

FAIRFAX PLANNING DISTRICT OVERVIEW

The Fairfax Planning District is centrally located in Fairfax County and surrounds the City of Fairfax. The planning district is approximately 13,000 acres in size, which encompasses approximately five percent of the county. Many of the major roads in the county are tangent to or traverse the district, including Interstate 66 (I-66), Arlington Boulevard (Route 50), Chain Bridge Road/Ox Road (Route 123), Lee Highway (Route 29), Little River Turnpike (Route 236), Braddock Road, Hunter Mill Road and Gallows Road (see Figure 1).

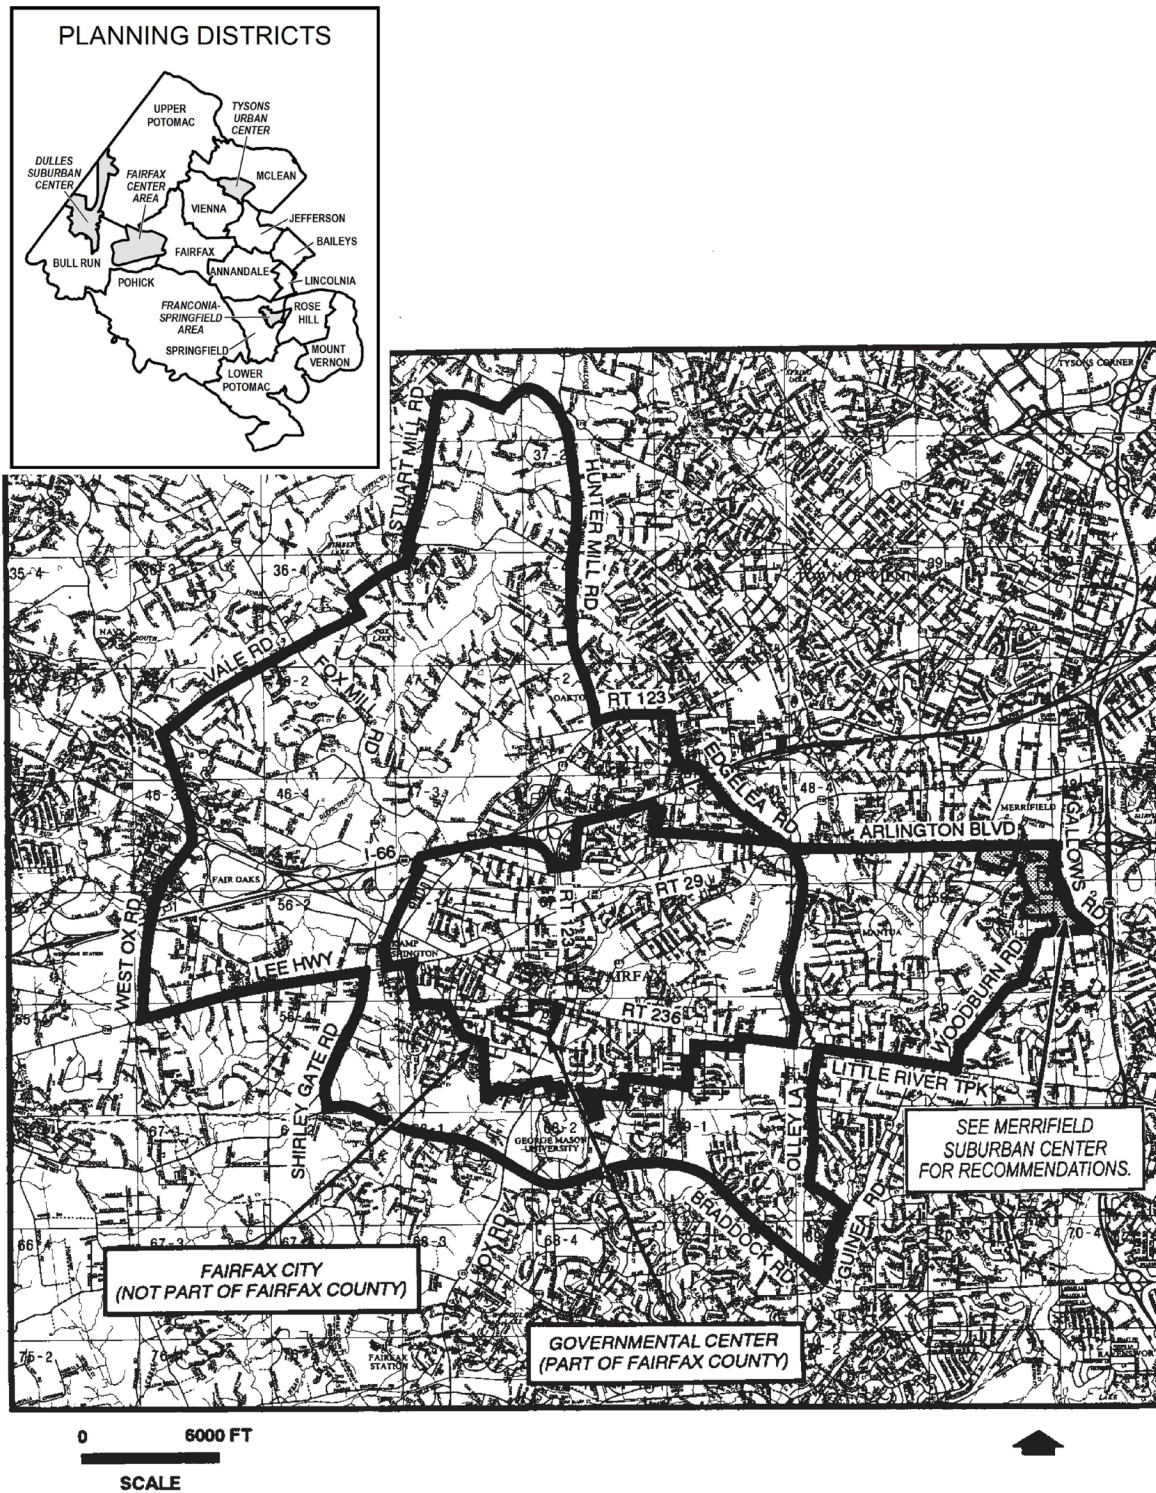

The Fairfax Planning District contains several mixed-use centers in part or whole. A portion of the Fairfax Center Area Suburban Center is located within the western section of the Fairfax Planning District; plan recommendations for the Fairfax Center Area Suburban Center are included in the Area III volume of the Comprehensive Plan, Fairfax Center Area. A portion of the Merrifield Suburban Center is located within the eastern section of the district; plan recommendations for the Merrifield Suburban Center are included in the Area I volume of the Comprehensive Plan, Merrifield Suburban Center. The Flint Hill Suburban Center is located entirely within the Fairfax Planning District, north of the intersection of Chain Bridge Road and I-66. The district also includes approximately 50 acres of land surrounded by the City of Fairfax (F6: County Government Center Community Planning Sector) on which the Fairfax County Courthouse and Public Safety Center are located.

The predominant character of the Fairfax Planning District is low density residential development. Most of the low density residential development was built in the 1950s through 1970s. The northwestern portion of the planning district, which lies in the Difficult Run Watershed, is developed with low density residential neighborhoods or is environmental conservation (open space) use. Townhouse and multifamily residential uses are located north and south of I-66 near the Flint Hill Suburban Center and northeast of the City of Fairfax. In the vicinity of Woodburn Road and Gallows Road there is a townhouse and multifamily development adjacent to the Merrifield Suburban Center.

George Mason University is a major institutional use located in the southern portion of the planning district. The university complex includes the Patriot Center, which is a regional sports and entertainment facility. George Mason University owns a large vacant tract in this district, which is under state control for planning purposes.

There is a small area in the southwestern section of the planning district (F7 George Mason Community Planning Sector) that is in the Occoquan Watershed. The Comprehensive Plan for the area within the Fairfax Planning District located within the watershed of the Occoquan Reservoir provides for a rural character by maintaining a very low density development recommendation of .1-.2 dwelling units per acre or five- to ten-acre lots. This very low density pattern provides reasonable use of the property and serves as a land use Best Management Practice (BMP). When used in conjunction with stormwater management facilities (structural BMPs), the water that ultimately enters the Occoquan Reservoir is managed in a way that positively contributing to the quality of water in the reservoir. The reservoir is a major source of drinking water for the county and other jurisdictions, and the reservoir is an environmentally important feature and source of recreation for the public.

In addition to water quality benefits, very low density residential development within the Occoquan Watershed preserves large lot development opportunities and assures compatibility

FAIRFAX PLANNING DISTRICT

FIGURE 1

with the character of the existing residential development. More importantly, it allows the county to concentrate limited public resources for public facilities, transportation and public utilities in those areas of the county planned for higher intensity development. Public revenue may be more economically and efficiently used by targeting these resources to planned mixed-use centers that are expected to provide for economic development and affordable housing opportunities in accordance with the Policy Plan and Concept for Future Development.

The county has adopted a sewer service area map, which defines areas where public sewer is planned to be permitted. Land in the Fairfax Planning District in the Occoquan Watershed is not within the approved sewer service area nor are some portions of the Difficult Run Watershed that are planned for low density residential use. These areas are planned for and generally developed with uses which do not require public service and may be developed in residential densities or in nonresidential uses which do not require public sewer service.

CONCEPT FOR FUTURE DEVELOPMENT

The planning guidance provided by the Concept for Future Development is one of the principal elements used in formulating Area Plan recommendations. The Concept and its associated land use guidance recommend the predominant use and character envisioned for land areas within each planning district although within the Planning District, there may be land areas planned for a distinctly different land use than that envisioned by the Concept.

In the context of the Policy Plan, the majority of the Fairfax Planning District has been recommended as Suburban Neighborhoods. The Flint Hill Suburban Center (Sector F3) incorporates a relatively small area adjacent to the intersection of I-66 and Route 123 on the northern boundary of Fairfax City. A small portion of the Merrifield Suburban Center (Sector F2) is located near the intersection of Arlington Boulevard and Gallows Road in the eastern part of the District. A Large Institutional Land Area has been identified for George Mason University (Sector F7).

Suburban Centers are defined as mixed-use areas where employment use predominates. Suburban Neighborhoods emphasize a residential character and suggest development guidelines that will help maintain this character and inhibit potentially incompatible land uses or intensities of use. Neighborhood stability is further promoted through sound planning principles addressing appropriate transitions between adjoining land uses, access control, environmental protection and other appropriate public facility and transportation guidelines.

MAJOR OBJECTIVES

Planning objectives in the Fairfax Planning District are the following:

- Preserve stable residential areas, including those older neighborhoods within this Planning District through infill and new development of a compatible character, use and intensity;
- Limit commercial encroachment into established residential neighborhoods and by defining a clear "edge" within transition areas between stable commercial and residential areas;

- Provide pedestrian and bicycle facilities to support a walkable, bikeable, and transit supportive community with access to and from residential and employment areas to retail areas;
- Ensure compatibility between any future expansion of major institutional uses, such as George Mason University and the Fairfax Hospital complex, and the interests of the surrounding community;
- Encourage residential and ancillary retail uses in the Flint Hill Suburban Center to help create a mixture of uses where the predominant development is for employment use. Also, encourage added amenities, such as plazas, fountains, and outdoor sitting areas, within existing development;
- Protect environmental resources associated with all stream valleys;
- Provide parks, open space and recreation facilities; and
- Identify, preserve and promote awareness of heritage resources through research, survey and community involvement.

DISTRICT-WIDE RECOMMENDATIONS

Transportation

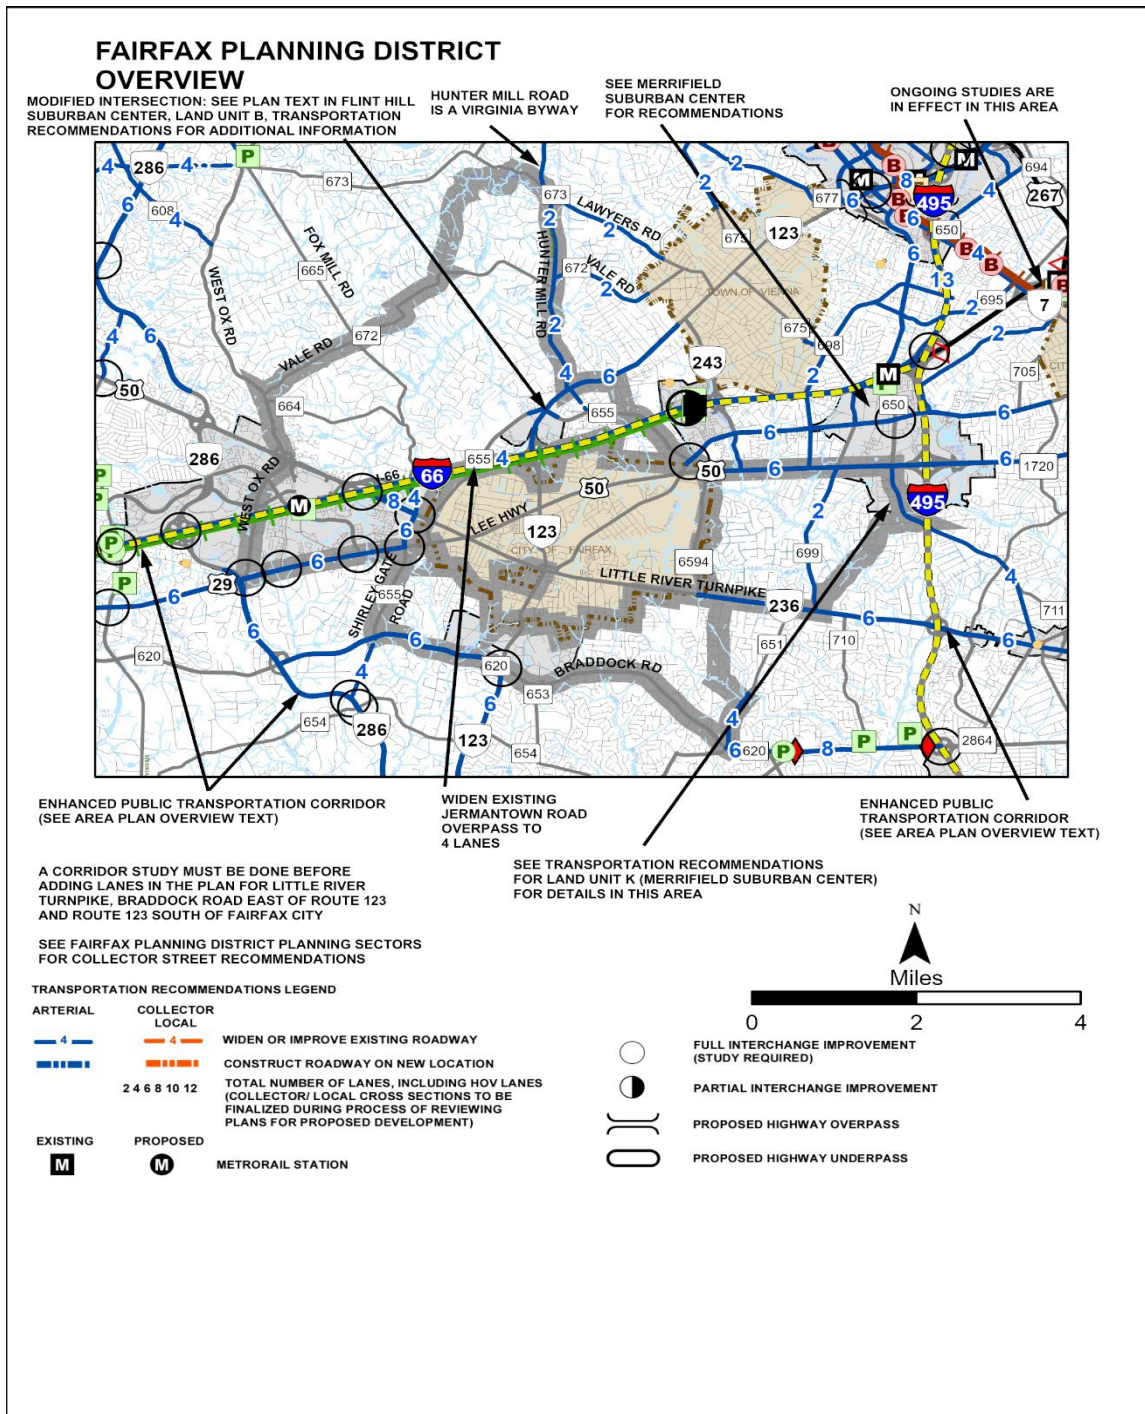

Travel within and through the Fairfax Planning District is affected by land uses and transportation facilities in adjacent districts, as well as throughout the Northern Virginia region. Therefore, the transportation network affecting the District is comprised of several elements, many of which relate to more extensive countywide facilities, services, and policies. The arterial and major collector roadways affecting the District are shown on Figure 2. Other countywide Transportation elements are also depicted.

Within the discussion for each sector of the planning district, a sector map depicting the Transportation Plan recommendations in that sector is provided. More detail is provided on these sector maps than on the planning district map. The additional detail may relate to more local transportation issues that are difficult to present at the planning district scale. In some cases, such as interchange areas, a portion of the sector map has been enlarged so that the transportation recommendations are clearly identified. These enlargements of the sectors may also include guidance regarding the provision of access to selected land areas.

Braddock Road from Guinea Road to Ox Road was widened to four lanes in 1991. There are few, if any, opportunities to add highway capacity on this stretch of Braddock Road. A Corridor Study must be done before additional lanes can be considered. This study should explore not only alternate routes, but also additional transit services and carpooling incentives.

Community and neighborhood-sized commuter parking facilities are needed along Braddock Road. Park-and-ride lots could be built for commuters, or shared parking arrangements could be made with churches, parks, and other uses. Provisions need to be made for safe pedestrian and bicyclist access between bus stops, park-and-ride lots, and nearby developments.

Hunter Mill Road from Chain Bridge Road to Baron Cameron Avenue is a 7.2 mile roadway that is designated a Virginia Byway. To preserve the road's scenic and historic

COUNTYWIDE TRANSPORTATION RECOMMENDATIONS **FIGURE 2**
FAIRFAX PLANNING DISTRICT
(SEE SECTOR MAPS FOR DETAILED TRANSPORTATION RECOMMENDATIONS)

character, planning efforts should focus on innovative ways of dealing with traffic volumes. The Hunter Mill Road Traffic Calming Study, sponsored by the Northern Virginia Regional Commission (NVRC) and completed in 2006, provides both a traffic calming conceptual plan for Hunter Mill Road, as well as context sensitive roadway design techniques.

The I-66 travel corridor is an Enhanced Public Transportation Corridor, with a planned Metrorail line. The provision of a rail station between the existing Vienna-Fairfax-GMU Metro station and the easternmost station in the Fairfax Center area may be necessary in order to ensure the viability of high quality Metrorail service in this corridor. To allow for preservation of land for a Metro station in this area, an enhanced corridor study should be undertaken that will consider the requirements of Metrorail service in the entire I-66 corridor, identify the need for stations west of Vienna, and locate potential sites for rail stations. Site recommendations should be consistent with the policy of preserving low density residential land use in the headwaters of the Difficult Run.

Assisted Housing

Assisted Housing in the Fairfax Planning District includes housing constructed and/or managed under programs which limit the amount of rent charged and the eligibility of occupants based on income. These limits are a condition for the provision of financial assistance from federal, state, or local sources. Assisted Housing includes units provided under the affordable dwelling unit and workforce dwelling unit programs, as well as other federal, state and local programs. In many cases, the assisted housing units represent only a portion of a larger development. Some programs have time limits, and those units would no longer be considered “assisted” after income eligibility and rent limitations have been removed. For an inventory of assisted housing programs administered by the Fairfax County Department of Housing and Community Development (DHCD) on behalf of the Fairfax County Redevelopment and Housing Authority, please contact the DHCD.

Environment

The dominant environmental feature of the Fairfax Planning District is the Difficult Run Environmental Quality Corridor. The two main branches of the Difficult Run meet in the far northern corner of Community Planning Sector F4, Fox Lake. Headwaters occur north and west of Jermantown Road and in the I-66 area. Building sites in the Difficult Run headwaters are severely constrained by environmental factors, including steep slopes, poor soils and wetlands. Like portions of the Pohick, Lower Potomac, Upper Potomac and Bull Run Planning Districts, this area is important for the preservation of wildlife habitat in Fairfax County.

Environmentally sensitive lands are also found in the southwestern portion of this district. This area comprises headwaters for Popes Head Creek watershed, which flows into the Occoquan Reservoir. Portions of this watershed have been developed for a long time. Stormwater management Best Management Practices (BMPs) are required for the lands within the Occoquan Reservoir water supply watershed. These are detailed in the Public Facilities Manual.

Older, developed portions of the county often have fair to poor surface run-off water quality. This is due primarily to nonpoint source pollution in the form of stormwater runoff which contains high levels of fertilizers, pesticides, sediment, and hydrocarbons. Portions of the Fairfax Planning District have benefited to a certain extent from state-of-the-art water quality control practices, BMPs, instituted under the Occoquan watershed protection initiatives. However, these controls

apply only to a small portion of the Fairfax Planning District. The challenge is to implement controls in built up areas.

High water quality should continue to be promoted through land use and structural controls in order to comply with the spirit of the Chesapeake Bay Preservation Act. The following guidelines are suggested to achieve this objective:

- Maintain very low density development in the portions of the District that are environmentally constrained and drain into the Difficult Run and the Occoquan Reservoir;
- Create an extended EQC system to provide protection to areas that constitute the Difficult Run and Popes Head Creek headwaters. The EQC system includes areas of significant habitat in addition to stream valley lands;
- Provide for the regional stormwater management ponds according to the Regional Stormwater Management Plan. Discourage the use of on-site stormwater management techniques in lieu of a regional alternative. In headwaters areas with suitable soils, infiltration techniques may be appropriate; and
- Encourage cluster development at planned densities and low development densities in the stream valley headwaters.

Extensive EQCs are found in this district in association with the Difficult Run and Popes Head Creek. The Difficult Run Stream Valley has been designated an area of critical environmental concern by the Commonwealth. The entire watershed has been identified as a significant environmental resource by the Board of Supervisors under the county's Adopt-A-Stream Program. Many initiatives are underway to reclaim and preserve this watershed. This district includes a large part of the Difficult Run wildlife habitat. Also, the southwestern portion of this district drains into the Occoquan Reservoir. Only a small portion of this area is subject to land use controls that maintain water quality. The undeveloped sections of Fairfax Planning District that are severely constrained by environmental factors, including steep slopes, poor soils, or significant areas of vegetation should be maintained as natural resource/wildlife areas.

The headwaters of several major watersheds, Accotink Creek, Pohick Creek, Difficult Run and Popes Head Creek, are environmentally sensitive areas located in the Fairfax Planning District. The floodplains and parks associated with these creeks and their tributaries form the basis for the environmental quality network in this Planning District. The protection of these stream valleys, wetlands and their associated wildlife habitat is essential.

Heritage Resources

The Fairfax Planning District contains both known and potential heritage resources. A list of those heritage resources included in Fairfax County's Inventory of Historic Sites is shown on Figure 3, and a map of those resources is shown on Figure 4. The inventory is open-ended and

FIGURE 3

V Virginia Landmarks Register

H Historic Overlay District

¹Site is also located in Vienna and Upper Potomac Planning Districts

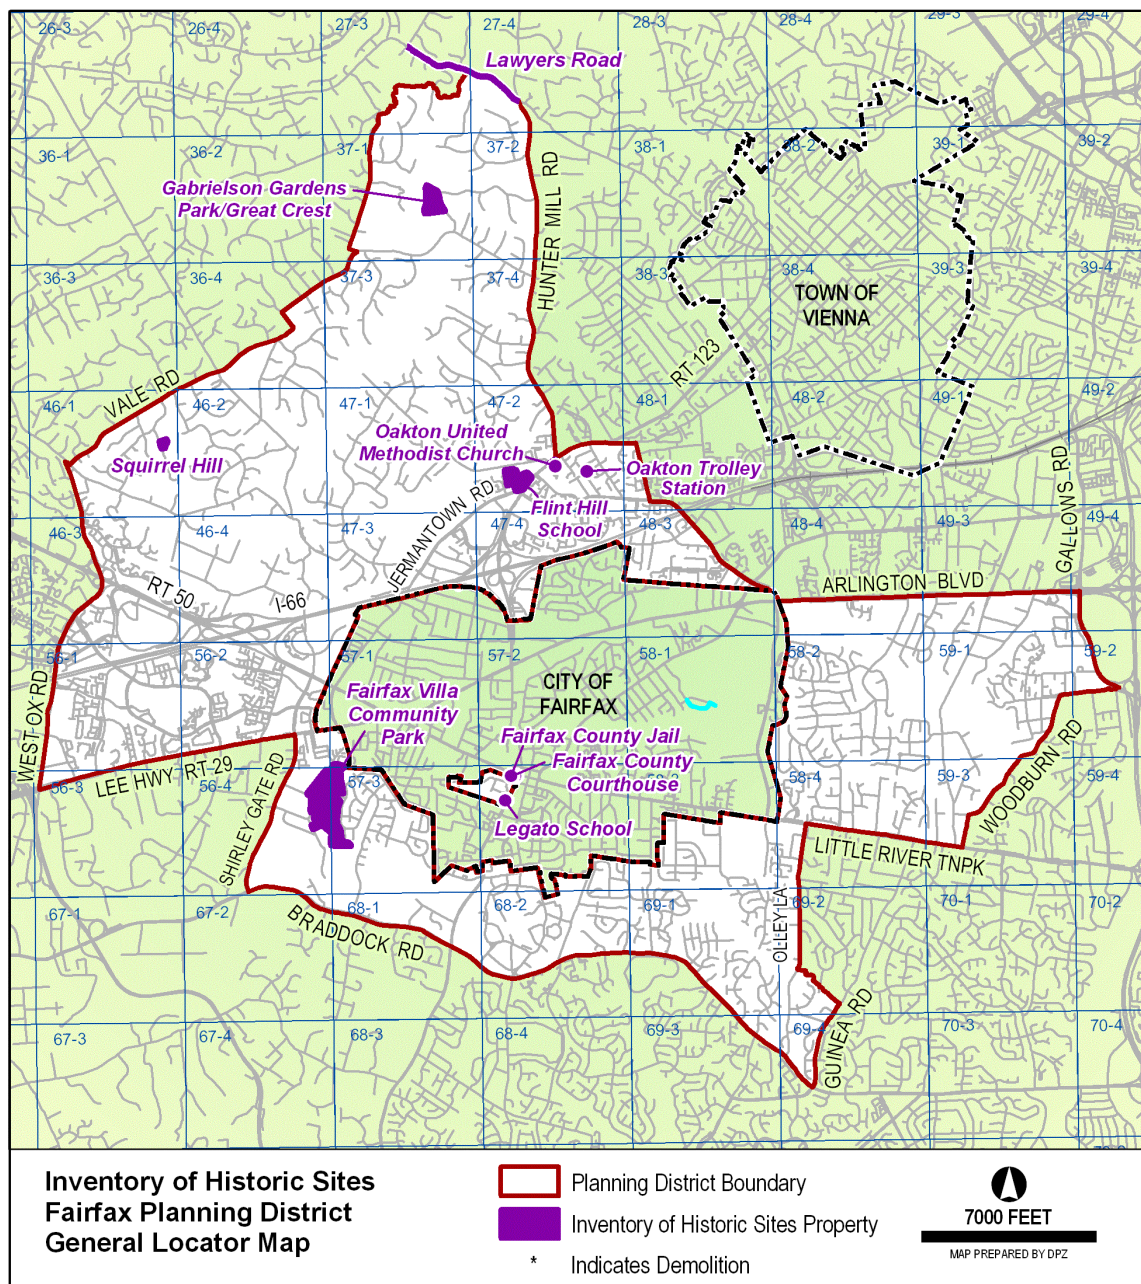

FIGURE 4

continues to grow. For information about these and other historic sites, consult the Fairfax County Department of Planning and Zoning. Identified heritage resources include:

- Fairfax County Courthouse and Jail – Built in 1799, this modified town hall type courthouse was the prototype for other Virginia courthouses. The folk Victorian jail was built c. 1885.
- Oakton Trolley Station – This building is the last remaining station on an electric trolley line from Washington D.C. to Fairfax Courthouse which ceased operations in 1936.

