forecast average household sizes and variances by housing unit type and geography. The average household sizes are also compared to the Fairfax County Public School enrollment trends over the past 10 years. The trends influencing average household sizes in Fairfax County include housing type, racial/ethnic diversity, and socioeconomic factors.

Household sizes tend to differ by the size and style of housing units. Fewer persons per unit typically live in multifamily housing than in single family detached and single family attached housing. As the mix of housing styles changes over time to include more multifamily housing, downward pressure is applied to the county's overall average household size.

Households headed by racial and ethnic minorities in Fairfax County tend to have larger average household sizes than households with White heads of household. Since 1970, these minority households have become an increasingly larger proportion of all households. This trend has exerted upward pressure on Fairfax County's overall average household size. However, within each racial/ethnic group, household sizes generally have been slowly shrinking over time due to socioeconomic factors.

Group Quarters Population Methodology

Group quarters population for each geographical area is added to the household population to obtain the total population estimate. The population of special institutions, such as Fort Belvoir, Fairfax County adult and juvenile detention centers, pre-release centers, nursing homes, assistant living units without a full kitchen, George Mason University dormitories, and other group facilities, are obtained directly from these institutions. Institutional and group quarters population is included in all geographies.
