Alternate Heating Source Safety Tips

- Keep at least three feet of clearance between your alternate heat source and anything combustible.
- Never leave a heater on when you are not in the room or when you go to sleep, and never leave children or pets unattended near heating sources.
- Only use heaters that have been tested to the latest safety standards and certified by a nationally recognized testing laboratory, such as Underwriters Laboratories (UL). These heaters will have the most up-to-date safety features, such as automatic shut-offs. It is important to install and use heaters according to manufacturer’s recommendations.