Large portions of the Fairfax Planning District have not been surveyed to determine the presence or absence of heritage resources. These areas should be examined before development is committed and appropriate action taken to record, preserve and/or recover significant heritage resources.

There are known and potential heritage resources located along the 7.2-mile length of Hunter Mill Road, a portion of which lies within this Planning District. Such resources include sites or structures that are evidence of Native American occupation, pre-Revolutionary and Civil War activities, and the county's agrarian past. Actions to document these heritage resources, and to protect and preserve those that are determined by the county to be of historic or archaeological significance are underway and should be encouraged. Hunter Mill Road has been determined to be eligible for listing in the Virginia Landmarks Register and the National Register of Historic Places. The determination of eligibility is the first step in the process for being listed on the Virginia Landmarks and/or the National Register of Historic Places. Hunter Mill Road has also been designated as a Virginia Byway.

Other heritage resources including those protected by Historic Overlay Districts, or listed on the National Register of Historic Places or Virginia Landmarks Register, may be identified in the text and recommendations section.

The Fairfax County Inventory of Historic Sites, the National Register of Historic Places and the Virginia Landmarks Register, and the county's Historic Overlay Districts promote the recognition of sites with historic, architectural and archaeological significance. Designation confers public recognition and can offer incentives for preservation to the property owner.

The county Inventory of Historic Sites includes properties which meet certain eligibility criteria and are officially designated by the county's History Commission. In addition to historic, architectural or archaeological significance, property that serves as a focus of community identity and pride may also be recognized. The benefits of designation include public recognition of the structure's significance and enhanced support for preservation. Owners of properties included in the Inventory may meet with the county's Architectural Review Board on a voluntary basis to review proposed changes to their properties. Project review and approval by the county's Architectural Review Board may be required in accordance with the guidance provided by the Policy Plan under Land Use Appendix 9 Residential Development Criteria 8 Heritage Resources.

The Virginia Landmarks Register and the National Register of Historic Places also officially recognize properties meeting specific criteria. Like the county Inventory, benefits of designation include public recognition and enhanced support for preservation. In addition, projects that are funded or sanctioned by federal government agencies may require review to determine if they will

have any effect on properties listed in or eligible for listing in the National Register for Historic Places. Alternatives must be explored to avoid or reduce harm to the historic properties.

The county's Historic Overlay District is a zoning tool used to regulate proposed new construction and changes to existing structures in areas containing heritage resources to ensure compatibility with the resources. Site design, facades, demolition, and building materials must be reviewed and approved by the county's Architectural Review Board.

In those areas where significant heritage resources have been recorded, an effort should be made to preserve them for the benefit of present and future generations. If preservation is not feasible then the threatened resources should be thoroughly recorded and, in the case of archaeological resources, the data recovered in accordance with countywide policies.

Prior to any zoning action, heritage resource staff from the Department of Planning and Zoning should be consulted as to what architectural surveys are necessary to document any on-site cultural resources. Archaeological staff from the Park Authority should be consulted to develop a scope of work for any on-site archaeological surveys prior to any development or ground disturbing activity. Should architectural or archaeological resources be discovered that are potentially eligible for inclusion in the National Register, further survey and testing should occur to evaluate these resources as to their eligibility. If such resources are found to be eligible, mitigation measures should be developed that may include avoidance, documentation, data recovery excavation and interpretation.

Public Facilities

Existing public facilities located within the Fairfax Planning District and those for which a future need has already been identified are included on Figure 5. Major expansions of existing facilities (with the exception of federal or state facilities) or uses of land that are distinctly different than the use of the public facility must be considered by the county Planning Commission through provisions outlined in Section 15.2-2232 of the Code of Virginia. For these existing facilities minor expansions, which are in keeping with the character of the facility, may be considered in conformance with the Plan.

A number of public facilities are identified as future needs in this Planning District. These projects are included for informational purposes and in most cases will require a 2232 Review public hearing before the Planning Commission prior to being established. Those facilities for which a specific location for future construction has been identified are also listed in the sector recommendations and may be considered a feature of the Comprehensive Plan upon review by the Planning Director and concurrence by the Planning Commission. If such feature shown determination is made, these projects will not require a future 2232 Review public hearing. The following public facilities are identified as future needs in the Fairfax Planning District:

1. Expansion of Fairfax Hospital facilities as indicated for Land Unit M1 of the Merrifield Suburban Center in the Area I Plan. (Sector F2).
2. Renovation and expansion of the Woodburn Mental Health Center to provide for additional individual clinical treatment space, group rooms, public areas, equipment and storage space, administrative office space and a parking structure. Specific recommendations are found in Land Unit M1 of the Merrifield Suburban Center in the Area I Plan (Sector F2).

3. Expansion of the Judicial Complex to accommodate future service needs of the courts and court related services and public safety systems, space for county agencies not currently located at the Judicial Complex, non-profits and volunteer agencies that support the court system, and a Diversion and Community Re-Entry Center. Specific recommendations are found in Sector F6.

* Federal and state facilities are not subject to the 2232 review process

4. A new fire and rescue facility in the Hunter Mill Road corridor north of Oakton. (Sector F4).
5. A new juvenile residential facility.
6. Unspecified expansion of existing Courts and juvenile detention centers. (Sector F6).
7. A future community library to be built consistent with Policy Plan standards for community libraries on Hunter Mill Road in Oakton to help alleviate overcrowding in existing library facilities.
8. Provide additional finished water transmission facilities between Waples Mill Road and Vale Road.

The following Fairfax County facilities are located in Fairfax City:

- DVS Jermantown Maintenance Facility
- Fairfax City Regional Library
- Facilities Management Maintenance Compound
- Joseph Willard Health Center
- Alcohol and Drug Services Administration
- Alcohol and Drug Services Assessment and Referral Center
- Alcohol and Drug Services Adult Outpatient
- Recovery Women's Center
- Health Department Administration Office
- Office for Children Training Center
- Maintenance and Stormwater Management Administration and Maintenance Facility

Parks and Recreation

Existing public parks are identified in Figure 6. Additional active recreation facilities are provided at county public school sites. Consideration should also be given to co-locating other compatible public facilities where feasible. The Fairfax Planning District contains the headwaters of several major stream valleys including the Accotink, Difficult Run, and Long Branch systems. These stream valley parks offer the potential for development of a greenway system, extending from the geographic center of the county northward and southeast to the Potomac River shoreline, which eventually can provide hiking and biking access to a wide diversity of active and passive recreational facilities. The EQCs of the Accotink and Difficult Run Stream Valley systems contain environmentally sensitive areas, as well as natural, cultural and recreational resources. Intrusions of non-recreational development should therefore be restricted, or prohibited and adverse environmental and visual impacts should be mitigated.

The Oak Marr Recreation Center provides year-round recreational opportunities for area residents and employees in the Flint Hill Suburban Center. The planned expansion of Oak Marr District Park should address the deficiencies of active recreation facilities in the area. Development of additional facilities will meet or exceed all environmentally-related state and county requirements in order to minimize possible impacts on environmentally sensitive areas and to the water quality of Difficult Run.

FIGURE 6
FAIRFAX PLANNING DISTRICT

In general there is a good distribution of Neighborhood and Community Parks in this Planning District, although a number of these parks are currently undeveloped. Acquisition and development of an additional Community Park to include active recreation facilities is recommended to serve the area east and southeast of Fairfax City.

FLINT HILL SUBURBAN CENTER

CHARACTER

The Flint Hill Suburban Center is located on both sides of Chain Bridge Road (Route 123) north of its intersection with I-66 and near the northern boundary of the City of Fairfax (See Figure 7). It lies between Interstate 66 (I-66), the Dudley Heights single-family detached subdivision, Jermantown Road and the eastern boundary of the AT&T Corporate Center boundary extended south to I-66.

The Flint Hill Suburban Center is defined primarily by 110 contiguous acres of land planned and developed for a mixture of office, retail and residential uses that straddle Chain Bridge Road on the north side of I-66. The area contains the AT&T Corporate office site at Chain Bridge Road and Jermantown Road and the 35-acre Flint Hill Office Park between Jermantown Road and Chain Bridge Road. Other smaller tracts are fully developed with office, retail, or restaurant uses. Building heights do not generally exceed six stories in the Center area. The Oakton Gable apartments are adjacent to the Flint Hill Office Park and both were developed as part of the same planned unit development.

The Flint Hill Suburban Center is surrounded by a mixed development character (See Sectors F3 and F4). The area adjacent to the Center northwest of Jermantown Road is a low density area with little residential development and extensive parkland. It is in the upper headwaters of the Difficult Run watershed where there is extensive low density residential use and significant environmental resources. To the north of the Center is Oakton with a mixture of detached, and attached single-family residential use, neighborhood-serving retail facilities and some institutional uses, including the Oakton Elementary School and the Flint Hill Preparatory School. To the east is a sizable area of townhouses and multifamily apartments that extends along the Blake Lane corridor and I-66 to Fairfax Circle.

CONCEPT FOR FUTURE DEVELOPMENT

The Concept for Future Development recommends this area as a Suburban Center. The area includes a mixture of office and residential uses. Flint Hill is much smaller in size than the other designated Suburban Centers in the county. Land Unit B is designated as the core area of the Suburban Center.

AREAWIDE RECOMMENDATIONS

Land Use

Extensive landscaping and integrated pedestrian and bicycle systems should be provided throughout the Flint Hill Suburban Center to make the area more attractive and convenient. Plazas, urban parks, fountains and street furniture are examples of amenities that would enhance the area, even in existing development.

Recommendations for the Flint Hill Suburban Center are organized by land units. The boundaries for these land units are shown on Figure 7.

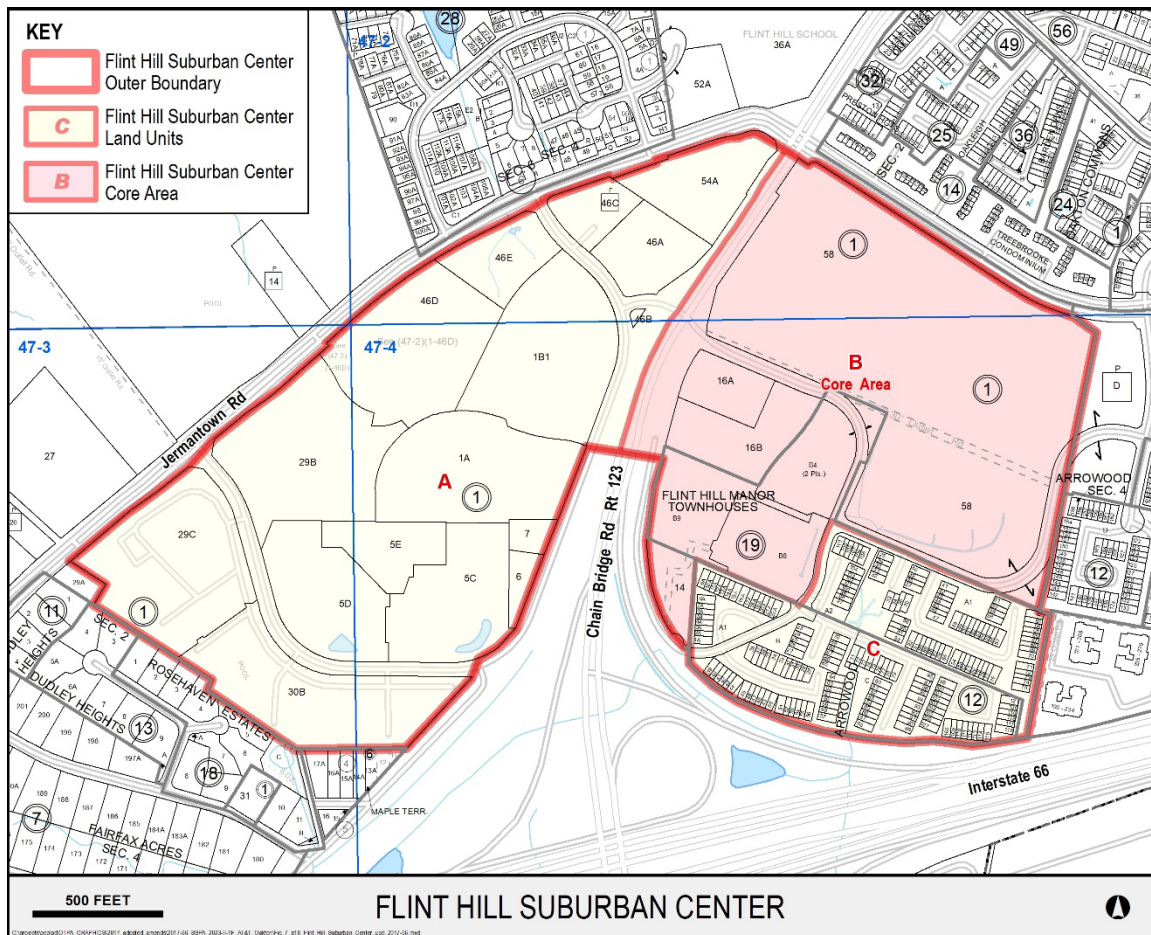

Figure 7

Transportation

Transportation recommendations for the Flint Hill Suburban Center are shown on Figures 8 and 8A. In some instances, site-specific transportation recommendations are included in the land use recommendations section. The figures show access orientation, circulation plans, interchange impact areas and generalized location of proposed transit facilities. The recommendations contained in the Area Plan text and maps, the Policy Plan and Transportation Plan map, policies and requirements in the Public Facilities Manual, the Zoning Ordinance, and other standards will be utilized in the evaluation of development proposals.

Active Transportation

Providing safe and comfortable pedestrian and bicycle connections and facilities is a high priority for the suburban center and surrounding communities. Connections should promote clear and direct paths that are enhanced with wayfinding signage and street trees with appropriate width buffers from vehicle travel lanes. Additional buffer width may be necessary in certain areas to

accommodate utilities, preserve desirable tree canopy, and for other considerations. Key steps to improving active transportation within the suburban center include completing missing segments in the sidewalk network, providing new and enhanced trails, and improving substandard sidewalks. Street furniture and alternative paving treatments may be appropriate to offer attractive visual and pedestrian-serving amenities. Linear parks and connectivity between existing and planned parks should be provided to promote access to open space and health and recreational opportunities. The Gerry Connolly Cross County Trail should be improved to provide for two-way pedestrian and bicycle movements. Bicycle facilities should be provided to include on-road bike lanes on Borge Street and Bushman Drive. Where needed, bicycle facilities should be provided on low volume streets to contribute to a complete bicycle network. Off-road bicycle facilities should be provided on roads with higher vehicle volume to provide comfortable and low-stress bicycling.

Pedestrian crossings should be provided on all four legs of intersections within the suburban center. Accessibility ramps should be aligned parallel to the road. Additional features, such as high-visibility markings, leading pedestrian intervals, median refuge islands, and similar facilities should be provided to promote active transportation users' safety in the crossings.

A traffic control signal should be provided for the benefit and safety of pedestrians and school students at Oakton Elementary School. The signal should be provided at the Chain Bridge Road and Blake Lane intersection. A second signal should be evaluated for use along the Miller Road frontage of the school.

Transit

Transit services should be optimized to provide safe access and mobility choices for the communities within and in proximity to the suburban center, in addition to providing services for the new residents, employers and visitors, particularly to the core area.

Transit stops should be enhanced with amenities such as seating and shelters, identifying signage and transit information appropriate for the stop.

Vehicular

Within the suburban center, improvements should be made to the transportation network with the objective of improving traffic flow and pedestrian safety. The timing of potential transportation improvements should be considered relative to the impact of new development. Alternative or innovative intersection designs within the wider area to improve safety and traffic congestion should be explored and implemented. Appropriate measures should be taken to mitigate impacts of new traffic designs on pedestrian and bicycle safety. Potential improvements within and beyond the suburban center may include, but are not limited to, the following:

- Align the intersection of Rose Forest Drive and White Granite Road to be perpendicular to Chain Bridge Road with no channelized islands.
- Explore options to improve safety and congestion between Blake Lane and Hunter Mill Road along Chain Bridge Road.
- Realign Rosehaven Street and Rose Forest Drive to provide a through connection from Jermantown Road to Chain Bridge Road as a four-lane road. This connection may serve to redirect traffic from Jermantown Road accessing Chain Bridge Road. Configuration of this connection, ensuring access to the residual portion of Rosehaven Street, will need to be

determined subject to further analysis. Pedestrian crossings with enhanced safety features may be implemented with these road improvements.

- Improve the entirety of Flagpole Lane to a two-lane improved road. Refer to Figures 8 and 8A, Transportation Recommendations Map, for the extent of recommendations for this roadway.
- Redesign Borge Street, Jermantown Road, and Flagpole Lane adjacent to Borge Street Park to calm traffic and accommodate pedestrian safety measures.
- Consider traffic calming and pedestrian and bicycle safety along Blake Lane from Chain Bridge Road to Sutton Road.

Stormwater Management

Development in Flint Hill should retain, to the extent feasible, the first inch of rainfall on-site through infiltration, evapotranspiration, and/or reuse. If the retention of the first inch of rainfall is demonstrated not to be fully achievable, the portion of the first inch of rain that cannot be retained should be detained and gradually released. All available measures should be implemented to the extent practicable to support this goal for retention or mixed retention and detention of the first inch of rainfall. Development should reduce the peak runoff rate for the 2- year 24-hour storm in the existing condition by at least 20 percent; or use the Energy Balance method to reduce the peak runoff rate from the site, at a minimum, to that of a good forested condition, per the county Stormwater Management Ordinance.

Parks and Recreation

Parks and recreation recommendations for this sector are shown on Figures 20 and 24 (Sectors F3 and F4). The column "Park Classification" includes existing park facilities. The "Recommendations" column includes entries for both existing and proposed facilities. Prior to developing parkland, the Fairfax County Park Authority initiates a master planning process to determine the appropriate facilities and design for that park. This process involves extensive citizen review and participation. If an existing park is listed but no recommendation appears on that line, it means the park has been developed in accordance with its master plan.

LAND UNIT RECOMMENDATIONS

Land Unit A

Land Unit A, approximately 60 acres, is designated as the area west of Chain Bridge Road between Jermantown Road, Chain Bridge Road and the Dudley Heights subdivision. This land unit is planned and developed for low to medium intensity mixed-use including office use up to .40 FAR, residential use at a density of 16-20 dwelling units per acre and a fire station. Ancillary retail and institutional uses could be incorporated into existing structures to serve the work force in the Flint Hill Suburban Center.

Land Unit B: the Suburban Center Core Area

Land Unit B, approximately 50 acres, is designated as the area located east of Chain Bridge Road between Chain Bridge Road, Jermantown Road, Oakton Village, and part of the Arrowhead

and Calibre subdivisions. The land unit is planned for low to medium intensity mixed-use development up to .40 FAR. Residential mixed-use development up to 0.88 FAR on Tax Map 47-2 ((1)) 58 may be considered as described below.

Core Area Land Use

In consideration of Land Unit B as a core area, the Plan's overall guidance for the development of core areas of Suburban Centers applies. The development and design of the core area should exemplify these planning principles and create a core area appropriate to its location and context within Oakton.

Mixed-use is the overall development goal of the county's suburban core areas. As such, future development plans and any subsequent amendments should provide for a balanced mix of residential, commercial, public spaces, and other uses that promote a vibrant and active focal point for the surrounding community. A mix of uses that facilitate a day-night activity cycle is essential to achieving the core area's goals. Automobile-dependent uses, such as drive-throughs on restaurants and businesses, are incompatible with the core area's development pattern and should be avoided.

The core area is envisioned to incorporate a grid of streets, including a walkable and activated streetscape along one or several main corridors. Residential alleyways, loading docks, trash disposal, and other service areas should be appropriately sited and screened to minimize the visual impact of these features, both internal and external to the development.

The primary residential form within the Flint Hill suburban core area is multifamily use, as determined by the number of housing units. Traditional and stacked townhomes may supplement these units to provide a diversity of housing types and compatibility with the surrounding townhome neighborhoods. New residential uses should consider universal design strategies, as appropriate, based on building type. Partnerships with outside entities to increase the availability of affordable housing are encouraged.

Buildings in the core area may be a maximum height of seven stories (approximately 95 feet) if buildings and setbacks can be designed to ensure compatibility with the surrounding uses and to mitigate the visual impact of taller buildings on nearby residential neighborhoods. Grading, landscape screening with year-round vegetation, the use of street trees and open space, topography, and other appropriate urban design practices should be utilized. Taller building heights should generally be located to the interior of the site and tapered down to the property lines to provide appropriate transitions to existing residential neighborhoods.

Establishing the Core Area

The AT&T office campus, Tax Map 47-2 ((1)) 58, may be redeveloped as the predominant mixed-use site in the core area at an intensity up to 0.88 FAR, averaged across the site, provided that the areawide guidance for the Flint Hill Suburban Center and the following criteria are met:

Land Use

- As the predominate site in the core area, the site should be developed under a coordinated plan that includes high quality architecture, design, and building materials, a consistent streetscape, lighting, and other elements. As a center for the Oakton community, an attractive, unifying character should be expressed throughout the site that complements the character of the broader area, creates a sense of place that invites

people to gather, interact, and feel connected, and incorporates nature-inspired design elements, materials, amenities, and colors. Reliance on surface parking lots should be minimized in favor of right-sized structures and on-street parking.

- In consideration of a 0.88 FAR, averaged across the site, the development pattern should accommodate higher intensities in the western portion of the site fronting Chain Bridge Road, and taper to lower intensities to the east to support compatibility with and achieve an appropriate transition to the adjacent townhome communities.
- The development should incorporate ground level elements designed to activate the street, provide interest to pedestrians, and serve as a gathering place for the broader Oakton community. Among the potential design techniques are (i) varied sidewalk and crosswalk widths, materials, and patterns; (ii) the use of lighting, street furniture and signage; and (iii) architectural treatments, building materials, and building colors that complement existing developments in the Oakton area.
- If the site is developed in multiple phases, interim conditions should be identified within a cohesive plan for the overall completion of the mixed-use development. Development at each phase should provide for its proportional share of the community needs generated from the new uses. Any future rezoning application should include a phasing plan. Non-residential uses should be provided in the initial phases of development.
- Up to 120,000 square feet of non-residential uses, inclusive of both retail and community use, should be included to primarily serve the local community. Small-scale retail, coffee shops and restaurants, assembly spaces, artistic spaces, daycare and education, fitness, professional services, a neighborhood-scale grocery store, and other compatible uses and amenities are envisioned. Such uses are intended to contribute to the community's sense of place and cultivate social connections.
- A compact development form that preserves much of the existing, desirable tree canopy and understory around the perimeter of the site (examples include areas such as along the Jermantown Road and Chain Bridge Road frontages and in locations near existing residential uses), provides usable open space, and complements the character of surrounding development is essential to the vision for the core area. Where tree removal is necessary, replacement vegetation should provide a similar or greater function and be consistent with existing tree varieties.
- Reflective of Oakton's name, any new development should incorporate both the preservation of existing and the planting of new oak trees designed to unify the development and provide shade areas for pedestrians. The existing oak trees along Chain Bridge Road and Jermantown Road should be prioritized for preservation and serve as a "gateway" feature to establish a sense of arrival and place and may be supplemented with other elements such as a standalone structure treated with a mural, the use of public art, or similar design features.
- The site's design should consider the adjacent nonresidential uses along White Granite Drive. Intersections, pedestrian nodes, and the siting of new buildings and open space uses should not preclude the adjacent properties from future redevelopment as part of the Suburban Center core area.

- Connected, well designed, and appropriately located and sized publicly accessible urban park(s), including at least one consolidated, common green that can provide flexible open spaces and accommodate a broad spectrum of active recreation activities and complement the new uses in the core area, should be included to create a sense of place and provide recreational opportunities for residents and visitors, per the guidance found in the Urban Parks Framework. The common green should be connected to Borge Street Park via a linear park that expands the open space network in the area. The linear park should be of sufficient width to provide a variety of active and passive recreation facilities. Expansion and improvements to the existing Borge Street Park should also be considered.
- The existing hydrologic feature in the southwestern portion of the site along White Granite Drive should be protected through the use of open space and retention of existing wooded areas to the extent feasible.

Heritage Resources

- Tax Map 47-2 ((1)) 58 includes a substantial building comprised of four “pods,” located around a central spine. The architecturally distinctive building was designed by the internationally known architectural firm, Kohn Peterson Fox, and serves as a landmark for the area. Prior to redevelopment, the building should be evaluated for potential historic and architectural significance consistent with Fairfax Planning District Guidance and the countywide policies for Heritage Resources. If found significant, the AT&T campus should be considered for preservation, and adaptive reuse. If preservation is not feasible, the AT&T headquarters building should be thoroughly documented and recognized in the design of the development or through other interpretive measures.

Transportation

- Eliminate gaps in the pedestrian and bicycle infrastructure along the periphery of the subject site and connect with adjacent facilities, neighborhoods, and parks with safe, comfortable routes and crossings.
- Improve pedestrian pathways to be wide enough with adequate buffers and street trees to provide comfortable and low-stress facilities.
- Improve the Chain Bridge Road, Jermantown Road, White Granite Drive and Flagpole Lane frontages with a shared use path, or equivalent facility to provide for two-way protected pedestrian and bicycle movements.
- A direct, publicly accessible street should be provided from White Granite Drive to Jermantown Road across the subject site. Refer to Figures 8 and 8A, Transportation Recommendations Map, for the extent of recommendations for this roadway. This connection may need to be accommodated through multiple stages of redevelopment within Land Unit B, and final location and alignment should be determined at the time of rezoning. New publicly accessible streets within the site should incorporate traffic calming measures into the design. The street design should limit turns to the extent possible while incorporating design elements to manage vehicle speeds. Street design and accompanying signage should be used to indicate a clear north-south travel path.
- Reduce the anticipated vehicle traffic by incorporating a Transportation Demand Management (TDM) program. TDM programs should also include strategies to address

demand during peak periods on the weekday and weekend, increase the use of transit, and improve last mile travel through the provision of infrastructure and/or incentives.

