Technical Bulletin

Subject: DPOR Certification for Backflow Prevention Device Workers

Date: 4/7/2021

No.: 21-04

Summary: To ensure compliance with Virginia Department of Health (VDH) Regulations all personnel involved in testing and repairing backflow devices must hold an applicable license issued by the Virginia Department of Professional and Occupational Regulation (DPOR).

Effective date: January 1, 2022

Background: The newly proposed VDH revisions to the Waterworks regulations were submitted to the Virginia State Office of the Executive for signature in December 2020. These revisions [in 12 VAC 5 – 590 – 630] included the following requirement:

Starting January 1, 2022, persons testing and repairing backflow prevention assemblies and devices shall be certified by a Commonwealth of Virginia tradesman certification program (identified by DPOR as backflow prevention device workers). Until January 1, 2022, persons testing and repairing backflow prevention assemblies and devices shall be qualified to perform such work as demonstrated by possessing a certification or license from a local or state agency having legal authority or shall possess a certificate of completion of applicable vocational training acceptable to the owner.

Policy: Fairfax County Building Division Cross Connections Program, by delegation from Fairfax Water, will require certification through DPOR as a “Backflow Prevention Device Worker,” for each backflow assembly tester starting on January 1, 2022.

Approved by: William D. Hicks, P.E.
