

VIENNA PLANNING DISTRICT OVERVIEW

OVERVIEW

The Vienna Planning District encompasses approximately 12,000 acres, or about five percent of the county. The planning district is located in the central northeast section of the county, and is generally bordered to the east by Leesburg Pike (Route 7), the Capital Beltway/Interstate 495 (I-495), Interstate 66 (I-66), and Prosperity Avenue, and to the west by Hunter Mill Road, Blake Lane, and the Difficult Run Stream Valley (see Figure 1). The planning district contains the Town of Vienna, the Vienna Transit Station Area (TSA) and portions of the Merrifield Suburban Center and the Tysons Urban Center. Plan recommendations for the Merrifield Suburban Center are included in the Area I volume of the Comprehensive Plan, Merrifield Suburban Center. Plan recommendations for the Tysons Urban Center are included in the Area II volume of the Comprehensive Plan, Tysons Urban Center. The Town of Vienna has jurisdiction over its own planning functions. Consult the Town of Vienna Comprehensive Plan for recommendations within this area.

The planning district is predominantly comprised of single-family neighborhoods. The exceptions to this are areas within the Vienna TSA, Merrifield Suburban Center, and the Tysons Urban Center.

The planning district is traversed by several major roads and highways, including I-495, I-66, the Dulles Airport Access Road and Dulles Toll Road (DAAR, Route 267), Lee Highway (Route 29), Arlington Boulevard (Route 50), Leesburg Pike, and Chain Bridge Road (Route 123). The Washington and Old Dominion (W&OD) Railroad Regional Park also bisects the planning district. Metrorail's Orange Line is located in the median of I-66, with two stations serving the Vienna Planning District. The Vienna-Fairfax-GMU Metro Station is located near the intersection of Nutley Street (Route 243) and I-66, and the Dunn Loring-Merrifield Station is located at Gallows Road and I-66.

CONCEPT FOR FUTURE DEVELOPMENT

The planning guidance provided by the Concept for Future Development is one of the principal elements used in formulating Area Plan recommendations. The Concept and its associated land use guidance recommend the predominant use and character envisioned for land areas within each planning district although within the Planning District, there may be land areas planned for a distinctly different land use than that envisioned by the Concept.

The Concept for Future Development recommends that the Vienna Planning District develop as Suburban Neighborhoods. In addition to containing Suburban Neighborhoods, the Vienna Planning District (Sectors V2 and V3) is on the periphery of the Tysons Urban Center and there is one designated Transit Station Area, Vienna, located within the boundaries of the Planning District. The district also includes a portion of the Merrifield Suburban Center.

The western portion of the Planning District (Sector V4) includes some neighborhoods that are recommended as Low Density Residential Areas. The Lee Community Planning Sector (V1), while primarily composed of Suburban Neighborhoods, also contains the Vienna Transit Station Area and is adjacent to the Merrifield Suburban Center.

VIENNA PLANNING DISTRICT

FIGURE 1

MAJOR OBJECTIVES

Planning objectives in the Vienna Planning District include the following:

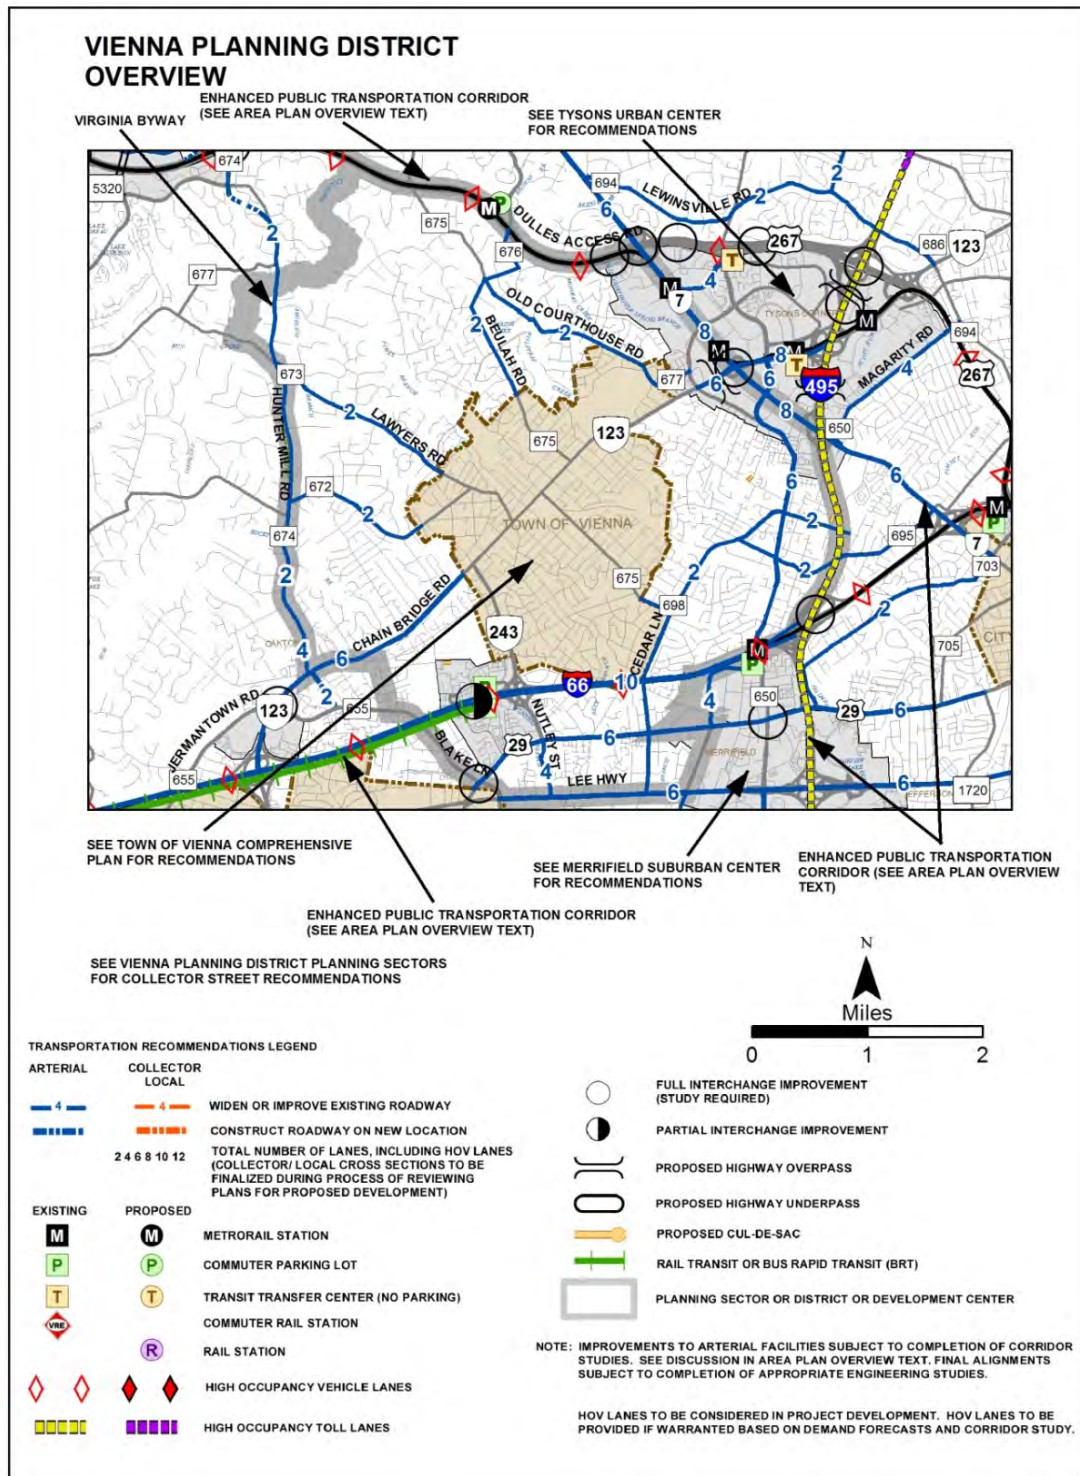

- Provide for compatible infill development that protects, enhances, and maintains the stability of established residential neighborhoods;
- Provide for effective transitions between the Tysons Urban Center and surrounding neighborhoods;
- Achieve appropriate development and redevelopment in the Vienna Transit Station Area, and Merrifield Suburban Center;
- Identify, preserve and promote awareness of heritage resources through research, survey and community involvement;
- Preserve the environment;
- Protect stable low density residential neighborhoods in the vicinity of the Vienna-Fairfax-GMU Metro station;
- Ensure that Level of Service D is maintained on the road network surrounding the Vienna-Fairfax-GMU Metro station;
- Prevent further westward expansion along the Route 123 corridor of office and commercial land use within the Vienna Planning District; and
- Maintain the existing low density residential uses in the Route 123 corridor between Oakton and Vienna, and east of Vienna to the extent such low density uses are not incompatible with specific planning objectives for this district.

DISTRICT-WIDE RECOMMENDATIONS

Transportation

Travel within and through the Vienna Planning District is affected by land uses and transportation facilities in adjacent districts, as well as throughout the Northern Virginia region. Therefore, the transportation network affecting the District is comprised of several elements, many of which relate to more extensive countywide facilities, services, and policies. The arterial and major collector roadway affecting the District are shown on Figure 2. Other countywide transportation elements are also depicted.

Within the discussion for each sector of the Planning District, a sector map depicting the Transportation Plan recommendations in that sector is provided. More detail is provided on these sector maps than on the planning district map. The additional detail may relate to more local transportation issues that are difficult to present at the planning district scale. In some cases, such as interchange areas, a portion of the sector map has been enlarged so that the transportation recommendations are clearly identified. These enlargements of the sectors may also include guidance regarding the provision of access to selected land areas.

COUNTYWIDE TRANSPORTATION RECOMMENDATIONS
VIENNA PLANNING DISTRICT
(SEE SECTOR MAPS FOR DETAILED TRANSPORTATION RECOMMENDATIONS)

FIGURE 2

Hunter Mill Road from Chain Bridge Road to Baron Cameron Avenue is a 7.2 mile roadway that is designated a Virginia Byway. To preserve the road's scenic and historic character, planning efforts should focus on innovative ways of dealing with traffic volumes. The Hunter Mill Road Traffic Calming Study, sponsored by the Northern Virginia Regional Commission (NVRC) and completed in 2006, provides both a traffic calming conceptual plan for Hunter Mill Road, as well as context sensitive roadway design techniques.

Housing

A list of existing, under construction, and proposed assisted housing for the Vienna Planning District is shown in Figure 3. This list includes housing developments which, to the county's knowledge, have received some type of housing assistance as defined below, but it should not be considered all inclusive.

Assisted housing includes programs which limit the amount of rent and the eligibility of occupants based on income as a condition for the provision of financial assistance from federal, state, or local sources. Some programs have time limits, and those units would no longer be considered "assisted" after income eligibility and rent limitations have been removed. The programs listed below are included as "assisted housing." Most programs provide assistance to privately owned housing developments. In some cases, multiple sources of financing may be used. The primary program and type of ownership is listed in the figure.

- Housing units owned or managed by the Fairfax County Redevelopment and Housing Authority (FCRHA) and operated by the Department of Housing and Community Development under the Federal Public Housing program or the local Fairfax County Rental Program;
- Housing units owned by the FCRHA and leased to the Fairfax-Falls Church Community Services Board for use as group homes or to nonprofit groups for emergency housing;
- Federal Section 8 project based rental subsidy units, which are usually privately owned;
- Units subsidized under federal mortgage subsidy programs including Section 202 (Elderly), Section 811 (Disabled), Section 221(d)(3), Section 235 or Section 236. These units may be publicly owned but most are owned by private or nonprofit entities;
- Developments which were financed with FCRHA bonds where a portion of the units must have reduced rents for tenants who meet income eligibility requirements;
- Tax Credit/VHDA financed projects with Low Income Housing Tax Credits and/or Virginia Housing Development Authority (VHDA) financing which establishes income eligibility requirements, many of which are privately owned;
- Nonprofit rental units and group homes serving nine or more individuals and owned by private entities, which were assisted with loans or grants from the Community Development Block Grant (CDBG), Section 108 loans, Home Investment Partnerships Program (HOME), or Fairfax County Housing Trust Fund;

FIGURE 3
VIENNA PLANNING DISTRICT
ASSISTED HOUSING
(Occupied or Under Construction, as of October 2004)

Location	Planning Sector	Number of Assisted Units	Type of Ownership And Program
<u>Rental Projects</u>			
The Apartments at Regent's Park Clocktower Place	V1	29	Private/ADU Rental Program
Armistead Park at Barkley Mainstone Drive	V1	3*	Public Housing
Tysons Tower, Tyspring St.	V3	274	Private/Section 236 (Elderly)
Briarcliff I, Briarcliff Court	V3	30	Section 8
Briarcliff II, Briarcliff Court	V3	20	Public Housing
Minerva Fisher Hall, Wolftrap Road	V3	12 Beds	Group Facility/Section 8
Patrick Street Home Patrick Street	V3	8 Beds	Group Home
<u>Homeownership</u>		83*	MIDS, First Time Home Buyers, or Affordable Housing

*Scattered Units

- Moderate Income Direct Sales (MIDS) program units which are for sale to income-eligible, first time home buyers with financial assistance provided in return for control of the re-sale price of the home; and
- Affordable Dwelling Units (ADU) for sale or for rent to serve households with incomes up to 70% of Metropolitan Statistical Area (MSA) median income and which are required to be included in certain housing developments of 50 or more units pursuant to Article 2, Part 8 of the Fairfax County Zoning Ordinance. In some instances, units created under the ADU Program may be owned by the FCRHA or a nonprofit organization; if so, they would be considered in one of the other categories above.

In many cases the assisted units represent only a portion of a larger development. Only the number of assisted units is included on the figure. Also, the housing listed as part of the Section 8 program is only that where the Section 8 rent subsidy is tied to specific housing units (project based). Housing where eligible tenants are receiving assistance through the Section 8 Housing Choice Voucher Rental program or where the subsidy transfers with the tenant is not listed since the units change continuously as tenants move. Countywide, at the end of 2002, over 3,200 families living in Fairfax County were assisted with tenant-based vouchers. Finally, for some proposed developments where a zoning proffer requires the provision of low and/or moderate income housing, but no specific program (such as MIDS) is identified in the proffer, the type of program is listed as Unknown.

Environment

The Vienna Planning District straddles the ridge line that separates the two largest watersheds (Difficult Run and Accotink Creek) in the Piedmont Upland area of the county. Therefore this district contains large areas of the headwaters for these large watersheds. The watershed divide roughly parallels Chain Bridge Road. South of the divide lies Bear Branch and the upper reaches of Hunters Branch. North of the divide lies Piney Branch, Angelico Branch, Wolf Trap Creek, Rocky Branch, and Old Courthouse Spring Branch. These five streams are all tributaries to Difficult Run.

The western third of the district has a rural character with a large area of stream valley and habitat environmental quality corridors. Like portions of Pohick, Lower Potomac, Upper Potomac and Bull Run, this area is important to the preservation of Fairfax County's natural resources. The eastern two-thirds of the district have been developed for some time. Environmental policies for the Vienna Planning District must respond to both of these areas. For the entire district, policies that focus on pollution control, reclamation, and preservation should be followed. The district should benefit from attention to preservation.

Older, developed portions of the county often have fair to poor surface water quality. This is due primarily to nonpoint source pollution in the form of runoff which contains high levels of fertilizers, pesticides, sediment, and hydrocarbons. Suburban areas such as Vienna have benefitted somewhat from state-of-the-art water quality control practices. However, they remain a challenge in the county's efforts to improve surface water quality and meet the requirements of the Chesapeake Bay Preservation Act.

The achievement of high water quality should continue to be implemented through land use, as well as structural control techniques in the portion of the district that drains to the Difficult Run. The following guidelines are suggested to achieve this objective:

- Maintain very low density development in the portions of the district that are environmentally constrained and drain into the Difficult Run;
- Devise an extended EQC system to provide protection to areas that constitute the Difficult Run headwaters, and preserve ecologically significant habitat areas. The EQC system should prohibit encroachment on steep slopes, problem soils, and wetlands;

- Construct the regional stormwater management ponds according to the Regional Stormwater Management Plan. Discourage the use of on-site stormwater management techniques in lieu of a regional alternative. In headwaters areas with suitable soils, infiltration techniques may be appropriate; and
- Encourage clustering and maintenance of low planned densities in the stream valley headwaters.

The Difficult Run Stream Valley has been designated an area of critical environmental concern by the Commonwealth. The entire watershed has been adopted by the Board of Supervisors under the county's Adopt-A-Stream Program. The six stream valleys of the Difficult Run watershed in this district, as well as the associated forest lands, wetlands and meadowlands, constitute a large part of the Difficult Run habitat.

Heritage Resources

The Vienna Planning District contains both known and potential heritage resources. A list of those heritage resources included in Fairfax County's Inventory of Historic Sites is shown on Figure 4, and a map of those resources is shown on Figure 5. The Inventory is open-ended and continues to grow. For information about these and other historic sites, consult the Fairfax County Department of Planning and Zoning. Identified heritage resources include:

- Ash Grove – Thomas Fairfax, the ninth Lord Fairfax, built this home in 1790.
- Hunter House – Built in 1890, this farm house was expanded over the years and is now a community center operated by Fairfax County Park Authority.
- Freedom Hill Fort – This circular earthen fort is typical of Civil War field fortifications. It was reconstructed by Fairfax County Park Authority as a county Park in the late 1970s.

There are known and potential heritage resources located along the 7.2-mile length of Hunter Mill Road, a portion of which lies within this Planning District. Such resources include sites or structures that are evidence of Native American occupation, pre-Revolutionary and Civil War activities, and the county's agrarian past. Actions to document these heritage resources, and to protect and preserve those that are determined by the county to be of historic or archaeological significance are underway and should be encouraged. Hunter Mill Road has been determined to be eligible for listing in the Virginia Landmarks Register and the National Register of Historic Places. The determination of eligibility is the first step in the process for being listed in the Virginia Landmarks and/or the National Register of Historic Places. Hunter Mill Road has also been designated as a Virginia Byway.

Potentially significant prehistoric archaeological sites are known to exist in the Long, Bear, Hunters, and Piney Branch floodplains, and similar sites may be located in the Difficult and Scott Run and Wolf Trap Creek watersheds. Historic resources have been identified in the Town of Vienna as well as throughout the district. Additional unidentified resources may yet exist in undeveloped areas and within developed sections of the district. Of particular importance are resources associated with the history of the Town of Vienna and the community of Dunn Loring.

N National Register of Historic Places
V Virginia Landmarks Register
H Historic Overlay District

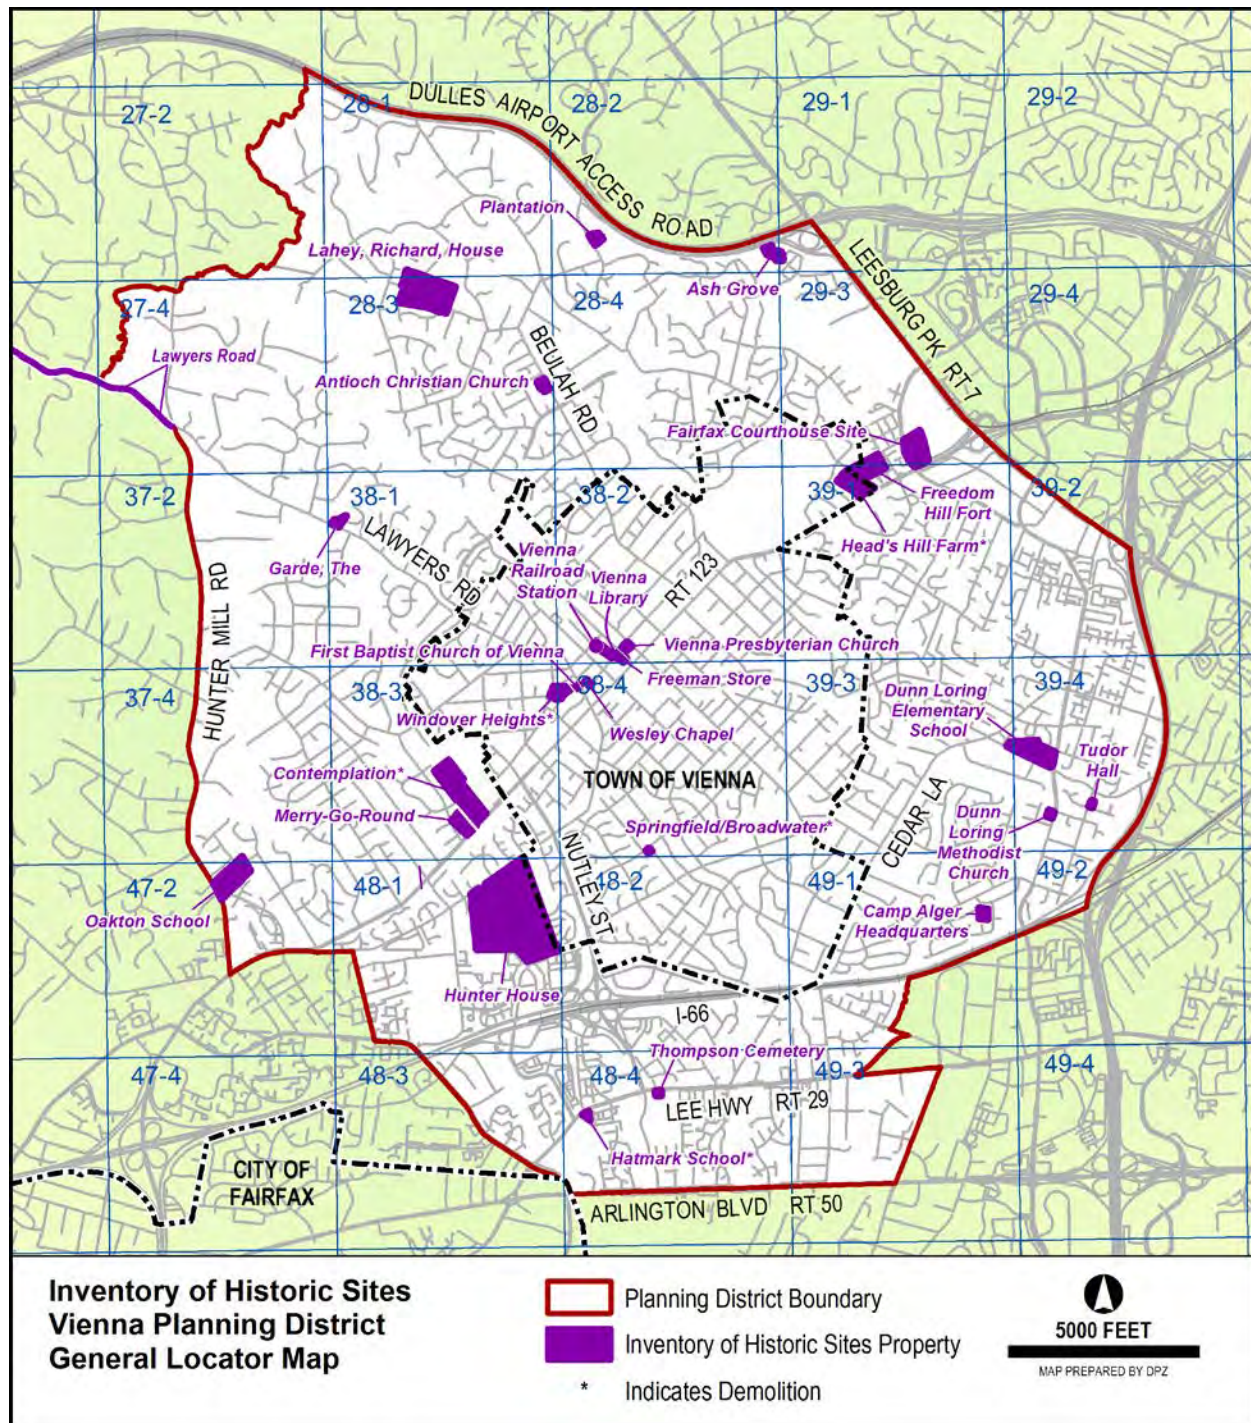

FIGURE 5

Other heritage resources including those protected by Historic Overlay Districts, or listed in the National or Virginia Landmarks Register, may be identified in the text and recommendations section.

The Fairfax County Inventory of Historic Sites, the National Register of Historic Places and Virginia Landmarks Register, and the county's Historic Overlay Districts promote the recognition of sites with historic, architectural and archaeological significance. Designation confers public recognition and can offer incentives for preservation to the property owner.

The county Inventory of Historic Sites includes properties which meet certain eligibility criteria and are officially designated by the county's History Commission. In addition to historic, architectural or archaeological significance, property that serves as a focus of community identity and pride may also be recognized. The benefits of designation include public recognition of the structure's significance and enhanced support for preservation. Owners of properties included in the Inventory may meet with the county's Architectural Review Board on a voluntary basis to review proposed changes to their properties. Project review and approval by the county's Architectural Review Board may be required in accordance with the guidance provided by the Policy Plan under Land Use Appendix 9 Residential Development Criteria 8 Heritage Resources.

The Virginia Landmarks Register and the National Register of Historic Places also officially recognize properties meeting specific criteria. Like the county Inventory, benefits of designation include public recognition and enhanced support for preservation. In addition, projects that are funded or sanctioned by federal government agencies may require review to determine if they will have any effect on properties listed in or eligible for listing in the National Register for Historic Places. Alternatives must be explored to avoid or reduce harm to the historic properties.

The county's Historic Overlay District is a zoning tool used to regulate proposed new construction and changes to existing structures in areas containing heritage resources to ensure compatibility with the resources. Site design, facades, demolition, and building materials must be reviewed and approved by the county's Architectural Review Board.

In those areas where significant heritage resources have been recorded, an effort should be made to preserve them for the benefit of present and future generations. If preservation is not feasible then the threatened resources should be thoroughly recorded and, in the case of archaeological resources, the data recovered in accordance with countywide policies.

Prior to any zoning action, heritage resource staff from the Department of Planning and Zoning should be consulted as to what architectural surveys are necessary to document any on-site cultural resources. Staff from the Cultural Resource Management and Protection Branch of the Park Authority should be consulted to develop a scope of work for any on-site archaeological surveys prior to any development or ground disturbing activity. Should architectural or archaeological resources be discovered that are potentially eligible for inclusion in the National Register, further survey and testing should occur to evaluate these resources as to their eligibility. If such resources are found to be eligible, mitigation measures should be developed that may include avoidance, documentation, data recovery excavation and interpretation.

*Federal and state facilities are not subject to the 2232 review process.

Public Facilities

Existing public facilities located within the Vienna Planning District are included on Figure 6. Major expansions of existing facilities (with the exception of federal or state facilities) or uses of land that are distinctly different than the use of the public facility must be considered by the county Planning Commission through provisions outlined in Section 15.2-2232 of the Code of Virginia. For these existing facilities, minor expansions which are in keeping with the character of the facility may be considered in conformance with the Plan.

A number of public facilities have been identified as future needs in this Planning District. These projects are included for informational purposes and in most cases will require a 2232 Review public hearing before the county Planning Commission prior to being established. Those facilities for which a specific location for future construction has been identified are also listed in the sector recommendations and may be considered a feature of the Comprehensive Plan upon review by the Planning Director and concurrence by the Planning Commission. If such feature shown determination is made, these projects will not require a future 2232 Review public hearing. The following public facilities are identified as future needs in the Vienna Planning District.

1. In order to meet additional requirements for public water, water storage may be required by the City of Falls Church at its site on Cedar Lane near I-66.
2. In order to meet additional requirements for public water, water storage may be required by the City of Falls Church at either of its sites on Gallows Road or Old Courthouse Road.
3. Implement the Regional Stormwater Management Plan by providing necessary stormwater detention ponds in the district.
4. A fire and rescue station is required in the Hunter Mill Road corridor north of Oakton.
5. Locate a Primary Care Center for diagnostic and treatment health care services within the district.

Parks and Recreation

Public parks located within the Vienna Planning District are identified in Figure 7. Additional recreation facilities are provided at county public school sites, including those within the jurisdictional limits of the Town of Vienna. Parklands administered by the Town of Vienna in Sector V6 are listed in the appropriate park category in Figure 7. The majority of parkland in the Vienna Planning District is concentrated in Neighborhood, Community and Countywide Stream Valley Parks. These open space amenities help to shape the suburban residential character of the district. Large parks in the Vienna Planning District include: Nottoway and Clarks Crossing District Parks, Meadowlark Gardens Regional Park, and the W&OD Trail Regional Park. Nottoway Park is the sole location of a major athletic field complex and also contains community garden plots and the Hunter House, a historic property adapted for community use. Clarks Crossing Park is planned primarily for passive recreation use and natural resource protection, however, limited active facilities include an equestrian area. Freedom Hill Park, a Civil War historic site, is also located in this district.