Beyond the AT&T campus, other sites in Land Unit B have the potential for future redevelopment as part of the core area. Tax Map parcels 47-4- ((1)) 16A and 16B, about five acres in total, at the intersection of White Granite Drive and Chain Bridge Road, have been developed for restaurant and office (U.S. Post Office) uses up to a FAR of 0.40. Hotel or ancillary retail use is also appropriate at a maximum FAR of 0.40. Residential use at 12-16 dwelling units per acre would also be appropriate on this site. Development on this site should meet the general objectives for development as part of the core area.

Outside of the AT&T campus, residential use within Land Unit B should be mid-rise multifamily at a density of 12-16 dwelling units per acre. Building heights should not exceed six stories. Office parking areas should be well-buffered and screened from nearby residential areas.

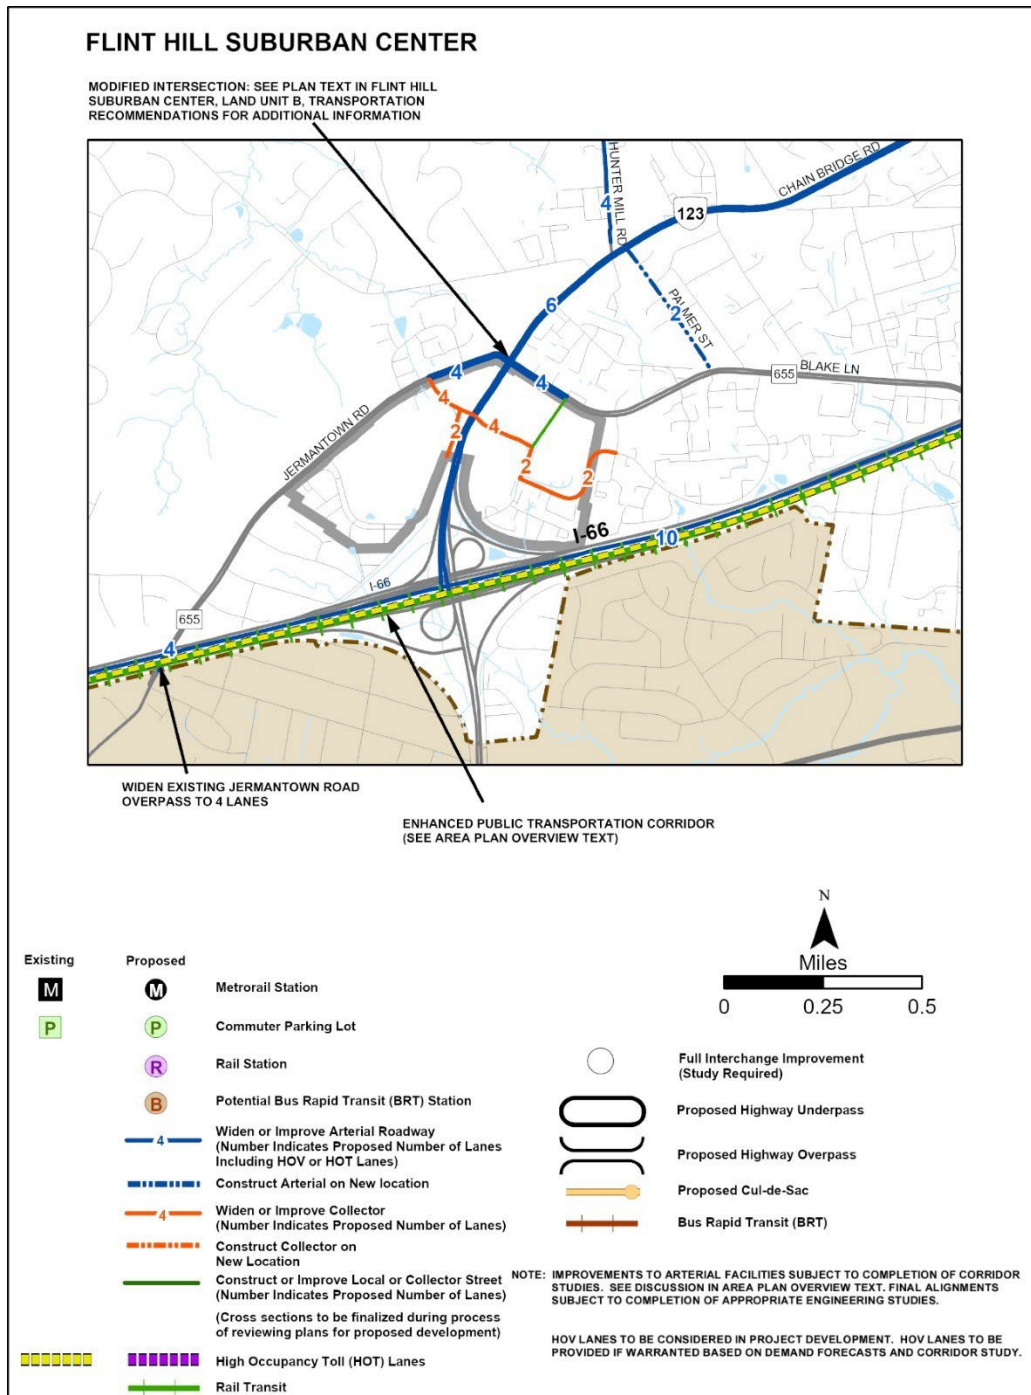

Core Area Transportation

In addition to the core area's site-specific guidance, the following transportation considerations apply to Land Unit B:

- Connect the shared use path from the Chain Bridge Road frontage to the 66 Parallel Trail shared use path.
- Improve White Granite Drive to a four lane street inclusive of turn lanes from Chain Bridge Road to the new north-south street (within the subject site) as shown in Figures 8 and 8A. Appropriate measures should be taken to minimize vehicular traffic impacts on the nearby residential communities.

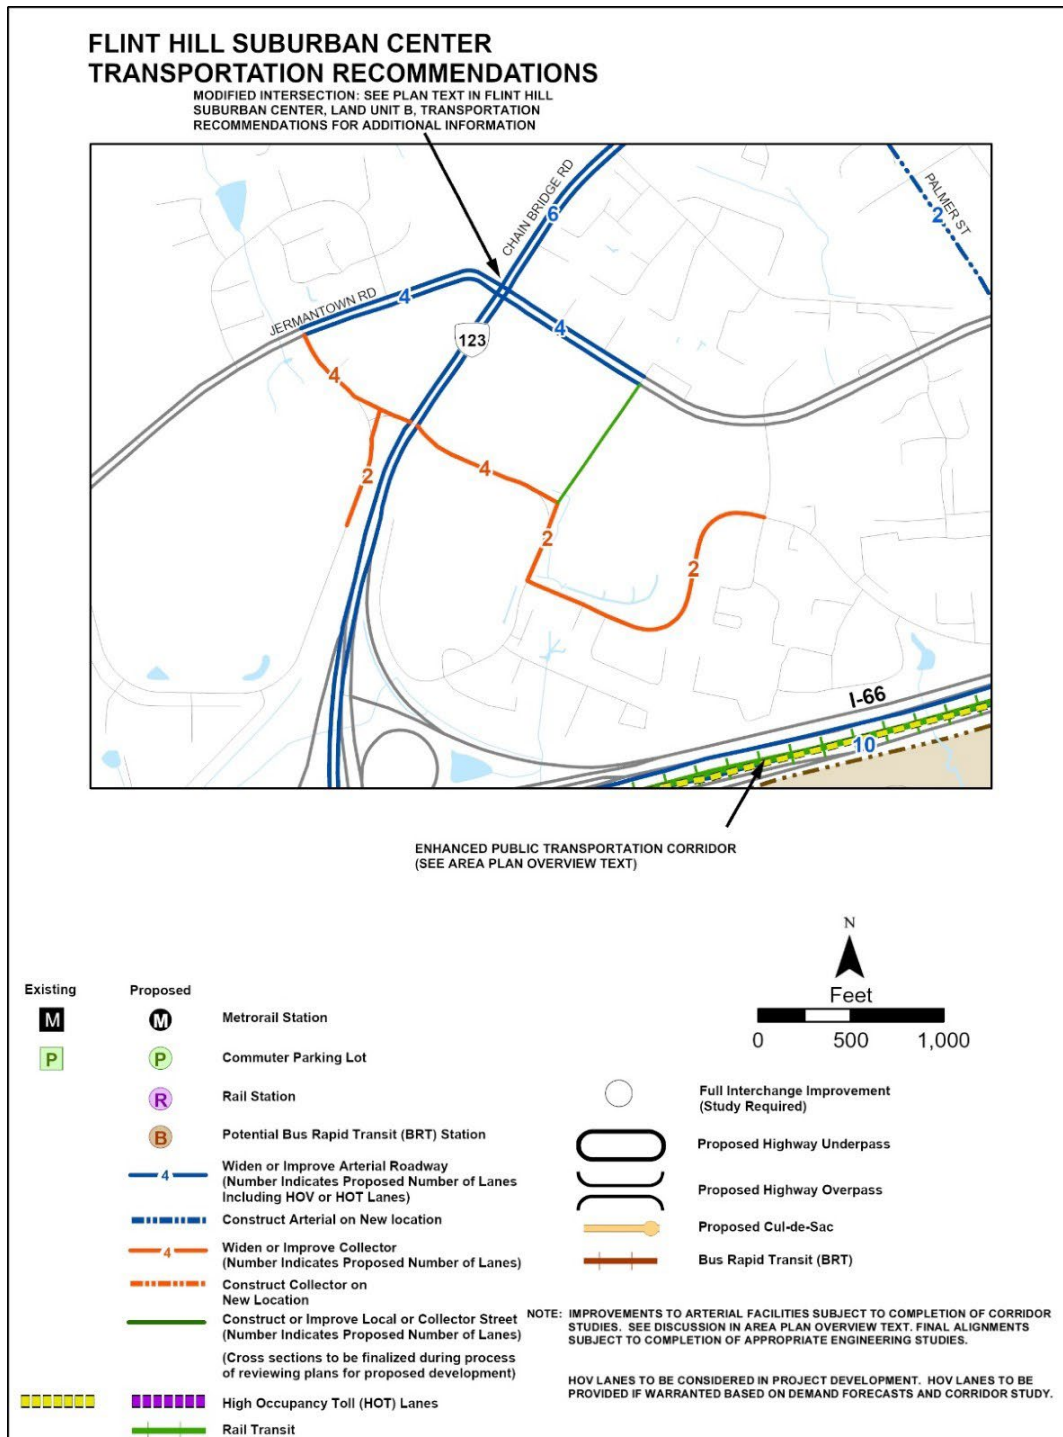

Land Unit C

Land Unit C, approximately 20 acres, contains the Arrowhead townhouse subdivision. This land unit is planned and developed at a density of 8-12 dwelling units per acre.

FIGURE 8

**TRANSPORTATION RECOMMENDATIONS
FLINT HILL SUBURBAN CENTER
F3, F4 COMMUNITY PLANNING SECTORS**

FIGURE 8A

COMMUNITY PLANNING SECTORS
 FAIRFAX PLANNING DISTRICT

FIGURE 9

F1 BRADDOCK COMMUNITY PLANNING SECTOR

CHARACTER

The Braddock Community Planning Sector is located on the southeast boundary of the City of Fairfax, bounded generally by Main Street/ Little River Turnpike (Route 236), Olley Lane, Long Branch Stream Valley Park, Guinea Road, Braddock Road and Roberts Road.

A majority of the sector contains stable residential development at a density of approximately 2-3 dwelling units per acre. Major subdivisions are Hickory Farms, George Mason Forest, Somerset, Starlit Ponds, Chestnut Hills, Old Creek Estates, Somerset South, Olde Forge and Surrey Square. Some small sections scattered throughout the sector have older subdivisions with lots up to five acres in size some of which are vacant, such as Holly Park and Little Run Estates.

No community-serving or neighborhood-serving retail or office facilities are located in this planning sector, but such facilities are adequately provided in locations adjacent to the sector.

The Fairfax Memorial Gardens and Calvary Memorial Gardens are large cemeteries located in the vicinity of the northeast quadrant of the Burke Station Road and Braddock Road intersection. The Long Branch Stream Valley Park extends through much of this sector.

CONCEPT FOR FUTURE DEVELOPMENT

The Concept for Future Development recommends that the entire sector be identified as a Suburban Neighborhood.

RECOMMENDATIONS

Land Use

The Braddock sector is largely developed with stable residential neighborhoods. Infill development in these neighborhoods should be compatible with existing development in the vicinity in terms of use, type and intensity, in accordance with the guidance provided by the Policy Plan under Land Use Objectives 8 and 14.

Where substantial parcel consolidation is specified, it is intended that such consolidations will provide for projects that function in a well-designed, efficient manner and provide for the development of unconsolidated parcels in conformance with the Area Plan.

Figure 10 indicates the geographic locations of land use recommendations for this sector. Where recommendations are not shown on the General Locator Map, it is so noted.

1. Land in the northeast quadrant of the intersection of Roberts Road and Braddock Road (Tax Map 68-2((1)) 21-25) is planned for single-family detached residential use at 1-2 dwelling units per acre. A redevelopment option for single-family detached residential use at 3-5 dwelling units per acre may be appropriate if the following conditions are met:

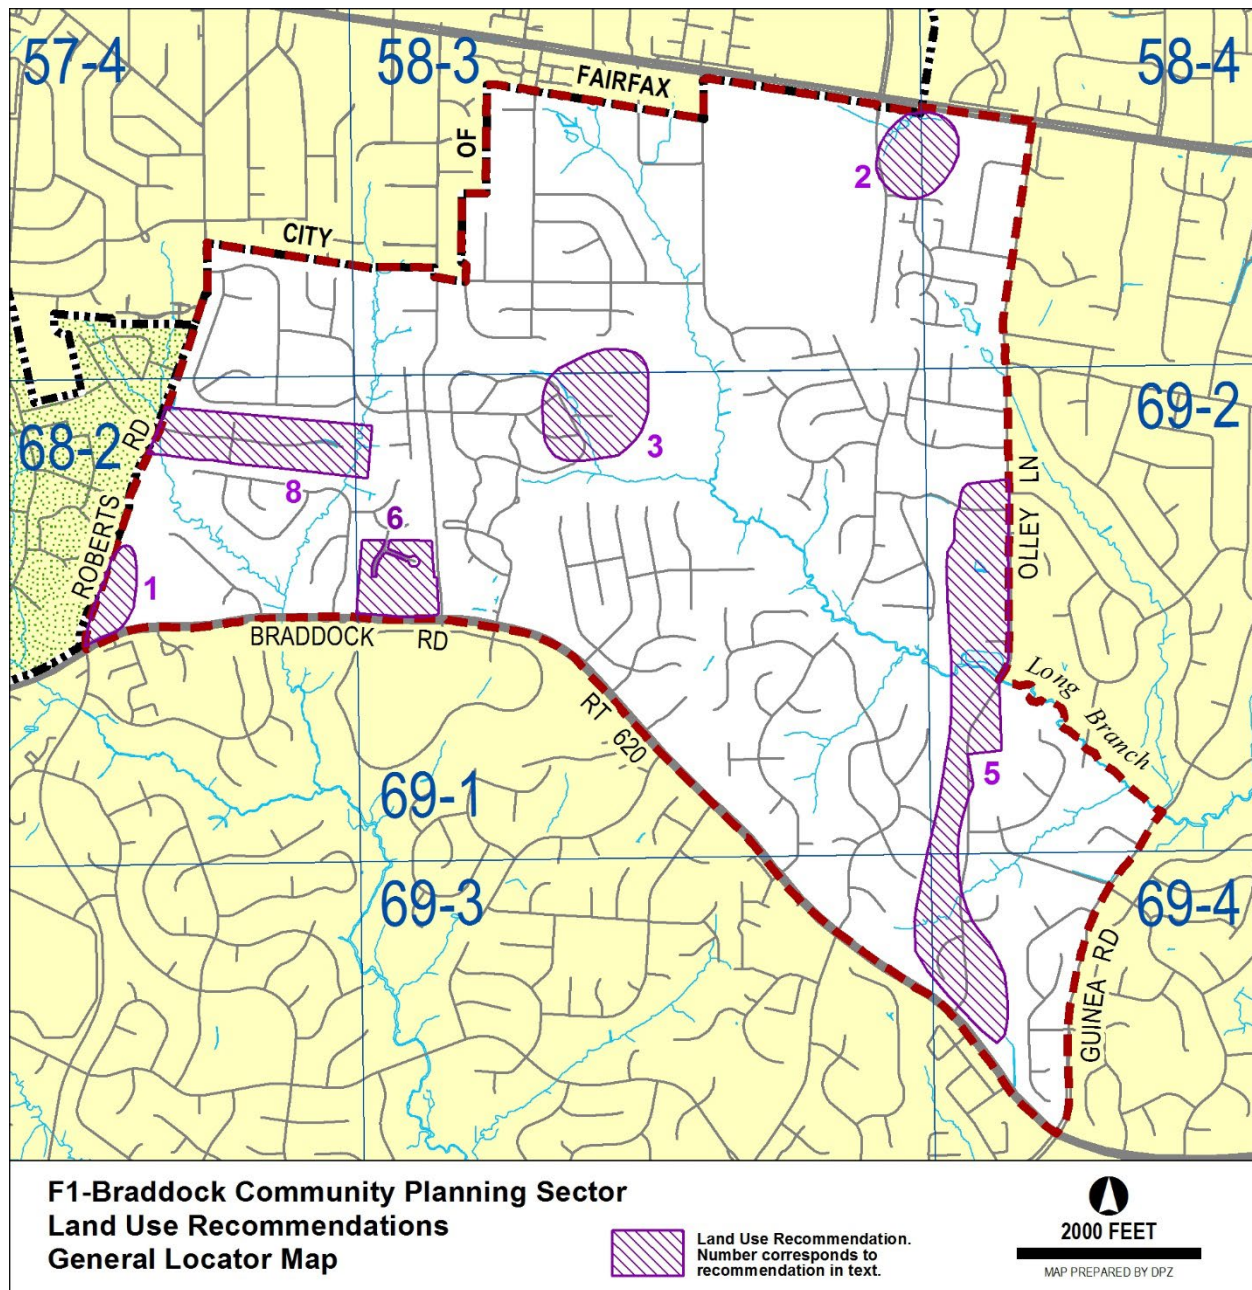

FIGURE 10

- Full parcel consolidation;
 - The consolidation is limited to a single point of access to Roberts Road, as far north as possible;
 - Density proposed should not necessitate the widening of Roberts Road to a four-lane facility or the provision of additional curb and gutter except as required for safety purposes. Improvements should include a sidewalk or pedestrian trail along the east side of Roberts Road to serve the new development; and
 - Redevelopment is sensitive to existing environmental features, particularly major tree stands primarily located at the eastern extent of the property, adjacent to University Park, which should be preserved in consultation with the Fairfax County Urban Forest Management Division. Dedication of land to expand University Park may serve as a means of preservation.
2. The 15-acre parcel (Tax Map 58-3((1))2A) located between Route 236, Pickett Road, Starlit Ponds subdivision, Haywood subdivision and Calvary Hill Baptist Church is planned for residential development at 4-5 dwelling units per acre. Currently it is developed with Barcroft Bible Church. This institutional use provides a transition between single-family detached development, and community-serving retail use. In any development proposal the following conditions should be met:
- A landscaped buffer of at least 25 feet should be provided along the perimeter adjacent to existing single-family detached subdivisions;
 - Primary access should be via Pickett Road;
 - Environmental resources, particularly major tree stands, should be preserved; and
 - Substantial landscaped screening and buffering along Route 236 should be provided.

Institutional development should be designed to ensure compatibility with the residential communities to the south and east in terms of building height, scale and building components.

3. If the vacant portion of the Calvary Memorial Gardens cemetery, which includes about 40 acres west of the stream valley, becomes available for an alternative use, this land should be planned for parkland and incorporated into the Long Branch Stream Valley system.
4. Commercial and industrial uses are not appropriate in this sector because the sector is adequately served by such facilities in Fairfax City and areas along the Route 29 corridor and at the intersection of Ox Road and Braddock Road. [Not shown]
5. Land in the Olley Lane corridor located between Braddock Road and the lots fronting on Athens Road is planned for residential use at 1-2 dwelling units per acre. In view of the large lot, low density, single-family detached residential use that predominates in this corridor, new and infill development in the corridor, that includes Parcels 69-2 ((2))L, M, N1, P1, Q, R, S, 3, 3A, 5, 7, 7B, 8A, 8B1, 8B2, 9A, 9C, 9D, 10B, 11A, 11B1, 11B2, as well as parcels 69-2((1))5A, 5B, 5C, 6; parcel 69-2((13))44; Parcels 69-4((24))A, 1-21 and Parcel 69-4((1))6A, generally should not exceed one dwelling unit per acre, to retain the contour of land to

preserve existing mature trees. Accordingly, land North and South of the Resource Protection Area should retain its current low density residential and rural character to be in consonance with the surrounding communities.

Parcels 69-4((24))A, 1-21 located at the southern portion of the corridor have been redeveloped under a plan option requiring the consolidation of three parcels and limited overall density to 2.2 dwelling units per acre. This redevelopment (Olley Lane Subdivision) preserved five acres of environmentally sensitive land and limited access to Olley Lane to address safety and operational issues.

6. Land in the northwest quadrant of the intersection of Burke Station and Braddock Roads (Tax Map 69-1((1))4-11) is planned for residential use at 1-2 dwelling units per acre as shown on the Plan map. As an option, residential use at 2-3 dwelling units per acre may be appropriate, if the following conditions are met:
 - A minimum of seven acres of land is consolidated in a manner that provides the opportunity for coordinated development with and interparcel access for the area that is not consolidated;
 - Lot sizes and/or density are compatible with the adjacent George Mason Forest subdivision;
 - No access is provided to Braddock Road; and
 - Access is provided to Manor Place or to Burke Station Road. If access is provided to Burke Station Road, it should be at the northern point of Parcel 4.
7. The cumulative effect of institutional uses in this sector should be considered before additional institutional uses or expansion of existing uses are developed. Nonresidential uses requiring special exceptions or special permits should be rigorously reviewed and permitted only if the following conditions are met:
 - Access is oriented only to arterial roads;
 - The size and scale of the use should be compatible with, that is, similar to, the character of existing development in the immediate vicinity; and
 - Buffering and screening should be provided in excess of that required by the Zoning Ordinance. [Not shown]
8. The Ridge Manor Subdivision, Tax Map 68-2((1))12, 12A and 68-2((2))1-29, is an established, stable and low density residential neighborhood with environmentally sensitive features that include stands of mature trees, flood plain and portions of two stream valleys. To retain this area's existing low density residential character and preserve its environmental features, the neighborhood should remain planned as shown on the Comprehensive Land Use Plan map and should be protected from consolidation and higher density development. Moreover, public, institutional or university-related uses are inappropriate for this area.

Transportation

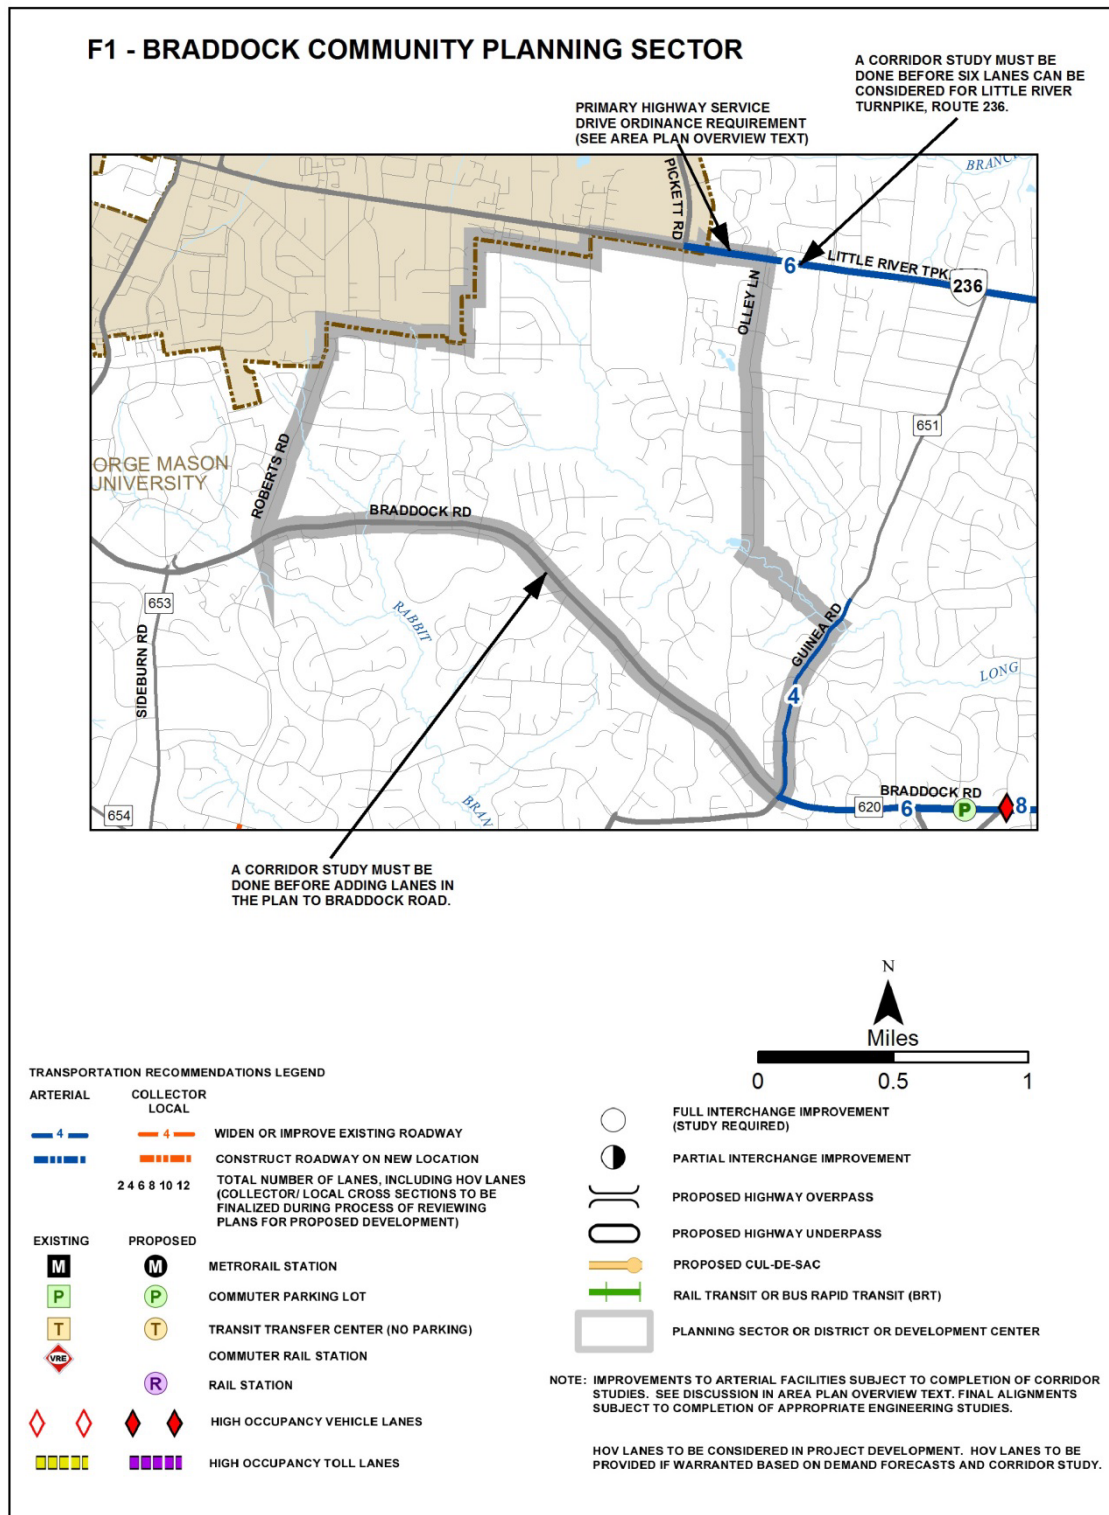

Transportation recommendations for this sector are shown on Figure 11. In some instances, site-specific transportation recommendations are included in the land use recommendations section. The figures show access orientation, circulation plans, interchange impact areas and generalized locations of proposed transit facilities. The recommendations contained in the Area Plan text and maps, the Policy Plan and Transportation Plan map, policies and requirements in the Public Facilities Manual, the Zoning Ordinance, and other standards will be utilized in the evaluation of development proposals.

