Pre-Ins	tallation	Meeting and Site Preparation			
CHECK	РНОТО	DESCRIPTION		DATE OF INSPECTION / COMMENTS	
		Pre-Installation Meeting with - contractor designated to install the facility - 3rd party inspector (or designee) - assigned County site inspector A review of checklist and tentative schedule for interim inspections and sign-offs has been discussed Contributing drainage areas are stabilized and not eroding.			
		Stormwater runoff is diverted around the ex stabilized conveyance.			
Excava	tion	I		I	
CHECK	РНОТО	DESCRIPTION		DATE OF INSPECTION / COMMENTS	
		Horizontal location of BMP is in accordance plans.	with the approved		
		Subgrade surface free of rocks, roots, and I may be filled with base aggregate.)	arge voids. (Voids		
		For level 2 permeable pavement: Excavatio scarified.	n bottom is		
		No groundwater seepage or standing water standing water is dewatered to an acceptab device, and the design consultant has been	le dewatering		
		Excavation of facility has achieved proper elevations and grade per approved plans.			
Filter La	ayer and	Underdrain Placement			
CHECK	РНОТО	DESCRIPTION		DATE OF INSPECTION / COMMENTS	
		All aggregates (stone, sand, etc., as require washed, and conform to specifications.	d) are clean,		
		Perforated underdrain size and spacing per Pipe Diameter Inches Material ft. Slope Perforation Size/Spacing	_%		
		Filter layer and initial reservoir layer aggreg dumped) to avoid aggregate segregation pe Depth of filter layer ft.

Stone Reservoir Aggregate Placement

CHECK	РНОТО	DESCRIPTION	DATE OF INSPECTION / COMMENTS
		Sides covered with geotextile with no tears, holes, or excessive wrinkles.	
		Stone reservoir layer aggregate placement, compaction, and	
		thickness, are per approved plans.	
		Depth of reservoir layer aggregateInches	
Bedding	g Layer a	and Pavement Installation	
CHECK	РНОТО	DESCRIPTION	DATE OF INSPECTION / COMMENTS
		Pre-treatment structures (when required) are installed per approved plans.	
		Type of pretreatment	
		Concentrated flow is not being discharged directly onto the permeable pavement.	
		Pavement surface is even and runoff spreads evenly across surface.	
		Flow reduction orifice or cap placed on the end of the pavement underdrain per approved plans.	
		Permeable pavement block systems which require edge	
		restraints are installed flush with the paver blocks per approved	
		plans.	
		Size of Edge Restraints	
		Type of Edge Restraints	
		Aggregate layer for the installation of the underdrain system is	
		per approved plans.	
		Depth of aggregate layer ft.	
		Size of aggregate layer	
		Signs installed per PFM 6-1304.3B	
		For porous asphalt and pervious concrete pavement, the full permeability of paved surface has been properly tested (clean water applied at a min. rate of 5 gpm over the entire surface), and all water infiltrated directly without puddle formation or surface runoff.	
		Provide a photo of the BMP facility after completion of construction.