FIGURE 7

V5			Nottoway		
V6	<u>Fairfax County</u> Peterson Lane	<u>Fairfax County</u> Cunningham		<u>Fairfax County</u> Freedom Hill Wolf Trap Stream Valley	Fairfax City Connector/ W&OD Trail
	<u>Town of Vienna</u> Beulah Road Northside Moorefield Locust-Hine	<u>Town of Vienna</u> Glyndon Southside Meadow Lane Waters-Caffi Fields Vienna Comm. Ctr. Bowman House Wolf Trap Creek Park		<u>Town of Vienna</u> Salsbury Spring (historic site)	W&OD Trail

The W&OD Trail Regional Park is one of the most popular and heavily used recreational facilities in Northern Virginia. Additionally, this facility provides an east-west non-vehicular "thoroughfare" transecting the entire district, which implements several recreation and transportation policy objectives. A second potential opportunity exists for a north-south trail axis which would link the Vienna Transit Station Area with major countywide parks south of Arlington Boulevard via the Accotink Stream Valley Trail and the W&OD Railroad/City of Fairfax Connector Trail.

Additional Community Parks developed with active recreation facilities are needed in the eastern and southern sectors planned for higher density development in the vicinity of Tysons Urban Center, Vienna Transit Station Area, and the Merrifield Suburban Center.

Difficult Run Stream Valley, on the northwest boundary of the district, is a sensitive environmental area which should be protected by means of land dedication or acquisition of open space easements by the Fairfax County Park Authority. Significant archaeological resources located in this district should be similarly protected. Intrusion of non-recreational development in these areas should therefore be restricted or prohibited and environmental and visual impacts should be mitigated.

Principal Park and Recreation guidelines for the Vienna Planning District include:

- Acquire and develop at least three additional Community Parks to address deficiencies of active recreation facilities;
- Plan and develop stream valley trails to facilitate non-vehicular travel options; and
- Preserve and protect significant natural and heritage resources.

VIENNA TRANSIT STATION AREA

OVERVIEW

The Vienna-Fairfax-GMU Metro station is located in the median of Interstate 66 (I-66), west of Nutley Street (Route 243). The station is connected to parking and feeder bus service north and south of I-66 via enclosed pedestrian bridges above the highway. Access roads extend both to the north and south of I-66 from Nutley Street to Blake Lane. Vehicles proceeding east on I-66 may take an off-ramp to the station, use the station, and then proceed to the westbound lanes of I-66 without having to enter the I-66 and Nutley Street interchange.

The Vienna Transit Station Area encompasses the Metro station and surrounding areas. Figure 8 shows the Vienna Transit Station Area divided into "land units" for the purpose of organizing Plan recommendations. These land units will be referred to in the remainder of this section of the Plan. The Transit Station Area is primarily developed with residential uses at 5-8 dwelling units per acre, although, some lower density residential areas also exist. Mixed-use development is planned on Land Units A and G, located south and north of I-66, fronting on the west side of Nutley Street.

The Vienna Transit Station Area offers both challenges and opportunities for compatible, non-automobile dependent development patterns. The Concept for Future Development guidelines for Transit Station Areas seek to maintain the general character of the area in which the Metro station is located, while optimizing the development opportunities associated with the Metro station location.

CONCEPT FOR FUTURE DEVELOPMENT

The Vienna Transit Station Area is recommended by the Concept for Future Development as one of several mixed-use centers located around the fourteen Metrorail stations in Fairfax County. They are shown as part of the Adopted Regional System for Metrorail. These Metrorail stations provide the opportunity for non-automobile dependent development to occur in a manner that is compatible with the existing nearby land uses. As recommended in the Concept, the intention of this designation is to capitalize on the opportunity to provide transit-focused housing and employment locations, in a manner that is compatible with nearby land uses. The area is bounded generally by Nottoway Park on the north, Lee Highway (Route 29) on the south, Sutton Road and East Blake Lane Park on the west, and Nutley Street on the east.

Existing and/or approved mixed-use (residential and commercial) development within the Vienna Transit Station Area is planned for Land Units A and G. Land Unit A is approved for 1.2 million square feet of office space and 350 dwelling units. The approved residential density for this land unit is 33 dwelling units per acre. Land Unit G is approved for 600,000 square feet of office space and 152 townhomes at a density of 7.5 dwelling units per acre. All other land units are planned primarily for residential development.

RECOMMENDATIONS

Land Use

Designs for future development should provide facilities to encourage residents to access the station without using their private vehicles. Pedestrian/bike paths should be installed to allow easy access to the station from new development, and it may be desirable for some segments of these paths to be covered to encourage the use of Metro even during inclement weather.

Infill development within and surrounding the Vienna Transit Station Area should be of a compatible use, type and intensity in accordance with the guidance provided by the Policy Plan under Land Use Objectives 8 and 14.

Where substantial parcel consolidation is specified, it is intended that such consolidations will provide for projects that function in a well-designed, efficient manner and provide for the development of unconsolidated parcels in conformance with the Area Plan.

Densities north and south of the Metro station are reflected on the Comprehensive Plan map. Cooperation among property owners and Washington Metropolitan Area Transit Authority (WMATA) should be encouraged.

Recommendations for the Vienna Transit Station Area are organized by land units. The boundaries for these land units are shown on Figure 8.

Land Unit A

This land unit is planned and approved for mixed-use development to include multifamily residential units as well as office uses up to .50 FAR and ancillary uses including, but not limited to, support retail and a day-care center. Approximately 320-350 housing units are approved for development in the southwest corner of the land unit and these should be provided. Additional multifamily residential units or a mix of multifamily and high density single-family attached units may be considered on the remaining undeveloped portion of the land unit at an average of 20-30 dwelling units per acre built at a ratio converting approved office use to multifamily residential use of 1:1 (one office square foot for one residential square foot).

Optional uses may include housing for the elderly/elderly care facilities, hotel/motels and health/recreation facilities that are well integrated into the mixture of office and residential use not to exceed the approved commercial development for Land Unit A of 1,200,000 square feet.

Support retail uses should be integrated within office and residential buildings. Freestanding retail use is not appropriate.

Buildings should be sited so that building heights, in general, do not project more than ten (10) feet above the existing ridge line vegetation; the Environmental Quality Corridor should be preserved, covered paths to the Metro station and a minimum 50-foot landscaped or natural buffer to the residences on Fairlee Drive (Land Unit I) should be provided. The

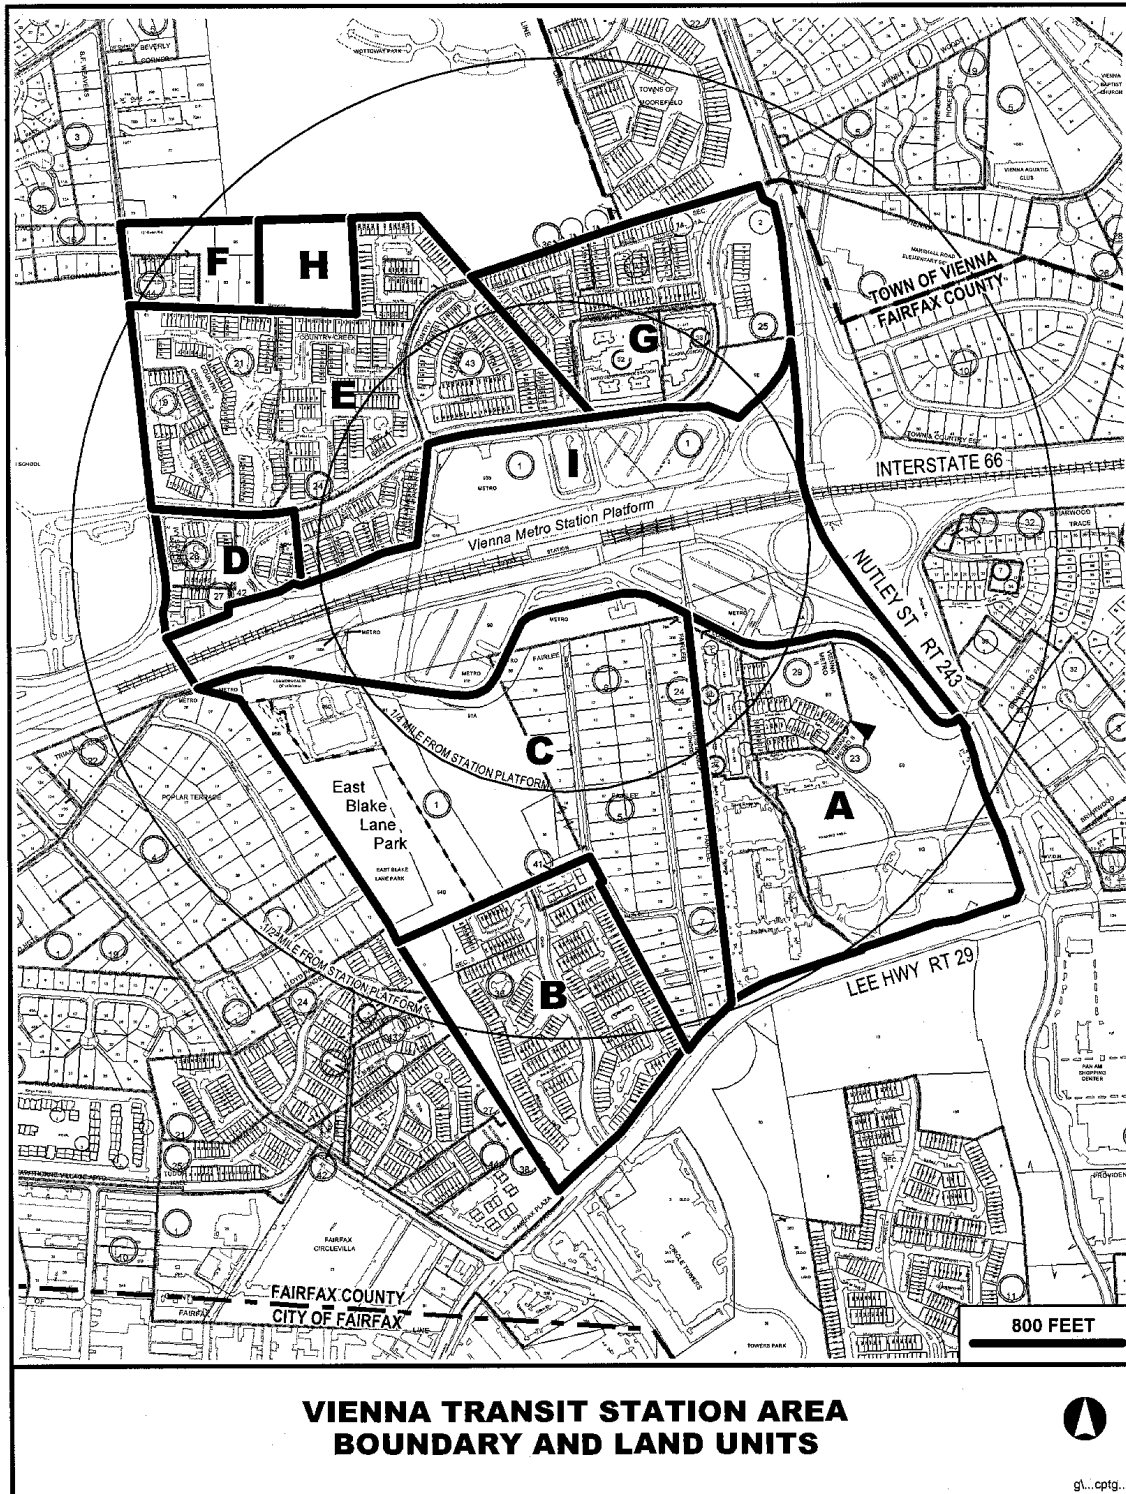

FIGURE 8

fifty (50) foot buffer may be modified to twenty-five (25) feet in the southwestern portion of the site if the following standards are met:

1. Barriers and enhanced landscaping are provided along the common property line.
2. The height of the apartment buildings closest to the property line shall not exceed four (4) stories and shall be located no closer than 100 feet from the western property line.
3. The twenty-five (25) foot buffer shall be undisturbed.

Because of the site's topography, development should be integrated with the land forms to reduce visual impacts to adjacent residential areas.

Land Unit B

This land unit of about 34 acres is planned for residential use at 5-8 dwelling units per acre. It is comprised entirely of the Circle Woods townhouses. This is a stable residential community that should be protected from any adverse impact that might be associated with any future development to the north (Land Unit C) or redevelopment to the east (Land Unit I).

Land Unit C

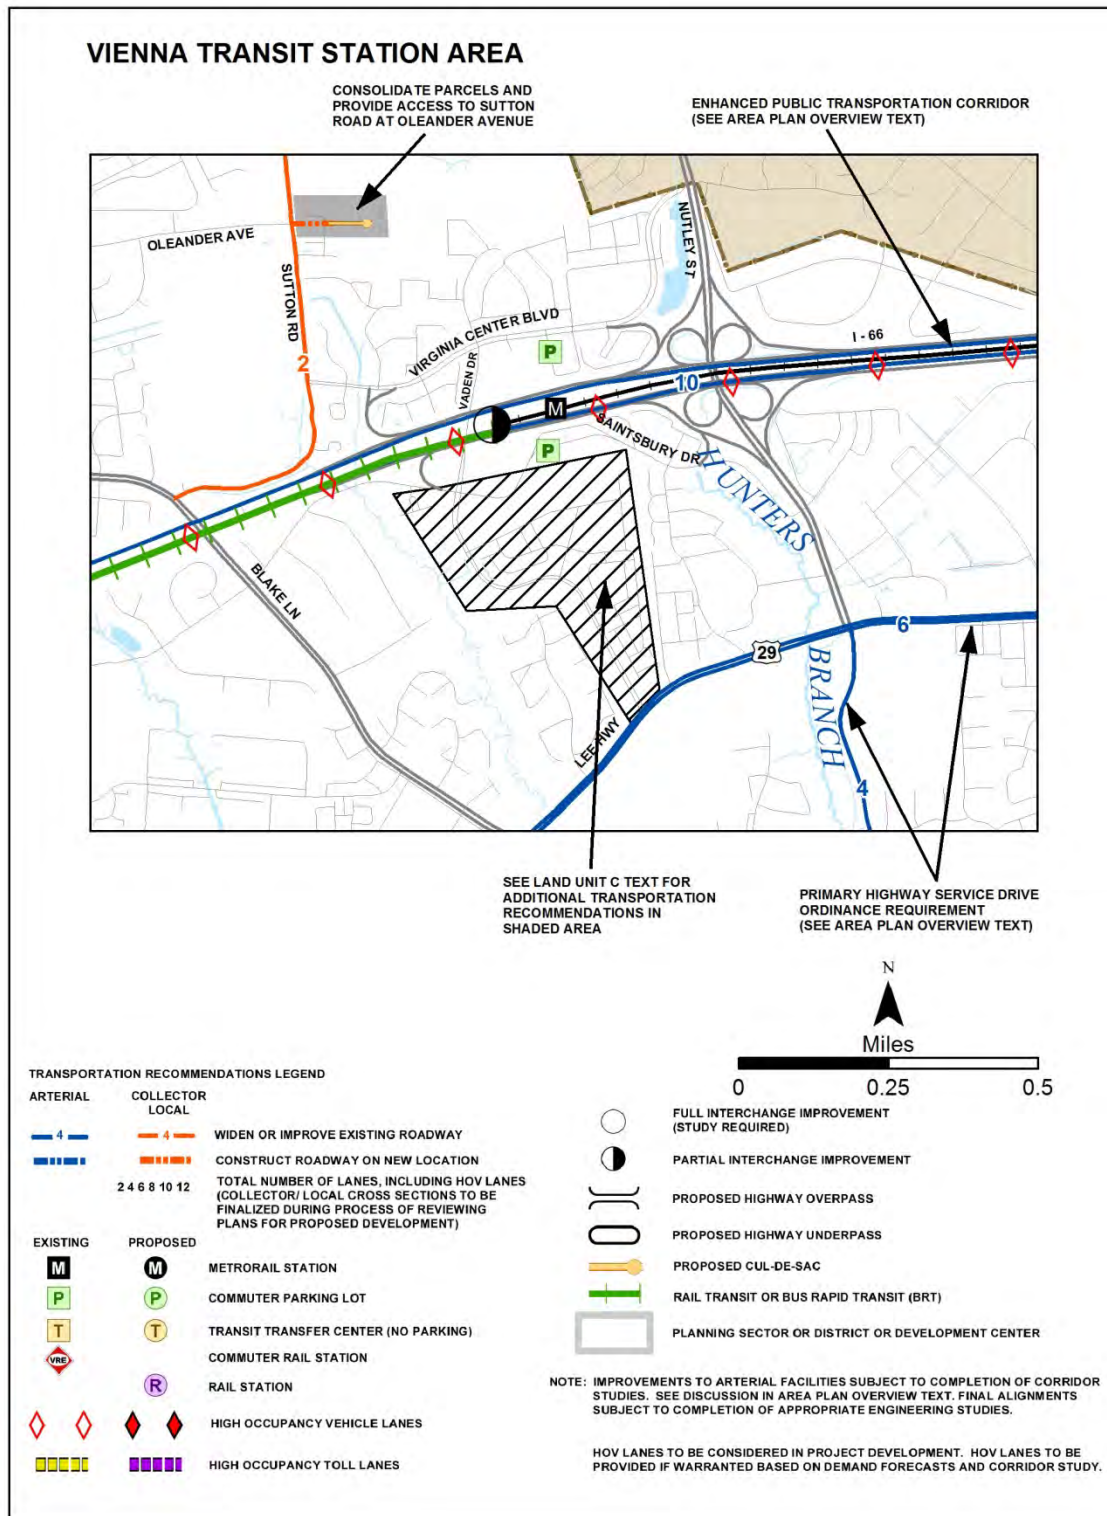

This land unit is approximately 70 acres in size and includes portions of East Blake Lane Park, a significant amount of vacant land and the former Fairlee subdivision, an older residential neighborhood adjacent to the Metro station that contained 61 single-family detached houses, a parsonage and a church. The full consolidation of the Fairlee subdivision will provide an excellent opportunity for redevelopment to occur under a single integrated development plan.

Residential Baseline

The baseline recommendation for this land unit is residential use at 4-5 dwelling units per acre as shown on the Plan Map. The area that comprises the former Fairlee subdivision is planned at a higher density of 5-8 dwelling units per acre if the full consolidation of this subdivision is achieved in accordance with the Policy Plan's Guidelines for Neighborhood Redevelopment.

A portion of the land unit along Saintsbury Drive has been approved for age-restricted, multifamily residential use. A portion of East Blake Lane Park is located in this land unit and is planned for public park use. Absent its inclusion into the Metro-oriented Mixed-Use Option, the WMATA parcel located south of Saintsbury Drive is planned for open space and the limited surface parking that currently exists.

At the residential baseline density, it is anticipated that access will be provided by the existing local streets, although the development of new streets could be provided. Right-of-way should be dedicated to Fairfax County for the future road connection between Lee Highway and Vaden Drive as shown on Figure 9. Pedestrian access to the Metro station area is a key feature of development of this land unit and should be provided as part of any future development. This pedestrian access should include a connection with the W&OD/Fairfax City Connector Trail.

**TRANSPORTATION RECOMMENDATIONS
 VIENNA TRANSIT STATION AREA
 V1, V5 COMMUNITY PLANNING SECTORS**

FIGURE 9

Residential Option

As an option, if the former Fairlee subdivision is consolidated with the undeveloped parcels to the west, higher density residential use may be appropriate if the following conditions are met:

- The overall density will be calculated based on a density range of 16-20 dwelling units per acre for the former Fairlee subdivision and 12-16 dwelling units per acre for the remaining portion of the consolidation;
- Densities should taper down from the area closest to the Metro station towards Lee Highway and the Circle Woods subdivision to encourage transit usage and to provide an effective transition to existing residential areas;
- Building heights should not exceed 65 feet;
- Substantial usable open space should be provided for the residents of the new development. In addition, land should be dedicated to enlarge East Blake Lane Park;
- A 50-foot buffer should be provided to adjacent development;
- Development should preserve the natural vegetation and environmental amenities of the site to the extent feasible given the planned density;
- Adequate outfall and storm water management (SWM) that fully mitigates the impact of development should be provided;
- The impact of development on schools should be mitigated. The applicant should work with the community and Fairfax County Public Schools to identify the appropriate commitments to address projected impacts;
- Affordable housing should be provided either through compliance with the Affordable Dwelling Unit Ordinance or an appropriate proffer of land or units for affordable housing; and,
- Coordinated circulation and access should be provided as shown on Figure 9, including dedication and construction of the four-lane connector road (Vaden Drive Extended) between Lee Highway and the Metro Station.

Metro-oriented Mixed-use Option

This land unit represents an excellent opportunity to promote transit oriented mixed-use development at the Vienna Metro station. To achieve this, the fully consolidated Fairlee subdivision and undeveloped parcels to the west should be consolidated with property owned by the Washington Metropolitan Area Transit Authority (WMATA) located south of Saintsbury Drive adjacent to Fairlee. Including WMATA's property within the overall development will allow for a better integration of land uses with the transit station. A coordinated development, in partnership with WMATA, will provide the opportunity to enhance pedestrian access by making changes to the location of some station facilities. Absent inclusion of the WMATA property into the Metro-oriented Mixed-Use Option, the

WMATA parcel is planned for open space and the limited surface parking that currently exists.

This mixed-use option, which includes residential and nonresidential uses, encourages the creation of a land use pattern that supports mass transit by locating housing, retail and employment uses within walking distance of the rail station. Development should include residential, retail, service and public uses and should be concentrated in the area that is within 1/4 mile of the Metro station platform, as set forth below. Office use may be appropriate with an effective Transportation Demand Management (TDM) program and with its associated parking limited as set forth below under “Parking”. Hotel use may also be appropriate. The entire proposed development must address a number of development elements or conditions related to such things as design, transportation, pedestrian circulation, affordable housing, and public facilities, as discussed below.

This mixed-use option represents a highly integrated vision, whose synergy lessens the impacts of development on this site by creating conditions that minimize the need for automobile use. This density/intensity will be successful only if several core components – retail, commercial and transportation demand management – succeed individually and collectively, and are also designed to serve the needs of the surrounding neighborhoods.

The proposed transit-oriented mixed-use development is envisioned to be divided into four areas as shown on Figure 10.

- The area that is within ¼ mile of the station platform (the Core Area) consists of approximately 23 acres and is planned for a primarily multifamily mixed use development at a FAR of up to 2.25, including Affordable Dwelling Units (ADUs) and an age restricted housing component of approximately 145 units. Density credit for approximately five to six acres of land, that has or that will be dedicated for public purposes, (generally located west of Vaden Drive extended and north of the Circle Woods community) can be utilized in this portion of the site. The Core Area should be characterized by the tallest buildings; off-street parking should be provided in above and below grade structures; streetscape and plazas should be well integrated into the development to serve the residents, as well as the general public; and, other landscaped open space areas should be incorporated to provide an alternative to the paved surfaces.
- The area west of the Core Area consists of approximately 12.5 acres and is planned for 12 - 16 dwelling units per acre; the northernmost approximately 3.5 acres of this area can be developed with up to 230 units of elderly housing, provided that 15% of these units are provided as ADUs. The area west of the Core should be characterized by low to mid-rise multifamily dwelling units, including stacked townhouse units, with off-street parking provided in above and below grade structures and in garages. Open space amenity areas should be functionally integrated into the area in order to provide recreational opportunities for residents of the development, as well as a visual amenity for those walking or driving through the development.
- The area south of the Core Area consisting of approximately 16 acres is planned for 8 – 12 dwelling units per acre. This area should be characterized by townhouse and/or stacked townhouse units. Off-street parking should be primarily within individual garages. A landscaped “village green” as well as other landscaped open space areas should be well integrated into this portion of the site.

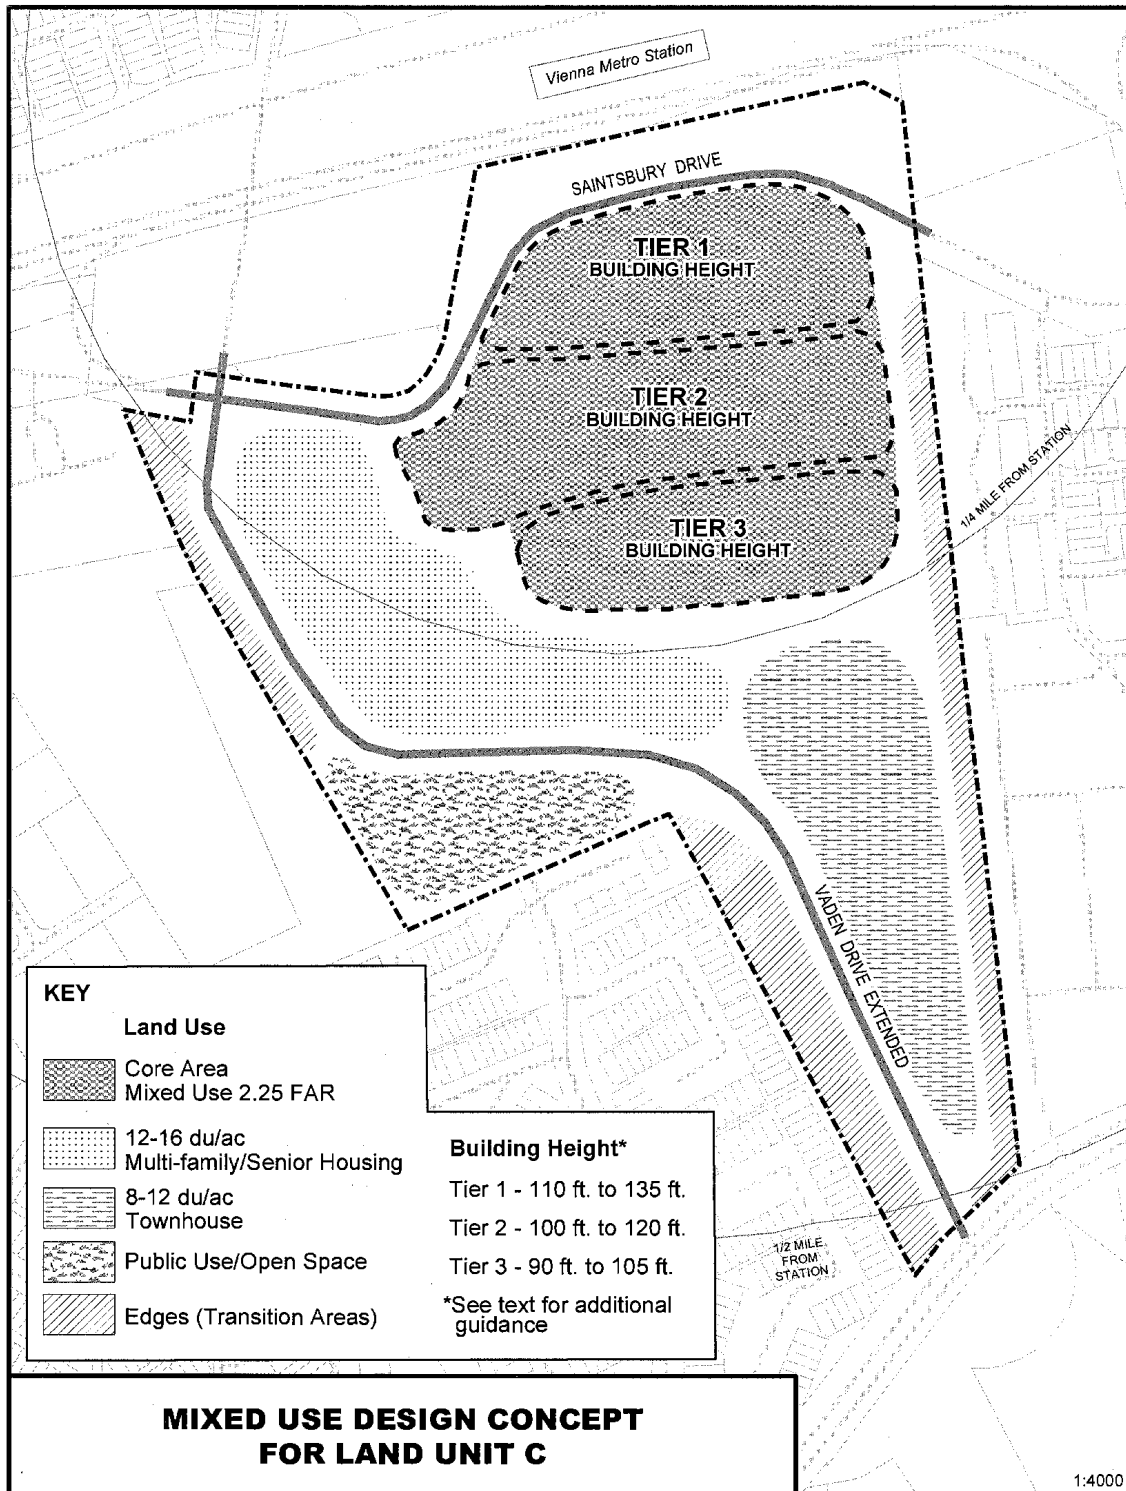

FIGURE 10

- The area west of Vaden Drive should be dedicated to the county for open space and public use, including a potential site for a community facility.