Heritage Resources

Significant heritage resources may be located in open space, in low density residential areas and in mid 20th century neighborhoods and should be identified and preserved where possible. Because land in these areas may be relatively undisturbed, the resources that may exist could also be undisturbed and therefore more easily identified and preserved. Any development or ground disturbance in this sector, both on private and public land, should be preceded by heritage resource studies, and alternatives should be explored for the avoidance, preservation or recovery of significant heritage resources that are found. In those areas where significant heritage resources have been recorded, an effort should be made to preserve them. If preservation is not feasible, then, in accordance with countywide objectives and policies as cited in the Heritage Resources section of the Policy Plan, the threatened resource should be thoroughly recorded and in the case of archaeological resources, the artifacts recovered.

Parks and Recreation

Park and recreation recommendations for this sector are shown on Figure 12. The column "Park Classification" includes existing park facilities. The "Recommendations" column includes entries for both existing and proposed facilities. Prior to developing parkland, the Fairfax County Park Authority initiates a master planning process to determine the appropriate facilities and design for that park. This process involves extensive citizen review and participation. If an

existing park is listed but no recommendation appears on that line, it means the park has been developed in accordance with its master plan.

Trails and Bicycle Facilities

Trails planned for this sector are delineated on the 1":4,000' Countywide Trails Plan Map which is referenced as Figure 2 in the Transportation element of the Policy Plan and is available from the Department of Transportation. Trails in this sector are an integral part of the overall county system. While some of the segments have already been constructed, the Countywide Trails Plan Map portrays the ultimate system for the sector and the county at large. In addition, the map specifies a classification for each segment, which represents the desired ultimate function and surface type of the trail. Specific construction requirements are detailed in the Public Facilities Manual.

Bicycle Facilities for this sector are delineated on the 1":4000' Countywide Bicycle Network Map which is referenced as Figure 3 in the Transportation element of the Policy Plan and is available from the Department of Transportation.

F2 MANTUA COMMUNITY PLANNING SECTOR

CHARACTER

The Mantua Community Planning Sector is located east of the City of Fairfax, between Arlington Boulevard (Route 50) and Little River Turnpike (Route 236), extending to Woodburn Road. Portions of the Mantua Planning Sector are within the Merrifield Suburban Center. Plan guidance for this area is included in the Area I volume of the Comprehensive Plan, Merrifield Suburban Center.

The planning sector is almost completely developed with single-family detached residential use. Most of this development was built between 1950 and 1970. Major single-family detached subdivisions include Mantua, Ridgelea, Pine Ridge, Sutton Place, Little River Pines and Prosperity Heights.

Two townhouse subdivisions are located in the sector: Strathmeade Square, which is developed at a density of 8-12 dwelling units per acre adjacent to the Inova Fairfax Hospital complex, and Chesterfield Mews, developed at a density of 3-4 dwelling units per acre, located on Arlington Boulevard opposite Nutley Street. Three multifamily housing developments are located along Little River Turnpike near Pickett Road and the City of Fairfax: Margate Manor, Pinewood Plaza and Fairfax Plaza. These are developed at a density of 16-20 dwelling units per acre, as are the Condominiums of Woodburn, which are adjacent to the Inova Fairfax Hospital complex along Gallows Road.

Towers Park, owned by the Fairfax County Park Authority, is located south of Arlington Boulevard along Accotink Creek adjacent to the City of Fairfax. The density attributable to this parcel was transferred to Circle Towers, located on the north side of Arlington Boulevard, at the time of its development. There are a number of institutional uses in the sector, including The Virginian, a Continuing Care Retirement Community (CCRC), the Kena Temple, the Elks Lodge, the Merritt Academy, the Sunrise Senior Assisted Living Community, the Fairfax Circle Baptist Church, and the Chabad Lubavich of Northern Virginia. There is a large concentration of special exception and special permit uses in this area, especially in the Arlington Boulevard and Little River Turnpike corridors.

A small amount of neighborhood-serving retail development is located on Little River Turnpike between Pineland Street and Woodburn Road.

The Accotink Creek Stream Valley is a major land use feature that traverses the sector and includes parts of Long Branch, Bear Branch, Hunters Creek, Crooks Creek and various unnamed connecting creeks.

CONCEPT FOR FUTURE DEVELOPMENT

The Concept for Future Development recommends most of the sector be identified as a Suburban Neighborhood and a small portion is recommended as part of the Merrifield Suburban Center (see Merrifield Suburban Center for Recommendations).

RECOMMENDATIONS

Land Use

The Mantua sector is largely developed as stable residential neighborhoods. The predominant planned density is 2 dwelling units per acre with other planned densities as shown on the Plan Map and/or as further described in the following land use recommendations. Infill development in these neighborhoods should be compatible with existing development in the vicinity in terms of use, type and intensity, in accordance with the guidance provided by the Policy Plan in Land Use Objectives 8 and 14.

Where substantial parcel consolidation is specified, it is intended that such consolidations will provide for projects that function in a well-designed, efficient manner and provide for the development of unconsolidated parcels in conformance with the Area Plan.

Figure 13 indicates the geographic locations of land use recommendations for this sector. Where recommendations are not shown on the General Locator Map, it is so noted.

1. Tax map 58-2((1))14, formerly part of the Krasnow Estate, is located between the Mantua neighborhood in the county and Pickett's Reserve in the City of Fairfax consisting of approximately 15 acres is planned for public park use. This property is heavily wooded and efforts should be made to preserve mature trees where feasible.
2. The land fronting on Pickett Road between Mathy Drive and Route 236 is planned and developed for neighborhood-serving office and retail use and light industrial use. Due to the proximity of this land to Margate Manor apartments, any development or redevelopment on these parcels should not exceed an FAR of .25.
3. The majority of the area generally bounded by Accotink Creek, Bear Branch, Arlington Boulevard, Pine Ridge, Tobin Road, Woodburn Road, Route 236, Briars of Westchester, Pinewood Plaza Apartments and the Fairfax City boundary is planned for residential use at a density of 1-2 dwelling units per acre as shown on the Plan map. Infill development in Pine Ridge, Tax Maps 59-1((1))25, 59-3((1))4 and 5, Forest Grove, Beaches Pine Ridge, Little River Pines, Mantua (Tax Map 58-2((4)); (Tax Map 48-4((5))) Oak Spring Village, Langhorne Acres, Westchester and Fairfax Forest shall be at no more than one dwelling unit per acre. [Not shown]
4. In the Sunny Hill subdivision infill development should be residential at a density of 1-2 dwelling units per acre. For consideration above the low end of the range, (a) sufficient consolidation must be achieved to allow for a well-designed and unified development plan and (b) sufficient improvements must be made to bring all affected roads up to state standards.
5. Commercial development in this sector should be limited to those areas designated for commercial use on the Plan map. Existing commercial uses generally should not be intensified, except minimally for modernization or beautification. Additional landscaping and buffering between commercial and residential uses and carefully designed pedestrian connections to adjacent residential areas are strongly encouraged, where appropriate. [Not shown]

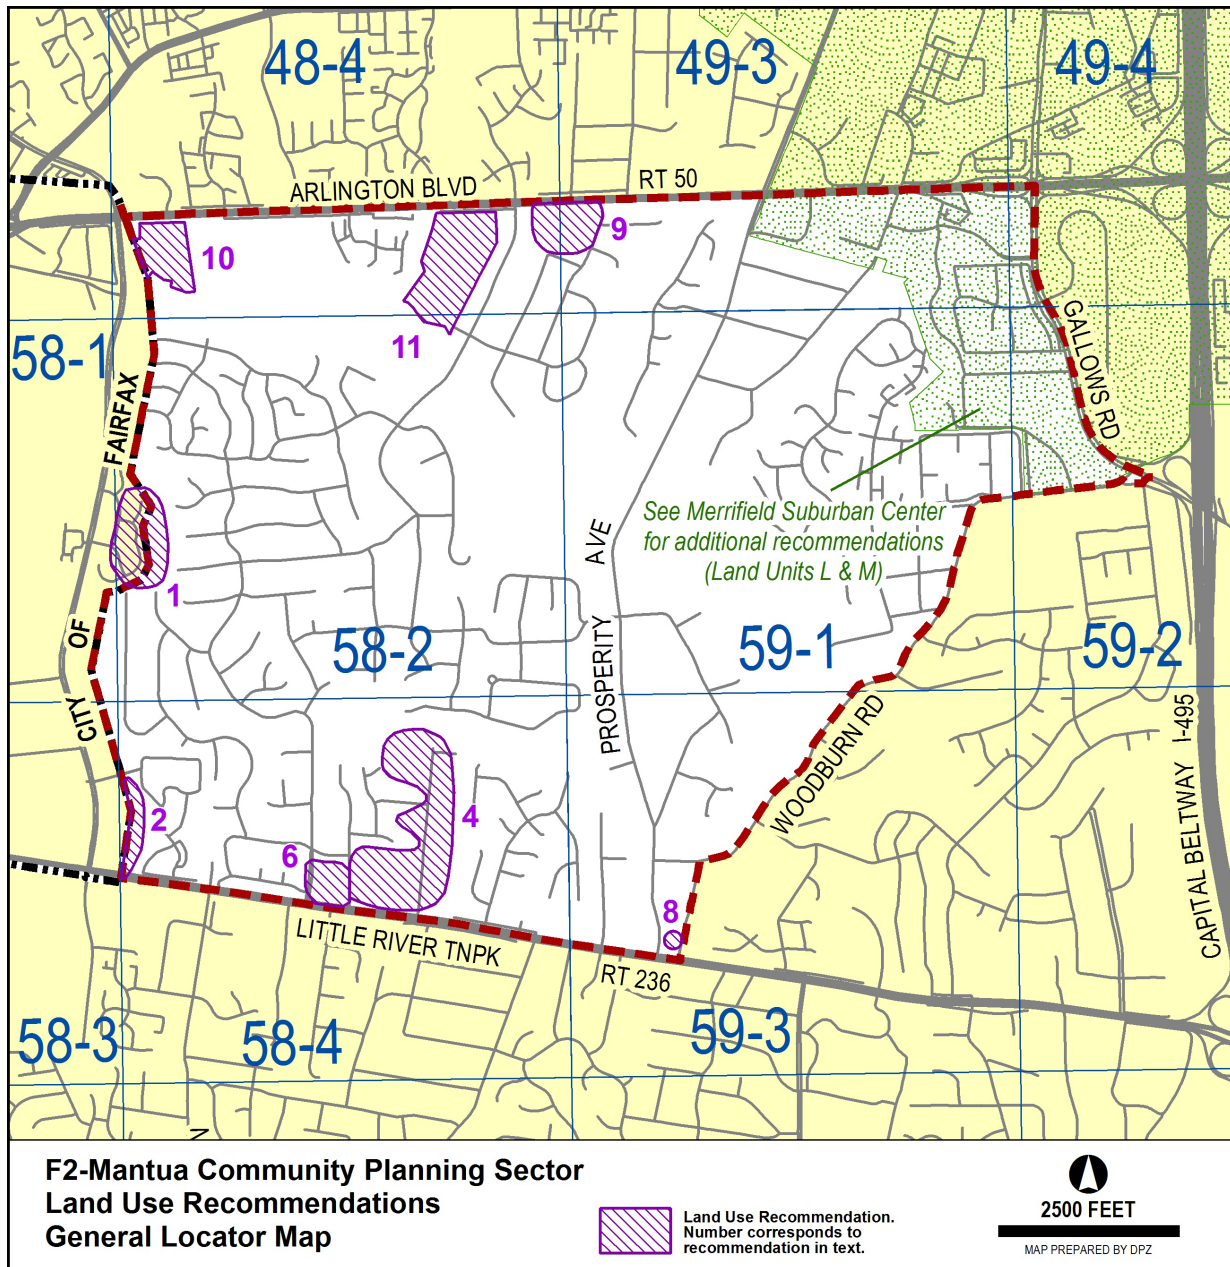

FIGURE 13

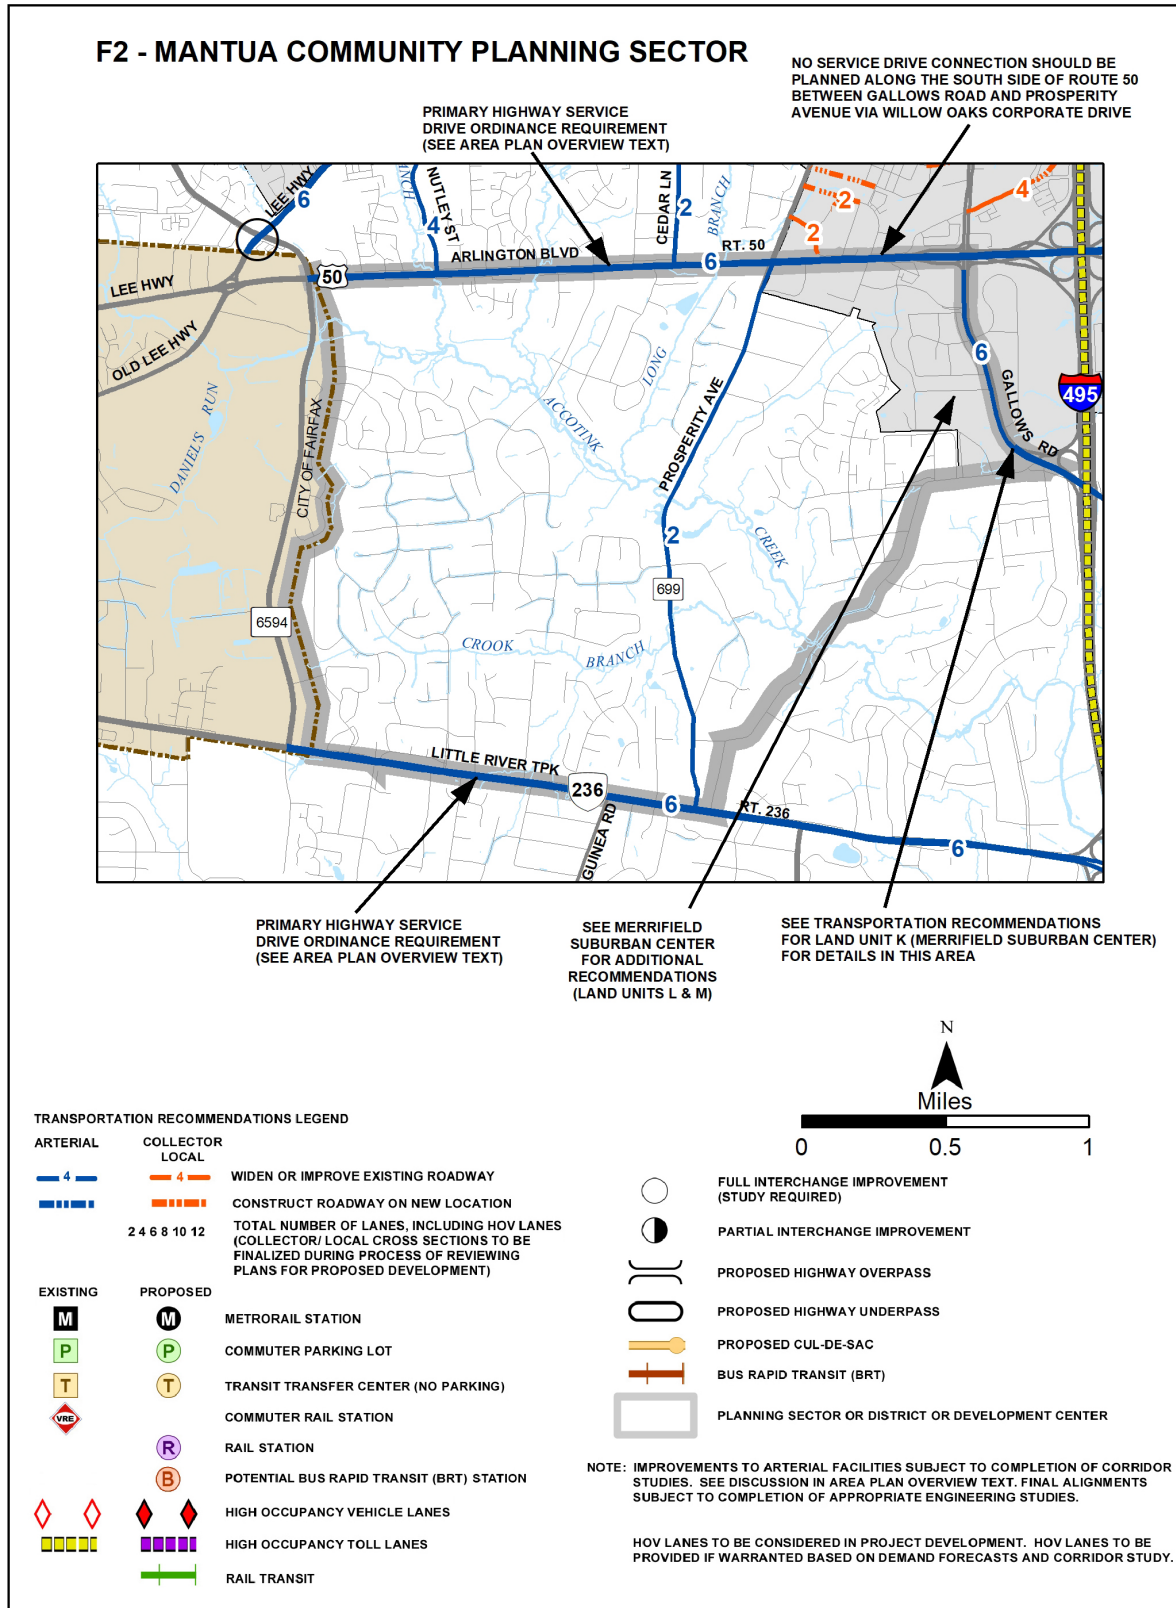

6. There are several special exception and special permit uses in this sector. When those uses are terminated, the underlying parcels should return to residential use at the densities for which the surrounding parcels are planned. The former “YMCA facility” (Tax Map 58-4((1))50) should not be expanded or intensified, since any expansion or intensification of this use would adversely effect the adjacent stable residential neighborhood.
7. Automobile-oriented uses of any type with direct access to Arlington Boulevard and Little River Turnpike are inappropriate as they may exacerbate congestion and are liable to create nuisance activity in and near stable residential areas. [Not shown]
8. The existing small, commercial retail and office area between Pineland Street and Woodburn Road primarily fronting on either Little River Turnpike (Route 236) or Prosperity Avenue, should not be expanded. Extensive buffering is required along the northern, eastern, and western boundaries of the tract to maintain the adjacent stable residential area.
9. Properties with direct access to Arlington Boulevard, between Chichester Lane and Barkley Drive [Tax Map 48-4((1))40 and 41; 49-3((1))12 and 13] should be developed residentially at 1-2 dwelling units per acre. Alternatively, these properties may be developed residentially, as an extension of Oak Spring Village, with access to Barbara Lane or with access to Chichester Lane at no more than 1 dwelling unit per acre. To avoid through traffic on neighborhood streets in Mantua/Oak Spring Village, under no circumstances shall Arlington Boulevard be connected directly or indirectly to Barbara Lane.
10. Towers Park, owned by the Fairfax County Park Authority, is located south of Arlington Boulevard along Accotink Creek adjacent to the City of Fairfax. The density attributable to this parcel was transferred to Circle Towers, located on the north side of Arlington Boulevard, at the time of its development. Accordingly, this publically-owned parcel should not be developed and should be used for public park purposes.
11. Parcel 48-4((1))42A is planned for residential use at 0.5-1 dwelling unit per acre and private open space. Consideration should be given to additional access points, such as a right-in and/or right-out access point on Arlington Boulevard, a pedestrian connection to the stream valley trail in Eakin Park to the south, and dedication of the environmentally sensitive areas on the site that are adjacent to existing parkland to the Fairfax County Park Authority for public park purposes.

Transportation

Transportation recommendations for this sector are shown on Figure 14. In some instances, site-specific transportation recommendations are included in the land use recommendations section. The figures show access orientation, circulation plans, interchange impact areas and generalized locations of proposed transit facilities. The recommendations contained in the Area Plan text and maps, the Policy Plan and Transportation Plan map, policies and requirements in the Public Facilities Manual, the Zoning Ordinance, and other standards will be utilized in the evaluation of development proposals.

Heritage Resources

Numerous prehistoric archaeological resources dating to the earliest known human inhabitants of Fairfax County (c. 9000 B.C.) and later have been identified in the Accotink

TRANSPORTATION RECOMMENDATIONS

FIGURE 14

watershed of this sector and adjacent uplands. Several of these resources have not been disturbed by modern development. Additionally, the archaeological remains of several historic mills have been located in the Accotink floodplain. These resources should be protected.

Any development or ground disturbance in this sector, both on private and public land, should be preceded by heritage resource studies, and alternatives should be explored for the avoidance, preservation or recovery of significant heritage resources that are found. In those areas where significant heritage resources have been recorded, an effort should be made to preserve them. If preservation is not feasible, then, in accordance with countywide objectives and policies as cited in the Heritage Resources section of the Policy Plan, the threatened resource should be thoroughly recorded and in the case of archaeological resources, the artifacts recovered.

Public Facilities

The following facilities are identified as future needs:

1. Expansion of Fairfax Hospital facilities as indicated for Sub-Unit M1 of the Merrifield Suburban Center in the Area I Plan. (Sector F2).
2. Improve and expand the Woodburn Mental Health Center to provide for additional individual clinical treatment space, group rooms, public areas, equipment and storage space, administrative office space and a parking structure. Specific recommendations are found in Sub-Unit M1 of the Merrifield Suburban Center in the Area I Plan (Sector F2).

Parks and Recreation

Park and recreation recommendations for this sector are shown on Figure 15. The column "Park Classification" includes existing park facilities. The "Recommendations" column includes entries for both existing and proposed facilities. Prior to developing parkland, the Fairfax County Park Authority initiates a master planning process to determine the appropriate facilities and design for that park. This process involves extensive citizen review and participation. If an existing park is listed but no recommendation appears on that line, it means the park has been developed in accordance with its master plan.

Trails and Bicycle Facilities

Trails planned for this sector are delineated on the 1":4,000' Countywide Trails Plan Map which is referenced as Figure 2 in the Transportation element of the Policy Plan and is available from the Department of Transportation. Trails in this sector are an integral part of the overall county system. While some of the segments have already been constructed, the Countywide Trails Plan Map portrays the ultimate system for the sector and the county at large. In addition, the map specifies a classification for each segment, which represents the desired ultimate function and surface type of the trail. Specific construction requirements are detailed in the Public Facilities Manual.

Bicycle Facilities for this sector are delineated on the 1":4000' Countywide Bicycle Network Map which is referenced as Figure 3 in the Transportation element of the Policy Plan and is available from the Department of Transportation.

FIGURE 15
PARKS AND RECREATION RECOMMENDATIONS
SECTOR F2

PARK CLASSIFICATION	RECOMMENDATIONS
NEIGHBORHOOD PARKS:	
Eakin (Mantua)	Upgrade existing facilities. Neighborhood Park facilities should be provided in conjunction with new development in the Pickett Road corridor (Also noted under Land Use Recommendations).
COMMUNITY PARKS:	
Eakin Community	Protect archaeological resources in any future development.
Crooks Branch	Additional recreational facilities are located at the Pine Ridge School site on southeastern boundary of this sector. Consider acquisition of parkland (Tax Map 58-4((1))54) adjacent to Mantua Elementary School.
DISTRICT PARKS:	
	This sector lies within the service area of Annandale District Park and major active recreation facilities at Wakefield Park, which is a countywide facility, also serve this sector.
COUNTYWIDE PARKS:	
Accotink Stream Valley	Protect archaeological resources in the headwaters of the EQC in the Pickett Road area through acquisition by Fairfax County Park Authority.
REGIONAL PARKS:	
W&OD Railroad Regional Park	Complete development of the Fairfax City to W&OD Connector Trail in accordance with approved master plan.

F3 MOSBY WOODS COMMUNITY PLANNING SECTOR

CHARACTER

The Mosby Woods Community Planning Sector is bounded by the City of Fairfax on the south, Jermantown Road and Chain Bridge Road (Route 123) on the west and north, and Edgelea Road and Blake Lane on the east.

This sector is predominantly developed with higher density residential use and medium intensity office use, which has occurred primarily since 1980. These higher intensity uses are located near the intersection of Chain Bridge Road and Interstate 66 (I-66) and south of Blake Lane which extends from Chain Bridge Road to Lee Highway (Route 29) near Fairfax Circle.

