3rd Party Construction Inspection Checklist and Certification: Dry Swales DEQ Spec. No. 10 & PFM 6-1308

Project Name:		Construction Firm:	
Co. Plan Number:		3 rd Party Inspection Firm:	
Site Address:		3 rd Party Inspector's Name:	
Latitude / Longitude:	_°N°W	Contact Info / Phone Number:	

BMP ID Number as shown on plan and general location on the site:

- A certification is required for all SWM/BMP facilities under PFM 6-1300 et. seq. A Virginia licensed professional engineer or licensed professional meeting the exemption requirements of the Code of Virginia §54.1-401 must sign the certification at the end of this checklist.

Instructions:

- •
- Check each item as complete, or write in "N/A" for those items that are not applicable. Fill in blanks for requested information on dimensions, materials, etc. Provide one or more photos for applicable items; checkboxes indicate items that <u>require</u> photos. •

Pre-Installation Meeting and Site Preparation

CHECK	рното	DESCRIPTION	DATE OF INSPECTION / COMMENTS
		Pre-Installation Meeting with - contractor designated to install the facility - 3rd party inspector (or designee) - assigned County site inspector A review of checklist and tentative schedule for interim inspections and sign-offs has been discussed	
		Impervious cover constructed, free of construction equipment, material storage, etc.	
		Pervious areas within contributing DA stabilized with appropriate vegetation.	
		Area of dry swale not impacted during construction, or has been remediated prior to installation. Circle one: Not Impacted Remediated	
		Stormwater diverted around the area of the dry swale and perimeter E&S controls installed.	

Excavation

СНЕСК	рното	DESCRIPTION	DATE OF INSPECTION / COMMENTS
		Horizontal location of BMP is in accordance with the approved plans.	
		If dry swale was used as a sediment trap, verify the bottom elevation of proposed stone reservoir is lower than the bottom elevation of the existing sediment trap.	
		Excavation of bottom is scarified.	
		Subgrade surface free of rocks, roots, and large voids. (Voids may be filled with base aggregate.)	
		No groundwater seepage or standing water is present. Any standing water is dewatered to an acceptable dewatering device, and the design consultant has been notified.	
		Excavation of facility has achieved proper grades, longitudinal slope, and required geometry per approved plans. Longitudinal Slope	
		Excavation bottom not compacted.	
		Elevation at bottom of stone reservoir conforms to plan.	

3rd Party Construction Inspection Checklist and Certification: Dry Swales DEQ Spec. No. 10 & PFM 6-1308

Filter Layer, Underdrain, and Stone Reservoir Placement

CHECK	РНОТО	DESCRIPTION	DATE OF INSPECTION / COMMENTS
		All aggregates (stone, sand, etc., as required) conform to specifications.	
		Underdrain size, spacing, base material installed per approved plans. Pipe Diameter Inches Material Slope% Pipe Spacing ft. Perforation Size, SpacingInches. Base Material/Type Depthft. Number of Cleanouts	
		Perforated underdrains placed in layer of washed VDOT #57 stone with gravel depth above/below underdrain pipe per approved plans. Gravel Depth (min 2")	
		Sides of excavation covered with geotextile that has no tears, holes, or excessive wrinkles.	
		Verify filter media per approved plans. Filter Media Type Depth of Filter Media ft.	
		Placement of underdrain, observation well(s), and underdrain fittings (45° wyes, cap at upstream end, etc.) installed per approved plans. Number of Observation Wells:	
		Restriction device/flow control device placed according to approved plans.	

Soil Media Placement

CHECK	рното	DESCRIPTION	DATE OF INSPECTION / COMMENTS
		Soil media certifications per project specifications, including confirmation of no apparent cross-contamination (see PFM 6-1308.8A and 6-1308.11D).	
		Soil media placed in 12 inch lifts to the design top elevation of the dry swale, as verified after settlement (2-4 days after initial placement).	
		Elevation at Top of Soil Media (post-settlement) conforms to plan.	
		Side slopes of ponding area are feathered back at the required slope, per approved plans. Side Slopes (max. 3:1)	
		Dry swale dimensions are per approved plans. Swale Lengthft. Bottom Width Swale Longitudinal Slope Swale Side Slopes (max. 3:1)	

3rd Party Construction Inspection Checklist and Certification: Dry Swales DEQ Spec. No. 10 & PFM 6-1308

Final Stabilization

CHECK	РНОТО	DESCRIPTION	DATE OF INSPECTION / COMMENTS
		Placement of energy dissipaters and pretreatment practices are installed per approved plans.	
		Riser, overflow weir, or other outflow structure is set to the proper elevation and functional. Riser / overflow weir / outflow structure elev.	
		External bypass structure is built per approved plans. Bypass Type Size Inches	
		Check dams installed per approved plans. Number Material Spacing Height Keyed into side slopes? Yes No Notch/Depression to pass 2-yr. Q? Yes No	
		Plant installation conforms to approved plans, and all plants are healthy.	
		Mulch installed per approved plans.	
		Ensure facility components are adequately stabilized (with matting, as required) per approved plans.	
		Provide a photo of the BMP facility after completion of construction.	

Final Certification

I do hereby certify that this as-built information for the stormwater management/BMP facility was inspected by me (or by an individual under my responsible charge) and conforms to the approved plans, except as indicated.