Design – The development proposal should create a mixed-use activity center. A “town center” or “main street” character should be promoted by orienting residential and nonresidential uses to sidewalks and plaza areas, by locating the buildings close to roadways and their associated sidewalks, and by providing streetscape amenities such as street trees, sidewalks, plazas, retail browsing areas, street furniture and landscaping. To encourage Metro use, and patronage of the retail uses by transit users, buildings should be oriented to the Metro and designed in a manner that will facilitate pedestrian access to the station as well as to retail and support service uses and outdoor plaza areas. Buildings and streetscape should be designed in a manner that enhances the pedestrian circulation system, encourages the use of outdoor spaces and does not create barriers to pedestrian circulation from both on- and off-site. Buildings should be constructed of materials such as brick, masonry, pre-cast, and glass. Buildings should establish a pedestrian scale in relationship to the street by employing compatible architectural features such as varied roof lines and building heights, articulation of facades, and variations in window and building details, texture, pattern and color of materials. Coordinated public space furniture and entry features are encouraged, as are arcades, awnings, and other building features that distinguish ground floor retail and other nonresidential uses. The development should be exemplary in terms of site and building design, construction materials and on-site amenities.

Office/Hotel Use – The office component of the mixed-use option should be at least 125,000 gross square feet in size but not exceed a total of approximately 300,000 gross square feet not including store front professional offices and live-work units (the combination of a private residence with professional office, retail, or other nonresidential use) that may be located in the ground floors of other buildings. Office use should be located close to the Metro Station to encourage transit usage by office workers and should provide for effective TDM measures. Vehicular access to the office use should be from internal roadways that connect to Saintsbury Drive. A hotel could be provided in addition to or as an alternative to the office or residential use.

As an option, up to 700,000 square feet of planned residential use may be converted to up to 700,000 square feet of office use in the core area, for a total of up to 1,000,000 square feet of office use in the core area, provided that all of the conditions established in the following paragraphs are met. Priority should be given to the location of this additional office use in areas that could be affected by noise, such as areas closest to I-66. Redevelopment that utilizes this option should achieve the same conditions for development as compared to the original option.

Residential Use – The residential component of the mixed-use option should not exceed a total of 2,250 dwelling units including all ADU, elderly and bonus units. If the option for the office use conversion is utilized, then the reduction in residential square feet should at least equal the replacement of office square feet. The maximum dwelling unit total of 2,250 units should decrease, based on the amount of square feet being converted divided by the average dwelling unit size of the high-rise residential buildings. Under this option, the overall intensity in the core area should substantially conform to that established under the original option, and in no event should the overall FAR exceed 2.25. In order to maximize transit usage, approximately 70 percent or more of the residential units should be located within the Core Area. If the option for the office conversion is utilized, then the majority of

the residential units should continue to remain in the core area, and at least 60 percent of the land use within the core area should remain as residential use.

In either case, a mix of housing types should be provided including single-family attached and various types of multifamily units. An elderly and active adult housing component should be incorporated into the development. In addition, the residential component of the project should be designed in a manner that facilitates the use of vanpools, carpools and bicycles (See “Transportation”, below). A portion of the market-rate and affordable units should be designed and provided as accessible units.

Retail, Service, Institutional and Other Uses – It is essential that nonresidential, nonoffice uses be incorporated into the development throughout the build-out of the multifamily residential and office development, particularly in the “town center” and “main street” portions of the Core Area. To that end, a total of at least 100,000 gross square feet of retail, service and institutional uses should be provided to serve the employees, transit users and residents of the area. These uses should be located primarily in the ground floors of the buildings that front the “town center” and “main street” portions of the Core Area. Such uses should be phased to the phases of the development. The provision of a full-service grocery store, at least 15,000 gross square feet in size, within a Core Area building is critical to the success of the Metro-oriented Mixed Use Option (convenience retail or a quick service food store will not satisfy this condition). Other such retail, service and institutional uses may include financial institutions, full-service restaurants, delis and other food services, bookstores, boutiques, a pharmacy, dry cleaners, and other personal service establishments, health clubs, professional storefront offices, live-work units, and institutional, cultural, recreational, governmental and other service uses. In order to create a street presence, these uses should be primarily incorporated into the design of the lower floors of nonresidential and residential buildings and should have direct public access and display windows oriented towards pedestrian walkways, and, where appropriate, to vehicular drives and/or streets. In addition, the ground level of above grade parking structures should contain store front nonresidential uses to the maximum extent feasible. A child care center(s) should be provided within the development to serve both the residents of the community and transit riders.

There should be no drive-through uses.

Building Height - Development should be concentrated within the Core Area with maximum building heights as shown on Figure 10 and as described in the following text. Buildings closest to the Metro Station should be the tallest buildings on the site, with other buildings tapering down as they become further from the Metro station. The first tier of buildings closest to the Metro Station should be no greater than 110 feet in height. If retail and/or other nonresidential uses are located in the first floor of buildings in this first tier, such building(s) may be 135 feet in height. However, if a grocery store is located in one of the buildings closest to the Metro platform, that building may be up to 150 feet in height, to the extent that additional height is needed to accommodate this use. Buildings located in the second tier of the Core Area should be no greater than 100 feet in height unless retail and/or other nonresidential uses are located in the first floor, in which case building height may be increased to 120 feet. Building heights located in a third tier should be no greater than 90 feet and, if other retail and/or nonresidential uses are located in the first floor of buildings in the third tier, then building heights may be increased up to 105 feet. To provide visual interest, building heights should not be uniform in the Core Area. Outside the Core Area, heights should transition downwards to be compatible with existing

residential areas, with buildings ranging from 35 to 75 feet in height. Elderly housing may be located in buildings up to 75 feet in height outside the Core Area and up to 105 feet if located inside the Core Area. Buildings adjacent to the Hunters Branch community should be at a comparable height of approximately 52 feet and those west of Vaden Drive Extended adjacent to Circle Woods should be no more than 35 feet in height.

Environment - Given the planned density under this option, exemplary attention should be paid to off-setting impacts on both the natural and man-made environment. The development should incorporate such things as Low Impact Development (LID) techniques and other innovative approaches to handling stormwater, use of green roofs and porous pavers, energy efficient design and construction techniques, and tree preservation and transplantation.

Trees, Landscaping and Streetscape – A comprehensive landscape plan should be provided which identifies the location and types of trees, flowers and shrubs that will be provided throughout the proposed development. Landscaping should be provided that is attractive in all seasons and provides shade to seating areas and pedestrian sidewalks and trails during summer months. In developing the landscape plan, emphasis should be placed on preserving some existing vegetation, transplanting some existing vegetation, and utilizing native plantings and trees that are known to mitigate air pollution.

A detailed streetscape plan should be provided for Vaden Drive, Saintsbury Drive and the major internal roadways within the development. This streetscape plan should detail the types and location of street trees, sidewalk/trail dimensions and general location and types of pedestrian amenities and should generally conform to the concepts shown in Figures 11 and 12. Sidewalks should be sufficiently wide to accommodate pedestrians, as well as to provide sufficient space for activities such as window shopping, seating, and outdoor dining.

Parking - Most off-street parking should be located behind or beneath the buildings. In order to promote the use of mass transit, parking for the multifamily and office uses should not exceed a ratio that is 10% higher than the minimum Zoning Ordinance requirements, not including parking spaces allocated to support TDM programs such as car sharing (e.g. FlexCar/ZipCar), car/van pool and fleet vehicles, shuttle vans/buses and the like. In order to be transit and pedestrian friendly, parking structures should generally be internal to the site and not oriented towards the Metro Station. If not located beneath the buildings, parking structures should be integrated into the development through the incorporation of other uses where feasible into the structure and through the use of architectural features and landscaping. Green roof elements and similar features should be incorporated into the design. Visitor parking should be convenient and well distributed throughout the site. Consideration should be given to the provision of parking spaces dedicated for Metro use in the parking structures near the Metro station, provided that primary access for any Metro parking is from Saintsbury Road or other parallel roadways. In addition, temporary surface parking may be provided for Metro patrons.

Storm Water Management – It is expected that adequate outfall and storm water management (SWM) that fully mitigates the impacts of this development be provided. Detention of storm water that flows from the Metro station property to the site should be accommodated to the extent feasible. In addition to fully mitigating the drainage impacts of this development, the developer should improve the existing conditions of Hatmark

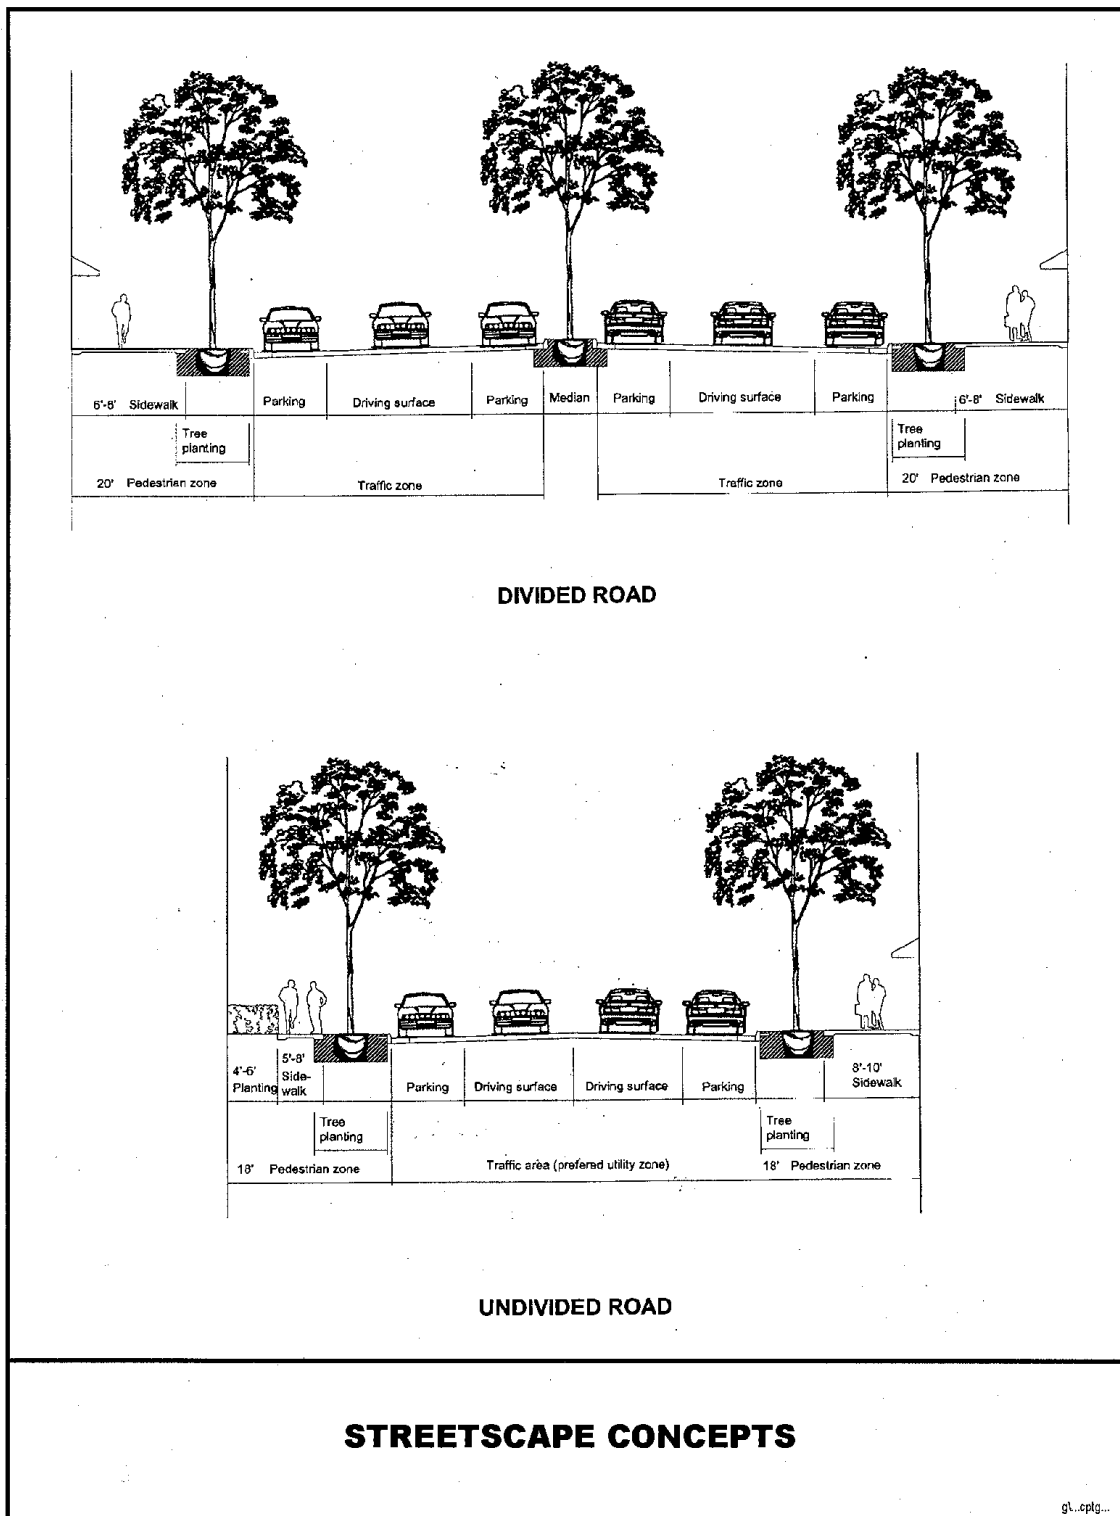

FIGURE 11

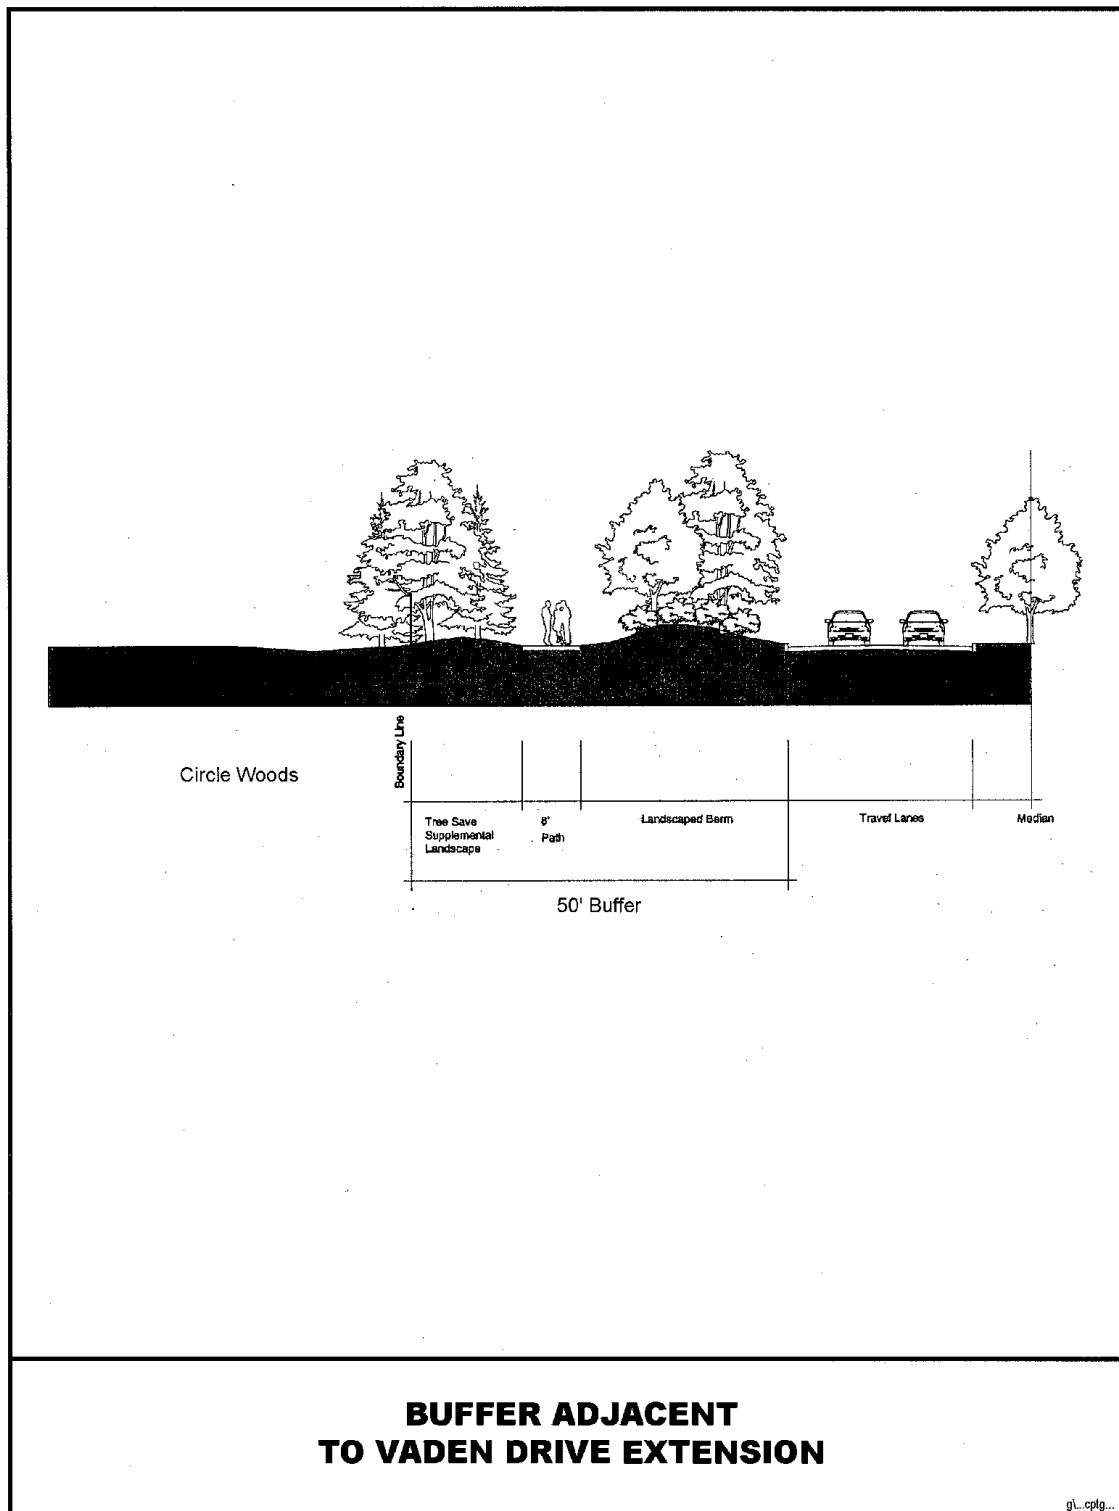

FIGURE 12

Branch proximate to the site, which may require that SWM facilities exceed the minimum standards in the Public Facilities Manual. The quality of Hatmark Branch should be improved proximate to the site through stream restoration, which may include bed and bank stabilization, reforestation and the possible creation of wetlands, provided that agreements can be reached with affected property owners. No stormwater detention ponds or similar detention facilities proposed in conjunction with the development of Land Unit C should be located off site. SWM facilities should be designed to incorporate plantings as may be appropriate to improve the appearance and function of the facilities.

The grading associated with the redevelopment of Land Unit C should be done in a manner that best manages stormwater. An underground SWM facility should be provided to help regulate the flow of water into Hunters Branch. SWM facilities may need to exceed the minimum standards in the Public Facilities Manual.

Affordable Housing – Affordable dwelling units (ADUs) within Land Unit C and contributions to affordable housing should be provided in accordance with the provisions of the Zoning Ordinance and the Residential Development Criteria. In addition to meeting the provisions that will result in ADUs based on the number and types of building constructed, the developer should replace units lost with the redevelopment of the former Fairlee Subdivision with affordable units. Consideration should be given to providing these additional units in partnership with a non-profit organization. The affordable units should be provided on site and dispersed throughout the development to the extent feasible. The provision of a portion of the ADU units as accessible units is strongly encouraged.

Noise Mitigation - Noise attenuation measures should be provided in accordance with county policy for all residential uses. Additionally, there should be no residential buildings located within 200 feet of the I-66 right of way.

Parks, Open Space and Public Facilities – To enhance the quality of this development and to meet the recreation needs of residents, substantial, usable open space and other on-site facilities should be an integral part of the proposed mixed-use development. Open lawn areas, urban parks, plazas and courtyards should be incorporated into the overall design to serve residents, employees and visitors to the area. These spaces should be appealing places to gather with seating, lighting, landscaping and other amenities. Open space should exceed minimum requirements, and overall should total more than 35 percent. Opportunities for public art should also be incorporated into the development.

In addition, provision should be made for a community facility, which may include opportunities for indoor recreation, community meeting space, a police satellite substation or other community needs, as may be identified by the county in coordination with the community.

Schools – The impact of the proposed development on schools should be mitigated. The applicant will work with the community and Fairfax County Public Schools to identify appropriate commitments to address projected impacts.

Buffers and Transitions to Existing Communities – Effective buffers and transitions that are outside of individual lots should be implemented to ensure that a compatible relationship is achieved between development in Land Unit C and the abutting residential communities. These transitions should include: a 50-foot buffer along the western property line adjacent to Circle Woods; a 20-foot buffer and barrier along the southern property line

adjacent to Circle Woods; a 30-foot buffer along the eastern property line adjacent to Hunters Branch; and, a 10-foot buffer along the eastern property line adjacent to Regents Park. Each buffer area should be appropriately landscaped to aid in the transition. An attractive barrier should also be provided along or inside the property lines adjacent to the aforementioned buffer areas to help screen existing communities from the proposed redevelopment. The buffer area adjacent to Regents Park should not be enclosed by solid barriers on both sides. A pedestrian/bike trail can be located within the 50-foot buffer adjacent to Circle Woods.

Pedestrian Circulation – A pedestrian circulation plan should be provided that directly connects the development to the Metro property and to the station’s platform and provides pedestrian connections to Circle Woods and Hunters Branch (see Figure 13). Particular attention should be given to providing safe pedestrian connections across Vaden Drive and across Lee Highway at Vaden Drive and across the Lee Highway and Nutley Street intersection. The development should have sidewalks on both sides of all major internal streets and unrestricted pedestrian access, so that pedestrian circulation around and through the development will be enhanced and not impeded. Pedestrian connectivity should be provided between the development and neighboring communities to the extent that those existing communities wish to avail themselves of this amenity. The development should provide streetscape amenities such as street trees, sidewalks, plazas, street furniture, and landscaping to encourage pedestrian activity; paths should be well lighted for pedestrian safety. The W&OD/City of Fairfax Connector trail should be realigned and access to the trail from adjoining residential neighborhoods for pedestrians and bicycles, and all modes normally permitted on such trails should be provided. Trees should be provided on both sides of the City of Fairfax Connector Trail that is located within East Blake Lane Park adjacent to the area where the trail is to be realigned. A pedestrian bridge across Hatmark Branch in East Blake Lane Park should be provided to improve trail usage and access to Metro.

Transportation – It is essential that the impacts of the development allowed under this option be offset through a combination of additional roadway and transit capacity, roadway and pedestrian circulation and access improvements, and effective transportation demand management (TDM) measures.

Capacity, Circulation, and Access Detailed traffic impact analyses should be done at selected intervals (identified at time of rezoning or other zoning evaluation) to determine the improvements required to mitigate the impacts of the proposed development on the transportation system. Particular attention should be paid to the Vaden Drive and Saintsbury Drive intersection. These impact analyses should include roads, transit, and pedestrian systems, and should be both an intersection analysis, as well as a cordon analysis that includes the roads surrounding the development. In addition, these impact analyses should demonstrate, in coordination with WMATA and Fairfax County, that sufficient existing and planned capacity should be available at the Vienna Metro Station to serve the additional ridership generated by the residential component of the development at build out.

In order to implement the office conversion, the traffic impact analysis for AM and PM peak periods should be completed to demonstrate that the proposed conversion does not negatively affect the level of service beyond the impact anticipated at the time of the original option. The analysis should consider the assumptions utilized in the traffic analysis under the original option including any modifications to these assumptions. The

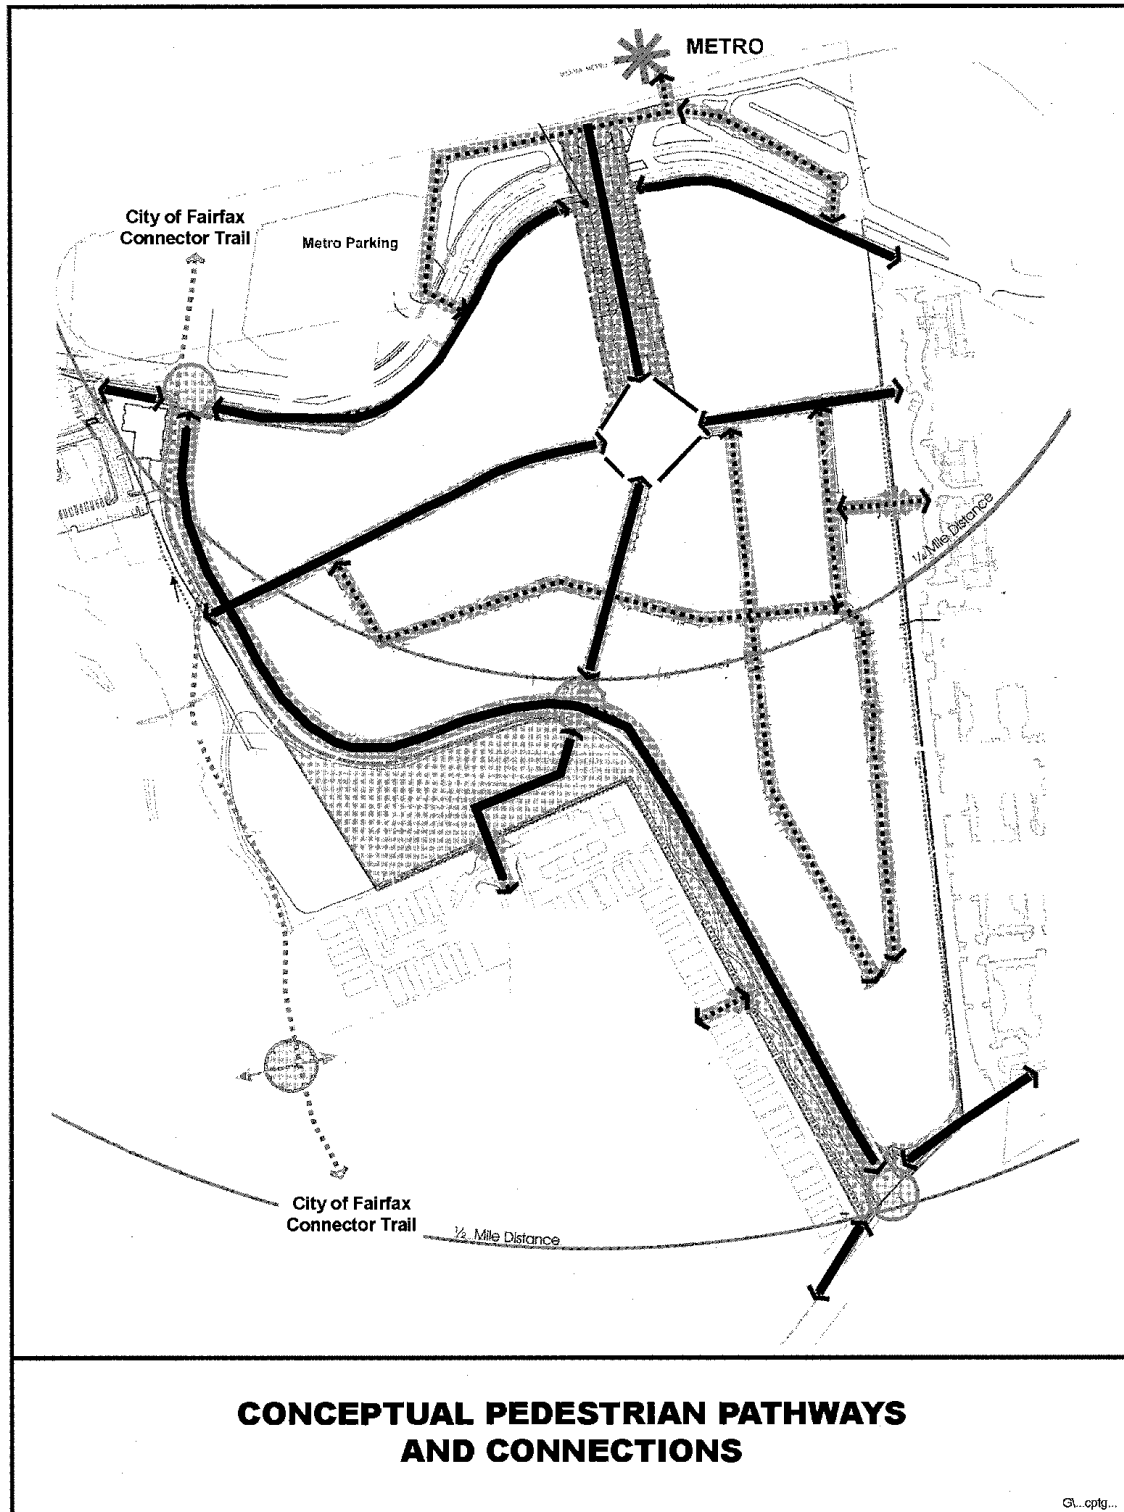

FIGURE 13

impact of this change in land use should be determined by: 1) degradation in the predicted intersection delay at the studied intersections; 2) a turning movement analysis to ensure that queues do not extend into through lanes beyond what was anticipated in the original option; and, 3) other evaluation measures determined to be appropriate.