Oakton Gable, Four Winds at Oakton, the Oakton, Trevor House, and the Vistas of Vienna are apartment and condominium developments located north of I-66. The Oakton Park Apartments are located south of I-66 and east of Chain Bridge Road. Hawthorne Village and Fairfax Circle Villa are apartment complexes near Fairfax Circle. Densities are upwards of 20 dwelling units per acre.

There are numerous townhouse developments in the same two areas, including Villa D'Este Village, Tudor Hall, Cedar Grove Park, Cyrandall Valley, Blake Lee, Oakton Village, Concord Village, Cherrywood Square, and Treebrook. These have densities in the range of 5-12 dwelling units per acre.

There are older single-family detached residential subdivisions in the remaining portions of the sector, developed generally at a density of 1-3 dwelling units per acre. The major subdivisions of this type are Fairfax Acres, near I-66 and Spruce Street, east of Jermantown Road; and Grays/Grays Oakton and Old Courthouse Woods, located between Blake Lane and Chain Bridge Road. Five Oaks Estates and Villa D'Este are single-family detached subdivisions south of I-66 and Blake Lane near the City of Fairfax.

The Flint Hill Suburban Center is completely contained in this planning sector; plan recommendations for the suburban center are found in a previous section of the Fairfax Planning District guidance, following the Overview section. Other nonresidential uses include a number of highway-oriented, neighborhood-serving retail uses located along Chain Bridge Road between Blake Lane and the Oakton Shopping Center at Hunter Mill Road. A number of light industrial uses are located on Draper Drive near Kingsbridge Drive.

Oakton Trolley Station and Oakton United Methodist Church are significant heritage resources in this sector. The trolley station is listed in the Fairfax County Inventory of Historic Sites, Virginia Landmarks Register and the National Register of Historic Places. An open space/conservation easement has been placed on the trolley station property. A list and map of these heritage resources are included in the Fairfax Planning District Overview section, Figures 3 and 4.

CONCEPT FOR FUTURE DEVELOPMENT

The Concept for Future Development recommends that most of this sector be identified as a Suburban Neighborhood. The Flint Hill Suburban Center is located in this sector (see the Flint Hill Suburban Center).

RECOMMENDATIONS

Land Use

The Mosby Woods sector is largely developed as stable residential neighborhoods. Infill development in these neighborhoods should be compatible with existing development in the vicinity in terms of use, type and intensity, in accordance with the guidance provided by the Policy Plan under Land Use Objectives 8 and 14.

Where substantial parcel consolidation is specified, it is intended that such consolidations will provide for projects that function in a well-designed, efficient manner and provide for the development of unconsolidated parcels in conformance with the Area Plan.

Figure 16 indicates the geographic locations of land use recommendations for this sector. Where recommendations are not shown on the General Locator Map, it is so noted.

1. Neighborhoods containing older, more moderately priced housing should be maintained and protected in order to provide affordable housing opportunities. Some of these areas include Fairfax Acres, Dudley Heights and Grays/Grays Oakton.
2. Bannockbairn Estates north of I-66, planned for residential use at 5-8 dwelling units per acre, is an older single-family detached residential subdivision that was bisected by I-66. The portion north of I-66 [(Tax Map 48-3((18)) and ((31)))] may be considered for redevelopment at 8-12 dwelling units per acre with substantial parcel consolidation. This density would be compatible with adjacent development, which is built at a density between 8 and 20 dwelling units per acre.
3. Commercial development in this sector should be limited to those areas designated for commercial use on the Plan map. Existing commercial uses generally should not be intensified, except minimally for modernization or beautification. Additional landscaping and buffering between commercial and residential uses and carefully designed pedestrian connections to adjacent residential areas are strongly encouraged where appropriate. [Not shown]
4. There is a small industrial area on Draper Drive that is planned and developed in a manner similar to adjacent land in Fairfax City. The intensity of development on this land should not exceed .50 FAR. Adjacent to this area is a vacant parcel that is owned by Virginia Power (Tax Map 48-3((1))25), which is programmed for a substation. The substation should be designed with a substantial buffer area (at a minimum - 50 feet) adjacent to residential neighborhoods to the north and east. The buffer area should include berms, barrier walls and landscaping designed to minimize the visual impact of the substation. Transmission lines should access the property from the industrial area to the south or west or be provided underground to minimize the visual impact on the adjoining residential area.

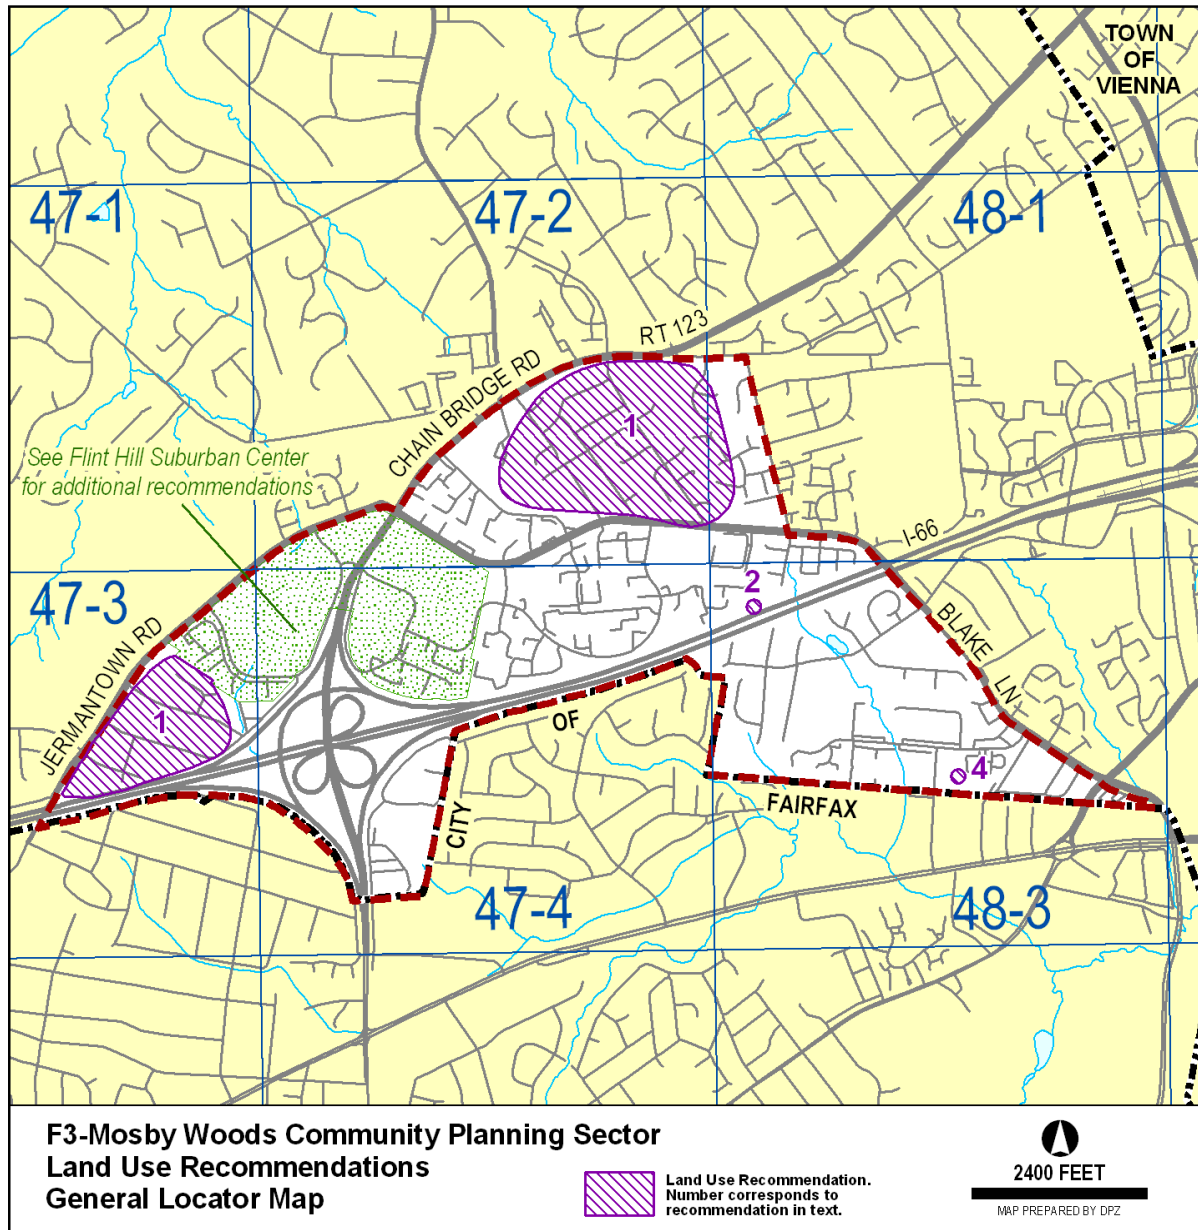

FIGURE 16

Any interim use of the property should provide substantial buffering and screening to residential areas.

As an option, should Virginia Power determine that this site is no longer viable for a substation, the site may be considered for residential use at 16-20 dwelling units per acre. Adequate buffering and screening should be provided between any residential development and the adjacent industrial area.

Transportation

Transportation recommendations for this sector are shown on Figures 17, 18 and 19. In some instances, site-specific transportation recommendations are included in the land use recommendations section. Recommendations regarding the AT&T campus site (Tax Map 47-2 ((1)) 58) can be found in the transportation guidance for the Flint Hill Suburban Center and as referenced on Figures 17 and 19. The figures show access orientation, circulation plans, interchange impact areas and generalized locations of proposed transit facilities. The recommendations contained in the Area Plan text and maps, the Policy Plan and Transportation Plan map, policies and requirements in the Public Facilities Manual, the Zoning Ordinance, and other standards will be utilized in the evaluation of development proposals.

Heritage Resources

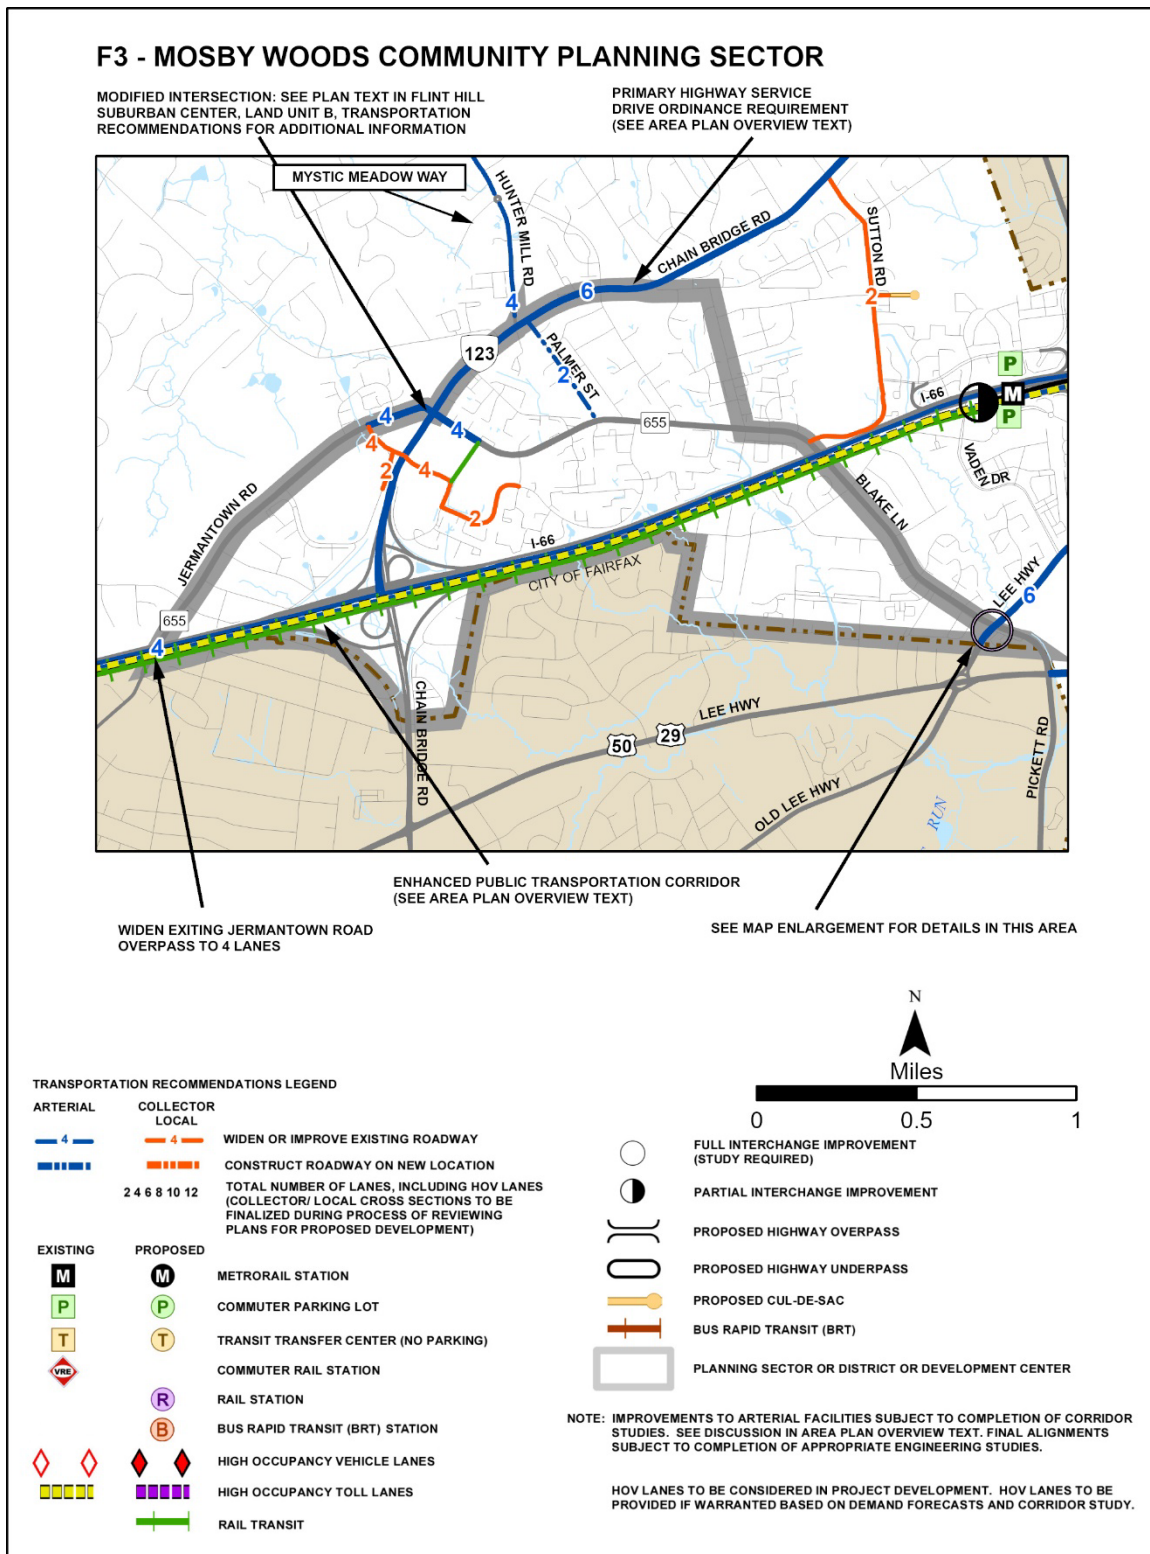

Reports of Civil War period camps suggest the potential for unrecorded heritage resources to exist in this sector. Efforts should be made to identify and preserve significant heritage resources in this sector. Any development or ground disturbance in this sector, both on private and public land, should be preceded by heritage resource studies, and alternatives should be explored for the avoidance, preservation or recovery of significant heritage resources that are found. In those areas where significant heritage resources have been recorded, an effort should be made to preserve them. If preservation is not feasible, then, in accordance with countywide objectives and policies as cited in the Heritage Resources section of the Policy Plan, the threatened resource should be thoroughly recorded and in the case of archaeological resources, the artifacts recovered.

Public Facilities

1. Expand by approximately 1,250 square feet the existing Oakton Fire Station.
2. Construct six additional classrooms to Mosby Elementary School.

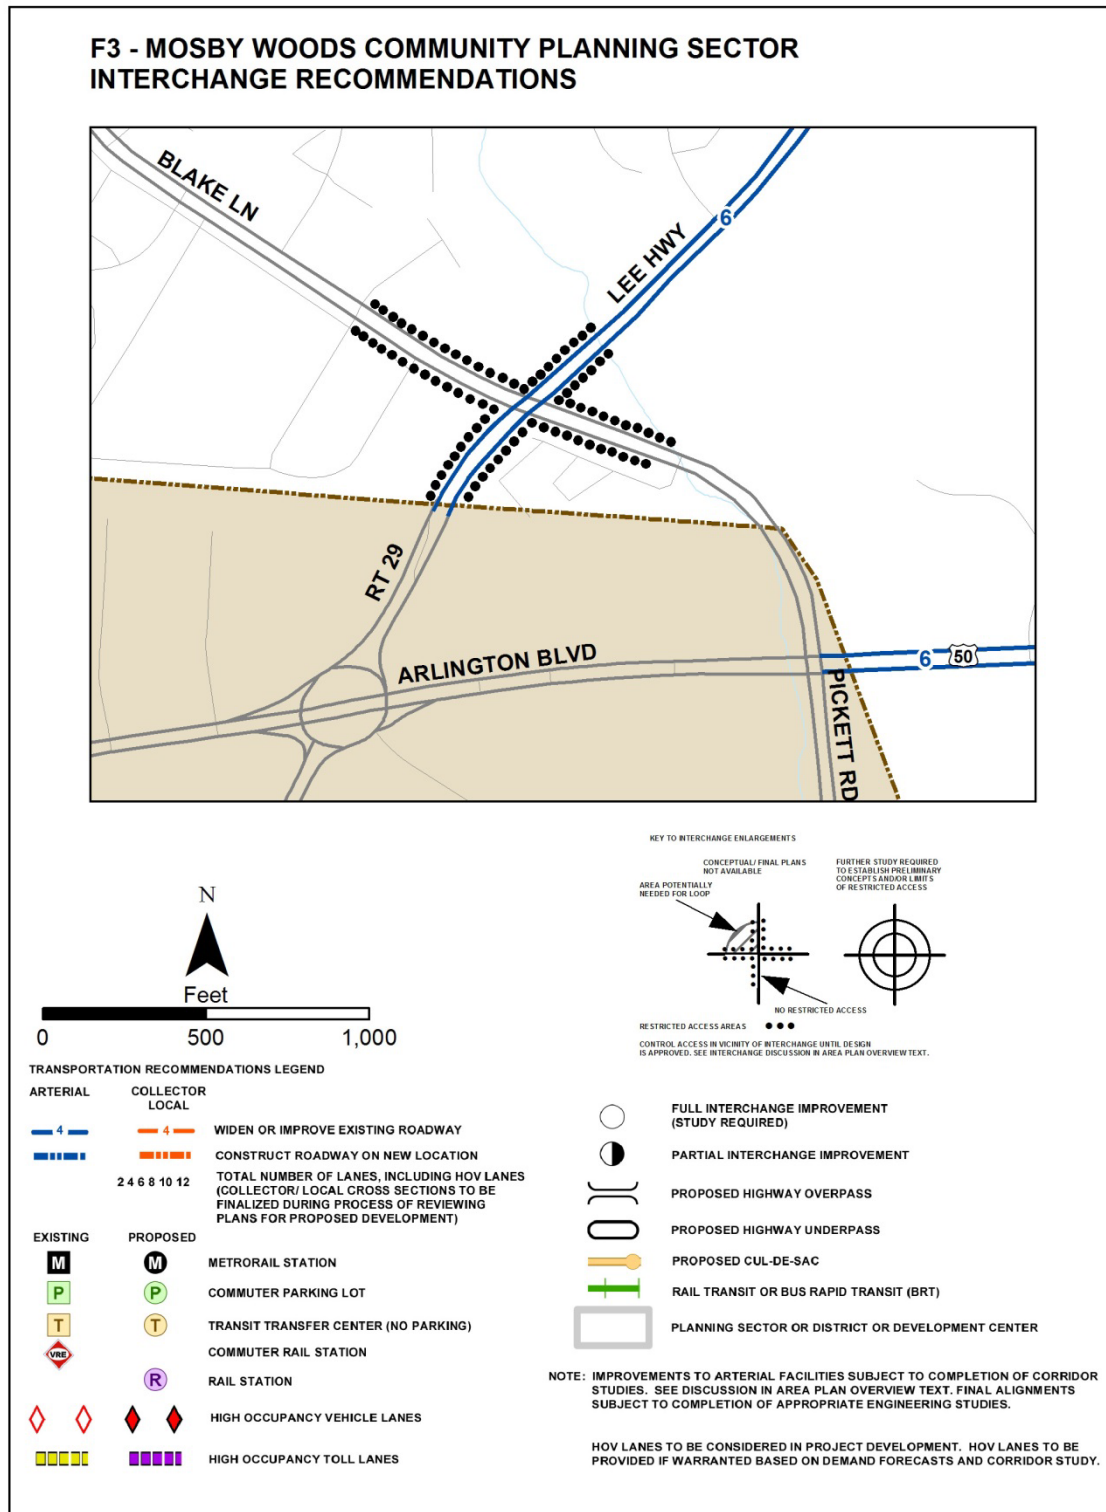

Parks and Recreation

Park and recreation recommendations for this sector are shown on Figure 20. The column "Park Classification" includes existing park facilities. The "Recommendations" column includes entries for both existing and proposed facilities. Prior to developing parkland, the Fairfax County Park Authority initiates a master planning process to determine the appropriate facilities and design for that park. This process involves extensive citizen review and participation. If an existing park is listed but no recommendation appears on that line, it means the park has been developed in accordance with its master plan.

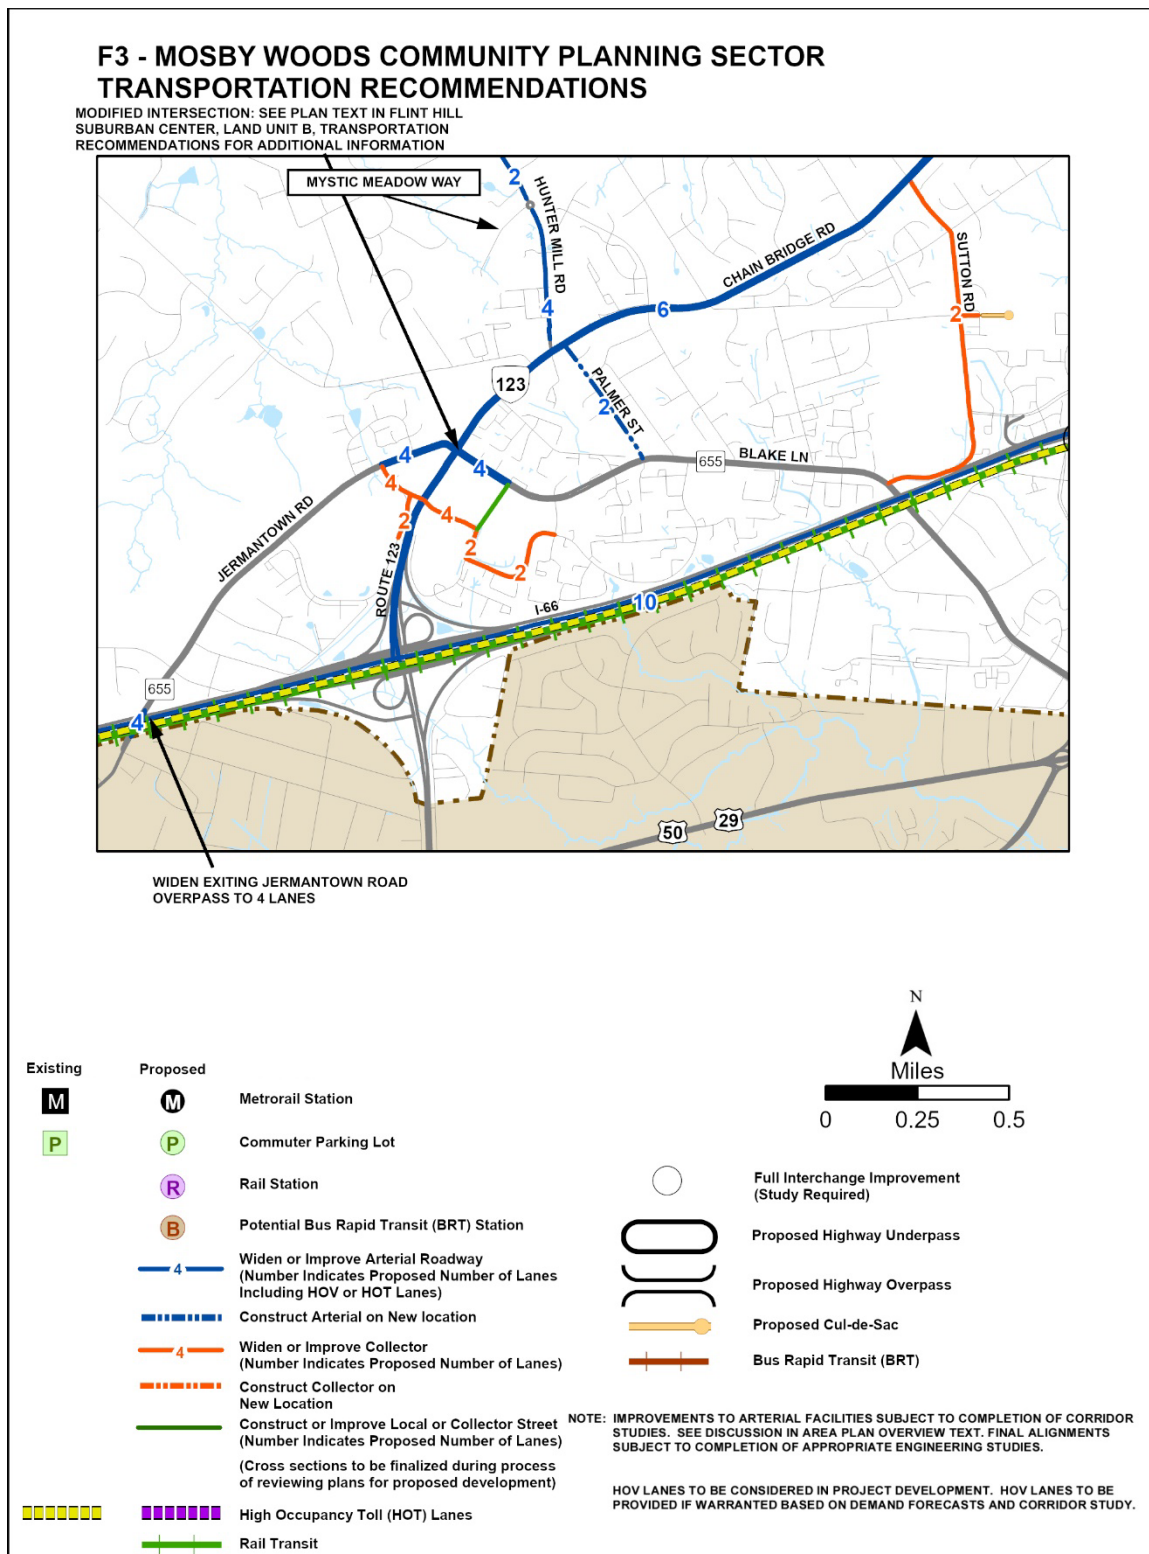

TRANSPORTATION RECOMMENDATIONS

FIGURE 17

**INTERCHANGE RECOMMENDATIONS
 F3, V1 COMMUNITY PLANNING SECTORS**

FIGURE 18

TRANSPORTATION RECOMMENDATIONS

FIGURE 19

FIGURE 20
PARKS AND RECREATION RECOMMENDATIONS
SECTOR F3

PARK CLASSIFICATION	RECOMMENDATIONS
NEIGHBORHOOD PARKS:	
Borge Street Mosby Woods	Complete development in accordance with master plan.
Villa D'Este	Develop in accordance with master plan.
COMMUNITY PARKS:	
Blake Lane School Site	Initiate a re-master planning process, if necessary, and develop in accordance with adopted plan.
DISTRICT PARKS:	
	This sector lies within the service area of the Oak Marr District Park, which is proposed for expansion.
	Additional athletic fields are needed to alleviate the shortage of active recreation facilities in this general area.
	Contributions for development of active recreation facilities at Oak Marr Park should be provided by the private sector in conjunction with planned residential and commercial development.