If the traffic impact criteria from the original option cannot be achieved and the level of service is negatively impacted as determined by these measures noted above, then additional improvements such as TDMs, road enhancements, other transportation facility improvements, or different mixture of uses including commercial (for example, hotel or retail use) and institutional uses, should be evaluated and implemented to meet this standard. Failing that, then the square footage conversion of residential to office use should be adjusted, so that a greater amount of residential square feet would be replaced with a lesser amount of office square feet.

In order to facilitate efficient internal circulation and access to the Metro station, development of a four-lane divided roadway connecting Lee Highway and the Metro station (Vaden Drive extended), as shown in Figure 9, should be constructed with the first phase of development. No vehicular connection should be provided between Circle Woods Drive and Vaden Drive. Vaden Drive should be developed as a boulevard with a landscaped median to provide safe refuge for pedestrian crossings. This roadway should be designed in such a manner as to foster low vehicular speeds, facilitate safe pedestrian crossings in designated locations, and minimize grading into East Blake Lane Park. In addition, turn lanes should be minimized as a way to reduce the crossing distances for pedestrians. Any retaining walls associated with the construction of the road should be low in height, terraced with vegetation provided on the terrace areas, and located in such a manner as to not interfere with pedestrian access from the park to the development and to the transit station.

The county should also take the appropriate measures to ensure that tank trucks and vehicles carrying hazardous cargo are prohibited from using Vaden Drive extended.

To further enhance pedestrian access to the Metro Station, the station access road (Saintsbury Drive) should be redesigned to improve pedestrian access to the station including relocating the existing bus bays, taxi stands and parking, and improving access to the park and ride facilities. This redesigned access road will greatly reduce the existing vehicular and pedestrian conflicts at this location. It should also contribute to clearly defining pedestrian access points for those who will be walking from and through the new development, as well as pedestrians from the existing communities located south of the station, such as Hunters Branch and Regents Park. Traffic calming measures should be provided to facilitate safe pedestrian crossings throughout the development.

Off-site improvements, such as improvements to the Lee Highway and Nutley Street intersection, may be appropriate at the initial stage of redevelopment to help ease existing congestion in the area.

Transportation Demand Management (TDM) A transportation demand management (TDM) program should be provided that encourages the use of transit (Metro and bus) and high occupant vehicle commuting modes, and that utilizes measures to reduce automobile trips. The TDM program should grow in size and scope as the proposed development of the site occurs. While this program will start under the auspices of the developer, it will ultimately be maintained and funded by the residents and business owners. The TDM

program should be established with an initial contribution from the developer that is sufficient to ensure that it will operate during the construction, marketing, and occupancy phases. Additionally, long term funding for the TDM program should be ensured by mechanisms that may include a specified yearly contribution based on each residential unit and nonresidential square foot. TDM measures employed during the initial and subsequent development phases will have an objective of reducing vehicular trips in the peak hours by a specified amount, with the exact number to be negotiated between the county and the applicant based upon the number and types of units and uses being developed. In general, at build out, it is expected that, for the residential portion of the development, a reduction in peak hour trips of 47% should be achieved through the use of transit and other means; for the office portion of the development, a peak hour trip reduction of 25% is expected to be achieved through the use of transit and other means.

The TDM program will be evaluated initially in at least three stages during the development process; first at the time of rezoning, second before and during construction and third after project completion or “buildout.” The TDM program also should be verified if amendments to the rezoning are proposed. In the first stage of evaluation, at the time of rezoning, a development application should demonstrate that TDMs will be provided to achieve the peak hour trip reduction goals stated above. If it is determined that the trip reduction goals as stated above are infeasible, the maximum office square footage and/or residential density should be reduced by an amount equal to the unachieved portion of the peak hour trip reductions. Once TDM levels are established at the rezoning stage, the TDM program must address interim stages of development to validate that the approved density can be accommodated. In the second stage of evaluation, before and during construction, the county will establish interim TDM targets for each phase of development. As residents move into the new community, county supervised surveys of actual resident behavior will be conducted to verify TDM success based on the interim trip reduction targets. If the interim targets are not met, additional measures will be required to reduce the number of vehicle trips. The third stage of TDM evaluation will be completed one year after build out or before bond release. At this point, if the established trip reduction targets for the development in its entirety are not being met, additional program measures and funding will be necessary until the trip reduction targets are achieved.

After project completion, periodic surveys and reports based on empirical measurements will be submitted to the county on an ongoing basis to document the continued success in achieving the target reductions.

A variety of TDM measures can be implemented to help achieve the expected trip reduction. These measures could include the following:

Employer, Homeowner and Tenant Association TDM Measures

Alternative Transportation Services

- Shuttle Bus(es)
- Vanpools
- Shared vehicles
- Telecommuting
- Concierge services
- Incentives to “live where you work”
- Contacting other building/development associations to combine and coordinate TDM measure

Support Facilities/Programs

- On-Site Transportation Coordinator
- Ridematching Services
- Preferred HOV Parking Locations
- Flexible Work Hours
- Financing incentives for reduced vehicle ownership

Pricing Programs

- Parking Management/Pricing Programs
- Subsidies for Use of HOV Modes, such as MetroChek

Bicycle use should be encouraged. Parking for bicycles should be provided at the office, retail and multifamily residential buildings. To encourage pollution-free commuting, shower facilities should be provided in office buildings for bicycle commuters, walkers and runners.

The common areas of residential buildings and individual residential units should include features to encourage work at home such as the pre-wiring of units for high-speed internet access.

Design elements such as car pool drop off zones that facilitate the TDM program should be incorporated into the project. Sheltered waiting areas should be provided.

The TDM program should include an education component. This program component could include such measures as notifying residents about “ozone action days” and actively encouraging trip combination, car pooling, mass transit, and other measures to reduce air pollution from automobiles during such periods.

This reference to TDM measures is not meant to be all inclusive; other measures may be acceptable if coordinated with the Fairfax County Department of Transportation.

Partnership with WMATA The success of this Metro-oriented Mixed-Use Option will depend in large measure on an effective partnership between the developer, WMATA and Fairfax County. The approximately three acres of WMATA property, south of Saintsbury Drive, should be incorporated into the development to provide a strong pedestrian-oriented environment that links the station with the mixed use development. The redesign and reconstruction of the current Metro access road (Saintsbury Drive) is a major benefit that will accrue to WMATA from this development option. Additionally, it is contemplated that this road will be accepted by VDOT for incorporation into its system. This will relieve WMATA of the responsibility for future upkeep and maintenance of this facility.

As a partner in this future development, in concert with the rezoning action required for this development option, WMATA should actively pursue the zoning action necessary to recognize the redesigned station facilities on Land Unit I. WMATA should also support Metro-oriented development at this location by initiating as soon as possible 8-car train service on the Orange Line so that the capacity will be in place to serve present and future riders from this and other stations along the Orange Line.

Metro Replacement Parking- Estimates of projected 20-year parking demands at the Vienna Metro station indicate a shortfall of parking spaces, especially since Vienna will remain as the end-of-the-line station for some time in the future. Currently, a portion of the property provides 650 temporary spaces for Metro parking, which are due to be closed

under the terms of the existing special exception approval. Due to the need to maintain and increase Metro parking levels, arrangements for maintaining or replacing this parking on an interim basis should be strongly encouraged until such time as additional parking is constructed at the station and/or enhanced feeder bus service to the station is provided. WMATA and the developer should work with the county to replace at least some of the surface parking that will be lost with the redevelopment of this temporary parking lot. The following measures as well as other approaches should be considered:

- Construction of surface parking in the loop of the interchange at the southwest quadrant of I-66 and Vaden Drive;
- Provision of on-street parking along Saintsbury Drive; and
- Continued use of portions of the temporary 650 space parking lot prior to its full closure due to development. The developer should provide a timetable and the number of spaces available under this measure.

Permanent Metro parking spaces and on-street spaces lost due to development should be replaced by the developer. The developer should provide the requisite number of parking spaces or provide funding for off-site provision of replacement parking.

Development Phasing - To ensure a viable, well-designed mixed-use project, a phasing plan should be a component of the rezoning application. This phasing plan should address the timing and development of Vaden Drive Extended and improvements to Lee Highway during the first construction phase; the timing of gateway features and plazas; and the timing of the pedestrian circulation system that provides direct access to the transit station from the development and surrounding neighborhoods during each construction phase. The phasing of other public improvements, such as the community building, should also be provided.

Land Unit D

Land Unit D is planned and developed for residential use at 5-8 dwelling units per acre. Noise barriers along I-66 should be provided.

Land Unit E

Land Unit E is planned and developed for residential uses at 5-8 dwelling units per acre. It includes the Country Creek subdivision.

Land Unit F

Land Unit F is located north of Marywood Road and east of Sutton Road. It includes Parcels 48-1((1))80-85 and is planned for residential development at 4-5 dwelling units per acre. As an option, residential use at 5-8 dwelling units per acre may be appropriate if all parcels in this land unit are consolidated and combined with Land Unit H (Tax Map 48-1((1))86), and a single access point is provided onto Sutton Road opposite Oleander Avenue. (See Figure 9 for access recommendations.)

Land Unit G

The large (De Luca/Virginia Center) tract north of the Metro parking lot is adjacent to the Country Creek and the Townes of Moorefield communities, as well as, Nottoway Park. Its size, location and single ownership identify this parcel as an appropriate site for a mixed-use, transit-oriented project promoting transit ridership. Development compatible in scale with the surrounding residential communities is also necessary. A maximum level of development of 152 townhouses and 650,000 square feet of commercial space (including at least 20,000 square feet but not more than 50,000 square feet of retail/service space) is planned, provided that the following development criteria are satisfied:

- The development plan should provide high quality site and architectural design, streetscaping, urban design and development amenities, including a well-maintained water feature to which the public will have access during hours of Metro operation;
- Design, siting, style, scale and materials should be compatible with adjacent development and the surrounding community and serve to maintain and/or enhance the stability of existing residential neighborhoods;
- Surface parking lots and parking structures should be well-buffered and landscaped and be well-designed in layout and detail;
- The commercial component of the development should be located closest to and oriented toward Metro, and the rooftop elevation of commercial buildings should not exceed 545 feet above sea level;
- No office or retail development should be located in the portion of the tract that lies between existing Virginia Center Boulevard and existing Nutley Street, although townhouses may be located there if all of the requirements for a special exception to redefine the floodplain are met;
- The development should create an environment conducive to use by pedestrians and bicyclists. Interparcel connections, safe and convenient bicycle and pedestrian access to the Metro station, and a well-designed system of pedestrian circulation should be provided. Trails should be sized to accommodate substantial bicycle and pedestrian use;
- If Transportation Systems Management (TSM) techniques are relied upon to justify the development density, intensities related to TSM success should be subject to phasing to ensure that projected reductions in traffic generation actually occur. TSM techniques should emphasize utilization of the Metrorail and bus service available at this site;
- The western portion of this site is wooded and contains specimen trees which should be preserved to the greatest practical extent. In addition, Nottoway Park should be linked through this property to the Metro station via a spur from the proposed W&OD/Fairfax City Connector Trail;
- A contribution should be made to the county's low- and moderate-income housing goals through an appropriate proffer of land, dwelling units and/or funds; and

- Land within the site needed for public road improvements should be dedicated.

As an option, high density, multifamily residential use may be appropriate on the portion of Land Unit G that is bounded by Virginia Center Boulevard on the south and east and by Centerboro Drive on the west and north, provided that the following conditions are satisfied:

- Development should not exceed 650,000 square feet (or 650 units) and be no more than six (6) stories in height;
- In order to foster high quality development and to mitigate development impacts, any residential development proposed under this option should satisfy three-fourths of the density criteria as stated in Appendix 9 of the Land Use section of the Policy Plan, including, Criterion 8, which, at a minimum, should be fulfilled consistent with development below the high end of the density range.
- The development plan should provide high quality site and architectural design, streetscaping, urban design and development amenities, including integrated open space;
- Primary access should be located on Centerboro Drive;
- Resident parking should be provided primarily below grade or to the interior of the site;

Should development occur under this residential option, the provision of support retail service use is encouraged but not required.

Land Unit H

This land unit includes only Parcel 48-1((1))86, which is located along the north side of Marywood Road approximately 600 feet east of Sutton Road. It is planned for residential development at 4-5 dwelling units per acre. As an option, residential development at 5-8 dwelling units per acre may be appropriate if the following conditions are met:

- Parcel 48-1((1))86 is consolidated with the land in Land Unit F and access is provided from Sutton Road opposite Oleander Avenue (see Figure 9 for access recommendations);
- A landscaped open space buffer is provided along the eastern boundary of the property;
- Existing mature trees are preserved, particularly along the perimeter of the property. Where necessary to provide appropriate buffers and screening, additional tree planting should supplement existing vegetation; and
- A pedestrian trail should be provided on Parcel 48-1((1))86, which would connect with the existing trails system in Nottoway Park and in the Country Creek townhouse community.

Land Unit I

This land unit contains the Vienna Metro Station and related parking and transit facilities. It is planned for public facilities use as shown on the Plan Map.

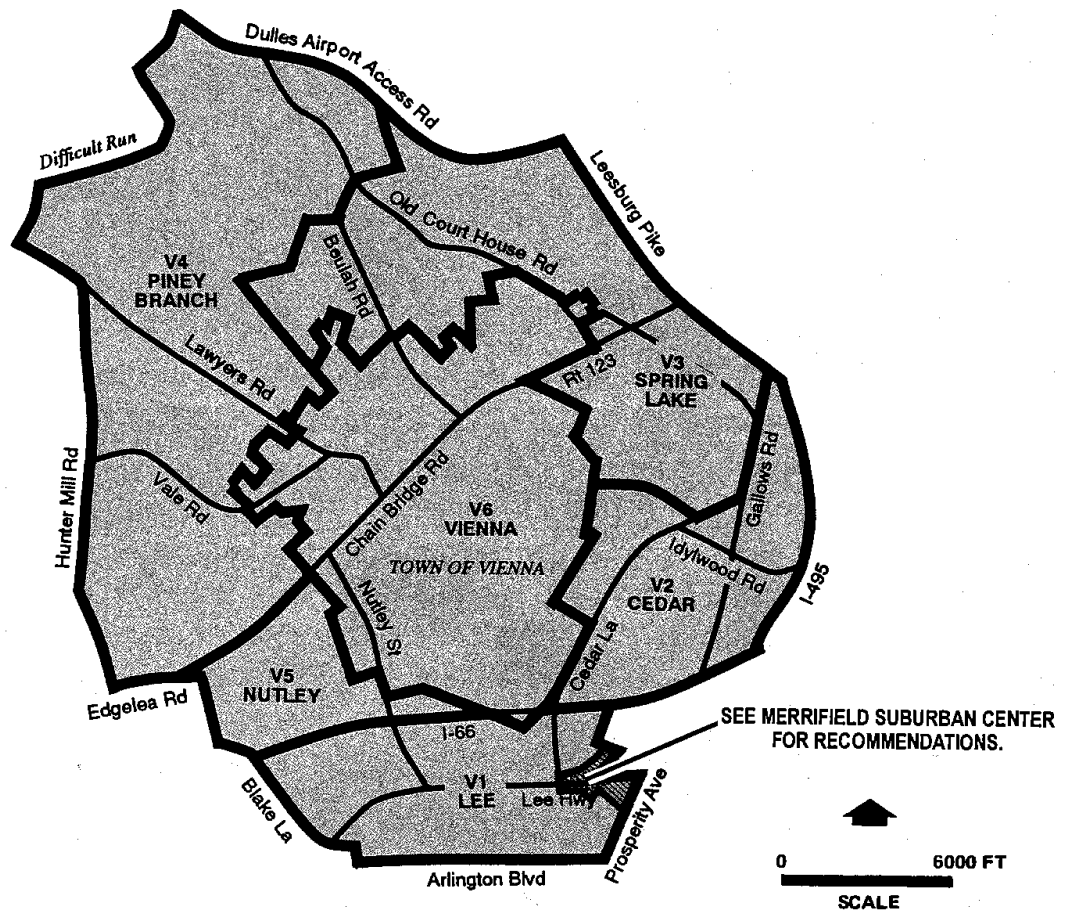

Transportation

Transportation recommendations for this Transit Station Area are shown on Figure 9. In some instances, site-specific transportation recommendations are included in the land use recommendations section. The figure shows access orientation, circulation plans, interchange impact areas and generalized locations of proposed transit facilities. The recommendations contained in the Area Plan text and maps, the Policy Plan and Transportation Plan map, policies and requirements in the Public Facilities Manual, the Zoning Ordinance, and other standards will be utilized in the evaluation of development proposals.

Trails

Within the Transit Station Area, a pedestrian circulation system is recommended to provide an interconnected system of walkways linking pedestrians to their destinations. Such a system should include new pedestrian routes, improved existing pedestrian facilities, and provide special physical treatments to enhance the pedestrian experience.

Throughout the Transit Station Area and surrounding communities, new sidewalks and sidewalk improvements should be constructed to facilitate access between the Metro station, new development, and the surrounding neighborhoods. The W&OD/Fairfax Connector Trail will provide access between the Vienna Transit Station Area, Nottoway Park, the City of Fairfax and the Accotink Stream Valley Trail.

COMMUNITY PLANNING SECTORS
VIENNA PLANNING DISTRICT

FIGURE 14

V1 LEE COMMUNITY PLANNING SECTOR

CHARACTER

The Lee Community Planning Sector is located south of the Town of Vienna and is generally bounded by Interstate 66 (I-66), Arlington Boulevard (Route 50), and Blake Lane. The planning sector includes the southern portion of the Vienna Transit Station Area (TSA) and a small portion of the Merrifield Suburban Center. Plan recommendations for the Merrifield Suburban Center are included in the Area I volume of the Comprehensive Plan, Merrifield Suburban Center. Recommendations for the Vienna TSA can be found in a previous section of the Vienna Planning District text, following the Overview section.

Outside of the Vienna TSA and the Merrifield Suburban Center, the planning sector is developed with a variety of housing types, including single-family detached, townhouse, and multifamily units. Community-serving commercial uses are focused at the intersection of Lee Highway (Route 29) and Nutley Street (Route 243).

Thompson Cemetery, located adjacent to the Pan Am Shopping Center, is a significant heritage resource listed in the Fairfax County Inventory of Historic Sites. A list and map of heritage resources are included in the Vienna Planning District Overview section, Figures 4 and 5. Additional historic sites in this planning sector are also included in the inventory.

CONCEPT FOR FUTURE DEVELOPMENT

The Concept for Future Development recommends that the Lee sector develop as Suburban Neighborhoods. The Vienna Transit Station Area is also located within the sector.

RECOMMENDATIONS

Land Use

Recommendations for the Vienna Transit Station Area are included in the Vienna Transit Station Area section of this Plan.

Infill development in this planning sector should be of a compatible use, type and intensity in accordance with the guidance provided by the Policy Plan under Land Use Objectives 8 and 14.

Where substantial parcel consolidation is specified, it is intended that such consolidations will provide for projects that function in a well-designed, efficient manner and provide for the development of unconsolidated parcels in conformance with the Area Plan.

In the area between Lee Highway and Arlington Boulevard, any additional nonresidential uses on land not already zoned for such uses should be limited to the area east of Prosperity Avenue. Prosperity Avenue between Lee Highway and Arlington Boulevard has long been recognized as the boundary separating planned commercial, industrial and higher density residential development from the surrounding lower density neighborhoods. This affirms a

long-standing policy in favor of low density, single-family, detached residential use in the area bounded by Bear Branch on the west and Prosperity Avenue on the east.

Figure 15 indicates the geographic location of land use recommendations for this sector.

1. The commercially-zoned parcels fronting on the south side of Lee Highway, east of the Merrifield Fire Station, and west of Cedar Lane are planned for neighborhood-serving retail use up to .25 FAR. If these parcels should redevelop, there should be consolidation to allow for interparcel access and to provide for a well-designed project. There should be no expansion of automobile or drive-through related uses in this area.
2. Parcels between the east side of Bear Branch and west of Chichester Lane, between Lee Highway and Arlington Boulevard are planned for 2-3 dwelling units per acre, as shown on the Plan map. Development of these parcels should: (a) be laid out in such a way as to avoid cut-through traffic between Lee Highway and Arlington Boulevard; (b) provide active recreation facilities; and (c) ensure preservation of all environmental and cultural resources. Development consistent with the Plan recommendation will require substantial consolidation of the parcels in this area. (See Land Use Recommendation #9 for development options above 2-3 du/ac for portions of this area.)
3. Pan Am Shopping Center, located north of Providence Hall apartments, west of Covington/Hampton Court townhouses, and east of Hunters Branch is planned for community retail uses up to .35 FAR. Any development or improvements should respect the adjacent Thompson Cemetery (Tax Map 48-4((1))13A) as well as the floodplain.
4. Land fronting the north side of Lee Highway between the eastern boundary of the Villa Lee townhouses and Maple Lane should develop in residential uses at a density of 1-2 dwelling units per acre. There shall be no expansion of nonresidential uses in this area. As an option, development at 4-5 dwelling units per acre may be appropriate for Tax Map Parcels 48-4((15))4B; 48-4((1))31, 32, 32A, 33, 33A, 33B; 49-3((2))1, 2, 7, 8, 9; 49-3((3))27 and 27A to foster coordinated development of this land if the following conditions are met:
 - Any development proposal above 1 to 2 dwelling units per acre should have consolidation. For the area west of Cedarest Road, the initial consolidation should consist of contiguous parcels and be, at a minimum, 5 acres with any unconsolidated parcels able to integrate into any previous consolidation and develop in a similar manner. For the area east of Cedarest Road (Parcels 49-3((2))1, 2; 49-3((3))27 and 27A) development above 1 to 2 dwelling units per acre should have full consolidation.
 - Development should consist of single-family detached residential dwelling units which may include zero lot line and/or patio homes.
 - For development to the west of Cedarest Road, access to Lee Highway should be limited to a single point and/or access should be provided to and from Cedarest Road.
 - For development east of Cedarest Road, access should be provided to and from the existing local streets through the use of reverse frontage.

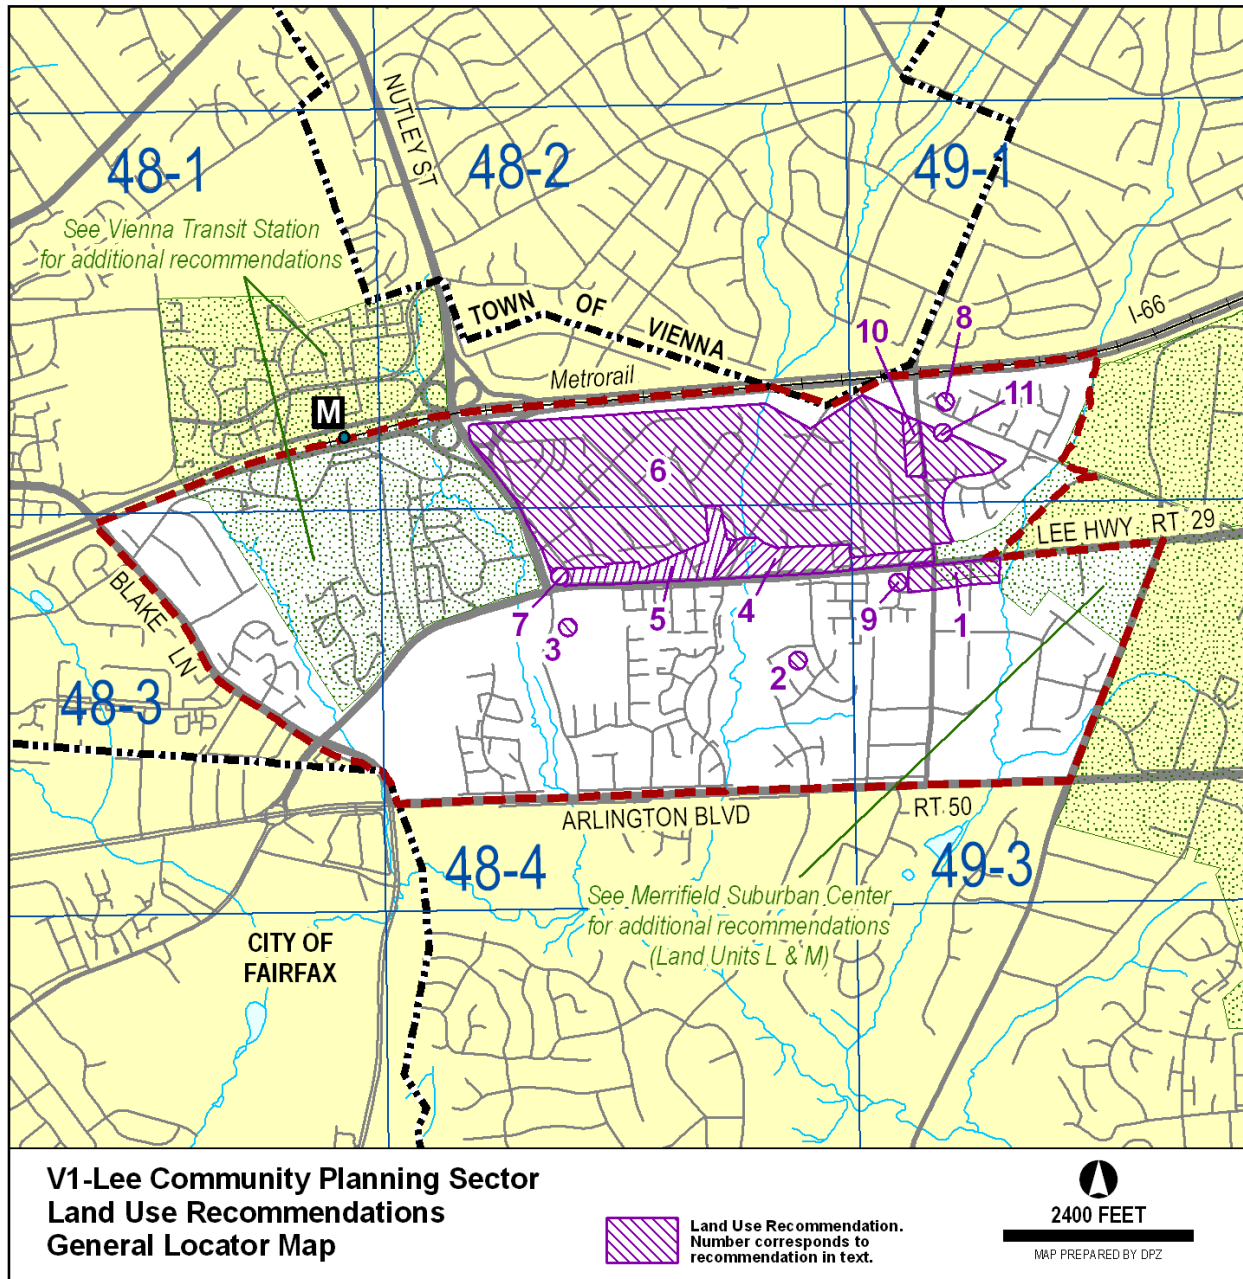

FIGURE 15

- Buffering between this new residential development should be provided adjacent to and from existing single-family detached neighborhoods, as well as any abutting nonresidential uses along Lee Highway.
 - Pedestrian walkways (sidewalks and trails) connecting all portions of this area to Lee Highway should be provided.
5. Vacant land and land subject to redevelopment fronting along the north side of Lee Highway between Nutley Street and Hunter Road should develop in coordinated residential uses at a density of 4-5 units per acre. Consolidation of parcels to a four-acre minimum is encouraged, with a substantial landscaped open space buffer provided to complement existing topography and vegetation along that portion of the land adjacent to Lee Highway. Such a buffer should eliminate any potential for adverse visual impact from Lee Highway or nearby commercial activity. Residential units should be sited in such a manner as to minimize any highway noise impact, with vehicular access from residential development coordinated with currently planned intersections along Lee Highway. In view of the impact of highway noise from nearby Lee Highway, new development must provide adequate noise attenuation measures including acoustical treatment of all units in order to reduce the interior and exterior noise levels to county accepted levels or standards. In addition, Parcels 48-4((3))(36)31A and 31B may be developed in residential use at 4-5 single-family detached dwelling units per acre if consolidated with parcels on the northern side of Lee Highway to achieve a four-acre minimum, with primary access from old Nutley Street and the above conditions are met.
6. Residential infill in the portion of the sector east of Nutley Street and north of frontage property on Lee Highway should be limited to residential uses at a density of 1 - 2 dwelling units per acre. As an option, the Topaz Street/Hideaway Road/Suteki Road [Tax Map 48-2((7))(33) 1, 2, 3, 7A, 9A, 10; (34) 1, 3, 5, 7, 9, 11, 13, 14, 16, B, A (35) 2-5; and (36) 1] may be considered for residential use at 4-5 dwelling units per acre (du/ac) and [Tax Map 48-2((7))(36) 2-5, 5A, 5B, 9, 36A, 36B may be considered for residential use at 2-3 du/ac under the following conditions:
- Substantial and logical consolidation is achieved. In addition, within the option area, a proposed consolidation must show how any unconsolidated properties within the consolidation area can redevelop at a similar density and character;
 - Access for those portions planned 4-5 du/ac is limited to the intersection of Swanee Lane with Nutley Street through a road built to VDOT design standards. There should be no extension of Hideaway Road beyond its current paved terminus near the southwestern boundary of the property generally known as Tax Map 48-2((7))(37)43A, nor should there be any connection by public or private road to Hideaway Road;
 - Suteki Road should remain open as a public road and should maintain the connection between Hideaway Road and Beau Lane;
 - New development should address the need for convenient pedestrian access to the crosswalk at Nutley Street and Swanee Lane for these residents and those to the east;
 - Buffering and screening are provided to mitigate impacts on adjacent properties;

- The new development creates a quality living environment for its residents and provides usable open space;
 - Townhouse uses are not permitted as market rate or ADU units; only single-family, detached units may be constructed;
 - Noise attenuation measures are provided as determined appropriate by the county; and
 - Existing mature trees should be retained to the greatest extent possible. The area adjacent to I-66 has substantial mature trees and vegetation that should be retained and preserved as open space adjacent to I-66;
 - In order to help enhance compatibility with existing and planned uses on the adjacent lands, within the areas planned 4-5 du/ac and 2-3 du/ac, densities inclusive of ADU's and bonus units, should not occur above the "mid point" of the density range;
 - At the edges of the development, in areas where the assembled property abuts existing development planned and/or zoned for lower density, the new development should be designed with units having a general orientation, location, building materials, and spacing that is compatible with the established development pattern; and
 - To further enhance compatibility with existing uses, new development should use design features such as street lighting, landscaping and entry features as a way to improve the transition from the new development to the existing and established residential uses.
7. Parcel 48-4((1))1B at the intersection of Lee Highway and Nutley Street is planned for residential use at 4-5 dwelling units per acre, consistent with the planning along Lee Highway between Nutley Street and Hunter Road. However, due to the adjacent electrical substation, the configuration of the roadway network and topography, on an interim basis, pending the planned widening of Lee Highway, this parcel may be appropriate for a nonresidential use such as a vehicle light service establishment that does not have adverse traffic, visual or other impacts on the adjacent single-family neighborhood and road network. Freestanding retail uses are not appropriate. Nonresidential development proposals should:
- Provide right-of-way for the planned widening of Lee Highway to the satisfaction of VDOT and the county and orient access to Old Nutley Street only;
 - Provide sufficient on-site parking so that there would be no spillover onto Old Nutley Street; and
 - Provide effective buffering and screening to the adjacent neighborhood to mitigate any adverse visual impacts.
8. The property located north of Hilltop Road and east of Cedar Lane is planned for residential use at 4-5 dwelling units per acre, as shown on the Plan map. If the following

conditions are met, in addition to the residential development criteria, the upper end of the planned density may be appropriate:

- Protection of the stable, low density single-family homes planned at 1-2 dwelling units per acre to the south and west by the use of a landscaped buffer along Hilltop Road;
 - Consolidation of parcels 49-1((1))20, 21 and 22 with a single access oriented to Hilltop Road; and
 - Development that is compatible with Dunn Loring Village.
9. Tax Maps 49-3((6))2; 49-3((1))4, 5, 6B, 7; and 48-4((1))35 are planned for residential use at 2-3 dwelling units per acre. As an option, residential use at 5-8 dwelling units per acre may be appropriate if consolidation occurs that results in adequate land dedicated for the fire station's platform on demand (POD) facility and the realignment of Chichester Lane with Cedarest Road, and if the following specific conditions are met:
- Substantial and logical consolidation should be provided so that the project functions in a well-designed and efficient manner. At a minimum, Tax Maps 49-3((6))2 and 49-3((1))4, 5, 7 must be consolidated in order provide for interparcel access, the redevelopment of a nonconforming retail use to residential and the dedication of land for a POD facility. Any unconsolidated parcels should develop at 4-5 du/ac;
 - Effective buffering and screening are provided adjacent to single-family residential uses and the Merrifield Fire Station (including the POD facility);
 - On-site recreation facilities, sufficient to serve the proposed residential community, should be provided which could include tennis and all purpose courts as well as tot lots and pocket parks;
 - A coordinated internal pedestrian system that connects all parts of this area should be provided that ensures pedestrian connections to Lee Highway, Chichester Lane, the county Government office, the adjoining Barkley Subdivision and Fairhill Elementary School;
 - Primary access for this area should be consolidated to one location at Lee Highway opposite Cedarest Road. Additional entrances along Lee Highway may be provided as right-in, right-out only, with the exception of a median opening opposite the fire station for emergency vehicle use only. Access should be provided to the public uses within this land unit via a service drive connecting the fire station entrance to the main entrance of the development. Chichester Lane shall not be connected between Lee Highway and Arlington Boulevard; and
 - Any development proposal should provide a coordinated development plan that provides for a unified residential area with a coordinated internal street system that connects all parts of this area and ensures that access to the main entrance at Lee Highway is provided to the unconsolidated parcels via the internal street system.
10. The south west quadrant of the intersection of I-66 and Cedar Lane (Tax Map 49-1((1))3, 5, and 6; and 49-1((4))15, and 16A) is planned for single-family detached residential use only

at a density of 3-4 dwelling units per acre, exclusive of the dedication of land necessary for the widening of Cedar Lane. Only conventional subdivision development should be allowed so that compatibility is maintained with the existing single-family communities to the east, south and west of these parcels.

11. The 2.47 acres of land (Tax Map 49-1((23)) A, B, and 1-7) is planned for residential use at a density of 2-3 dwelling units per acre. Development proposals on this parcel should address environmental and stormwater impacts.

Transportation

Transportation recommendations for this sector are shown on Figures 16, 17 and 18. In some instances, site specific transportation recommendations are included in the land use recommendations section. The figures show access orientation, circulation plans, interchange impact areas and generalized locations of proposed transit facilities. The recommendations contained in the Area Plan text and maps, the Policy Plan and Transportation Plan map, policies and requirements in the Public Facilities Manual, the Zoning Ordinance, and other standards will be utilized in the evaluation of development proposals.

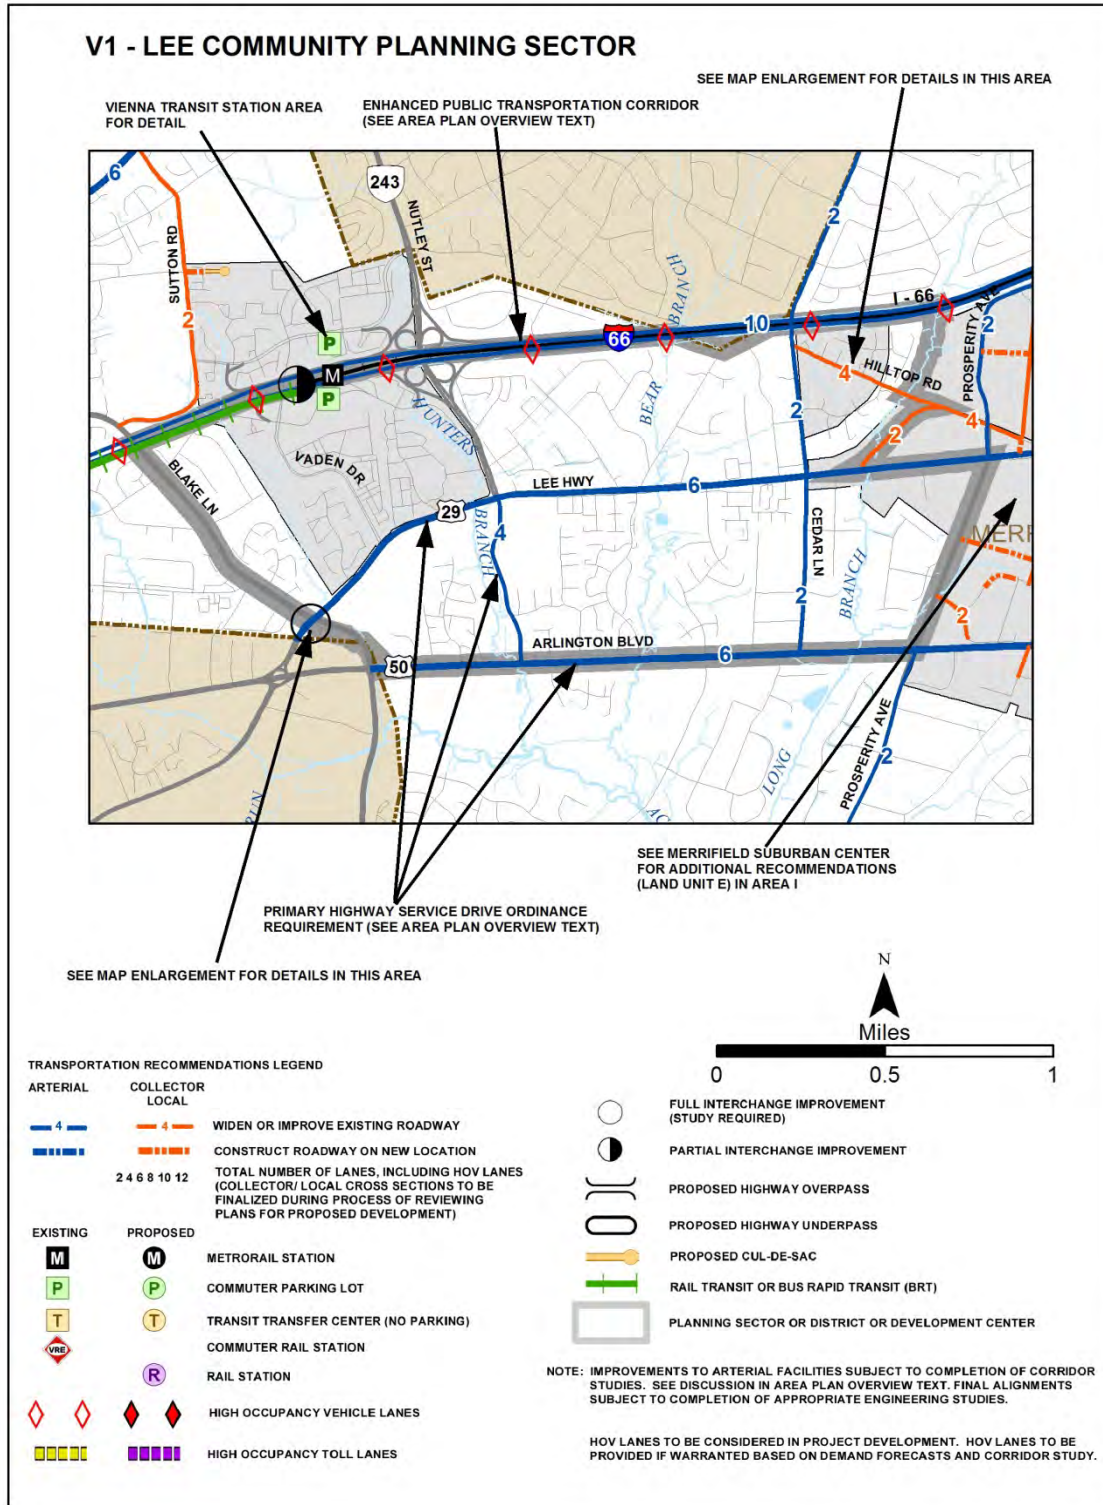

If Lee Highway, between Cedar Lane and Nutley Street, is to be widened from four through-lanes with a center turn lane, a corridor study must be undertaken. Any widening should preserve a service drive south of Lee Highway extending from White Rose Lane east to Ellenwood Drive. There should be no encroachment on the cemetery on the south side of Lee Highway just east of the Nutley Street intersection.

Heritage Resources

Potentially significant heritage resources have been discovered in this sector. Undeveloped land in older or low density neighborhoods may contain additional significant heritage resources. Any development or ground disturbance in this sector, both on private and public land, should be preceded by heritage resource studies, and alternatives should be explored for the avoidance, preservation or recovery of significant heritage resources that are found. In those areas where significant heritage resources have been recorded, an effort should be made to preserve them. If preservation is not feasible, then, in accordance with countywide objectives and policies as cited in the Heritage Resources section of the Policy Plan, the threatened resource should be thoroughly recorded and in the case of archaeological resources, the artifacts recovered.

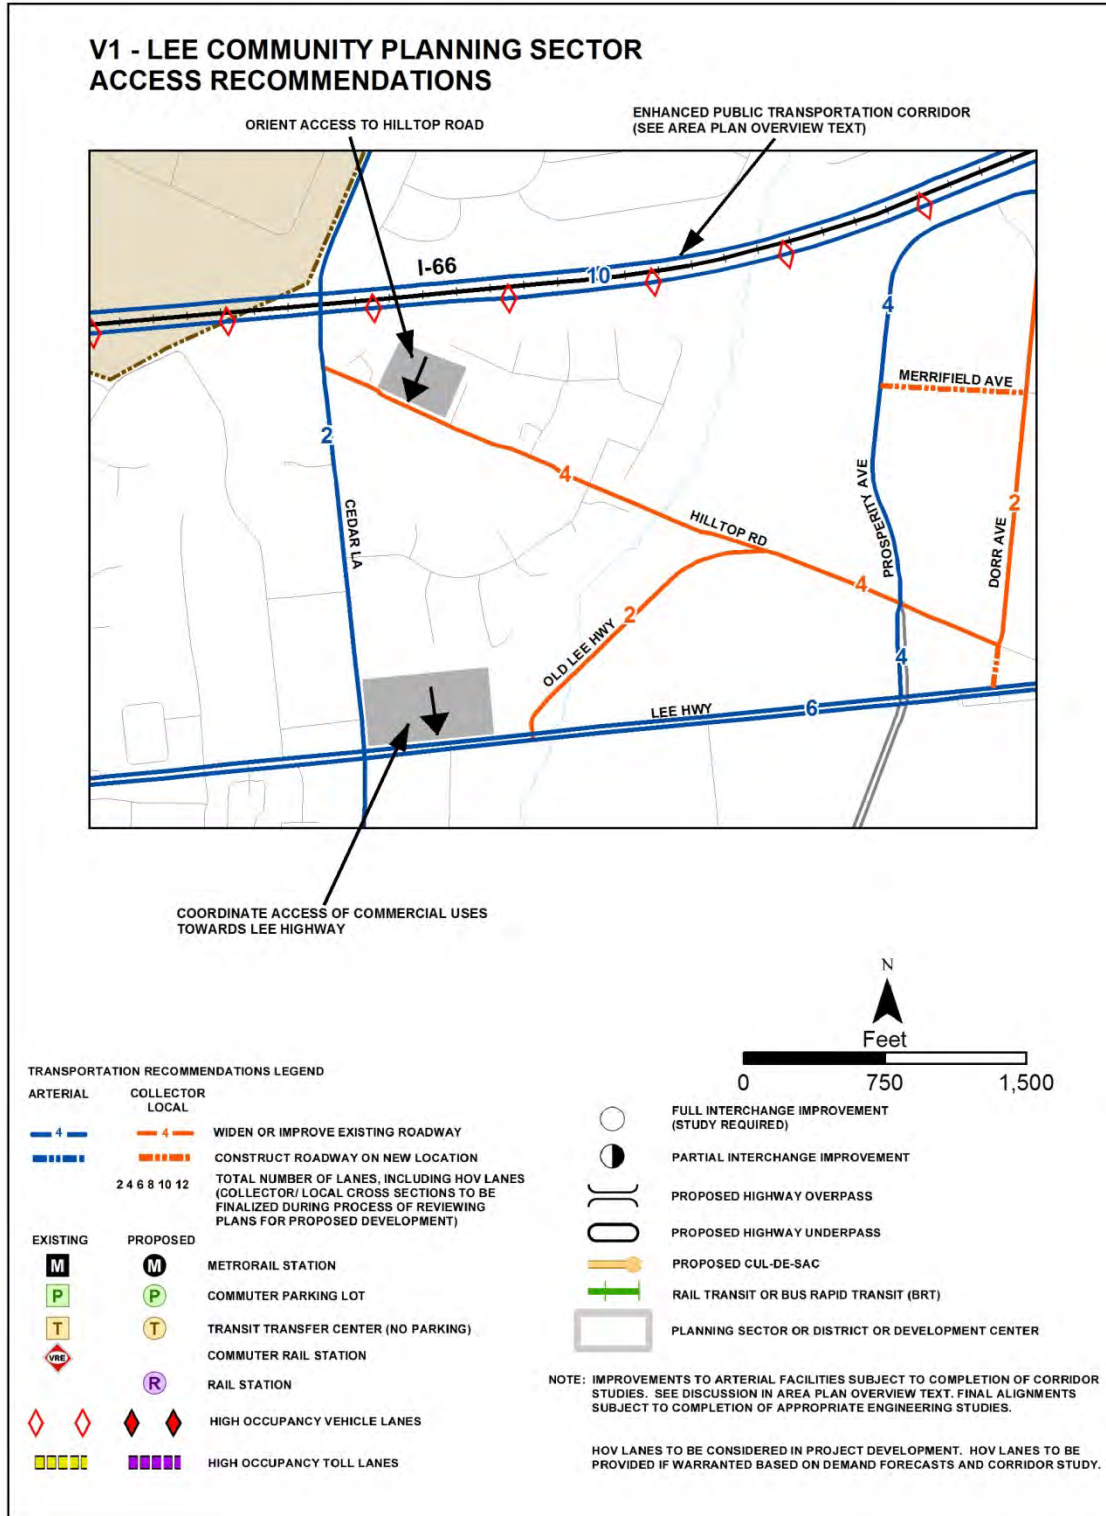

Parks and Recreation

Park and recreation recommendations for this sector are shown on Figure 19. The column "Park Classification" includes existing park facilities. The "Recommendations" column includes entries for both existing and proposed facilities. Prior to developing parkland, the Fairfax County Park Authority initiates a master planning process to determine the appropriate facilities and design for that park. This process involves extensive citizen review and participation. If an existing park is listed but no recommendation appears on that line, it means the park has been developed in accordance with its master plan.

TRANSPORTATION RECOMMENDATIONS

FIGURE 16

ACCESS RECOMMENDATIONS
 V1 LEE COMMUNITY PLANNING SECTOR

FIGURE 17

**INTERCHANGE RECOMMENDATIONS
 F3, V1 COMMUNITY PLANNING SECTORS**

FIGURE 18

FIGURE 19
PARKS AND RECREATION RECOMMENDATIONS
SECTOR V1

PARK CLASSIFICATION	RECOMMENDATIONS
NEIGHBORHOOD PARKS:	
Hideaway Villa Lee	Initiate a master planning process and develop in accordance with approved plan. Additional Neighborhood Park facilities in this sector should be provided in conjunction with new development.
COMMUNITY PARKS:	
East Blake Lane	Expand this park through dedication in conjunction with new development as noted in the land use recommendations. Consider development of an athletic field accessible from Metro and also a full complement of Community Park facilities.
Towers	Initiate a master planning process and develop in accordance with approved plan. Acquire and develop a Community Park site west of Prosperity Avenue between Arlington Boulevard and Lee Highway (as noted in land use recommendations).
DISTRICT PARKS:	
	This sector lies within the service area of Nottoway park.
COUNTYWIDE PARKS:	
REGIONAL PARKS:	
W&OD Railroad	Complete development of the Fairfax City to W& OD Connector Trail in accordance with approved master plan.

Trails and Bicycle Facilities

Trails planned for this sector are delineated on the 1":4,000' Countywide Trails Plan Map which is referenced as Figure 2 in the Transportation element of the Policy Plan and is available from the Department of Transportation. Trails in this sector are an integral part of the overall county system. While some of the segments have already been constructed, the Countywide Trails Plan Map portrays the ultimate system for the sector and the county at large. In addition, the map specifies a classification for each segment, which represents the desired ultimate function and surface type of the trail. Specific construction requirements are detailed in the Public Facilities Manual.

Bicycle Facilities for this sector are delineated on the 1":4000' Countywide Bicycle Network Map which is referenced as Figure 3 in the Transportation element of the Policy Plan and is available from the Department of Transportation.

V2 CEDAR COMMUNITY PLANNING SECTOR

CHARACTER

The Cedar Community Planning Sector is located east of the Town of Vienna and is generally bounded by Electric Avenue, the Capital Beltway/Interstate 495 (I-495), and Interstate 66 (I-66). The planning sector includes a small portion of the Tysons Urban Center. Plan recommendations for the Tysons Urban Center are included in the Area II volume of the Comprehensive Plan, Tysons Urban Center.

Outside of the Tysons Urban Center, the majority of the planning sector is developed with single-family detached residential units. The northern portion of the planning sector, along Gallows Road, is developed with a combination of townhouses and single-family detached residential units. There is a concentration of commercial and office uses between Cedar Lane, Gallows Road and Electric Avenue.

The area east of Gallows Road has produced potentially significant archaeological sites and contains some older and potentially significant buildings. The Dunn Loring Elementary School is located in the northwest corner of the Gallows Road-Idylwood Road intersection. Both Tudor Hall and the Camp Alger Headquarters, privately owned residences, are located in this planning sector. These residences are listed in the Fairfax County Inventory of Historic Sites. A list and map of heritage resources are included in the Vienna Planning District Overview section, Figures 4 and 5. Additional historic sites in this planning sector are also included in the inventory.

CONCEPT FOR FUTURE DEVELOPMENT

The Concept for Future Development recommends the areas of Cedar Community Planning Sector develop as Suburban Neighborhoods.

RECOMMENDATIONS

Land Use

The Cedar sector is largely developed as stable residential neighborhoods. Infill development in these neighborhoods should be of a compatible use, type and intensity in accordance with the guidance provided by the Policy Plan under Land Use Objectives 8 and 14.

Where substantial parcel consolidation is specified, it is intended that such consolidations will provide for projects that function in a well-designed, efficient manner and provide for the development of unconsolidated parcels in conformance with the Area Plan.

Figure 20 indicates the geographic location of land use recommendations for this sector. Where recommendations are not shown on the General Locator Map, it is so noted.

1. Residential infill is appropriate in the area bounded by Cedar Lane, Gallows Road, Idylwood Road and Electric Avenue at 4-5 dwelling units per acre. This area should be buffered from existing commercial uses.

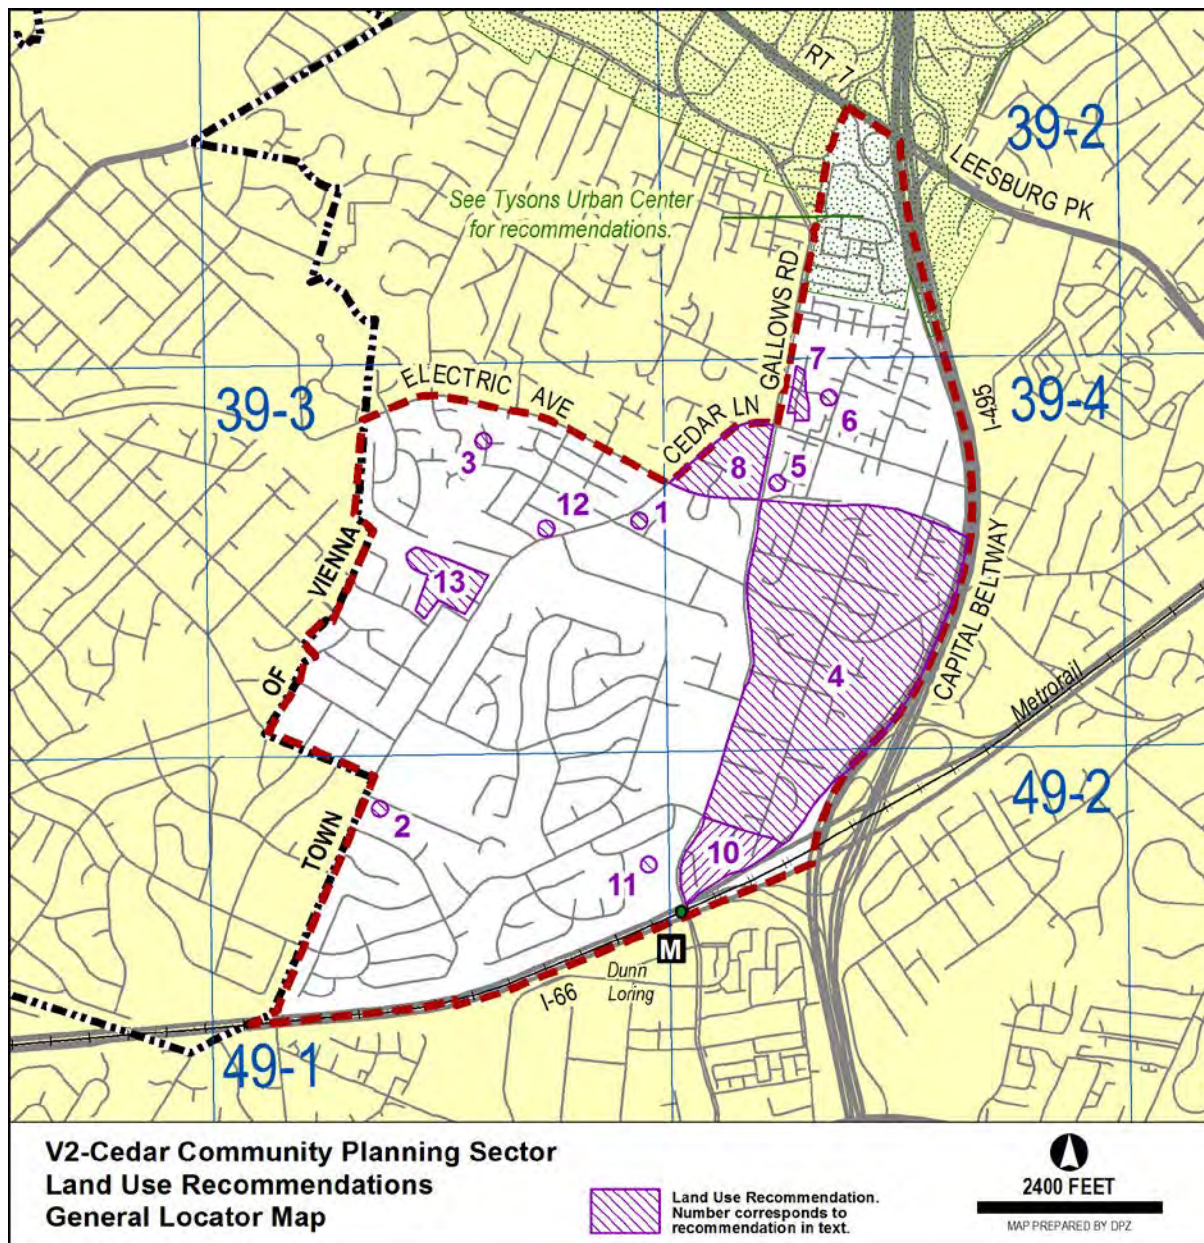

FIGURE 20

2. Parcels fronting on both sides of Amanda Place are planned for 3-4 dwelling units per acre. As an option, if an acceptable redevelopment plan is submitted that fully consolidates all of the parcels along Amanda Place, consideration may be given for a residential density range of 5-8 dwelling units per acre.