Trails and Bicycle Facilities

Trails planned for this sector are delineated on the 1":4,000' Countywide Trails Plan Map which is referenced as Figure 2 in the Transportation element of the Policy Plan and is available from the Department of Transportation. Trails in this sector are an integral part of the overall county system. While some of the segments have already been constructed, the Countywide Trails Plan Map portrays the ultimate system for the sector and the county at large. In addition, the map specifies a classification for each segment, which represents the desired ultimate function and surface type of the trail. Specific construction requirements are detailed in the Public Facilities Manual.

Bicycle Facilities for this sector are delineated on the 1":4000' Countywide Bicycle Network Map which is referenced as Figure 3 in the Transportation element of the Policy Plan and is available from the Department of Transportation.

Pedestrian pathways, trails, bicycle facilities adjacent to and abutting the AT&T campus site (Tax Map 47-2 ((1)) 58) can be found in the Transportation guidance for the Flint Hill Suburban Center.

F4 FOX LAKE COMMUNITY PLANNING SECTOR

CHARACTER

The Fox Lake Community Planning Sector is located north of the City of Fairfax and is bounded generally by West Ox Road, Vale Road, Hunter Mill Road and Chain Bridge Road (Route 123). The southwestern portion of the Fox Lake Community Planning Sector is included within the Fairfax Center Area Suburban Center. Plan recommendations for this area can be found in the Area III volume of the Comprehensive Plan, Fairfax Center Area.

This sector is almost entirely within the Difficult Run Watershed. Most of the sector is developed as low density residential use at a typical density of less than one unit per acre. A sizable portion of this sector is open space along Difficult Run and scattered elsewhere throughout the area.

Two townhouse cluster subdivisions, Oak Marr Courts and Oakborough Square, have been developed near the intersections of Jermantown Road, Miller Road and Chain Bridge Road at a density of 3-4 dwelling units per acre. The Penderbrook planned development is located in the western part of the sector, partly in the Fairfax Center Area. Penderbrook is developed at an overall density of about 7 dwelling units per acre, with both single-family detached and attached units. A golf course is incorporated into this development to serve the general area.

Hunter Mill Plaza and Oakton Shopping Center are neighborhood-serving shopping centers located at the intersection of Hunter Mill Road, Miller Road and Chain Bridge Road.

Due to the low density of residential and commercial development in this planning sector, it is one of the areas of highest potential for surviving prehistoric and historic heritage resources. Although few heritage resource surveys have been conducted in this sector, those that have been done have produced evidence of important resources from both time periods. Of particular interest are Squirrel Hill, a clapboard house (c. 1706) near Wayland Street; the Waples and Fox Milling complex, which is an archaeological site at the intersection of Waples and Fox Mill Roads; and reported prehistoric resources dating to at least 7000 B.C. along the southern and eastern boundaries of the sector.

Squirrel Hill is listed in the Fairfax County Inventory of Historic Sites. A list and map of heritage resources are included in the Fairfax Planning District Overview section, Figures 3 and 4. Additional historic sites in this sector are also included in the inventory.

CONCEPT FOR FUTURE DEVELOPMENT

The Concept for Future Development recommends that almost the entire sector remain as a Low Density Residential Area. There is a narrow area along Miller Road and Chain Bridge Road that the Concept for Future Development recommends as part of a Suburban Neighborhood due to its higher residential densities.

RECOMMENDATIONS

Land Use

The Fox Lake sector is largely developed with many stable residential neighborhoods. Infill development in these neighborhoods should be compatible with existing development in the vicinity in terms of use, type and intensity, in accordance with the guidance provided by the Policy Plan under Land Use Objectives 8 and 14.

Where substantial parcel consolidation is specified, it is intended that such consolidations will provide for projects that function in a well-designed, efficient manner and provide for the development of unconsolidated parcels in conformance with the Area Plan.

Figure 21 indicates the geographic locations of land use recommendations for this sector. Where recommendations are not shown on the General Locator Map, it is so noted.

1. It is appropriate that land in the Low Density Residential Area associated with the Difficult Run watershed be developed with residential use at a density of .1-.2, .2-.5 and .5-1 dwelling unit per acre as shown on the Plan map, except for Valewood Manor, which is developed at a density of 1-2 dwelling units per acre. This will help maintain the large lot residential character of the area that has been established. These areas are largely outside the approved sewer service area and should remain so to maintain the area in its current condition.

The Guidelines for Cluster Development contained in the Policy Plan should be strictly adhered to in this area, especially the guideline that no cluster development should be considered when the primary purpose of the clustering is to maximize density on the site.

Because of the configuration of several planned density ranges on the Plan map for this area, when a site has more than one planned density range assigned, the appropriate overall density and average lot size should be determined by placing strong emphasis on achieving compatibility with existing development in the vicinity. [Not shown]

2. The area east of Oakborough Square, north of Hunter Mill Plaza and west of Hunter Mill Road (i.e., (Tax Map 47-2 ((1))19, 20, 21, 22, 24, 25 and pt. 27E) is planned for residential use at .5-1 dwelling units per acre.

As an option, with full consolidation the entire area (Tax Map 47-2((1))19, 20, 21, 22, 24, 25 and pt. 27E) may develop with residential use at a density of 3-4 dwelling units per acre with development limited to a maximum of 58 units total, including any units provided for by the Affordable Dwelling Unit Program. Development can occur only if the area can be served by gravity-flow sewer without expansion of the sewer service area, and if the following conditions are met:

- Development should consist of single-family residential use which could include a mixture of single-family detached and single-family attached, with single-family detached housing to be located adjacent to the existing low density residential area to the north.
- A minimum 25 foot landscaped buffer area should be provided on the northwest side of the subject property between the new small lot single-family detached housing and

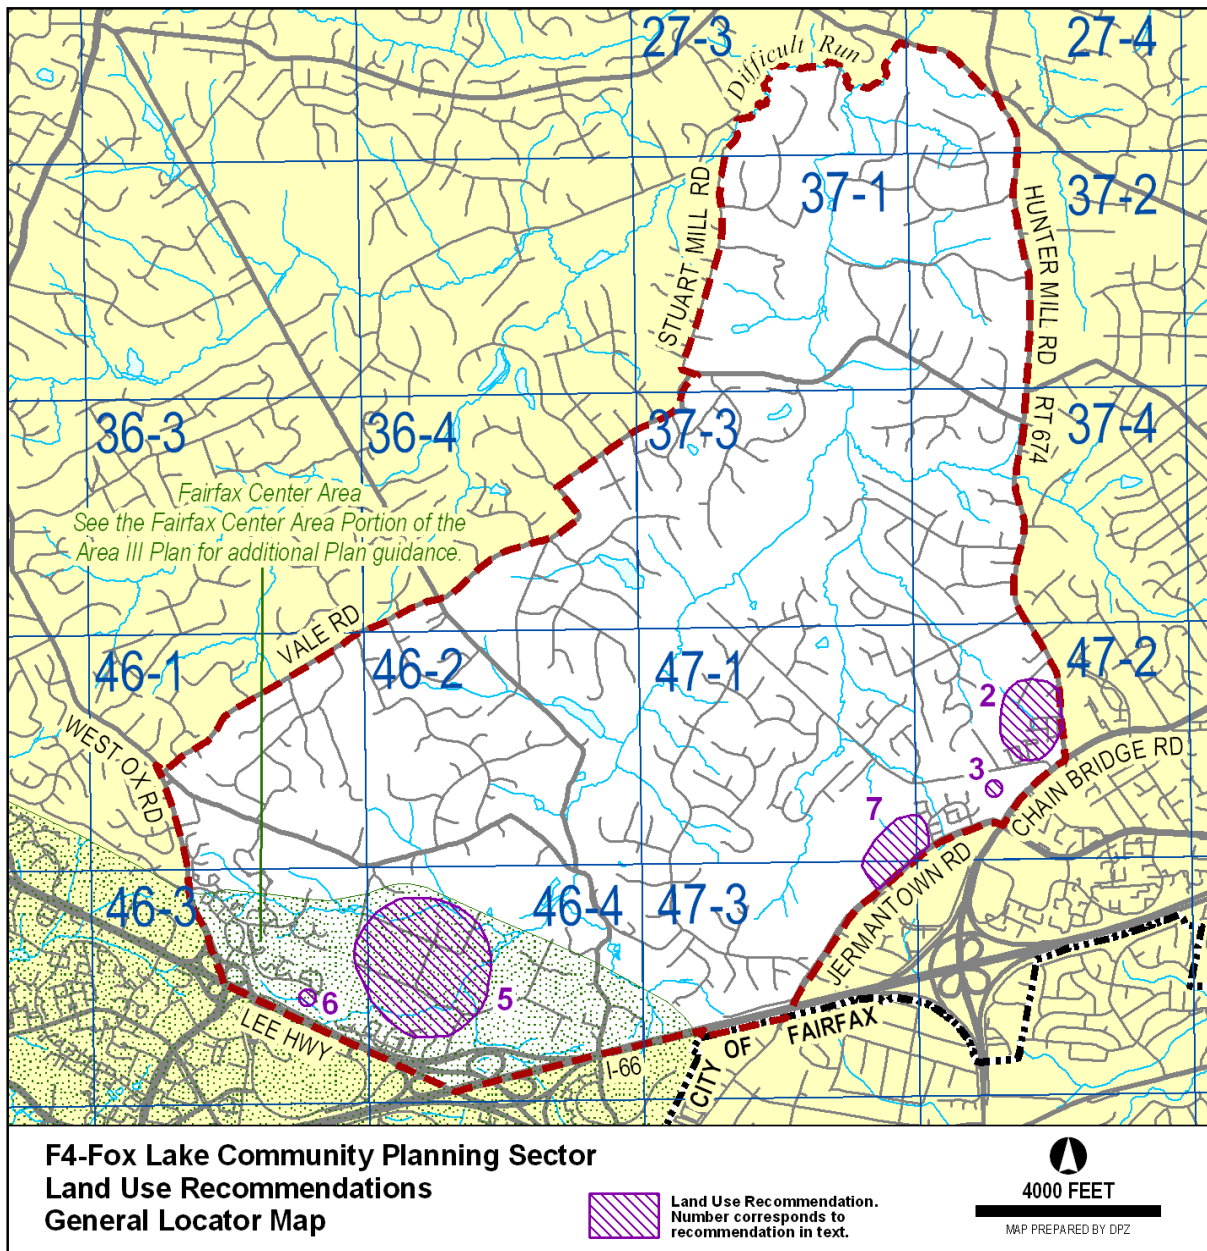

FIGURE 21

the adjacent existing low density residential area. Within this buffer area, mature trees should be preserved and supplemental plantings provided in order to provide effective screening to the adjacent area.

- At a minimum, a 15 foot buffer area should be provided on the western side of the subject property adjacent to the Oakborough Square Townhouses. In order to preserve mature trees, portions of the buffer area may need to be substantially wider.
- At a minimum, a 7 foot solid barrier wall should be provided along the southern edge of the subject property adjacent to the existing office structure, with no residential structure closer than 25 feet to this property line. In addition, a 10 foot landscaped buffer area should be provided along the entire southern boundary of the subject property.
- Any adverse traffic impacts which are coincident with development of this property should be mitigated through transportation improvements. Any improvements to Hunter Mill Road should be designed in a manner that preserves the 200-year old oak tree on the east side of Hunter Mill Road north of Route 124. Improvements should, at a minimum, include dedication of right-of-way for Hunter Mill Road, the provision of right and left turn lanes into the site, the provision of a southbound turn lane into the Oakton Shopping Center site, and provision of “right turn only” entrances on Hunter Mill Road except for the primary access.
- The primary access to Hunter Mill Road should be designed to align with the primary access for the existing Oakton Shopping Center and if warranted, a contribution towards signalization and a crosswalk should be provided. Internal circulation should be designed in a manner which avoids potential cut-through traffic between Hunter Mill Road and Miller Road.
- Transitional screening should be provided between the future right-of-way for Hunter Mill Road and the proposed development. This transitional screening should, at a minimum, include screening walls and shrubs, with shade trees (to include oak trees) along the sidewalk/trail.
- Pedestrian walkways (sidewalks and trails) connecting all portions of the development to Hunter Mill Road, Miller Road and the Oakborough Square Park should be provided. In making the connection to Oakborough Square Park, the walkway(s) should be designed to remove only a minimum number of trees. In addition to the internal pedestrian system, trails should be provided along the Hunter Mill Road and Miller Road periphery of the property.
- Pedestrian access should be provided to existing commercial areas to the south and east of the subject property.

Land for library and/or park uses should be dedicated as part of this residential option.

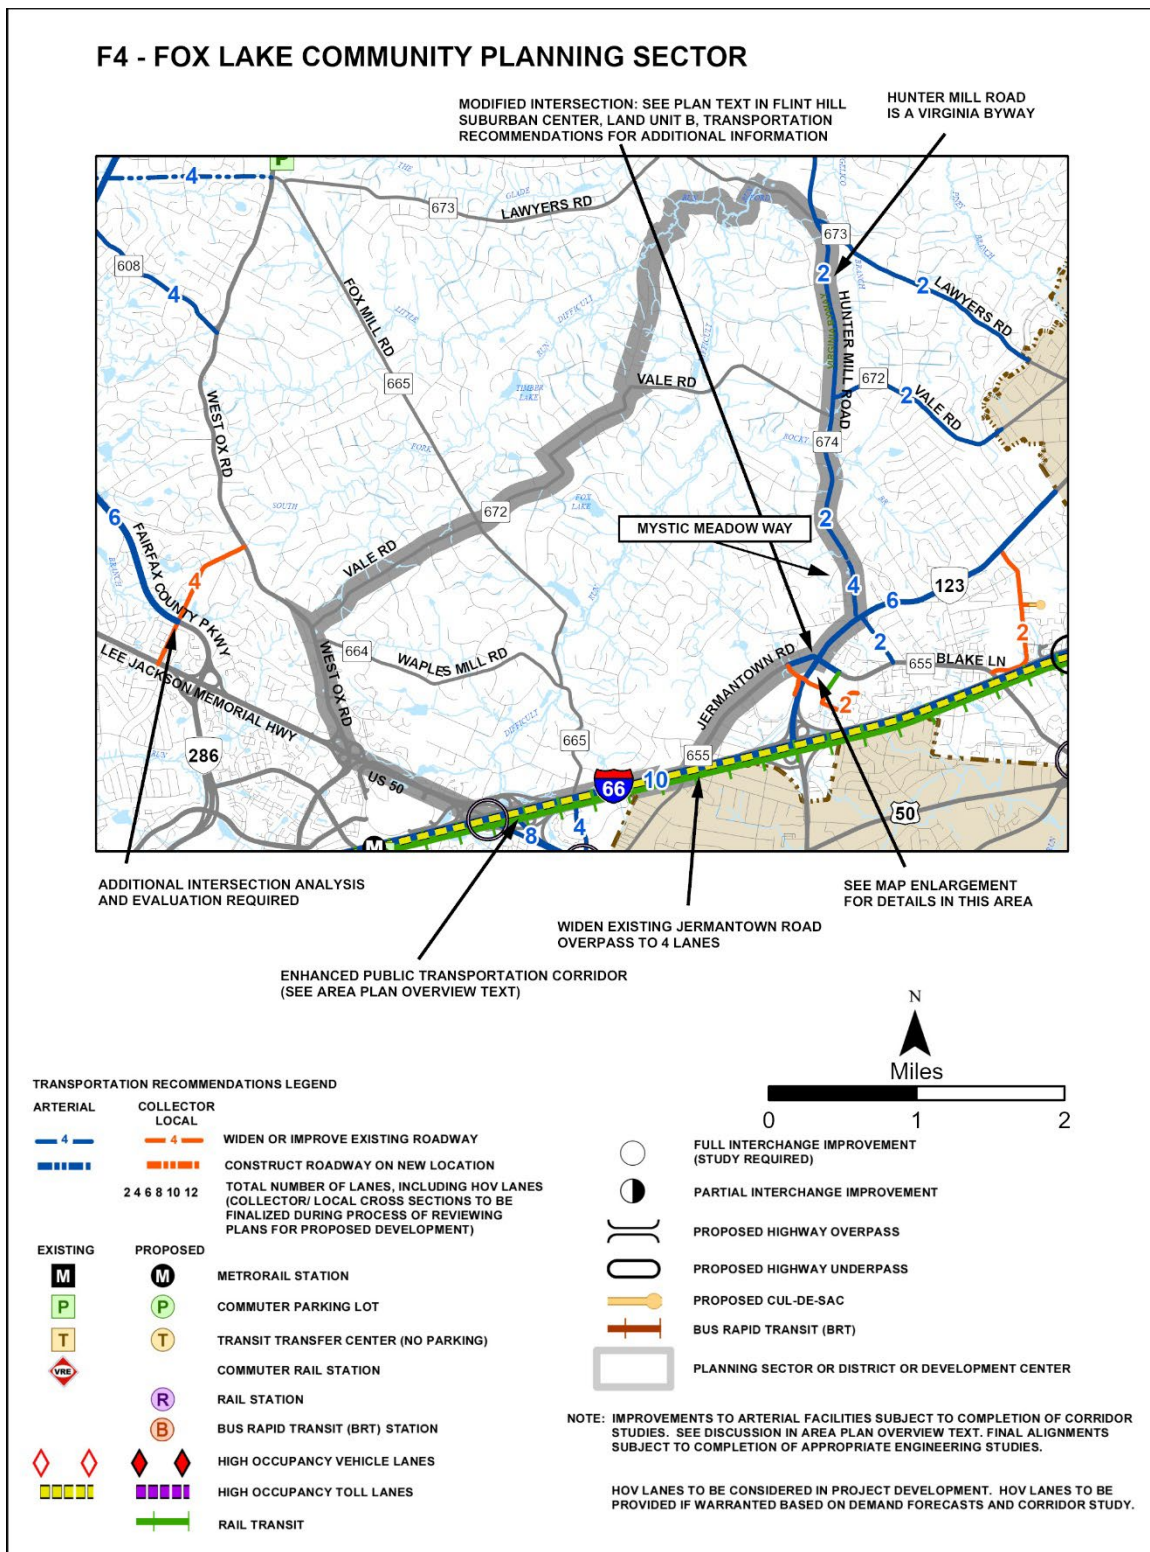

3. The Flint Hill Preparatory School should maintain a character that is compatible with existing and planned development in the vicinity.
4. Commercial development in this sector should be limited to those areas designated for commercial use on the Plan map. Existing commercial uses should not be intensified, except

minimally for modernization or beautification. Additional landscaping and buffering between commercial and adjacent residential land is strongly encouraged with carefully designed pedestrian connections created to adjacent residential areas where this is appropriate. [Not shown]

5. The Fairfax Farms subdivision should be retained as a low density residential area. Residential development at a density of .1-.2, .5-1 and 1-2 dwelling units per acre is appropriate as outlined in the recommendations for Land Unit O within the Fairfax Center area text (see Area III Plan). Redevelopment to higher densities or intensities should not occur. Infill of vacant lots in the subdivision and in adjacent areas should be compatible with existing development in terms of use, intensity and dwelling unit type.
6. The Penderbrook Golf Course is an amenity incorporated into the Penderbrook subdivision as an area-wide public amenity. The golf course should be preserved, either as an operating golf course or as passive green space in perpetuity should the privately-owned operations cease. The development policies that apply to this subdivision and golf course are contained in the Area III Plan, Land Unit N of the Fairfax Center area.
7. The area north of Jermantown Road between Oakton Elementary School on the east and Oak Marr Park on the west is planned for residential development at 3-4 dwelling units per acre except for the northern portion of the tract with frontage along the south side of Miller Road which is planned for residential development at .5-1 dwelling unit per acre to be compatible with the existing large-lot, single-family houses along Miller Road. The area planned for residential development at .5-1 dwelling unit per acre should extend to a minimum depth of 300 feet south of Miller Road. Lots should, at a minimum, be one acre in size, with no provision for clustering in view of the existing pattern of residential development along Miller Road. In addition, these lots should not be served by public sewer. To achieve the upper end of the .5-1 dwelling unit per acre density range, maximum advantage should be taken of the existing vegetation and topography and the development should result in minimal disruption to environmental features. If the area should develop as a part of a planned unit development, the density restrictions for this northern part, as described above, should still be maintained.

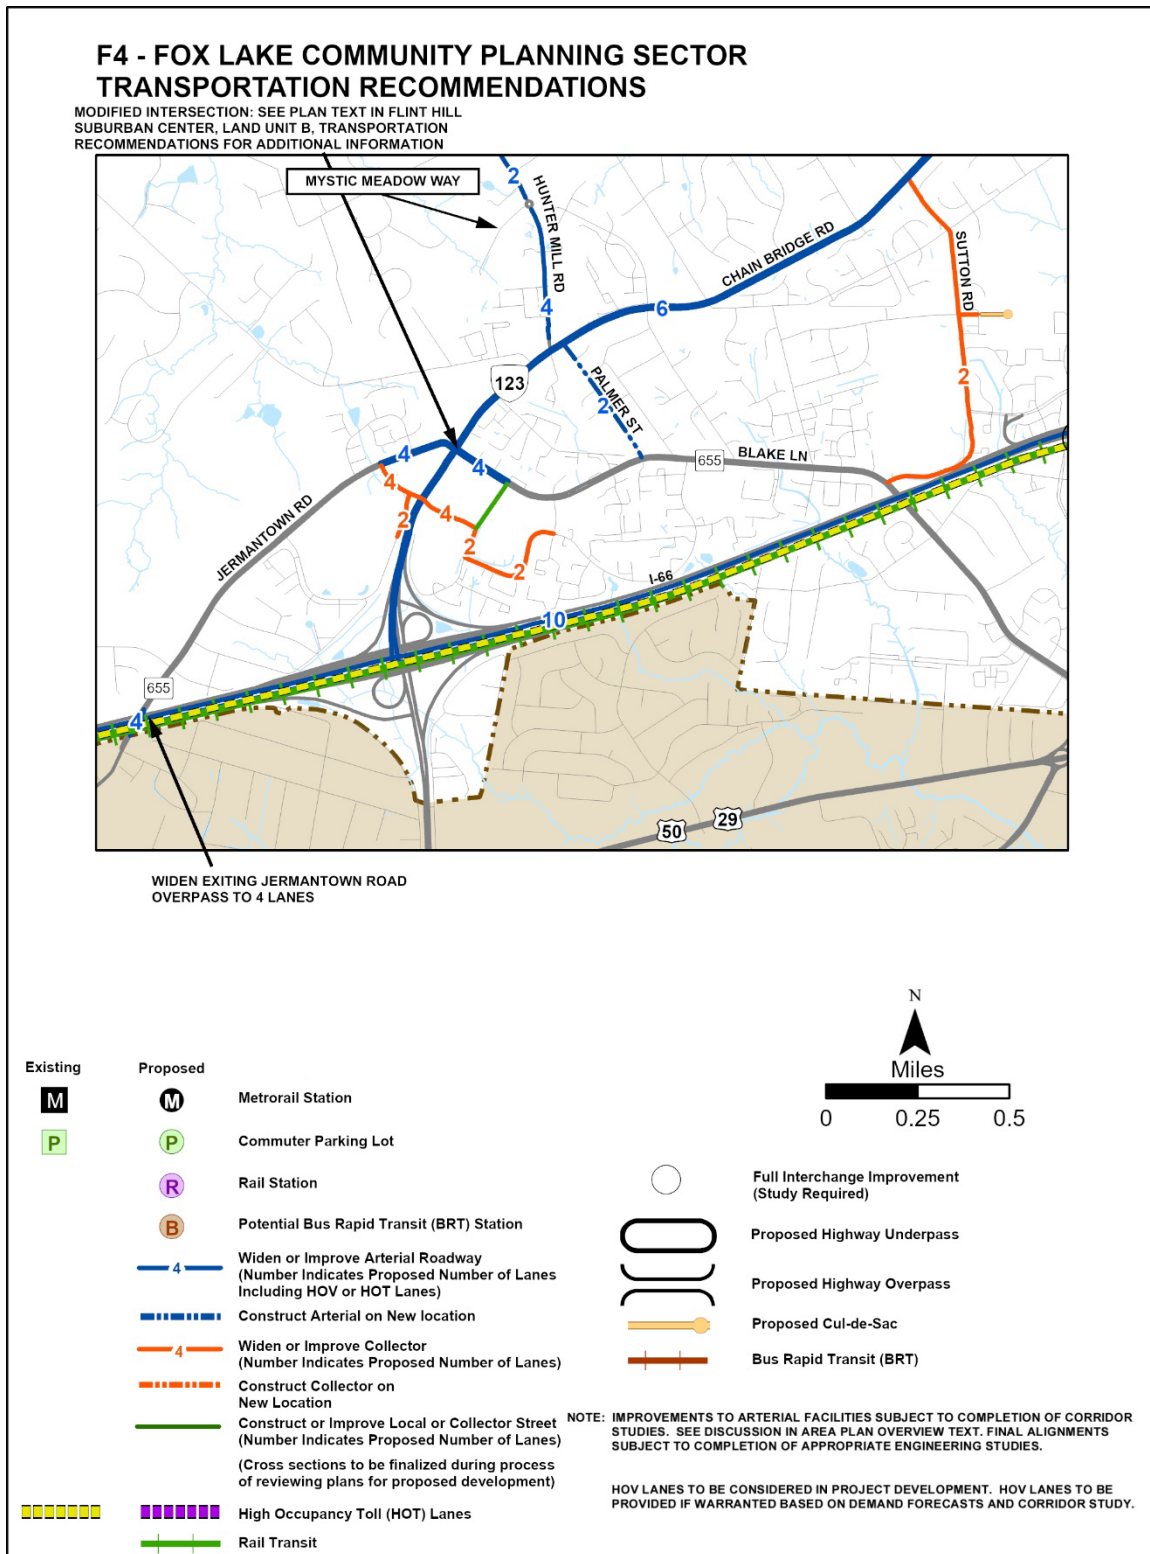

Transportation

Transportation recommendations for this sector are shown on Figures 22 and 23. In some instances, site-specific transportation recommendations are included in the land use recommendations section. The figures show access orientation, circulation plans, interchange impact areas and generalized locations of proposed transit facilities. Recommendations regarding the AT&T campus site (Tax Map 47-2 ((1)) 58) can be found in the transportation guidance for the Flint Hill Suburban Center and as referenced on Figures 22 and 23. The recommendations contained in the Area Plan text and maps, the Policy Plan and Transportation Plan map, policies and requirements in the Public Facilities Manual, the Zoning Ordinance, and other standards will be utilized in the evaluation of development proposals. Development proposals should also be evaluated against the Hunter Mill Road Traffic Calming Study (Northern Virginia Regional Commission, 2006), which provides both a traffic calming conceptual plan for Hunter Mill Road, as well as context sensitive roadway design techniques.