As an option, single-family detached housing at 4-6 dwelling units per acre may be appropriate on Tax Map Parcels 49-1((1))32, 32A, 33, 34, 39, 40, 40A, 40B and 41 to foster coordinated development of this land if the following conditions are met:

- Development should have substantial and logical consolidation, with any unconsolidated parcels able to integrate into any previous consolidation and develop in a similar manner;
 - Development above 5 dwelling units per acres should only occur if full consolidation is achieved; and
 - Internal open space should maximize opportunities to save mature trees on site.
3. A single-family detached residential density of 2-3 dwelling units per acre is planned for the area bounded by Electric Avenue to the north, Williams Avenue to the east, Idylwood Road to the south and the Tysons Woods subdivision to the west. As an option, single-family detached residential uses at 3-4 dwelling units per acre may be appropriate if substantial land consolidation of small lots to a minimum consolidated size of eight acres is achieved and an efficient internal vehicular circulation system is provided.
 4. The portion of the sector south of Railroad Street, north of Cottage Street, west of I-495 and east of Gallows Road is planned for residential use at 3-4 dwelling units per acre. Development above the low end of the Plan density range should meet the following conditions:
 - Provision of a substantial landscaped screen to ensure the elimination of any adverse visual impact upon nearby residentially planned areas from Gallows Road and the commercially-zoned parcel in the southeast quadrant of Gallows Road and Railroad Street;
 - Substantial consolidation of adjacent parcels to ensure coordinated development; and
 - Provision of coordinated vehicular access so as not to exacerbate traffic flow along Gallows Road. See Figure 23 for Transportation access recommendations.
 5. In view of their proximity to Gallows Road and planned commercial activity, Parcels 39-4((1))73 and 74; 39-4((38)) and 39-4((11))2, 3 and A, located between Gallows Road and Arden Street, north of Railroad Street, and south of the intersection of Gallows Road and Wolftrap Road, are planned for residential development at 4-5 dwelling units per acre. Development above the low end of the Plan density range should meet the following conditions:
 - Provision of a substantial landscaped open space buffer and permanent screen along the western and southern edge of the property adjacent to Gallows Road and commercial uses, and along the northern and eastern periphery adjacent to existing or

- planned detached single-family residential use to ensure compatible development and eliminate any potentially adverse impacts;
- Substantial consolidation of adjacent parcels to ensure coordinated development, the preservation of environmental amenities such as mature hardwoods, EQCs and the siting of residential buildings towards the interior of the property to minimize any disruptive effect on adjacent existing and planned detached single-family houses; and
 - Provision of coordinated vehicular access so as not to exacerbate traffic flow along Gallows Road. See Figure 23 for access recommendations.
6. The area along the east side of Gallows Road, between the Courts of Tysons Townhouse development on the north, Oak Street on the south and I-495 on the east, is planned for 2-3 dwelling units per acre as shown on the Plan Map. Any application for development above 2 dwelling units per acre, should comply with the following criteria:
- Preserve and incorporate any historic landmarks, structures, and other major elements associated with the historic Dunn Loring community, and the character of the community in the development scheme where appropriate;
 - Provide a landscape plan, including the limits of clearing for approval by the County Arborist showing maximum retention of existing stands of hardwoods and large individual specimen trees, both along the perimeter of the site and at the interior of the site; and
 - Conform with the appropriate transportation recommendations as shown on 22.
7. Parcels 39-2((1))39, 40 and 39-4((1))73, 74, 75, 76, 76A, 79 and 79A fronting on the east side of Gallows Road are planned for residential use at 2-3 and 4-5 dwelling units per acre as shown on the Plan map. As an option, residential development at 4-5 dwelling units for the entire area may be appropriate if the following conditions are met:
- Full consolidation of all Parcels 39-2((1))39, 40 and 39-4((1))75, 76, 76A, 79, 79A is achieved to ensure homogenous development;
 - A single access point between the site and Gallows Road is provided opposite Wolftrap Road (Parcels 73-75). (See Figure 22 for access recommendations.);
 - Buffering and screening along Gallows Road is provided;
 - Any historic landmarks, structures, and other major elements associated with the historic Dunn Loring community, and its character are preserved and incorporated in the development scheme where appropriate;
 - A landscape plan, including the limits of clearing is submitted for approval by the County Arborist showing maximum retention of existing stands of hardwoods and large individual specimen trees, both along the perimeter of the site and in the interior of the site; and
 - Provision of an undisturbed buffer of at least 40 feet between the new development on this site and the Tysons Grove and Harrison Grove communities. Where there are

not sufficient plantings to provide an effective buffer, new plantings should be provided as necessary.

8. To prevent strip commercial uses and to promote clustering of neighborhood commercial facilities, any additional neighborhood commercial uses in this sector should be confined to the triangular area bounded by Cedar Lane, Gallows Road and Electric Avenue. No additional land should be planned for commercial uses in this sector.
9. Commercial development in the Cedar Lane/Park Street area should be limited to those areas designated for commercial use on the Plan map. [Not shown]
10. The area south of Cottage Street, east of Gallows Road, and west of I-495 is planned for residential use at 3-4 dwelling units per acre provided the following conditions are met:
 - Substantial and logical consolidation is achieved. At a minimum, the consolidation should include the area bounded by I-66, Sandburg and Cottage Streets, Gallows Road and Stenhouse Place. Any proposed consolidation must show how any unconsolidated properties can be developed at a similar density and character;
 - In order to help enhance compatibility with existing and planned uses on adjacent areas, density inclusive of ADUs and bonus units, should not occur above 3.5 du/ac;
 - New development should address the need for convenient pedestrian access to the Dunn Loring Metro Station. Measures should include establishing walkways and other development practices that will encourage the use of the mass transit facility;
 - Buffering and screening should be provided to mitigate visual impacts associated with I-66, I-495 and Gallows Road;
 - The new development should consist of single-family detached residential units exclusively, should create a quality living environment for its residents and should provide usable open space;
 - Noise barriers should be provided on the north side of I-66 and the west side of I-495. Additional noise attenuation measures should be provided as determined appropriate by the county.
 - Existing mature trees should be retained to the greatest extent possible;
 - At the edges of the development, in areas where the assembled property abuts existing development planned and/or zoned for lower density, the new development should be designed with units having a general orientation, location, building materials, and spacing that is compatible with the established development pattern.
11. Both the Stenwood School and those residential areas immediately north of the Dunn Loring Transit Station Area should be protected and buffered from possible adverse impacts. These areas should also have adequate pedestrian linkages to the station. Noise barriers should be provided on the north side of I-66 and the west side of I-495, starting at the western edge of the Stenwood School property and continuing east and north.

12. Tax Map 39-3((10))18 is planned for residential use at 2-3 du/ac. As an option, this parcel may be considered for a residential density slightly above 3 du/ac provided that the subdivision results in parcels of a similar size, and in residential development similar in character and orientation, as the immediately abutting parcels to the west.
13. Residential development of the properties comprised Tax Map parcels 39-3((38))A, 11; 39-3((1))15, 16, 17, 18, 18A, 18B, 18C, 18D, 18E, 32, 33A, 33B, 33C should be limited to residential uses at densities of 1-2 dwelling units per acre. In any development of these parcels, a substantial vegetative buffer should be provided along the common border of adjoining parcels and the Northern Virginia Regional Park bike trail (W&OD trail); the buffer should preserve natural vegetation and be supplemented with additional plantings to provide effective screening; it should provide for a connection to the trail; the environmentally sensitive area along the day-lighted portion of the stream bed should be respected and preserved in the southern portion of the site; healthy existing mature trees should be preserved to the maximum practicable extent including the day-lighted portion of the stream bed located in the southern portion of the site; there should be no direct road connection to Augustus Court.

Transportation

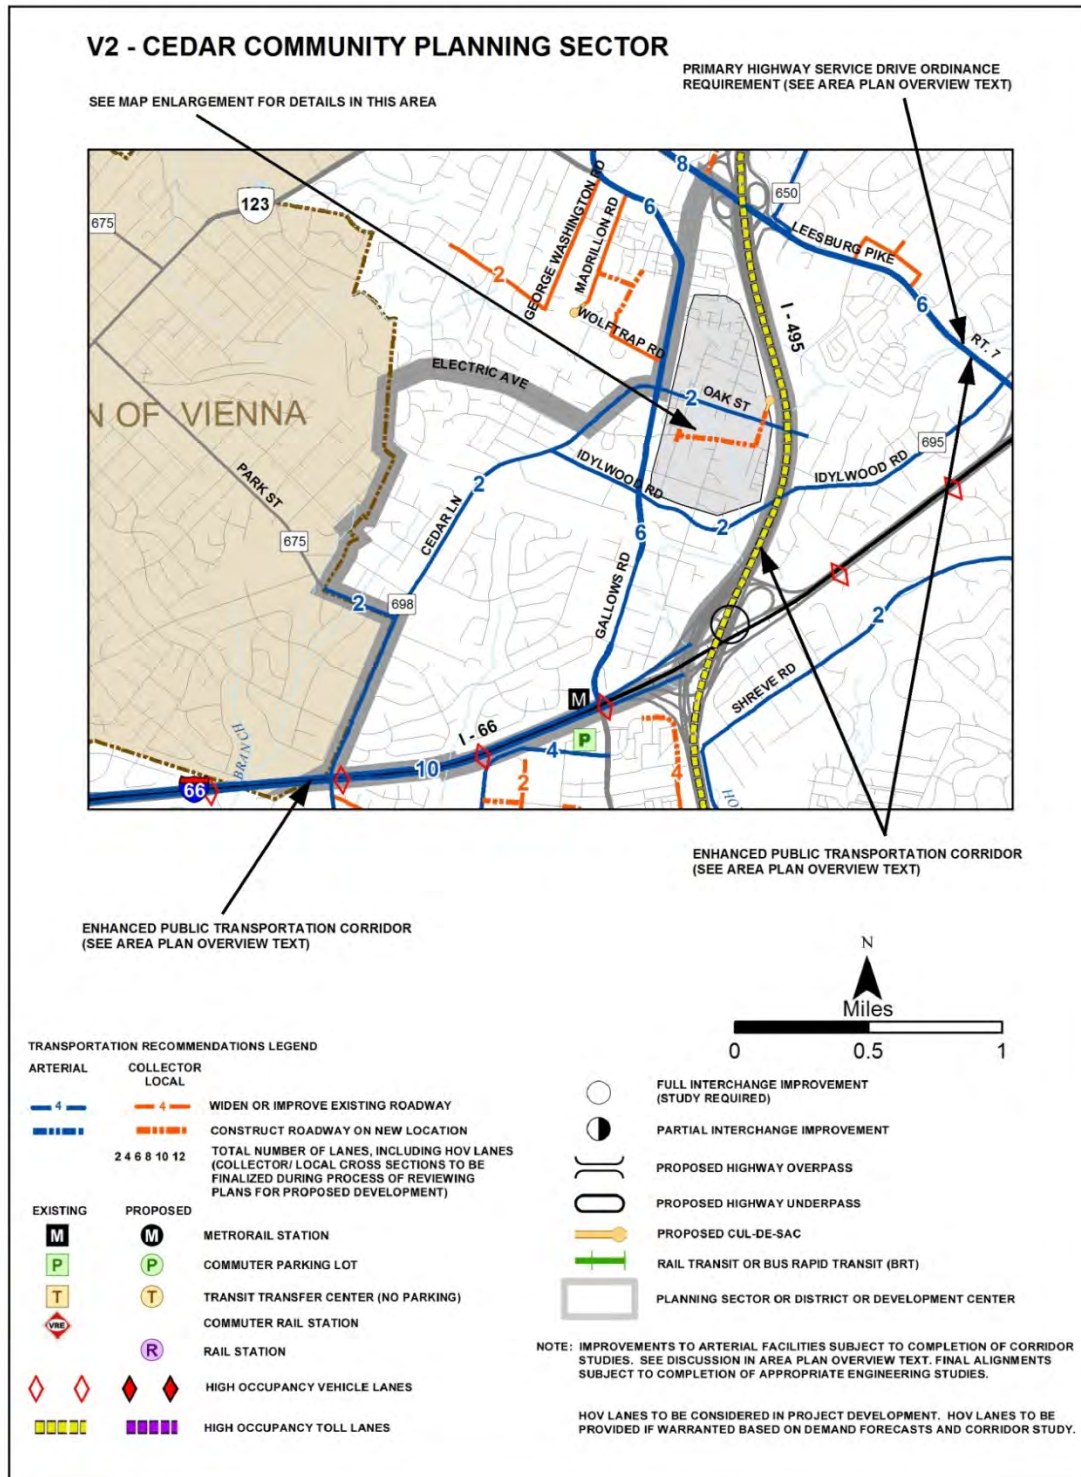

Transportation recommendations for this sector are shown on Figures 21 and 22. In some instances, site-specific transportation recommendations are included in the land use recommendations section. The figures show access orientation, circulation plans, interchange impact areas and generalized locations of proposed transit facilities. The recommendations contained in the Area Plan text and maps, the Policy Plan and Transportation Plan map, policies and requirements in the Public Facilities Manual, the Zoning Ordinance, and other standards will be utilized in the evaluation of development proposals.

Heritage Resources

Significant heritage resources may be located in open spaces, in low density residential areas and in mid 20th century neighborhoods of this planning sector. Any development or ground disturbance in this sector, both on private and public land, should be preceded by heritage resource studies, and alternatives should be explored for the avoidance, preservation or recovery of significant heritage resources that are found. In those areas where significant heritage resources have been recorded, an effort should be made to preserve them. If preservation is not feasible, then, in accordance with countywide objectives and policies as cited in the Heritage Resources section of the Policy Plan, the threatened resource should be thoroughly recorded and in the case of archaeological resources, the artifacts recovered.

Parks and Recreation

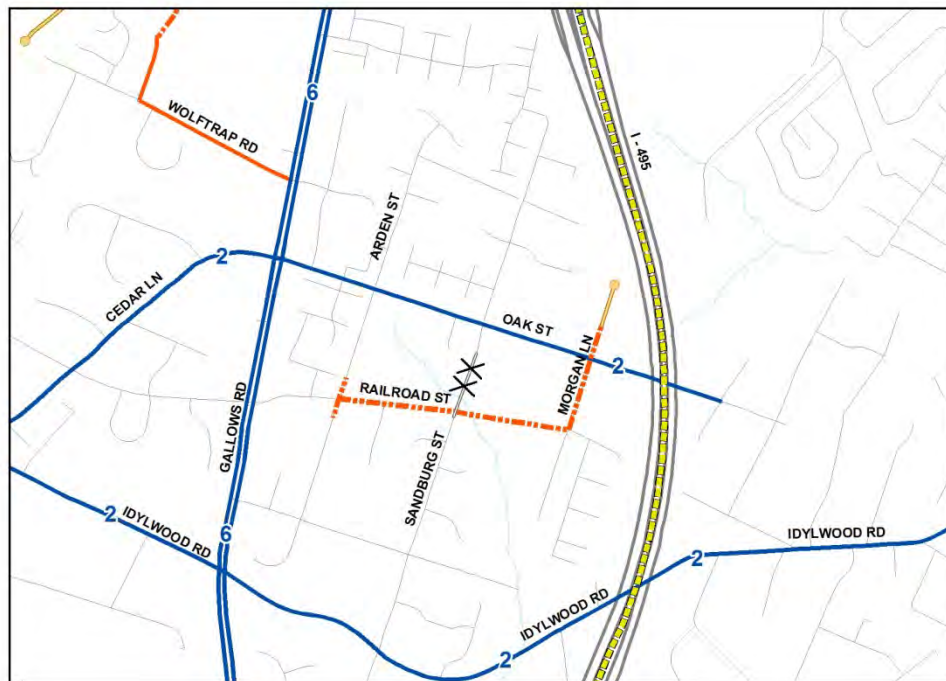

Park and recreation recommendations for this sector are shown on Figure 23. The column "Park Classification" includes existing park facilities. The "Recommendations" column includes entries for both existing and proposed facilities. Prior to developing parkland, the Fairfax County Park Authority initiates a master planning process to determine the appropriate facilities and design for that park. This process involves extensive citizen review and participation. If an existing park is listed but no recommendation appears on that line, it means the park has been developed in accordance with its master plan.

FIGURE 22

FIGURE 23
PARKS AND RECREATION RECOMMENDATIONS
SECTOR V2

PARK CLASSIFICATION	RECOMMENDATIONS
NEIGHBORHOOD PARKS:	
Tysons Woods	Develop in accordance with approved master plan. Additional Neighborhood Park facilities in this sector should be provided in conjunction with new development.
COMMUNITY PARKS:	
Dunn Loring	Identify a Community Park site between Tysons Urban Center and Dunn Loring Metro Station with access to W&OD Trail for development of active recreation facilities. Once a site is identified, land dedication should be provided singularly or in combination with other development or purchase by county.
DISTRICT PARKS:	
	This sector lies within the service area of Nottoway Park.
REGIONAL PARKS:	
W&OD Railroad	All purposed new road crossings or widening of existing roads should be grade-separated (underpass or overpass). Wayside parks should be dedicated or purchased. Complete development in accordance with approved master plan.

Trails and Bicycle Facilities

Trails planned for this sector are delineated on the 1":4,000' Countywide Trails Plan Map which is referenced as Figure 2 in the Transportation element of the Policy Plan and is available from the Department of Transportation. Trails in this sector are an integral part of the overall county system. While some of the segments have already been constructed, the Countywide Trails Plan Map portrays the ultimate system for the sector and the county at large. In addition, the map specifies a classification for each segment, which represents the desired ultimate function and surface type of the trail. Specific construction requirements are detailed in the Public Facilities Manual.

Bicycle Facilities for this sector are delineated on the 1":4000' Countywide Bicycle Network Map which is referenced as Figure 3 in the Transportation element of the Policy Plan and is available from the Department of Transportation.

V3 SPRING LAKE COMMUNITY PLANNING SECTOR

CHARACTER

The Spring Lake Community Planning Sector is generally located north of the Town of Vienna and south of the Dulles Airport Access Road and Dulles Toll Road (DAAR, Route 267). The planning sector includes a portion of the Tysons Urban Center. Plan recommendations for the Tysons Urban Center are included in the Area II volume of the Comprehensive Plan, Tysons Urban Center.

Outside of the Tysons Urban Center, development in the planning sector consists almost entirely of single-family detached residential uses. Townhouses and garden apartments are present in the eastern portion of the planning sector, adjacent to the Tysons Urban Center. Commercial development is located along Gallows Road, near Cedar Lane.

The nationally significant prehistoric archeological site Wolftrap is located in this planning sector. In addition, this planning sector includes Ash Grove, an 18th century house that was originally owned by the Fairfax family. Ash Grove is a significant heritage resource and is listed in the Fairfax County Inventory of Historic Sites. A list and map of heritage resources are included in the Vienna Planning District Overview section, Figures 4 and 5. Additional historic sites in this planning sector are also included in the inventory, most notably Freedom Hill Fort.

CONCEPT FOR FUTURE DEVELOPMENT

The Concept for Future Development recommends the areas of Spring Lake Planning Sector develop as Suburban Neighborhoods.

RECOMMENDATIONS

Land Use

The Spring Lake sector is largely developed as stable residential neighborhoods. Infill development in these neighborhoods should be of a compatible use, type and intensity in accordance with the guidance provided by the Policy Plan under Land Use Objectives 8 and 14.

Where substantial parcel consolidation is specified, it is intended that such consolidations will provide for projects that function in a well-designed, efficient manner and provide for the development of unconsolidated parcels in conformance with the Area Plan.

The section of the Spring Lake sector southeast of Chain Bridge Road (Route 123) is planned as Suburban Neighborhoods, comprised primarily of detached single-family houses. To protect the sector's residential character no expansion of commercial or office uses should be permitted. Old Courthouse Road, and the adjoining segment of realigned Gallows Road, should be maintained as the line of demarcation between the commercial, retail and office uses of the Tysons Urban Center and the residential uses in the sector.

Figure 24 indicates the geographic location of land use recommendations for this sector. Where recommendations are not shown on the General Locator Map, it is so noted.

1. The area located between Chain Bridge Road, Wolftrap Road, Madrillon Farms subdivision (which extends along the western boundary line between Lord Fairfax Drive and Byrd Road) and commercially-zoned land fronting on the south side of Old Courthouse Road is planned for residential use at 2-3 dwelling units per acre. Further development within this area should be considered infill, and should only occur if substantial land consolidation is achieved, such that there is a reasonable opportunity for remaining land to be consolidated and developed so that a fragmented development and circulation/access pattern is avoided. There should be no commercial uses and no special exceptions or special permits along the southeast side of Chain Bridge Road between the northeast entrance to Horse Shoe Drive and the Vienna town line.

As an option, Tax Map Parcels 39-1((3))8A, 9, 9A, 10, 10A, 11A, 11B, 11C, 11D, 11E and 12 may be considered for single-family detached residential use at 4-4.25 dwelling units per acre, with a maximum of 28 dwelling units. This development level is provided only because this area is adjacent to retail and other commercial uses, and is conditioned on it being designed in a manner that will provide a transition between the abutting commercial area and existing single-family detached neighborhoods to the south and east, if full consolidation is achieved and the following conditions are met:

- At the time of development review, the applicant should demonstrate that traffic generated by the proposed development can be accommodated and that traffic impacts to the community can be mitigated with appropriate traffic engineering improvements. These transportation improvements may include such measures as: the construction of a raised median on Horse Shoe Drive at its eastern intersection with Chain Bridge Road; the installation of signage on Chain Bridge Road prohibiting access onto Horse Shoe Drive at the western intersection of Chain Bridge Road during the a.m. peak period; the commitment to provide a traffic signal at the eastern intersection of Horse Shoe Drive and Chain Bridge Road if warranted; and the provision of a channelized median break on Chain Bridge Road at the western intersection with Horse Shoe Drive to allow left turns from Horse Shoe Drive if it can be demonstrated that this maneuver can be accomplished safely;
- At a minimum, a 35 foot landscaped buffer area should be provided adjacent to all nonresidential uses. The existing solid masonry wall adjacent to the office uses should be extended to screen all nonresidential uses abutting the subject property along its northern and western boundary. In addition, no structure should be located, on average, closer than 50 feet from the north and northeastern property lines which are adjacent to retail uses;
- Open space and/or tree preservation areas should be provided in a manner that will maximize opportunities to save mature trees on site, especially in the buffer area adjacent to nonresidential uses as well as in the area adjacent to existing residential uses and along Horse Shoe Drive;
- The provision of a substantial landscaped buffer area of at least 25 feet should be provided between the proposed development's stormwater facility and the abutting existing residential uses; and
- Pedestrian walkways (sidewalks and/or trails) should be provided to connect all portions of the development to Horse Shoe Drive.

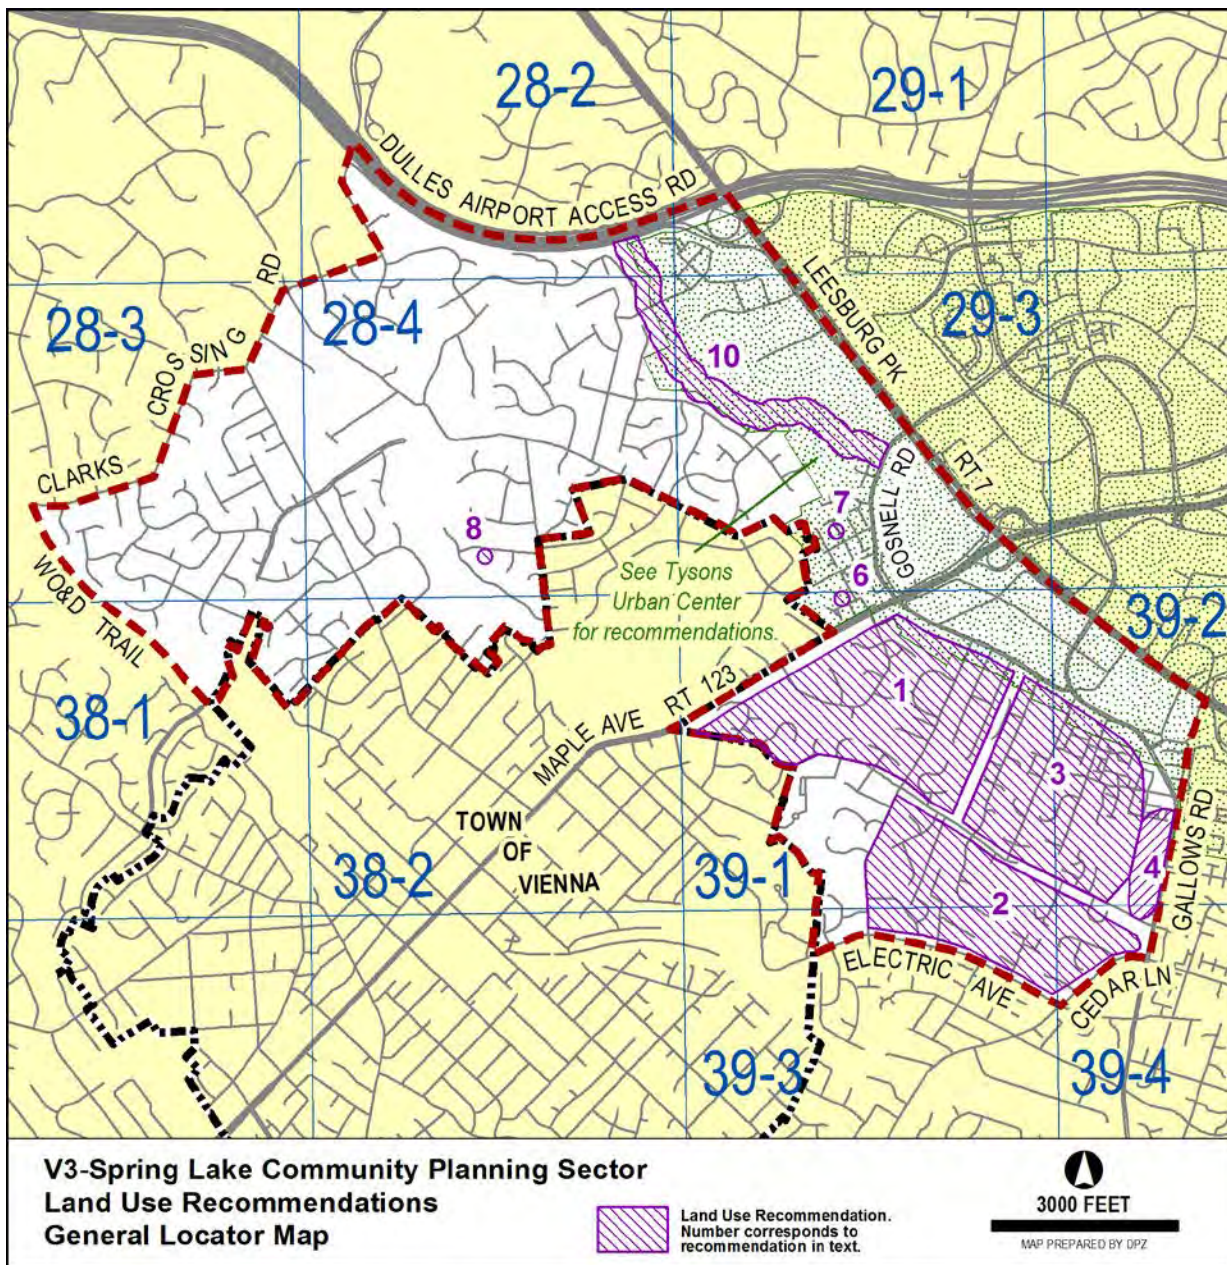

FIGURE 24

2. The area west of Cedar Lane, east of Woodford Road, south of Wolftrap Road and north of Electric Avenue, is planned for single-family detached residential use at 2-3 dwelling units per acre. As an option, in the event of substantial land consolidation, single-family detached residential uses at 3-4 dwelling units per acre may be appropriate for this area.
3. The area located between the western boundary of the Madrillon Farms subdivision (including the subdivision), Wolftrap Road, the Kilmer School, the Merry Oaks subdivision and commercial/institutional property on the south side of Old Courthouse Road is a largely undeveloped area that is located between stable residential areas to the south and west, and the Tysons Urban Center. Notable archaeological sites in any development proposal should be preserved.

Townhouse development at 8-12 dwelling units per acre is planned for the northeast section of this area in accordance with the Plan map.

The remaining portion of this area is planned for 3-4 dwelling units per acre in accordance with the Plan map. As an option, residential development up to 5 dwelling units per acre may be considered if the following conditions are met:

- Substantial consolidation of the area, including all properties bounding on the area planned for 8-12 dwelling units per acre;
 - Provision of both townhouse and single-family detached units. Townhouse units should be located adjacent to the area planned for 8-12 dwelling units per acre. The peripheral areas should be developed as single-family detached units that will be compatible with existing uses planned at 2-3 and 3-4 dwelling units per acre; and
 - Provision of usable open space and recreation facilities, and an integrated pedestrian circulation system throughout the development.
4. No commercial retail uses should be permitted along the southwest side of Old Courthouse Road or along Gallows Road north of the Dunn Loring Fire Station.
 5. There should be no extension of commercial uses along the northwest side of Chain Bridge Road between Tysons and the Vienna town line. Development and redevelopment along the northwest side of Chain Bridge Road should provide for decreasing intensity of uses from Tysons. Single-family residential uses are planned in the stable area west of Chain Bridge Road. Infill development should be of a compatible use, type and intensity. [Not shown]
 6. The area between Old Courthouse Road and Route 123, Freedom Hill Park and the Vienna town line is planned for residential use at 5-8 dwelling units per acre except where commercial zoning already exists. Substantial buffering should be provided to protect the cultural landscape and scenic integrity of Freedom Hill Park. If additional park facilities are planned for Freedom Hill Park, the park master planning process should preserve trees along the park's boundaries as a buffer between park facilities and adjacent residential areas. Additional guidance is provided in Sub-unit C-2 of the Tysons Urban Center portion of the Plan.

7. Tax Map 29-3((1)) 27A is planned for 5-8 dwelling units per acre. For consideration above the low end of the Plan density range there should be satisfactory incorporation of the following development criteria:
- Amelioration of traffic impacts from the site onto Old Courthouse Road and Gosnell Road through design of an internal circulation system that minimizes access points to Gosnell and Old Courthouse Roads.
 - Significant on-site landscaping and planting which retains existing mature trees;
 - Incorporation of an open space walkway system;
 - Utilization of the existing park and open space through development orientation to buffer any impacts to the south;
 - Compatibility of dwelling units with surrounding development especially with respect to scale and bulk;
 - Attention to urban design concepts and creative architectural solutions to development; and
 - Structure types should be townhomes in keeping with the character of the area.

Additional guidance is provided in the Gosnell Subdistrict recommendations of the Tysons Urban Center portion of the Plan.

8. Parcels 28-4((4))7 and 8 are planned for residential use at 2-3 dwelling units per acre as shown on the Plan map. Due to site topography and past drainage problems in the area, the following conditions should be met for any development:
- The parcels are consolidated;
 - The amount of impervious surface provided on the property (e.g., the widths of roads) is minimized;
 - To the extent possible, the development is designed such that stormwater runoff is conveyed away from lots fronting on Foxstone Drive (e.g., toward Ridge Lane or into a stormwater management facility)--stormwater runoff should be controlled and/or diverted such that post-development rates and volumes of runoff flowing into each of these lots are reduced to the greatest extent possible;
 - The discharge of drainage from the property, including discharges from any stormwater management facility that is provided on these parcels and associated emergency spillways, is conveyed in a manner that will not increase the potential for flooding of structure or any private yard areas between the site and Wolf Trap Creek; and
 - Existing trees on this site should be preserved where such preservation is determined to be feasible and desirable by an Urban Forester; otherwise, landscaping should be provided.

If the above conditions cannot be met, development should not exceed the baseline of 2 dwelling units per acre.

9. The remaining vacant area west of Chain Bridge Road, except for designated public space, should be limited to single-family residential uses at 2-3 dwelling units per acre as shown on the Plan map. However, the area bounded by Old Courthouse Road, Trap Road, the DAAR, Bartholomew Court, and the Tysons Green subdivision, is planned for 1-2 dwelling units per acre as shown on the Plan map. Protection is required for the areas of Moonac Creek and Wolftrap Creek as tributaries to the environmentally sensitive Difficult Run watershed. [Not shown]
10. A natural buffer zone should be preserved and maintained along the Old Court House Spring Branch Stream Valley from the DAAR to Gosnell Road, and from the stream valley to Freedom Hill Park. In addition to the stream valley and land already dedicated or about to be dedicated to the county for open space, this buffer should include the stream influence zone and any tree stands which protect the adjacent low density residential areas from the visual intrusion of the existing and planned high intensity uses in the Tysons Area. The whole of this buffer zone should be incorporated into the Old Court House Spring Branch Environmental Quality Corridor.
11. No commercial strip development should be permitted west of Chain Bridge Road along Old Courthouse Road. [Not shown]

Transportation

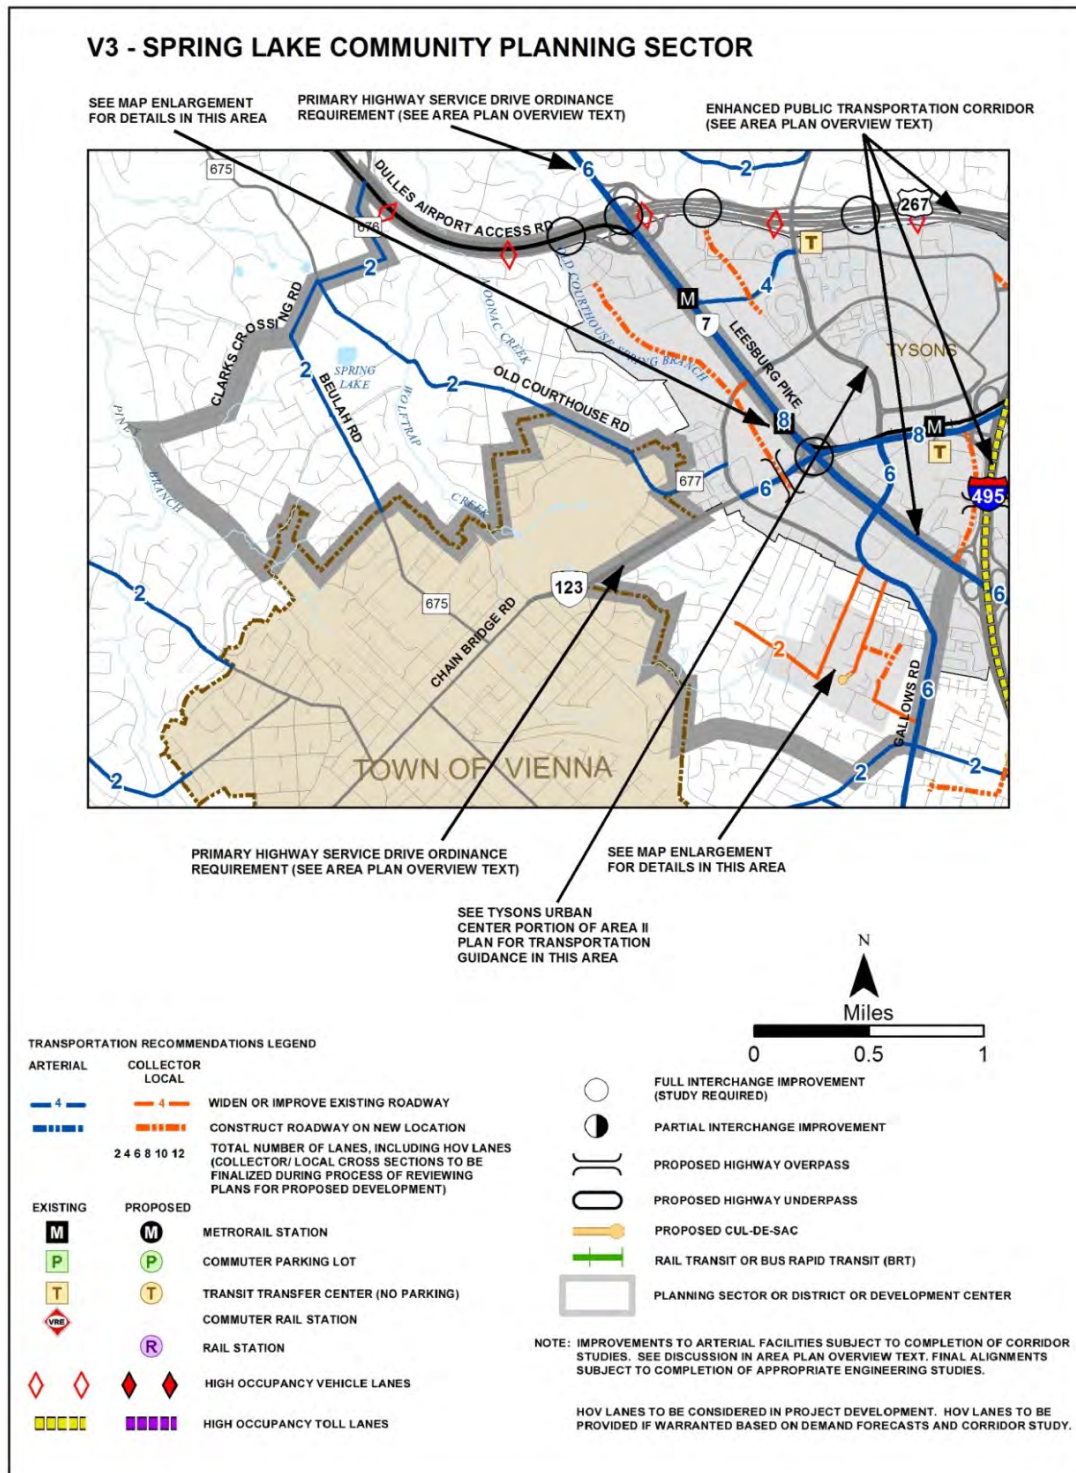

Transportation recommendations for this sector are shown on Figures 25, 26 and 27. In some instances, site specific transportation recommendations are included in the land use recommendations section. The figures show access orientation, circulation plans, interchange impact areas and generalized locations of proposed transit facilities. The recommendations contained in the Area Plan text and maps, the Policy Plan and Transportation Plan map, policies and requirements in the Public Facilities Manual, the Zoning Ordinance, and other standards will be utilized in the evaluation of development proposals.

Heritage Resources

Open space and low density residential areas or neighborhoods developed during the early or mid 20th century offer a high potential for significant heritage resources. Any development or ground disturbance in this sector, both on private and public land, should be preceded by heritage resource studies, and alternatives should be explored for the avoidance, preservation or recovery of significant heritage resources that are found. In those areas where significant heritage resources have been recorded, an effort should be made to preserve them. If preservation is not feasible, then, in accordance with countywide objectives and policies as cited in the Heritage Resources section of the Policy Plan, the threatened resource should be thoroughly recorded and in the case of archaeological resources, the artifacts recovered.

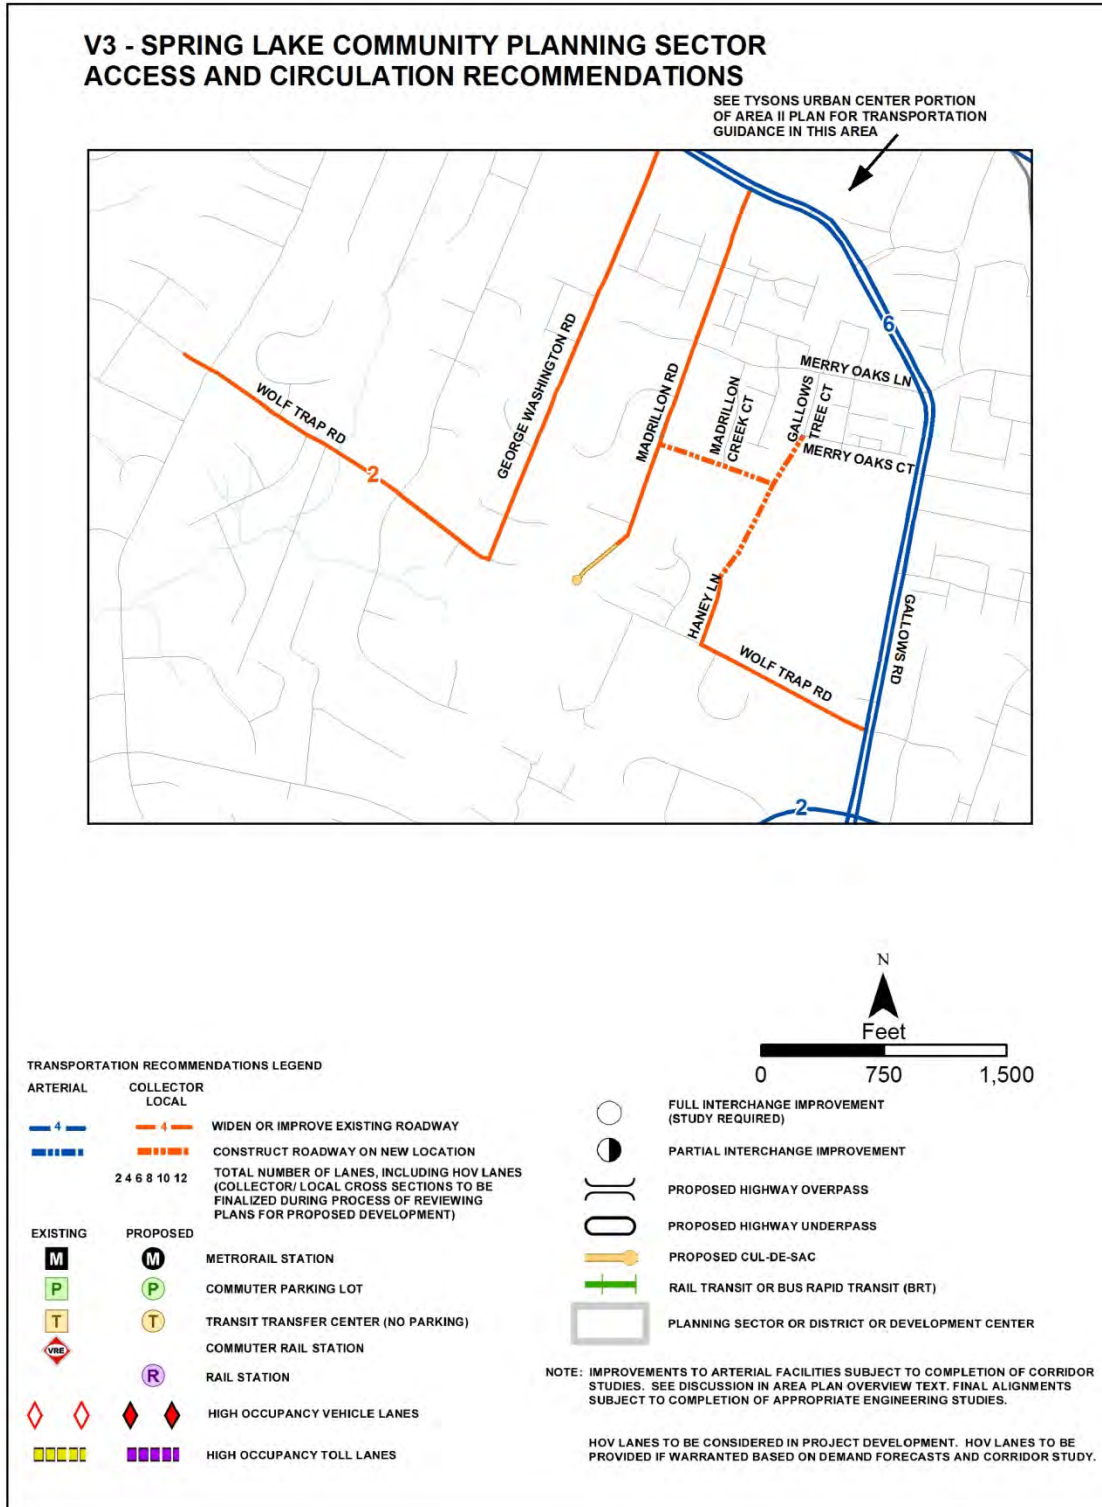

Parks and Recreation

Park and recreation recommendations for this sector are shown on Figure 28. The column "Park Classification" includes existing park facilities. The "Recommendations" column includes entries for both existing and proposed facilities. Prior to developing parkland, the Fairfax County Park Authority initiates a master planning process to determine the appropriate facilities

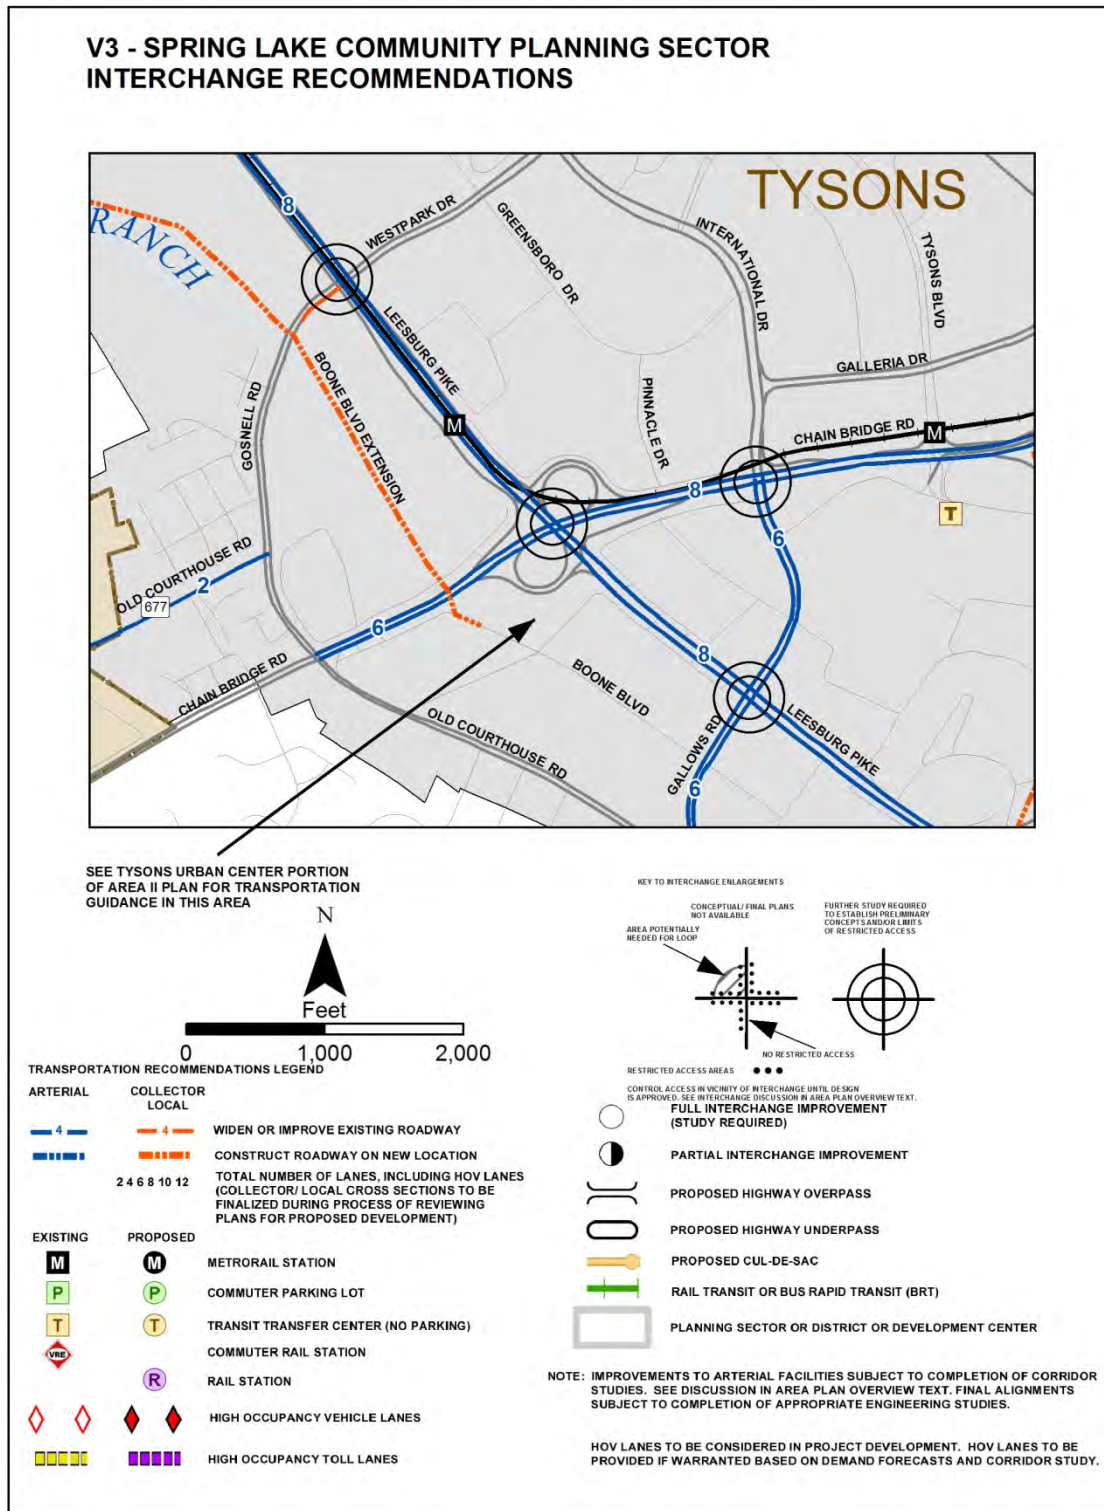

TRANSPORTATION RECOMMENDATIONS

 M1, V3, TYSONS AREA**

FIGURE 27

and design for that park. This process involves extensive citizen review and participation. If an existing park is listed but no recommendation appears on that line, it means the park has been developed in accordance with its master plan.

Trails and Bicycle Facilities

Trails planned for this sector are delineated on the 1":4,000' Countywide Trails Plan Map which is referenced as Figure 2 in the Transportation element of the Policy Plan and is available from the Department of Transportation. Trails in this sector are an integral part of the overall county system. While some of the segments have already been constructed, the Countywide Trails Plan Map portrays the ultimate system for the sector and the county at large. In addition, the map specifies a classification for each segment, which represents the desired ultimate function and surface type of the trail. Specific construction requirements are detailed in the Public Facilities Manual.

Bicycle Facilities for this sector are delineated on the 1":4000' Countywide Bicycle Network Map which is referenced as Figure 3 in the Transportation element of the Policy Plan and is available from the Department of Transportation.

FIGURE 28
PARKS AND RECREATION RECOMMENDATIONS
SECTOR V3

PARK CLASSIFICATION	RECOMMENDATIONS
NEIGHBORHOOD PARKS:	
Briarcliff Symphony Hills	Initiate a master planning process and develop existing parks in accordance with the approved plan. Additional Neighborhood Park facilities are not recommended in Low Density Residential Areas in the northwestern quadrant. Additional Neighborhood Park facilities should be provided in the eastern quadrant in conjunction with new development.
COMMUNITY PARKS:	
Foxstone Raglan Road	Initiate a master planning process and develop existing parks in accordance with the approved plan.
Waverly Wolf Trails Eudora	Develop in accordance with approved master plan. Upgrade existing athletic fields at school sites to meet the need for active recreation facilities.
DISTRICT PARKS:	This sector lies within the service area of Clarks Crossing Park.
COUNTYWIDE PARKS:	Acquire and preserve the major prehistoric archaeology site in this sector. Land dedication should be provided singularly, or in combination with other development or county purchase. Protect these heritage resources through all available means (as noted in land use recommendations).
Freedom Hill	
Wolf Trap Stream Valley	Ensure protection of EQC and public access to stream valley through dedication of land and/or donation of open space easements to FCPA for public park use.
REGIONAL PARKS:	
W&OD Railroad	All proposed new road crossings or widening of existing roads should be grade-separated (underpass or overpass). Wayside parks should be dedicated or purchased. Complete development in accordance with approved master plan.

V4 PINEY BRANCH COMMUNITY PLANNING SECTOR

CHARACTER

The Piney Branch Community Planning Sector is located west of the Town of Vienna and is generally bounded by the Dulles Airport Access Road and Dulles Toll Road (DAAR, Route 267), Chain Bridge Road (Route 123), the Difficult Run Stream Valley and Hunter Mill Road.

The planning sector primarily consists of single-family detached residential units with densities ranging from .5 dwelling units per acre to 2-3 dwelling units per acre. The lower densities are found closer to Difficult Run and Hunter Mill Road. Townhouses and garden-style multifamily residential units are present along the southern boundary of the planning sector, with community-serving commercial uses located at the intersection of Chain Bridge Road and Hunter Mill Road.

This planning sector contains heritage resources listed in the Fairfax County Inventory of Historic Sites. A list and map of these heritage resources are included in the Vienna Planning District Overview section, Figures 4 and 5. The Garde, Oakton School and Richard Lahey House are among the significant heritage resources in this planning sector. Additional historic sites in this planning sector are also included in the inventory.

CONCEPT FOR FUTURE DEVELOPMENT

The Concept for Future Development identifies the areas of the Piney Branch Planning Sector as Suburban Neighborhoods and Low Density Residential Areas.

RECOMMENDATIONS

Land Use

The Piney Branch sector is largely developed as stable residential neighborhoods. Infill development in these neighborhoods should be of a compatible use, type and intensity in accordance with the guidance provided by the Policy Plan under Land Use Objectives 8 and 14.

Where substantial parcel consolidation is specified, it is intended that such consolidations will provide for projects that function in a well-designed, efficient manner and provide for the development of unconsolidated parcels in conformance with the Area Plan.

Figure 29 indicates the geographic location of land use recommendations for this sector. Where recommendations are not shown on the General Locator Map, it is so noted.

1. To prevent strip commercial development along Chain Bridge Road south from the Town of Vienna and to define strictly commercial activity areas:
 - a. All future commercial uses and activity in this sector should be limited to the existing Oakton shopping center site and the adjacent land already zoned for commercial use.