TRANSPORTATION RECOMMENDATIONS

FIGURE 22

**INTERCHANGE RECOMMENDATIONS
F3, F4 COMMUNITY PLANNING SECTORS**

FIGURE 23

Heritage Resources

The Waples and Fox Milling complex dates to the 19th century and has extensive mill race systems in the adjacent floodplain. These resources and the prehistoric resources that probably exist in the Difficult Run Stream Valley are particularly vulnerable to public utility and recreational development which should not proceed without prior survey and appropriate measures to mitigate adverse impacts.

Any development or ground disturbance in this sector, both on private and public land, should be preceded by heritage resource studies, and alternatives should be explored for the avoidance, preservation or recovery of significant heritage resources that are found. In those areas where significant heritage resources have been recorded, an effort should be made to preserve them. If preservation is not feasible, then, in accordance with countywide objectives and policies as cited in the Heritage Resources section of the Policy Plan, the threatened resource should be thoroughly recorded and in the case of archaeological resources, the artifacts recovered.

Public Facilities

1. A new fire and rescue facility in the Hunter Mill Road corridor, north of Oakton, has been identified as a future need.
2. In general, the area north of Jermantown Road, Oakton Road, and Waples Mill Road is not planned or programmed for sewer construction. This area includes part of the headwaters of Difficult Run, and the current policy of the Board of Supervisors, reaffirmed in May 1989, is not to extend sewer service into this watershed. However, to remedy a public health hazard caused by a number of irreparably failed and imminently failing septic systems, the county's Approved Sewer Service Area (ASSA) was expanded and implemented under the county's Extension & Improvement Program to the area generally north of Interstate 66 (I-66), west of Jermantown Road, south of Tattersall and Oak Marr Parks, and east of an unnamed tributary of the Difficult Run Stream Valley. This limited expansion of the ASSA includes land that can be served by gravity flow sewer lines which are installed in accordance with sound engineering and financial principles and which connect to the facilities serving dwelling units with irreparably failed and imminently failing septic systems.
3. The Flint Hill private school is located at Oakton and Jermantown Roads. A limited expansion of the Approved Sewer Service Area (ASSA) on a portion of the school site should be permitted to only support restroom facilities to serve the existing accessory athletic fields. This limited expansion of the ASSA should in no way be construed to support future expansion of the school buildings or other types of facilities. Any expansion of school buildings should be allowed only to the extent that the proposed expansion can be accommodated by the ASSA that was in place in 2004.

Parks and Recreation

Park and recreation recommendations for this sector are shown on Figure 24. The column "Park Classification" includes existing park facilities. The "Recommendations" column includes entries for both existing and proposed facilities. Prior to developing parkland, the Fairfax County Park Authority initiates a master planning process to determine the appropriate facilities and design for that park. This process involves extensive citizen review and participation. If an existing park is listed but no recommendation appears on that line, it means the park has been developed in accordance with its master plan.

Trails and Bicycle Facilities

Trails planned for this sector are delineated on the 1":4,000' Countywide Trails Plan Map which is referenced as Figure 2 in the Transportation element of the Policy Plan and is available from the Department of Transportation. Trails in this sector are an integral part of the overall county system. While some of the segments have already been constructed, the Countywide Trails Plan Map portrays the ultimate system for the sector and the county at large. In addition, the map specifies a classification for each segment, which represents the desired ultimate function and surface type of the trail. Specific construction requirements are detailed in the Public Facilities Manual.

Bicycle Facilities for this sector are delineated on the 1":4000' Countywide Bicycle Network Map which is referenced as Figure 3 in the Transportation element of the Policy Plan and is available from the Department of Transportation.

Pedestrian pathways, trails, bicycle facilities adjacent to and abutting the AT&T campus site (Tax Map 47-2 ((1)) 58) can be found in the transportation guidance for the Flint Hill Suburban Center.

FIGURE 24
PARKS AND RECREATION RECOMMENDATIONS
SECTOR F4

PARK CLASSIFICATION	RECOMMENDATIONS
NEIGHBORHOOD PARKS:	
Oakborough Square	Initiate a master planning process and develop in accordance with the approved plan. Additional Neighborhood Parks are not recommended in this predominantly Low Density Residential Area.
COMMUNITY PARKS:	
Foxvale Tattersall Wayland Street	Initiate a master planing process and develop these parks with a mix of passive and active recreation uses consistent with site constraints.
DISTRICT PARKS:	
Oak Marr	Consider acquisition of additional contiguous parcels on Oakton Road to improve park access. Proposed expansion and development of this park should address the need for active recreation to alleviate recreation deficiencies in the service area and to protect the sensitive parkland resources. Plan and develop a countywide trail connection between the Fairfax Center Area and Oak Marr District Park.
COUNTYWIDE PARKS:	
Difficult Run Stream Valley	Protect and preserve significant ecological resources in the Difficult Run headwaters through a combination of land dedication, donation of conservation easements to, and purchase by, the Fairfax County Park Authority. Ensure continuity of public access within Difficult Run EQC through donation and/or purchase of trail easements as necessary. Preserve and protect heritage resources in areas planned for public park use. Seek historic preservation easements on selected privately owned prehistoric sites and historic properties.

FIGURE 24
PARKS AND RECREATION RECOMMENDATIONS
SECTOR F4
(continued)

PARK CLASSIFICATION	RECOMMENDATIONS
COUNTYWIDE PARKS (continued):	
Penderbrook Golf Course	The Penderbrook Golf Course, a privately operated facility open to the public, should be maintained for public use. In the event that the current operation ceases, the site should be perpetually available for publicly accessible open space.

F5 LEGATO COMMUNITY PLANNING SECTOR

The Legato Community Planning Sector is entirely within the Fairfax Center Area Suburban Center. Plan guidance for this area is in the Fairfax Center Area section of the Area III volume of the Comprehensive Plan.

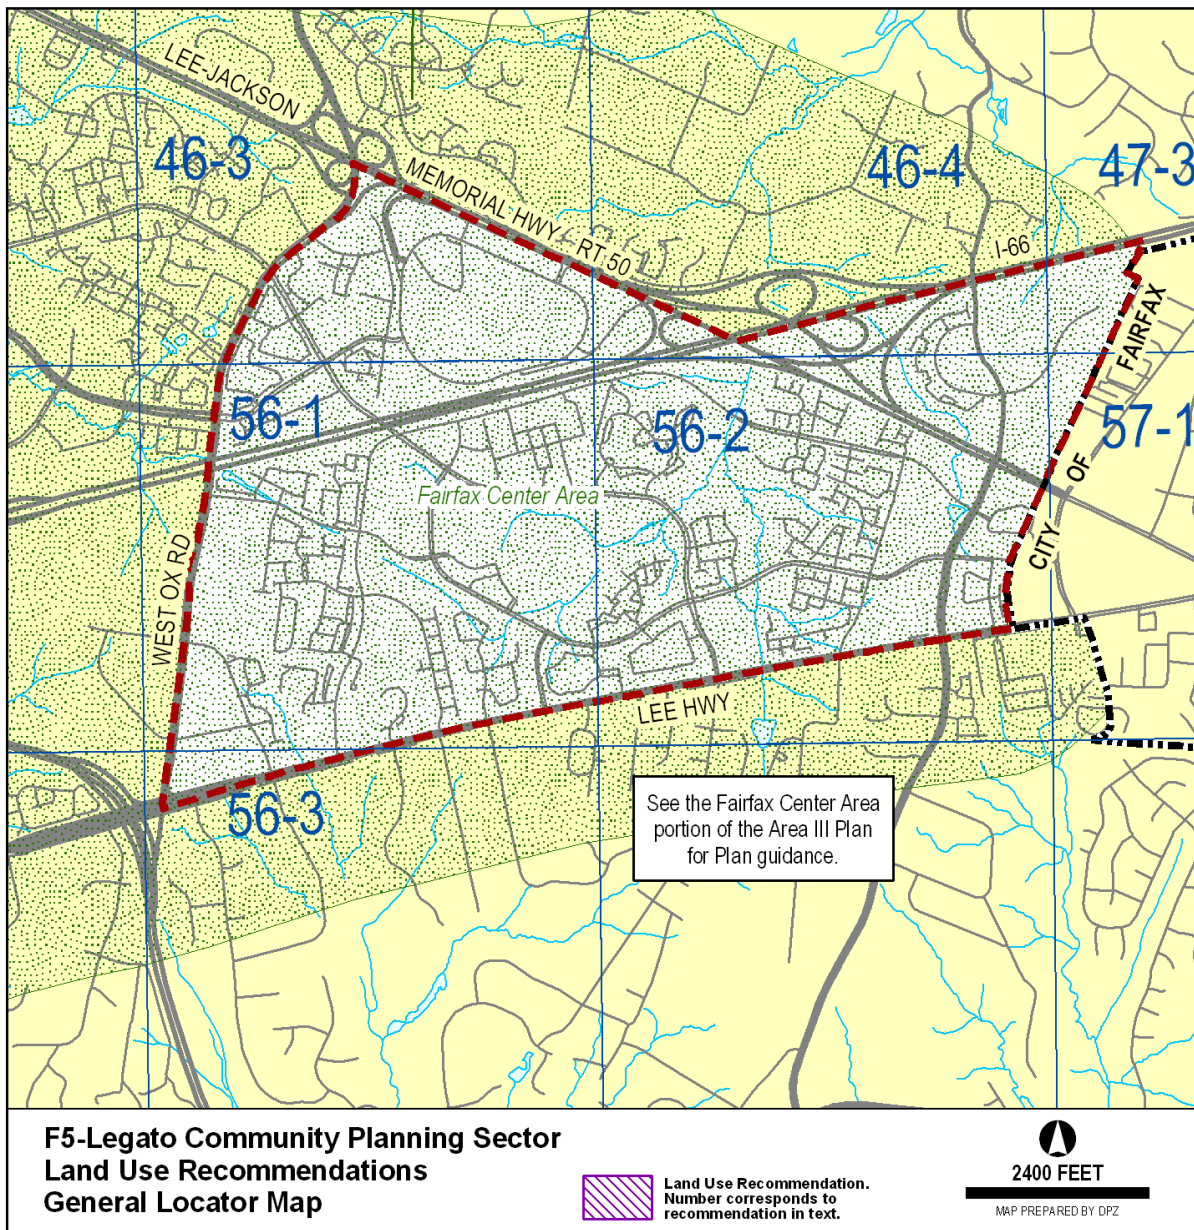

FIGURE 25

F6 COUNTY GOVERNMENT CENTER COMMUNITY PLANNING SECTOR

CHARACTER

Originally the seat of Fairfax County's government, the 48-acre County Government Center Community Planning Sector has transformed into the county's judicial center, now known as the Fairfax County Judicial Complex. It is home to the county's three court systems: Fairfax County Circuit Court, General District Court, and the Juvenile Domestic Relations District Court; and includes the Adult and Juvenile Detention Centers. The Judicial Complex receives a high volume of daily visitors and requires a high level of security. The Judicial Complex comprises county land surrounded by the City of Fairfax, and generally is bounded by Main Street (Route 236), Chain Bridge Road (Route 123), Judicial Drive, and Jones Street. The Judicial Complex is bounded by commercial properties, a cemetery, townhouses to the north, and single detached residential units to the west. Old Town Fairfax is located directly to the east (see Figure 26).

This planning sector contains heritage resources listed in the Fairfax County Inventory of Historic Sites, Virginia Landmarks Register, and the National Register of Historic Places. A list and map of these heritage resources are included in the Fairfax Planning District Overview section, Figures 3 and 4. The Historic Courthouse, Historic Jail, and Legato School are among the significant heritage resources in this sector. A list of historic sites in this sector is also included in the Inventory of Historic Sites in the Heritage Resources section of the Fairfax Planning District.

PLANNING HISTORY

The Judicial Complex's history dates from 1799 when Fairfax County purchased four acres of land for the construction of a county courthouse. Over the next few years, the adjacent Town of Providence was founded; later renamed the Town of Fairfax. During this time, additional land was sold to the county for the construction of other buildings associated with the judicial system, including the jail which opened in 1886. The Historic Courthouse was expanded in 1929 and no further construction occurred until the early 1950s.

Rapid population growth post-World War II increased the need for county services and a period of expansion began. Additions to the Historic Courthouse from 1953 to 1961 more than doubled its size. In the mid-20th century, the Burkholder Building and the Police Administration building were added to the complex. The latter was later converted to the Police Evidence Storage building. In 1969, the 13 story Massey Building was constructed and served as the seat of government for Fairfax County until the current Government Center opened in 1992. The Massey Building continued to house the headquarters of the Police and Fire and Rescue Departments until 2017, when they were moved to the Public Safety Headquarters at the Government Center. The Massey Building was subsequently demolished in 2019.

The Adult Detention Center was opened in 1978, further expanding the Judicial Complex. In 1982, the current Fairfax County Courthouse and the Juvenile Detention Center were added to the complex. In 1991, the Juvenile Detention Center was relocated to a one-story structure on the west side of the Judicial Complex. The Adult Detention Center, Juvenile Detention Center, and Courthouse were subsequently expanded with the most recent addition occurring in 2010. To accommodate the growth of the Judicial Complex, two freestanding parking garages were constructed in 1994 and 2002.

The Massey Building's demolition was the impetus for the Judicial Complex Master Plan completed in 2021. The result of a 2.5-year process, the Master Plan provides a 20-year vision and involved extensive stakeholder engagement. It envisions the Judicial Complex as a vibrant, welcoming, and accessible civic space, rooted in architectural history and integrated into the fabric of Old Town Fairfax. The Master Plan also proposes increasing density and diversifying land uses to fulfill community needs and activate the Judicial Complex. Planning for this sector is based on the 2021 Master Plan.

CONCEPT FOR FUTURE DEVELOPMENT

This area is not covered by the Concept for Future Development because it is entirely surrounded by the City of Fairfax.

GUIDING PRINCIPLES

The following principles will guide the development of the Judicial Complex to become a vibrant, welcoming, and secure civic space for all users. Planning and design will be holistic, taking into account functional requirements, aesthetics, and each development phase's contribution to the overall sense of place. Development applications will be evaluated based on their ability to meet the following principles:

1. **Old Town Fairfax's street grid will be extended to the Judicial Complex, creating a new multi-modal street grid with walkable urban blocks.** The Judicial Complex will be transformed from an automobile-oriented space with loop roads and stand-alone parking garages to one that equitably considers all transportation modes. With the inclusion of street trees, lighting, sidewalks, and bike paths, it will be convenient, safe, and pleasant for pedestrians, transit users, and bicyclists to move about the site. Parking will be integrated underground into new buildings where feasible. On-street parking should be prioritized to minimize surface parking lots.
2. **The Judicial Complex will be activated around a welcoming open space network, and organized along a north-south, east-west axis.** It will include public lawns, plazas, and landscaped areas to provide space for events and gatherings for residents, employees, and visitors. A key component will be the Pedestrian Promenade connecting Old Town Fairfax to the Courthouse.
3. **The Historic Courthouse grounds will serve as the gateway between Old Town Fairfax and the Judicial Complex; it will also serve as focal point of the open space network.** Although the Judicial Complex's historic structures have not retained their original use, they define its architectural character.
4. **Security will be seamlessly integrated into the overall site design.** Public and secure areas will be delineated, using both hardscape (i.e. bollards, walls, decorative fencing) and softscape (sloped, vegetated channels) measures.

RECOMMENDATIONS

Land Use

The County Government Center Community Planning Sector contains the Fairfax County Judicial Complex, which is planned for approximately 2 million square feet of public facilities uses, and includes the Fairfax County Circuit Court, General District Court, the Juvenile Domestic Relations District Court, as well the adult and juvenile detention centers and other county, non-profits, and volunteer agencies that support the general operations and mission of the Judicial Complex. The complex is planned for additional public facility uses to include the expansion of the judicial and public safety systems, additional space for county agencies, non-profits, or other entities that are supportive of the general operations and mission of the Judicial Complex, a Diversion & Community Re-Entry Center, supporting retail spaces for uses such as a convenience market and/or food services, affordable/workforce housing, and childcare services.

An integrated network of open space should be provided within the Judicial Complex to include public lawns and plazas which provide space for events and gatherings for residents, employees, and visitors. These spaces should be connected by accessible paths that provide access between buildings within the Judicial Complex and should provide sustainable landscaping. The focal point of the open space network should be the Historic Courthouse grounds, which will provide a visible public green and a gateway between Old Town Fairfax and the Judicial Complex.

Affordable Multifamily residential development consisting of up to 300 units comprised entirely of workforce and/or affordable housing, with an option for supporting childcare center may also be appropriate for the Judicial Complex if the following conditions are met:

- Pedestrian and bicycle connections are provided connecting housing to open space within the Judicial Complex, the surrounding community, and Old Town Fairfax;
- Adequate outdoor recreational facilities are provided for the future residents;
- The building design and architecture, including form, massing, materials, and façade treatments are compatible with surrounding uses.

Buildings constructed on Tax Map Parcel 57-3 ((1)) 17 must meet the following conditions:

- A maximum building height of 80 feet. Building heights should taper to 40 feet or lower along the northern and western boundary of the parcel to reduce visual impacts, provide light, privacy, and an appropriate architectural transition to the adjacent residential neighborhoods to the north and west. Shadow studies, cross sections, and building design should be provided to demonstrate that the proposed building height does not adversely impact adjacent residential neighborhoods;
- The provision of a continuous landscaped buffer along the northern and western boundary of the parcel to mitigate potential impacts to residential neighborhoods which should include the preservation of healthy and mature trees, to the extent feasible, and supplemented with appropriate evergreen and understory vegetation to provide year-round visual screening to adjacent residential neighborhoods;
- The provision of enhanced bicycle and pedestrian facilities along Jones Street and

Judicial Drive, with connections to the bicycle and pedestrian network serving the Judicial Complex.

Transportation

The street network of the Judicial Complex should be organized into a grid layout that streamlines traffic movements, provides additional access points, and creates more regular parcels for future development. The following modifications to the existing street network are recommended to achieve these goals:

- The main entrance to the Judicial Complex from Chain Bridge Road should be realigned with the proposed extension of South Street in the City of Fairfax. South Street should be extended from the City of Fairfax into the Judicial Complex and connect with Page Avenue to become a central east/west spine road.
- A new east/west road should be constructed along the northern boundary of the Judicial Complex connecting West Street with a new access point to a parking garage.
- A new north/south road should be constructed between the Adult and Juvenile Detention Centers connecting Page Avenue with Judicial Drive.
- Massey Drive should be realigned as a north/south road to connect the new northern east/west road with the realigned central east/west spine road.
- West Street should be realigned within the Judicial Complex to provide a direct two-way connection between Main Street and the central east/west spine road. The current alignment of the intersection of West Street and Main Street should remain.
- The intersections of West Street and South Street, and South Street and Chain Bridge Road should accommodate all modes of transportation.
- Strategies to minimize and disperse vehicular traffic to and from the site should be implemented. Such strategies could include wayfinding, turn restrictions, TDM programming, and shuttle service.

To support the street grid network, pedestrian and bicycle facilities should be provided along roadways and through central open spaces. The following modifications to the pedestrian and bicycle network are recommended to achieve these goals:

- Sidewalks should minimally be 8 feet wide where significant pedestrian activity is expected, and minimally 6 feet wide in other areas.
- Pedestrian oriented street lighting and street trees between the street and sidewalk should be provided.
- A separated and protected bicycle facility should be provided through the site between Chain Bridge Road and the north/south portion of Judicial Drive.
- Improvements to bicycle facilities planned by the City of Fairfax along Judicial Drive should be supported.

Urban Design

The Judicial Complex's buildings, streets, and civic spaces should be designed to provide a vibrant high-quality urban environment that is comfortable to navigate. The following design measures should be used to achieve this goal:

Building Design

Redevelopment should use high-quality building materials and design, contribute to a sense of place, and achieve design harmony across the site. The Complex's architectural styles range from the early American styles of the Historic Courthouse and Jail to the concrete Brutalism of the Adult and Juvenile Detention Centers. The original Courthouse, built in 1982, is of the same Brutalist style. The Courthouse's 2008 brick addition bridges architectural styles, setting a standard for future development. Future architecture should continue using harmonious materials, features, and form, while drawing inspiration from the Historic Courthouse.

New buildings should be located close to the street to provide an edge to the pedestrian realm. When appropriate, facades of public spaces (lobbies, common spaces, and retail) should be transparent, allowing visibility from the sidewalk into the building. Ground floor elements that provide shade and define building entries are also encouraged. Where possible and appropriate, retail is encouraged at the ground floor level to fulfill employee and visitor needs.

Loading docks, mechanical rooms, and utility vaults should be located along service streets and/or within the building envelope to minimize negative impacts on the pedestrian realm.

The visual impact of parking should be minimized and mitigated. Parking should be incorporated within future buildings wherever possible. Underground parking is preferable; above-ground parking (parking podiums) should be minimized. When they do occur, façades should blend with floors above. Planters, landscaping, and architectural detailing can also soften the effect of above-ground parking. Exposed parking levels should only be located along service streets.

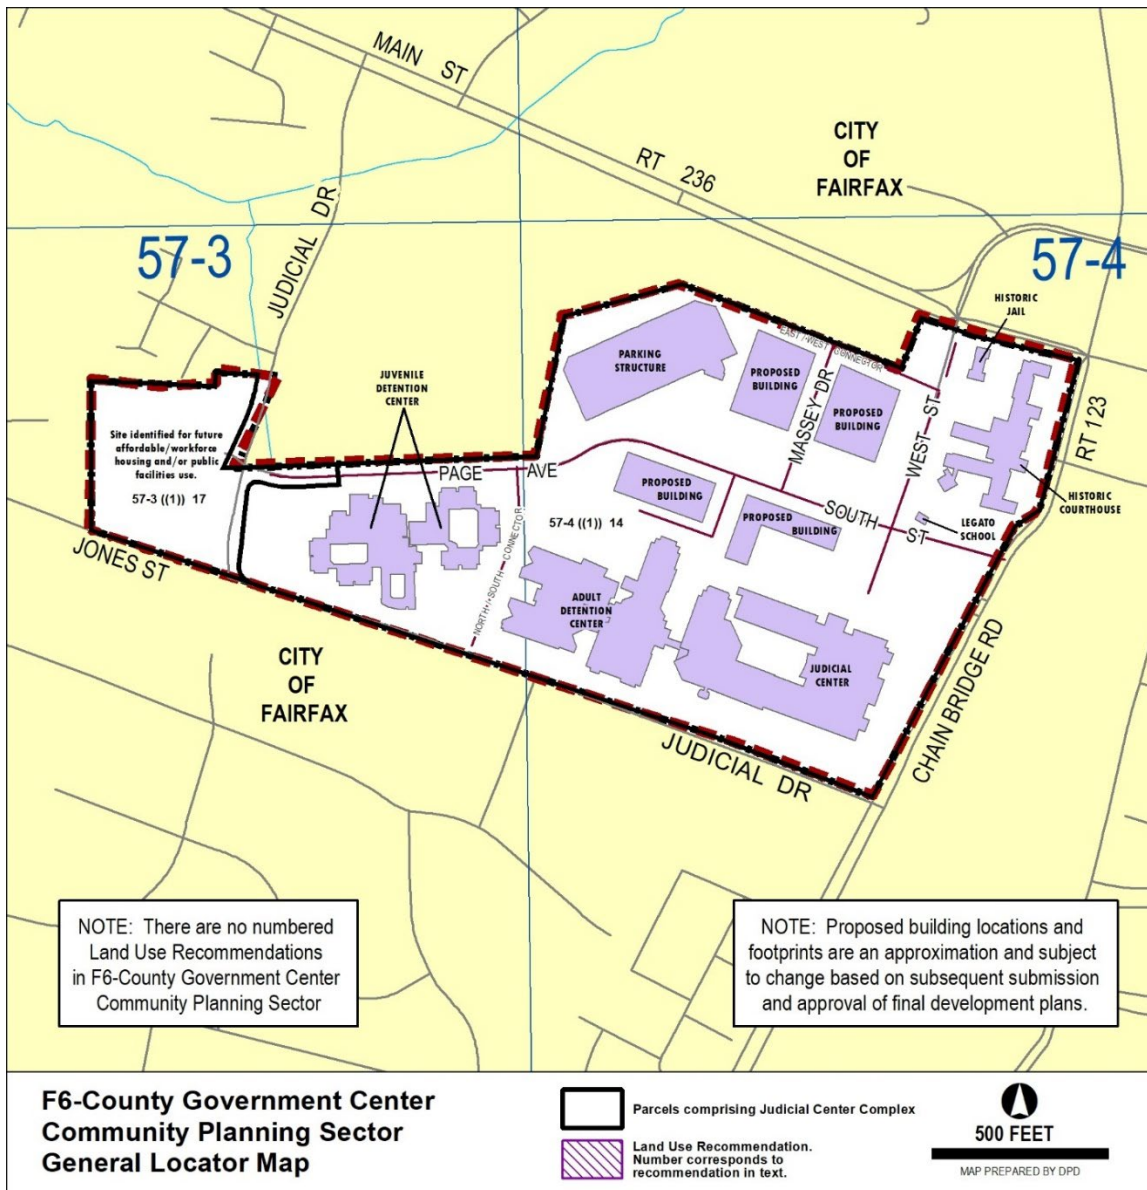

Streetscape

Streetscape is the area between the building façade and street. Streetscape should use a consistent palette of street furniture (light fixtures, benches, bike racks, trash, and recycling receptacles) to achieve design unity across the Complex. The style should be complimentary to the Complex's overall character. Pedestrian crossings should be located on all sides of an intersection when possible and prioritize pedestrian needs. Crossings at major streets should be highly visible.