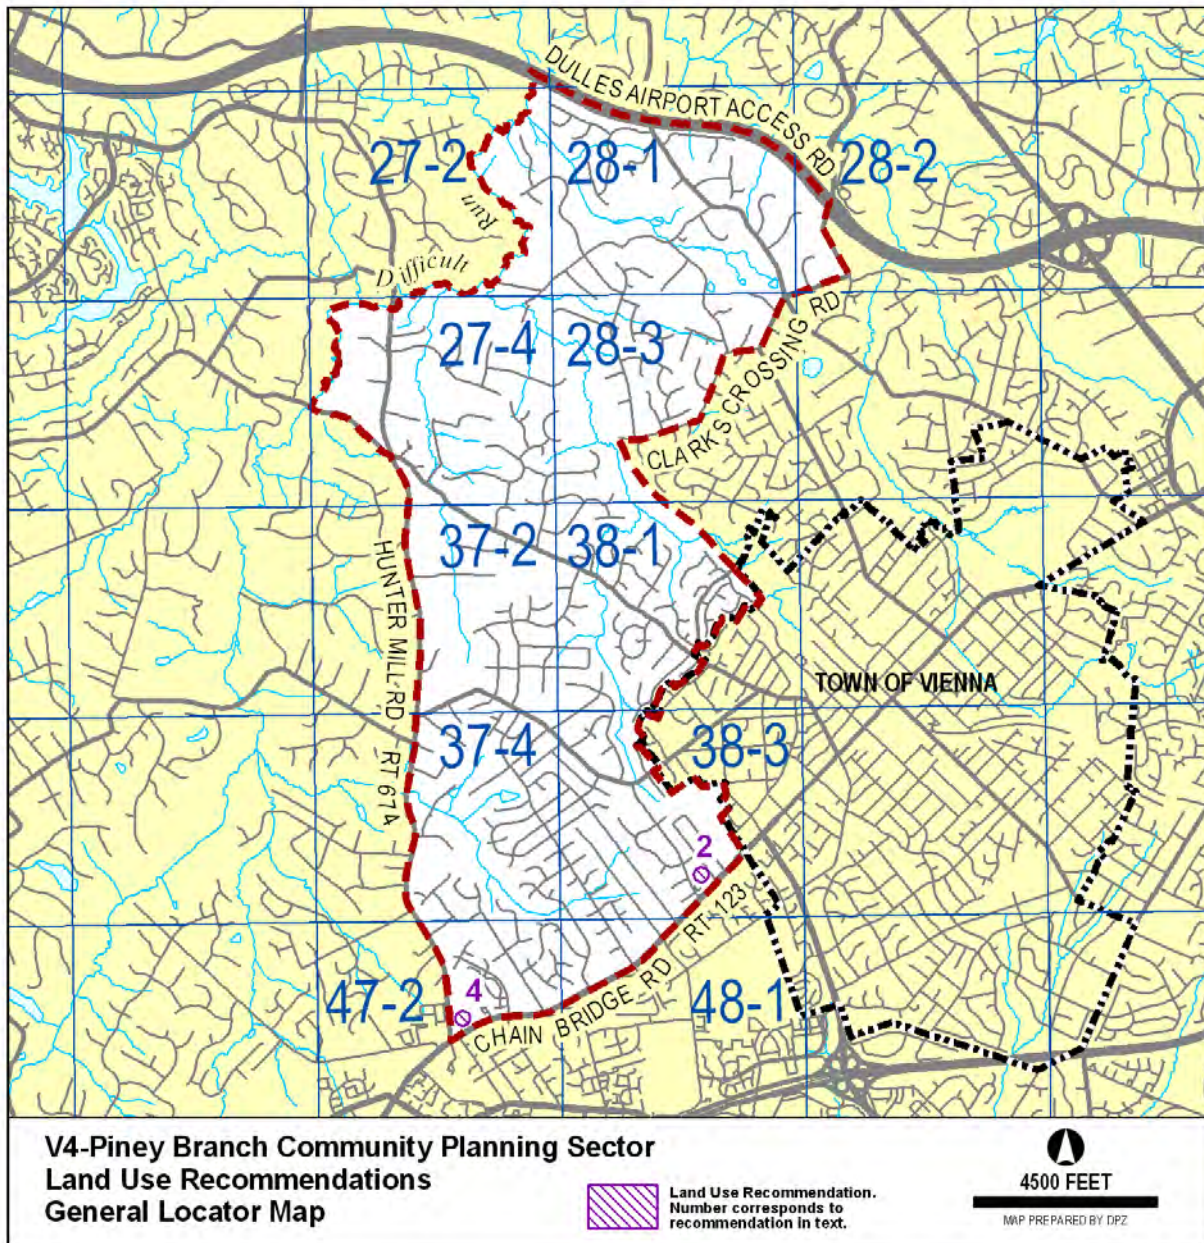

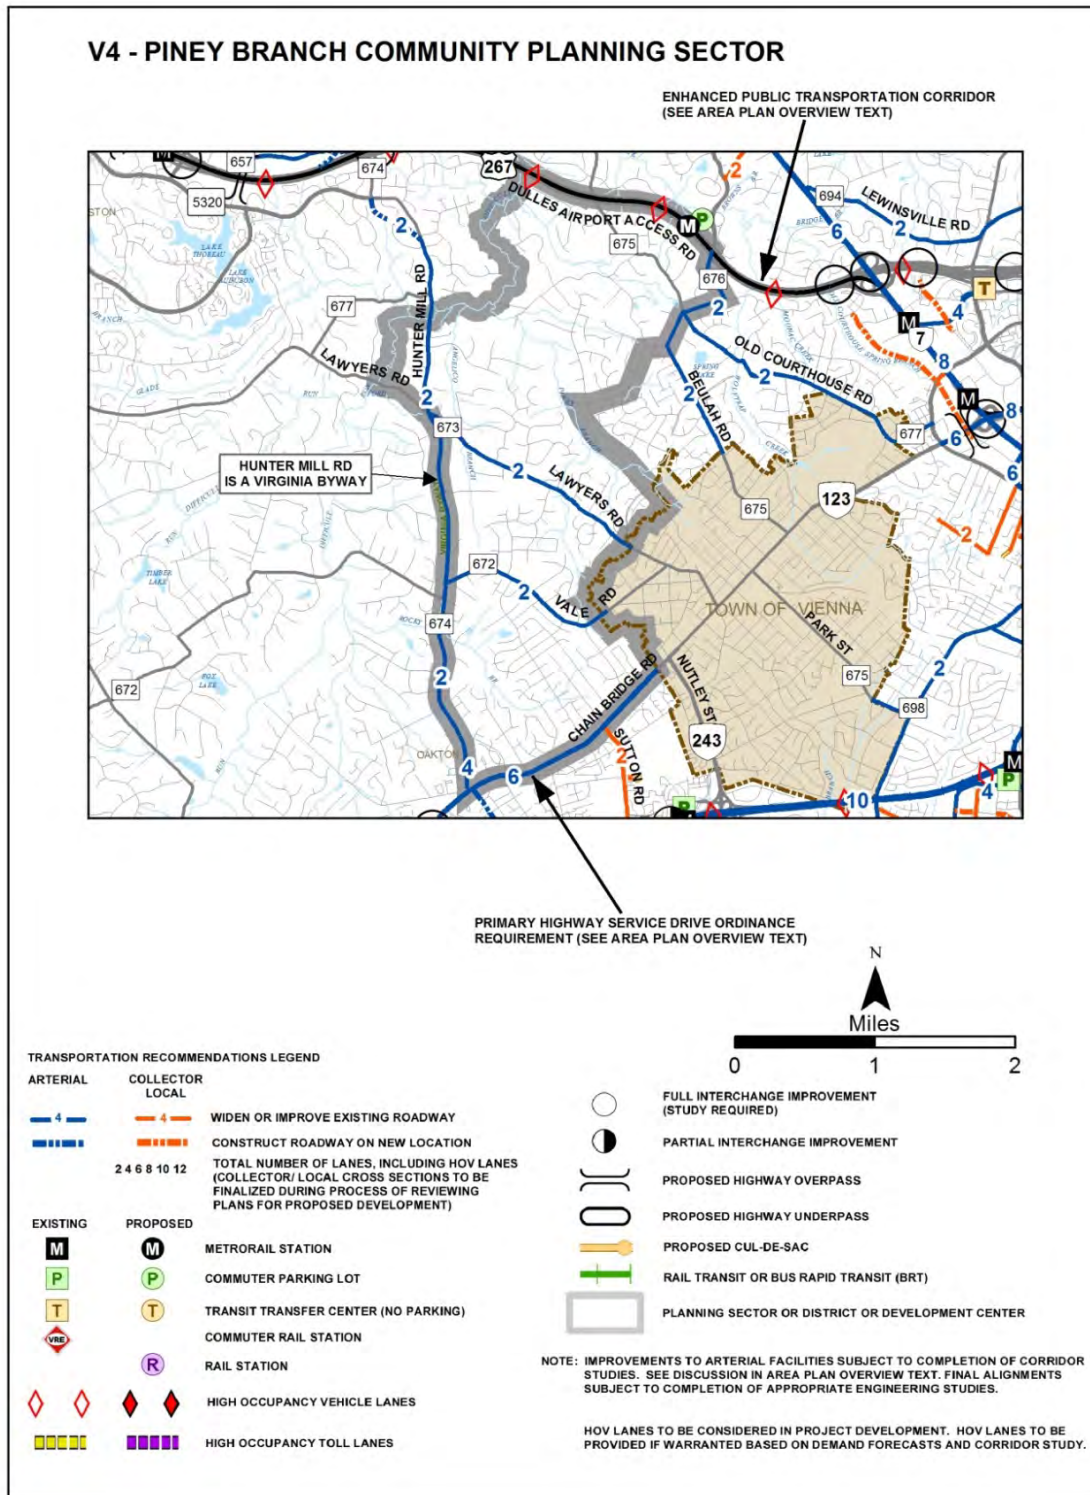

FIGURE 29

- b. The commercial area of Oakton located in the Piney Branch sector should be encouraged to continue to develop under a village concept and no further commercial rezoning in the area should be considered.
 - c. No additional strip commercial uses of any type should be allowed along Chain Bridge Road in this sector. [Not shown]
- 2. To protect existing stable neighborhoods through transitional residential uses along sections of Chain Bridge Road, the two parcels, east of Flint Hill Road and west of Glengyle Drive, fronting on the northwest side of Chain Bridge Road are planned for residential use at 5-8 dwelling units per acre.
- 3. To preserve the rural large lot and open space character of the northern part of this sector as well as to protect the critical environmental area adjacent to Difficult Run, Angelico Creek and Piney Branch:
 - a. The area northeast of the W&OD Railroad Regional Park and northwest of a line made by Clarks Crossing, Beulah Road and Trap Road is planned for residential use at .5-1 dwelling unit per acre as shown on the Plan map.
 - b. The area between Lawyers Road and the W&OD Railroad Regional Park northwest of the Carriage Hill subdivision is planned for residential use at .2-.5 dwelling unit per acre as shown on the Plan map.
 - c. The area north of Kemper Park, east of Hunter Mill Road, south of Lawyers Hill Road (south of Hunters Valley), and west of the school site is planned for .5-1 dwelling unit per acre, including all of Parcels 37-2((8))1 and 5.
 - d. The county should seek open space easements to preserve the rural large-lot open space character of this part of the sector. [Not shown]
- 4. Development and road improvements should be planned so that the over 200-year old oak tree on the east side of Hunter Mill Road north of Chain Bridge Road is preserved, unless the appropriate county authorities determine that, in light of the health and physical condition of the tree, preservation would endanger public safety or would otherwise be undesirable.

Transportation

Transportation recommendations for this sector are shown on Figure 30. In some instances, site-specific transportation recommendations are included in the land use recommendations section. The figures show access orientation, circulation plans, interchange impact areas and generalized locations of proposed transit facilities. The recommendations contained in the Area Plan text and maps, the Policy Plan and Transportation Plan map, policies and requirements in the Public Facilities Manual, the Zoning Ordinance, and other standards will be utilized in the evaluation of development proposals. Development proposals should also be evaluated against the Hunter Mill Road Traffic Calming Study (Northern Virginia Regional Commission, 2006), which provides both a traffic calming conceptual plan for Hunter Mill Road, as well as context sensitive roadway design techniques.

TRANSPORTATION RECOMMENDATIONS

FIGURE 30

Heritage Resources

Several known and potentially significant heritage resources have been identified in this sector. Large open space areas and older neighborhoods exist in this sector. Any development or ground disturbance in this sector, both on private and public land, should be preceded by heritage resource studies, and alternatives should be explored for the avoidance, preservation or recovery of significant heritage resources that are found. In those areas where significant heritage resources have been recorded, an effort should be made to preserve them. If preservation is not feasible, then, in accordance with countywide objectives and policies as cited in the Heritage Resources section of the Policy Plan, the threatened resource should be thoroughly recorded and in the case of archaeological resources, the artifacts recovered.

Parks and Recreation

Park and recreation recommendations for this sector are shown on Figure 31. The column "Park Classification" includes existing park facilities. The "Recommendations" column includes entries for both existing and proposed facilities. Prior to developing parkland, the Fairfax County Park Authority initiates a master planning process to determine the appropriate facilities and design for that park. This process involves extensive citizen review and participation. If an existing park is listed but no recommendation appears on that line, it means the park has been developed in accordance with its master plan.

Trails and Bicycle Facilities

Trails planned for this sector are delineated on the 1":4,000' Countywide Trails Plan Map which is referenced as Figure 2 in the Transportation element of the Policy Plan and is available from the Department of Transportation. Trails in this sector are an integral part of the overall county system. While some of the segments have already been constructed, the Countywide Trails Plan Map portrays the ultimate system for the sector and the county at large. In addition, the map specifies a classification for each segment, which represents the desired ultimate function and surface type of the trail. Specific construction requirements are detailed in the Public Facilities Manual.

Bicycle Facilities for this sector are delineated on the 1":4000' Countywide Bicycle Network Map which is referenced as Figure 3 in the Transportation element of the Policy Plan and is available from the Department of Transportation.

FIGURE 31
PARKS AND RECREATION RECOMMENDATIONS
SECTOR V4

PARK CLASSIFICATION	RECOMMENDATIONS
NEIGHBORHOOD PARKS:	
Lawyers Road	
Fox Hunters	Initiate a master planning process and develop in accordance with the approved plan. Additional neighborhood Park facilities are not recommended in the Low Density Residential Area. Additional neighborhood Park facilities in Suburban Neighborhoods should be provided in conjunction with new larger infill development.
COMMUNITY PARKS:	
Ashlawn Kemper	Develop in accordance with approved master plan. Consider acquiring the school site on Lawyers Road if it becomes available for development of active recreation facilities.
DISTRICT PARKS:	
Clarks Crossng	Complete development of Clarks Crossing Park in accordance with the master plan. This sector also lies within the service area of Nottoway and Oak Marr Parks.
COUNTYWIDE PARKS:	
Difficult Run Stream Valley	Preserve and protect sensitive ecological resources, and provide continuity of public use trails through dedication of land and/or open space easements to FCPA. Encourage donation of historic preservation easements on selected historic properties.
REGIONAL PARKS:	
W&OD Trail Meadowlark	Develop in accordance with the master plans. Develop a bicycle/pedestrian trail linking these two regional parks.

V5 NUTLEY COMMUNITY PLANNING SECTOR

CHARACTER

The Nutley Community Planning Sector is located west of the Town of Vienna and is generally bounded by Chain Bridge Road (Route 123) and Interstate 66 (I-66). The planning sector includes the northern portion of the Vienna Transit Station Area (TSA). Recommendations for the Vienna TSA can be found in a previous section of the Vienna Planning District text, following the Overview section.

A large portion of this planning sector is occupied by Oakton High School and Nottoway Park, which border the Vienna TSA on the north. The remainder of the planning sector, outside of the Vienna TSA, includes single-family detached residential units and townhouses. Low-intensity commercial uses are located in the northeastern portion of the planning sector, along Chain Bridge Road.

Hunter House, which is located in Nottoway Park, is a significant heritage resource listed in the Fairfax County Inventory of Historic Sites. A list and map of heritage resources are included in the Vienna Planning District Overview section, Figures 4 and 5.

CONCEPT FOR FUTURE DEVELOPMENT

The Concept for Future Development recommends the areas of Nutley Planning Sector develop as Suburban Neighborhoods.

RECOMMENDATIONS

Land Use

The Nutley Planning sector is largely developed as stable residential neighborhoods. Infill development in these neighborhoods should be of a compatible use, type and intensity in accordance with the guidance provided by the Policy Plan under Land Use Objectives 8 and 14.

Where substantial parcel consolidation is specified, it is intended that such consolidations will provide for projects that function in a well-designed, efficient manner and provides for the development of unconsolidated parcels in conformance with the Area Plan.

Figure 32 indicates the geographic location of land use recommendations for this sector. Where recommendations are not shown on the General Locator Map, it is so noted.

1. To prevent strip commercial development south along Chain Bridge Road from the Town of Vienna and to strictly define commercial activity areas, any additional commercial uses and activity in this sector should be limited to the Vienna Transit Station Area. Additional need for local serving shopping facilities should be met by small shopping facilities outside this sector. [Not shown]
2. Land bounded by Edgelea Woods, Oakton High School, Blake Lane and Edgelea Road is shown on the Plan map for residential use at 8-12 dwelling units per acre. However,

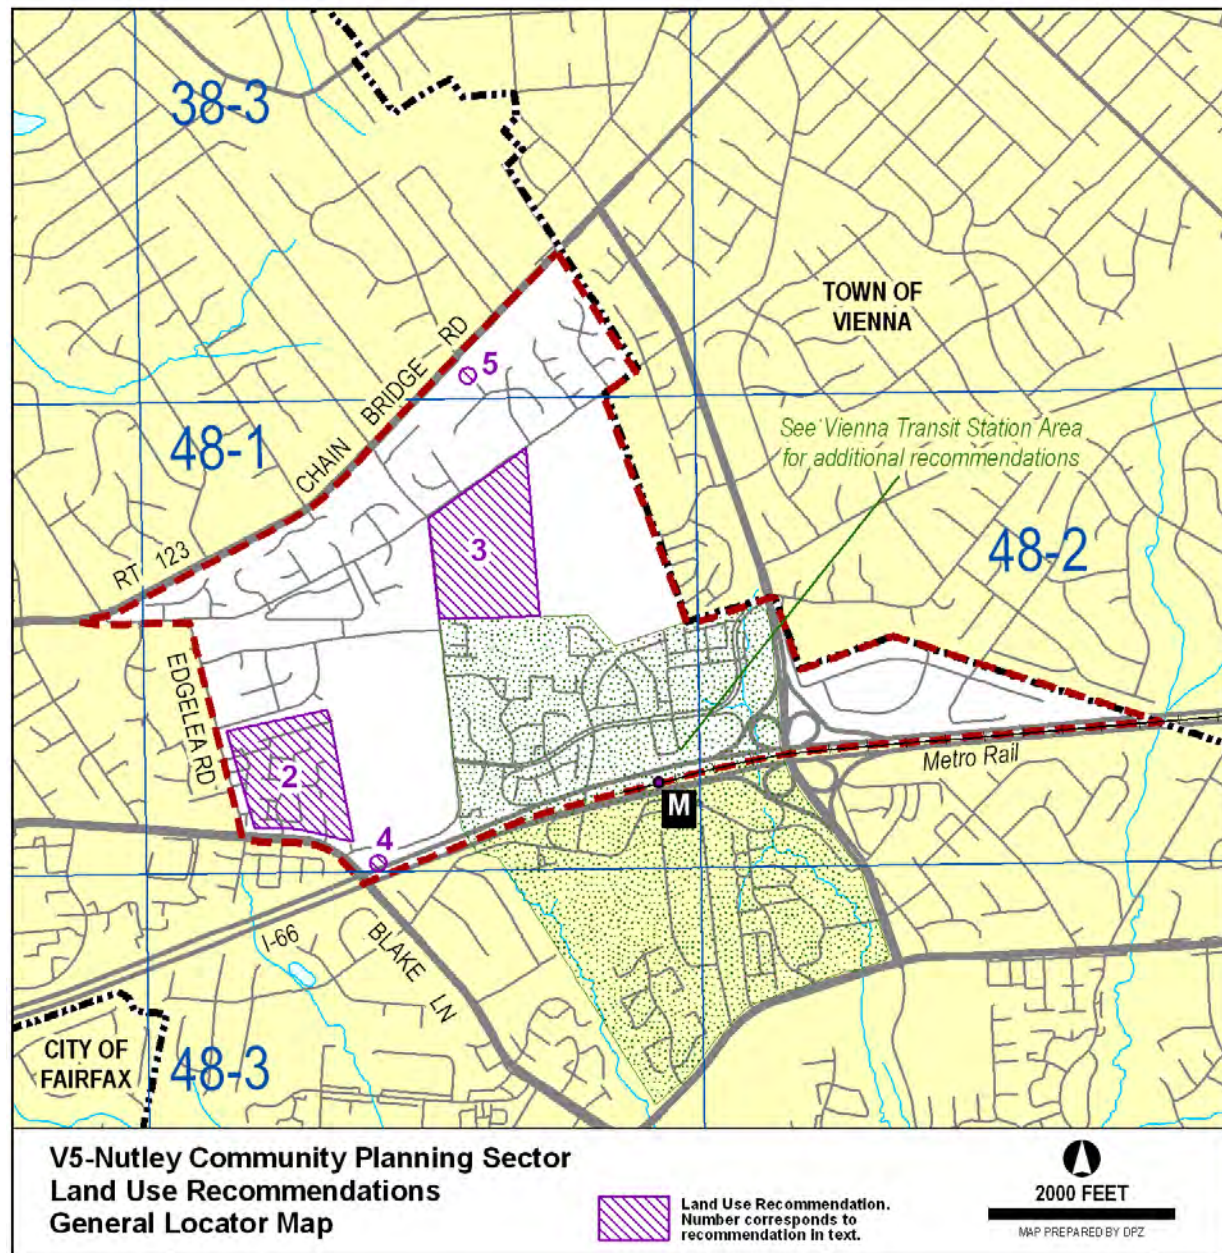

FIGURE 32

development of vacant land within this area should not exceed 10 units per acre to be compatible with the existing development.

3. The parcels bounded by Sutton Road, Courthouse Road, Nottoway Park, and Land Unit F of the Vienna Transit Station Area are planned for residential use at 2-3 dwelling units per acre. As an option, development for residential use at 4-5 dwelling units per acre may be appropriate if the parcels are fully consolidated and there is a single access point to Sutton Road.
4. The two parcels directly north of I-66 and bounded by Sutton Road and Blake Lane (Tax Map 48-1((1))142 and 143), are planned for residential use at 1-2 dwelling units per acre. These parcels, if consolidated, may also be appropriate for nonresidential uses at an intensity not to exceed .20 FAR, provided that adequate parking is provided, design and materials of any structure are compatible with residential uses to the west on Blake Lane, and safe access and appropriate landscaping are provided.
5. Tax Map parcels 38-3((1))28 and 32 are planned for residential use at 3 to 4 du/ac. Future infill development should not provide vehicular access to Whitecedar Court in order to ensure that traffic from Chain Bridge Road will not cut through the Vienna Oaks subdivision. Redevelopment should be designed to provide interparcel access to parcel 38-3((1))27 to the west, and if appropriate to parcel 38-3((1))33 to the east. In addition, future infill development should provide a pedestrian connection from Whitecedar Court to Chain Bridge Road.

Transportation

Transportation recommendations for this sector are shown on Figure 33. In some instances, site-specific transportation recommendations are included in the land use recommendations section. The figures show access orientation, circulation plans, interchange impact areas and generalized locations of proposed transit facilities. The recommendations contained in the Area Plan text and maps, the Policy Plan and Transportation Plan map, policies and requirements in the Public Facilities Manual, the Zoning Ordinance, and other standards will be utilized in the evaluation of development proposals.

Heritage Resources

Several known and potentially significant heritage resources have been identified in this sector. Large open space areas and older neighborhoods exist in this sector. Any development or ground disturbance in this sector, both on private and public land, should be preceded by heritage resource studies, and alternatives should be explored for the avoidance, preservation or recovery of significant heritage resources that are found. In those areas where significant heritage resources have been recorded, an effort should be made to preserve them. If preservation is not feasible, then, in accordance with countywide objectives and policies as cited in the Heritage Resources section of the Policy Plan, the threatened resource should be thoroughly recorded and in the case of archaeological resources, the artifacts recovered.

Parks and Recreation

Park and recreation recommendations for this sector are shown on Figure 34. The column "Park Classification" includes existing park facilities. The "Recommendations" column includes

entries for both existing and proposed facilities. Prior to developing parkland, the Fairfax County Park Authority initiates a master planning process to determine the appropriate facilities and design for that park. This process involves extensive citizen review and participation. If an existing park is listed but no recommendation appears on that line, it means the park has been developed in accordance with its master plan.

Trails and Bicycle Facilities

Trails planned for this sector are delineated on the 1":4,000' Countywide Trails Plan Map which is referenced as Figure 2 in the Transportation element of the Policy Plan and is available from the Department of Transportation. Trails in this sector are an integral part of the overall county system. While some of the segments have already been constructed, the Countywide Trails Plan Map portrays the ultimate system for the sector and the county at large. In addition, the map specifies a classification for each segment, which represents the desired ultimate function and surface type of the trail. Specific construction requirements are detailed in the Public Facilities Manual.

Bicycle Facilities for this sector are delineated on the 1":4000' Countywide Bicycle Network Map which is referenced as Figure 3 in the Transportation element of the Policy Plan and is available from the Department of Transportation.

V6 VIENNA COMMUNITY PLANNING SECTOR

CHARACTER

The Vienna Community Planning Sector encompasses the Town of Vienna. The Town of Vienna has jurisdiction over its own planning functions. Consult the Town of Vienna Comprehensive Plan for recommendations within this area.

The character of the town is shaped by the large amount of land in single-family detached residential units. Only a very small number of medium- to high-density residential units exist in the town. The majority of commercial activity is concentrated along Maple Avenue (Route 123) in a continuous strip. An additional community-serving retail center is located in the southeast section of the town, at the intersection of Park Street and Cedar Lane. Industrial use is primarily in the Vienna Industrial Park and adjacent to the Washington and Old Dominion (W&OD) Railroad Regional Park.

RECOMMENDATIONS

Land Use

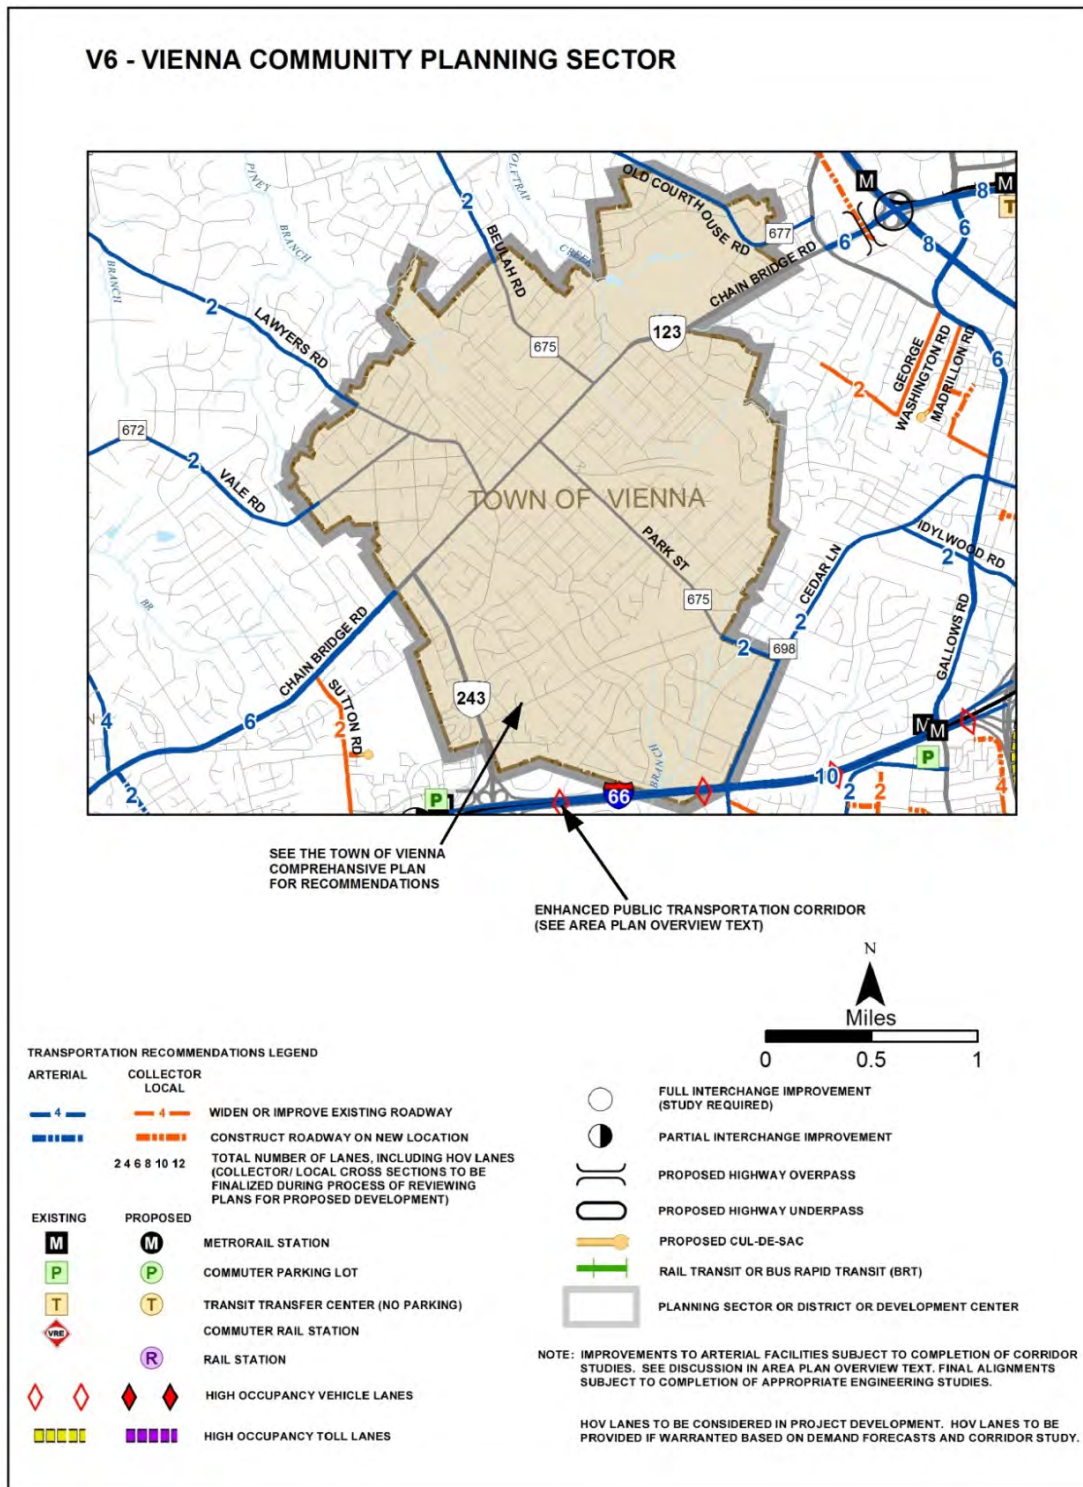

1. The land use and density plans of the Town of Vienna apply to this sector.
2. Fairfax County should plan land use and density in areas adjacent to Vienna to be compatible with the plans and goals established by Vienna for itself and the needs of the county.

Transportation

Transportation recommendations for this sector are shown on Figure 35. In some instances, site specific transportation recommendations are included in the land use recommendations section. The figures show access orientation, circulation plans, interchange impact areas and generalized locations of proposed transit facilities. The recommendations contained in the Area Plan text and maps, the Policy Plan and Transportation Plan map, policies and requirements in the Public Facilities Manual, the Zoning Ordinance, and other standards will be utilized in the evaluation of development proposals.

Heritage Resources

Although this sector is largely developed, there remain small undeveloped areas that should be surveyed for significant heritage resources and appropriate preservation actions should be taken. Any development or ground disturbance in this sector, both on private and public land, should be preceded by heritage resource studies, and alternatives should be explored for the avoidance, preservation or recovery of significant heritage resources that are found. In those areas where significant heritage resources have been recorded, an effort should be made to preserve them. If preservation is not feasible, then, in accordance with countywide objectives and policies as cited in the Heritage Resources section of the Policy Plan, the threatened resource should be thoroughly recorded and in the case of archaeological resources, the artifacts recovered.

TRANSPORTATION RECOMMENDATIONS

FIGURE 35

Parks and Recreation

Park and recreation recommendations for this sector are shown on Figure 36. The column "Park Classification" includes existing park facilities. The "Recommendations" column includes entries for both existing and proposed facilities. Prior to developing parkland, the Fairfax County Park Authority initiates a master planning process to determine the appropriate facilities and design for that park. This process involves extensive citizen review and participation. If an existing park is listed but no recommendation appears on that line, it means the park has been developed in accordance with its master plan.