Streetscapes should be designed to prioritize pedestrian comfort and safety and include three zones:

- **Landscape Amenity Panel** - Separating the street and sidewalk, this area buffers pedestrians from vehicular traffic. It can include street trees, lighting, bus stops, bicycle racks, parking meters, traffic signs, pedestrian refuge strips, wayfinding signs, and other urban infrastructure. The preferred width is 8 feet; the recommended minimum width is 6 feet.
- **Sidewalk** - This area, dedicated to pedestrian movement, should be free from obstructions.

- Building Zone - This is the area between sidewalk and building; width and character will be determined by the adjacent land use. It defines the edge of the pedestrian realm and may include building colonnades (i.e. the Courthouse), overhangs, awnings, landscaping, planters, street furniture, and outdoor dining. Where no buildings occur, walls, landscaping, and other architectural features can also be used to define the edge of the pedestrian realm.

GENERAL LOCATOR MAP

FIGURE 26

Heritage Resources

The Fairfax County Courthouse and Jail are listed in the County Inventory of Historic Sites, the Virginia Landmarks Register, and the National Register of Historic Places. Given their significance to county history, these properties should be considered for a future Historic Overlay District study. The county's Historic Overlay District is a zoning tool used to regulate proposed new construction and changes to existing structures in areas containing heritage resources to ensure compatibility with the resources. Site design, facades, demolition, and building materials must be reviewed and approved by the county's Architectural Review Board.

Renovations or rehabilitation of these historic structures should be consistent with the Secretary of the Interior's Standards for Rehabilitation and should be presented to the Architectural Review Board for review. Owners of properties included in the Inventory may meet with the county's Architectural Review Board on a voluntary basis to review proposed changes to their properties. Project review and approval by the county's Architectural Review Board may be required in accordance with the guidance provided by the Policy Plan under Land Use Appendix 9 Residential Development Criteria 8 Heritage Resources.

The Legato School building is listed in the County Inventory of Historic Sites and should continue to be protected, preserved, and open for community use.

Prior to any zoning action, heritage resources staff from the Department of Planning and Development should be consulted as to what architectural surveys are necessary to document any on-site cultural resources. Should architectural or archaeological resources be discovered that are potentially eligible for inclusion in the National Register, further survey and testing should occur to evaluate these resources as to their eligibility. If such resources are found to be eligible, mitigation measures should be developed that may include avoidance, documentation, data recovery excavation, and interpretation. All new construction in the "historic core" should be compatible in materials and design with the existing historic structures and presented to the Architecture Review Board for approval.

Because of the significance of Old Ox Road (Chain Bridge Road) in Fairfax and the presence of the courthouse, significant and irreplaceable historic archaeological resources can be expected around the courthouse and in relatively undisturbed areas along Chain Bridge Road. Any subsurface disturbance, including those associated with road improvements, parking lots, and underground utilities, should be preceded by an archaeological survey in accordance with county policies.

Any development or ground disturbance in this sector, both on private and public land, should be preceded by heritage resource studies, and alternatives should be explored for the avoidance, preservation or recovery of significant heritage resources that are found. In those areas where significant heritage resources have been recorded, an effort should be made to preserve them. If preservation is not feasible, then, in accordance with countywide objectives and policies as cited in the Heritage Resources section of the Policy Plan, the threatened resource should be thoroughly recorded and in the case of archaeological resources, the artifacts recovered.

Public Facilities

1. Specific recommendations are found under the Land Use section for the F6 County Government Center Community Planning Sector.

Parks and Recreation

Park and recreation recommendations for this sector are shown on Figure 27. The column "Park Classification" includes existing park facilities. The "Recommendations" column includes entries for both existing and proposed facilities. Prior to developing parkland, the Fairfax County Park Authority initiates a master planning process to determine the appropriate facilities and design for that park. This process involves extensive citizen review and participation. If an existing park is listed but no recommendation appears on that line, it means the park has been developed in accordance with its master plan.

FIGURE 27
PARKS AND RECREATION RECOMMENDATIONS
SECTOR F6

PARK CLASSIFICATION	RECOMMENDATIONS
LOCAL PARKS:	Plan and develop publicly accessible urban parkland for residents, employees, and visitors.
DISTRICT PARKS:	This sector is served by the Oak Marr District Park.

F7 GEORGE MASON COMMUNITY PLANNING SECTOR

CHARACTER

The George Mason Community Planning Sector is located between the southwestern boundary of the City of Fairfax, Roberts Road, Braddock Road and Shirley Gate Road. The northern portion of the sector where Lee Highway (Route 29) intersects with Shirley Gate Road is in the Fairfax Center Area Suburban Center. Plan recommendations for the Fairfax Center Area can be found in the Area III volume of the Comprehensive Plan.

A substantial portion of the land in this sector is owned by George Mason University (GMU). A portion of the GMU land holdings located east of the Braddock subdivision near Ox Road (Route 123) is undeveloped. The western portion of this sector is in the low density portion of the Occoquan Watershed.

Shirley Gate Park, Lake Fairfax Estates and Cavalier Woods subdivisions are located near Shirley Gate Road. Braddock and Braddock Forest are located near Ox Road. The average density of these subdivisions is about 1-2 dwelling units per acre. The Fairfax Gateway townhouse subdivision is located next to the City of Fairfax boundary of University Drive near Chain Bridge Road and George Mason University. Its density is about 4 dwelling units per acre. There are no community-serving or neighborhood-serving retail or office uses in this sector outside of those located in the Fairfax Center Area.

Fairfax Villa and University Square are single-family detached subdivisions located on the southern boundary of the City of Fairfax and developed at a density of about 3-4 dwelling units per acre. Access for Fairfax Villa is via the City of Fairfax, exclusively. The Fairfax Villa Elementary School is located between these subdivisions.

Prehistoric and historic resources, including Civil War earthworks and camps, have been located along Braddock Road and on George Mason University property. An undisturbed significant Native American quarry complex which is at least 3,000 years old is located in the western portion of the sector. This site is one of the few sites of its kind remaining in the Middle Atlantic region. Fairfax Villa Community Park is a significant heritage resource listed in the Fairfax County Inventory of Historic Sites. A list and map of heritage resources are included in the Fairfax Planning District Overview section, Figures 3 and 4.

CONCEPT FOR FUTURE DEVELOPMENT

The Concept for Future Development recommends that a sizable portion of this sector be identified as a Large Institutional Land Area. The remaining portion of the sector is recommended as part of a Low Density Residential Area and as part of a Suburban Neighborhood.

RECOMMENDATIONS

Land Use

The George Mason sector has a few stable residential neighborhoods. Infill development in these neighborhoods should be compatible with existing development in the vicinity in terms of

use, type and intensity, in accordance with the guidance provided by the Policy Plan in Land Use Objectives 8 and 14.

Where substantial parcel consolidation is specified, it is intended that such consolidations will provide for projects that function in a well-designed, efficient manner and provide for the development of unconsolidated parcels in conformance with the Area Plan.

Figure 28 indicates the geographic locations of land use recommendations for this sector. Where recommendations are not shown on the General Locator Map, it is so noted.

1. The Braddox subdivision (Tax Map 68-1((2))((3))((4))) is a stable residential community that should remain planned at its existing density, which is 1-2 dwelling units per acre.
2. The area north of University Drive and west of Route 123 (Tax Map 57-3((1))11A, 11B and 57-4((1)) 2B), about 10.8 acres in size, is planned for public facility, governmental or institutional uses and residential development at a density of 3-4 dwelling units per acre. With full consolidation, a redevelopment option may be appropriate for higher-density residential development of these parcels as a transitional use between the George Mason University (GMU) campus and the lower-density residential uses to the north. The option may include up to 240 multifamily housing units, affordable to households earning 60 percent or less of the Area Median Income (AMI), and up to 340 multifamily units envisioned to serve the GMU student population, to the extent practical and in conformance with all applicable local, State and Federal laws, particularly Fair Housing regulations. No additional bonus density for the provision of affordable units is appropriate. A limited amount of public meeting space also would be appropriate to accommodate continued utilization of the site by the Fairfax County Redevelopment and Housing Authority.

Redevelopment under the option should demonstrate compatibility with neighboring residential uses and the character of the Route 123 corridor through the satisfaction of the following conditions:

- A continuous landscaped buffer area should be provided along the northern boundary of the site. A 90-foot-wide buffer along the northern boundary of Parcel 2B, adjacent to Royal Legacy Estates, and a minimum 50-foot-wide buffer along the remaining northern boundary of Parcel 11A is desirable.
- A minimum of a 25-foot-wide landscaped buffer should be maintained along the Route 123 frontage, consistent with the character established by the Fairfax Gateway development located across Route 123 from the site. The buffer should be measured from the edge of the existing powerline easement that extends approximately 15 feet into the site and should continue around the building, tapering along University Drive.
- Existing healthy mature trees located within all buffer areas should be preserved, to the maximum extent feasible, in consultation with the Fairfax County Urban Forest Management Division. Buffer areas, and adjacent open areas, should be supplemented with appropriate evergreen, deciduous, and understory vegetation, to improve the general health of the buffer vegetation, to ensure that the full extents of the buffer areas contain healthy native species, and to provide some year-round visual screening to adjacent residences throughout each phase of development.

- High-quality architecture should be provided that is residential in character and includes architectural treatment of all building facades in a manner that is compatible with and complements other uses in the area. Facade treatments should extend onto any exposed parking levels along University Drive and internal roadways, to the extent practical. Vegetated screening and/or berms also may be utilized to ensure a pedestrian-friendly streetscape.
 - Safe, attractive, and secure pedestrian and bicycle facilities should be provided to improve access to GMU, bus stops, and other local services, and to reduce automobile trips generated by the development. Safe and secure pedestrian crossings to the university should be a high priority, and streetscape areas along Route 123 and University Drive should be designed to create a high-quality pedestrian environment, to include features such as street trees, landscaped areas, wide sidewalks, pedestrian-scaled lighting and other amenities.
 - The Resource Protection Area and Environmental Quality Corridor along the western boundary of the site should be identified and protected, consistent with Objective 9 of the Environment section of the Policy Plan. Previously developed portions of those areas should be restored and revegetated, including removal of existing structures and the FCRHA maintenance facility, and there should be no new development within those areas. Utilities should also be located to minimize disturbance and encumbrance of such areas.
3. The area in Fairfax County generally bordered by Route 123, University Drive, School Street, and lies on both sides of George Mason Boulevard is planned for residential use at a density of 5-8 dwelling units per acre.

It includes Fairfax Gateway, a townhouse community (Tax Map 57-4((18))A, 11-47) and the former Eleven Oaks School site (Tax Map 57-4((1))6). However, the former Eleven Oaks School site should generally not exceed 7 dwelling units per acre.

As an infill parcel the Eleven Oaks site should provide for a transition between the lower density single-family detached housing types on the east and the townhouses along Route 123. In order to complement existing development small lot or “zero-lot-line” single-family detached and single-family attached may be appropriate. The development should incorporate adjacent parcels along School Street.

A tree survey should be undertaken identifying and locating all trees 10 inches in diameter or greater. These trees should be analyzed for preservation and to the extent possible trees in good condition should be preserved and incorporated into the final design.

A consistent streetscape treatment along George Mason Boulevard, to include street trees, landscaping, sidewalks, and various paving textures should be provided to the extent possible.

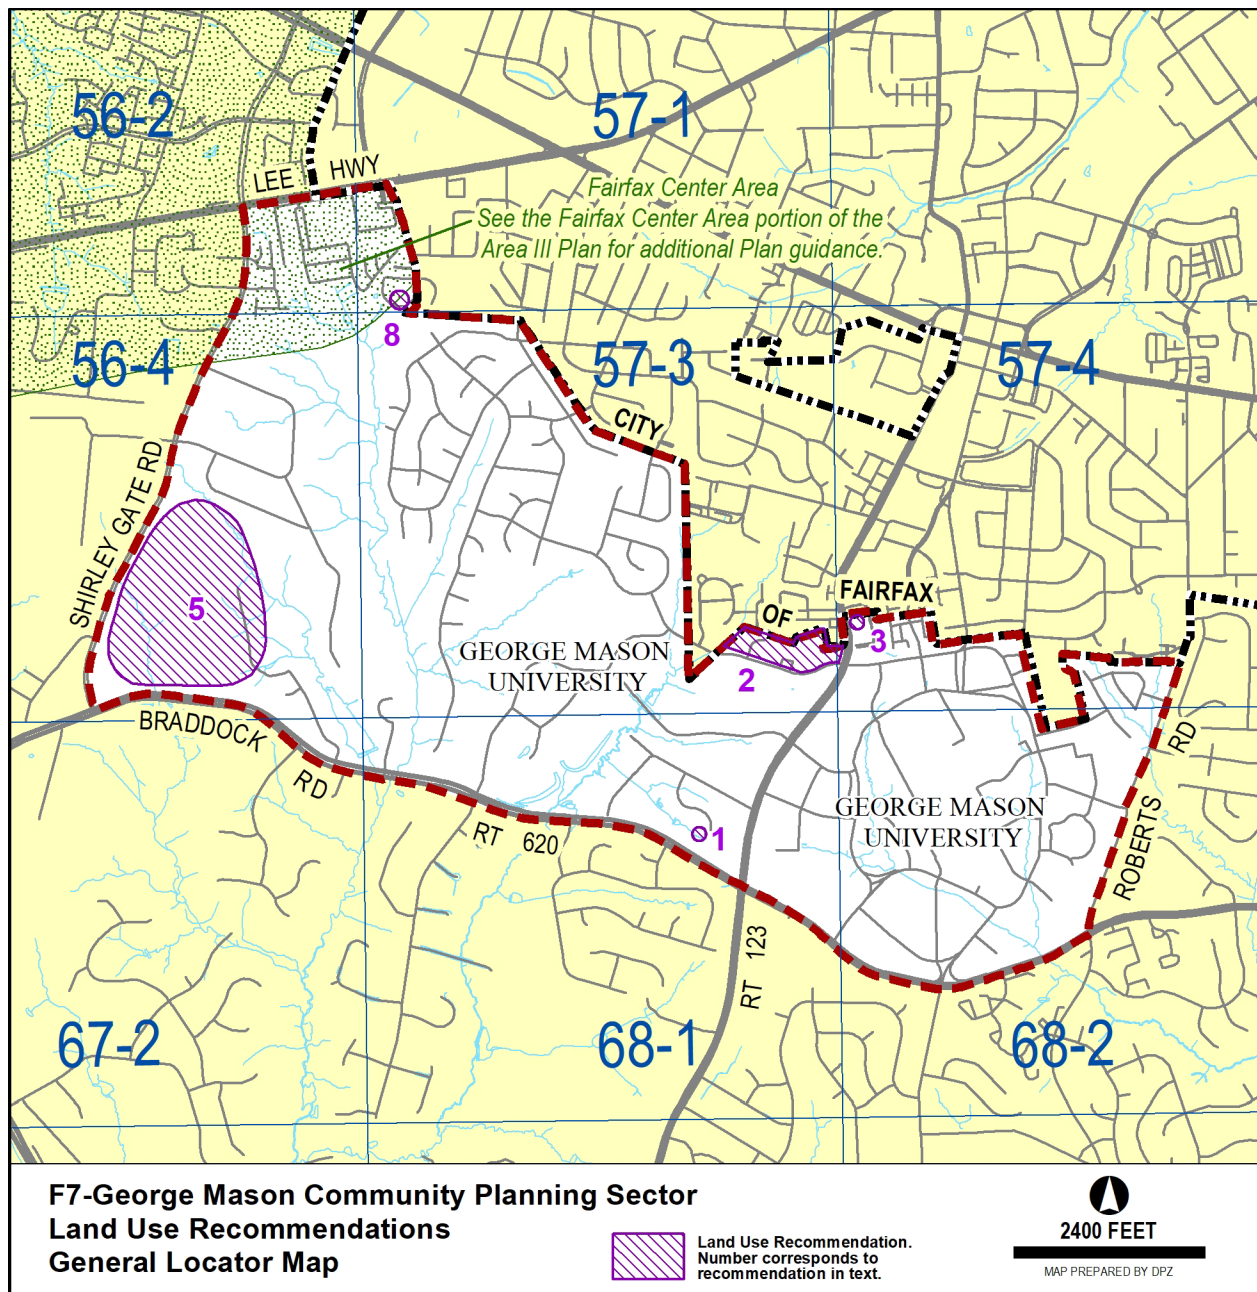

FIGURE 28

The access points to the development should be aligned with each other on opposite sides of George Mason Boulevard and the number of median breaks should be minimized.

The proposed density and/or total number of dwelling units should be balanced against the needs for adequate open space to serve the recreational needs of residents and adequate visitor parking, as parking is not permitted along George Mason Boulevard.

4. Some land in the western portion of this sector is planned for residential use at .1-.2 dwelling unit per acre in accordance with the findings in the Occoquan Basin Study. The planning and zoning is commensurate with predominant densities and the well-established character of existing development in this sector and should be maintained. Nonresidential uses requiring special exception or special permit approval should be rigorously reviewed. In general, these uses, if permitted at all, should only be located at the boundary of Low Density Residential Areas and Suburban Neighborhoods. These uses should be granted only if the following conditions are met:
 - Access for the use is oriented to an arterial:
 - The use is of a size and scale that will not adversely impact the character of the area in which it is located; and
 - The use is designed to mitigate impacts on the water quality of the Occoquan Reservoir. [Not Shown]
5. The planning of undeveloped land and expansion of existing facilities on land in the ownership of George Mason University near Shirley Gate Road and Braddock Road should be coordinated with both Fairfax City and Fairfax County. Further development of the University has a potential for adverse impact on the surrounding area which should be identified and mitigated through a cooperative planning effort.
6. Commercial and industrial uses are not appropriate in this sector because the sector is adequately served by such facilities in Fairfax City and areas along the Route 29 corridor and at the intersection of Ox Road and Braddock Road. [Not shown]
7. The cumulative effect of institutional uses in this sector should be considered before additional institutional uses or expansion of existing uses are developed. Nonresidential uses requiring special exceptions or special permits should be rigorously reviewed and permitted only if the following conditions are met:
 - Access is oriented only to arterial roads;
 - The size and scale of the use should be compatible with, that is, similar to, the character of existing development in the immediate vicinity;
 - Buffering and screening should be provided in excess of that required by the Zoning Ordinance; and
 - No access to George Mason University institutional uses will be permitted through Alta Vista Drive. [Not shown]

8. The Chandler Grove neighborhood is primarily located in Sub-unit W2 of the Fairfax Center Area and is planned for residential use up to 3 du/ac, with an option for residential use at 3-4 du/ac (See the Fairfax Center Area portion of the Area III Plan for guidance on this area).

Transportation

Transportation recommendations for this sector are shown on Figures 29 and 30. In some instances, site-specific transportation recommendations are included in the land use recommendations section. The figures show access orientation, circulation plans, interchange impact areas and generalized locations of proposed transit facilities. The recommendations contained in the Area Plan text and maps, the Policy Plan and Transportation Plan map, policies and requirements in the Public Facilities Manual, the Zoning Ordinance, and other standards will be utilized in the evaluation of development proposals.

Heritage Resources

Any development or ground disturbance in this sector, both on private and public land, should be preceded by heritage resource studies, and alternatives should be explored for the avoidance, preservation or recovery of significant heritage resources that are found. In those areas where significant heritage resources have been recorded, an effort should be made to preserve them. If preservation is not feasible, then, in accordance with countywide objectives and policies as cited in the Heritage Resources section of the Policy Plan, the threatened resource should be thoroughly recorded and in the case of archaeological resources, the artifacts recovered.

Parks and Recreation

Park and recreation recommendations for this sector are shown on Figure 31. The column "Park Classification" includes existing park facilities. The "Recommendations" column includes entries for both existing and proposed facilities. Prior to developing parkland, the Fairfax County Park Authority initiates a master planning process to determine the appropriate facilities and design for that park. This process involves extensive citizen review and participation. If an existing park is listed but no recommendation appears on that line, it means the park has been developed in accordance with its master plan.

Trails and Bicycle Facilities

Trails planned for this sector are delineated on the 1":4,000' Countywide Trails Plan Map which is referenced as Figure 2 in the Transportation element of the Policy Plan and is available from the Department of Transportation. Trails in this sector are an integral part of the overall county system. While some of the segments have already been constructed, the Countywide Trails Plan Map portrays the ultimate system for the sector and the county at large. In addition, the map specifies a classification for each segment, which represents the desired ultimate function and surface type of the trail. Specific construction requirements are detailed in the Public Facilities Manual.

Bicycle Facilities for this sector are delineated on the 1":4000' Countywide Bicycle Network Map which is referenced as Figure 3 in the Transportation element of the Policy Plan and is available from the Department of Transportation.

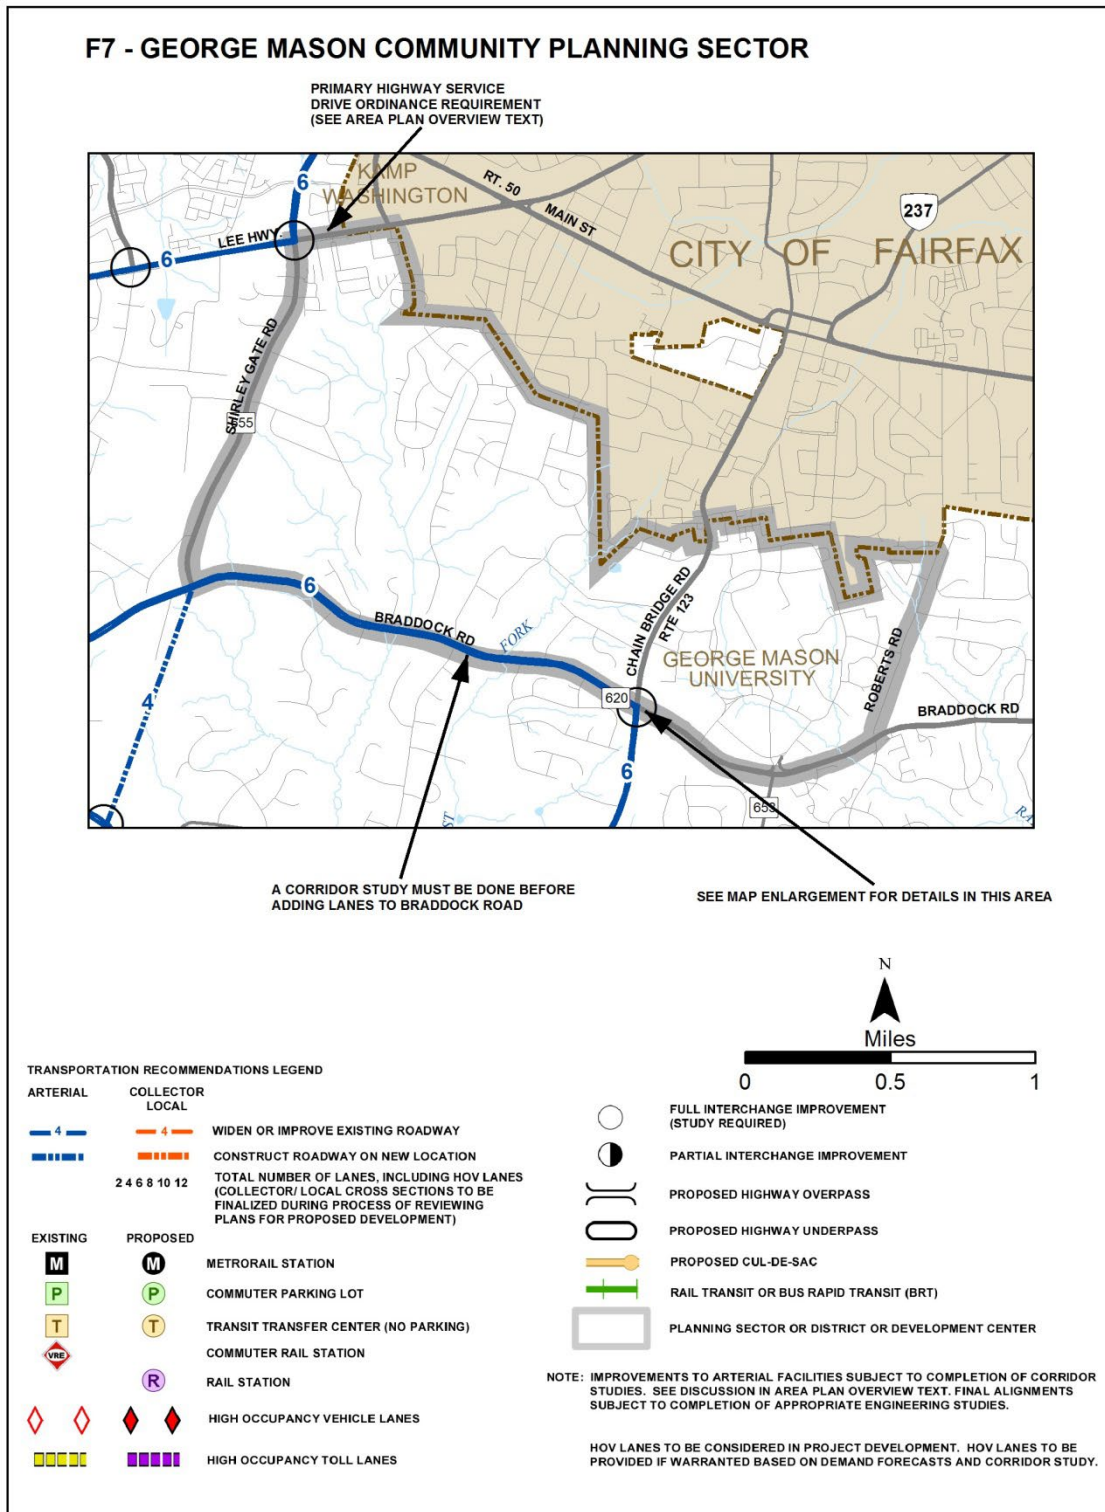

FIGURE 29

FIGURE 31
PARKS AND RECREATION RECOMMENDATIONS
SECTOR F7

PARK CLASSIFICATION	RECOMMENDATIONS
NEIGHBORHOOD PARKS:	Neighborhood Parks are not recommended in this sector in light of the large institutional uses.
COMMUNITY PARKS:	
Fairfax Villa	Re-master plan and develop this expanded park site for passive recreation and protection of significant prehistoric archaeological resources. Active recreation facilities to serve this sector may become available at the proposed Community Park in Fairfax Center.
DISTRICT PARKS:	This sector lies within the service area of Popes Head District Park.
COUNTYWIDE PARKS:	
Piney Branch Stream Valley	Ensure protection of EQC and public access to stream valley park through land acquisition, dedication or open space easements by the Fairfax County Park Authority.
